In June, 1526, with Father Anthony de Cervantes, he accompanied several hundred colonists under the leadership of Ayllon to Guandape, probably where the English subsequently founded Jamestown; or, as some are inclined to think, proceeded even as far as New York. In either case, however, we are safe in asserting that Holy Mass was celebrated for the first time in the present territory of the United States by these Dominicans. On the death of Ayllon (Oct., 1526) the colony abandoned the country and returned to San Domingo. According to Helps, "Spanish Conquest in America", he went to Venezuela about 1528 with twenty of his brethren. Nothing more is known of him except the slight information furnished by a note in the margin of the registry of his profession in the convent of St. Stephen at Salamanca, which says: "Obiit martyr in Indiis". He is the author of "Informatio juridica in Indorum defensionem".

JOSEPH SCHROEDER.

Montesinos, LUIS DE, Spanish theologian, date and place of birth unknown; d. 7 Oct., 1621. He entered the Dominican Order and studied philosophy and theology in the Spanish universities where he gained a reputation for sound scholarship and solid piety that made him illustrious among the savants of his time. Beginning his career as professor of philosophy, he was gradually promoted to the most important chairs. He was the foremost exponent of Thomistic theology at the University of Alcalá. His vast erudition, power of penetration, and clearness of exposition won for him the surname *Doctor clarus*. He possessed a singular charm of manner which secured for him at once love and respect. Such was his success in teaching that his lecture hall, though one of the largest in Spain, was too small to admit his audiences. For thirty years he taught with untiring zeal and devotion, refusing all ecclesiastical honours. Though threatened with total blindness in his latter years, he continued to teach till his death. He is the author of "Commentaria in primam secundæ S. Thomæ" (Alcalá, 1622).

JOSEPH SCHROEDER.

Montes Pietatis are charitable institutions of credit that lend money at low rates of interest, or without interest at all, upon the security of objects left in pawn, with a view to protecting persons in want from usurers. Being charitable establishments, they lend only to people who are in need of funds to pass through some financial crisis, as in cases of general scarcity of food, misfortunes, etc. On the other hand, these institutions do not seek financial profit, but use all profits that may accrue to them for the payment of employees and to extend the scope of their charitable work. Formerly there were not only pecuniary montes (*numarii*) which lent money, but also grain montes (*granatici*), flour montes, etc. In the history of these establishments it may be observed that the word *mons*, even in ancient Latin (Plautus, Prudentius), was used to signify a "great quantity", or heap, with reference to money, while the juridic term for a monetary "fund" was rather *massa*; and long before the creation of the montes pietatis the word *mons* (in Italian, *monte*) was used to designate collected funds, destined to various ends, which in time came to be called montes profani. Thus the public debt that was contracted by the Republic of Venice between 1164 and 1178 was called *Mons* or *Imprestita*, and similar montes were created by Genoa (1300) and by Florence (1345); the stock companies of the Middle Ages, also, were

called *montes*, as, for example, the "*mons alumina-rius*", which operated the alum deposits of Tolfa. The same was true of insurance societies and of the banks of exchange or of credit that for the greater part were in the hands of Jews or of the so-called Lombards. As these banks often lent money on objects delivered to them in pawn, the charitable institutions which were created for transactions of that class also took the name of *mons pietatis* being added to express the fact that the establishments in question were beneficent and not speculative.

In the Middle Ages it was very difficult to obtain money, as much on account of its scarcity as of the prohibitions by which Christians were bound in relation to usury, which second condition gave a species of monopoly of the credit business to the Jews, who were excluded from all other kinds of trade or industry, and who were often accorded great privileges by the towns, on condition of the establishment of pawn banks. They lent money at excessive rates of interest—as much as 60 per cent—or, when that was prohibited, as at Florence, where they were not allowed to charge more than 20 per cent, they resorted to subterfuges that made it possible for them to obtain as high rates as elsewhere. And in this way, they soon became rich and hated. Not less hated, however, were the so-called *coarsini* (named not after the city of Cahors in France, but after that of Cavour in Piedmont); likewise the Lombards, who were a kind of travelling bankers, and whose extortions were often even greater than those of the Jews, their usual rate of interest being $43\frac{1}{2}$ per cent, and frequently as high as 80 per cent. It was often a question, during the Middle Ages, of finding a remedy for this exploitation of the misfortune of others; although it is not true that St. Anthony of Padua founded a *mons pietatis*. The celebrated Doctor Durand de Saint Pourçain, Bishop of Mende, proposed that the magistrates of cities be compelled to lend money at low rates of interest. It is not known whether this proposition was accepted or not, but, in either event, it did not suggest the idea of the monte, for there lacked the condition of objects pawned, which was the case, also, in the institution of the "*Mont de Salins*", established later than 1350. The first true *mons pietatis* was founded in London, where Bishop Michael Nothburg, in 1361, left 1000 marks of silver for the establishment of a bank that should lend money on pawned objects, without interest, providing that the expenses of the institution be defrayed from its foundation capital. In this way, of course, the capital was eventually consumed, and the bank closed. In 1389 Philippe de Maisières published his project for the establishment of an institution that should lend money without interest, but should receive remuneration from those who might profit by its loans; this project, however, was not realized. Finally (1462), the first *mons pietatis* was established at Perugia, and in a few years there were similar institutions throughout Italy. The establishment and dissemination of *montes pietatis* is one of the brightest glories of the followers of the "*Poverello*" of Assisi, for the *mons pietatis* of Perugia was founded in consequence of the preaching at that city of the Franciscan Michele Carcano of Milan, who inveighed against the usury of the Jews (1461). The fund for that charitable establishment was made up in part by voluntary contributions and in part by money lent by the Jews themselves. But the idea of the *mons pietatis* was devised by the Franciscans Barnabò da Terni and Fortunato Coppoli of Perugia. In fact it seems that for a long time the preachers of the Franciscan Order had considered the problem of applying an effectual remedy to the evils of usury (cf. Holsapfel, 32 sq.). The assistance and the influence of the Apostolic delegate to Perugia, Ermolao Barbaro, Bishop of

Verona, greatly facilitated the work at the former town, and it was soon repeated at Orvieto (1463) through the action of the Franciscan Bartolommeo da Colle, and also at Gubbio and at other towns of Umbria. In the Marches the first *mons* was established at Monterubbiano, in 1465, through the efforts of the Franciscan Antonuzzo and the Dominican Cristoforo; the first city of the Papal States that established a *mons pietatis* was Viterbo (1469); in Tuscany, Siena (1472); in Liguria, Savona, and Genoa (1480), and in the Milanese territory, Milan (1483); everywhere it was the Franciscan Observants who took the initiative. But the greatest development was given to this work by Blessed Bernardino da Feltre, whose apostolic journeys were marked by *montes pietatis*, either instituted or re-established; he introduced them at Mantua (1484) and at various cities of the Venetian Republic, where they had to struggle against the ill-will of the Government; he carried them also to the Abruzzi, to Emilia, and to Romagna.

The *montes pietatis* were either autonomous establishments, or, as at Perugia, municipal corporations; they had a director, called *depositarius*, an appraiser, a *notarius* or accountant, salesmen, and other employees; and all were paid either with a fixed salary or with a percentage in the profits of the establishment. It should be noted that in the beginning the *montes* did not lend money gratuitously, but, on the contrary, the expressed intention of the founders was that the money should be lent at interest, varying from 4 per cent to 12 per cent. After opposition had been shown to these establishments *montes gratuiti* were instituted in some places, especially in Lombardy, but as these charities were not self-supporting they were altered to establishments that lend with interest, for Blessed Bernardino da Feltre always insisted on the necessity of interest to ensure the permanency of the institution. At the end of each month or of each year the net profits were applied to the capital, and if they were considerable, the rate of interest was lowered. In order to increase the funds of these institutions in some cities, collections were regularly taken on appointed days—at Padua on Easter day—or boxes were set up for contributions, as at Gubbio and Orvieto. At Gubbio there was a tax of 1 per cent on all property bequeathed by will, and at Spello the notary was required to remind the testator that he should leave something to the monte.

At first the sums loaned were very small, the maximum limit at Perugia being six florins, and at Gubbio four. Thus it was hoped that speculation and extravagance would be avoided, but little by little the limit was increased in some places to 100 and even to 1000 ducats. The amount of a given loan was equal to two-thirds the value of the object pawned, which, if not redeemed within the stipulated time, was sold at public auction, and if the price obtained for it was greater than the loan with the interest, the surplus was made over to the owner.

The opposition to the *montes* which has been referred to came in the first place from those whose interests were affected, the Jews and the Lombards, who were able to prevent the introduction of these charities into some cities, as Venice and Rome, until 1539. At Florence their efforts were directed to the same end, but the people rising in tumult obtained the recall of Blessed Bernardino da Feltre to the city. At Aquila the Jews sent a commission to Blessed Bernardino to ask him not to appear in the pulpit. But the most serious opposition the *montes* encountered was from certain theologians and canonists, who censured these establishments because they lent money at interest, which in those times was considered illicit even by the promoters of the *montes*. The controversy was long and bitter. The opposition was not directed against the *montes pietatis* as such,

but merely against the condition of requiring interest. It was not admitted that the use of the interest to maintain the charity justified the usury, since a good end could not justify evil means, and it was held that lending money at interest was intrinsically bad, money being unfruitful by its nature, and since Christ expressly forbids the practice (Luke, vi, 33). The term interest was not readily admitted by the friends of the montes, who replied that there were in reality two contracts between the montes and the borrower: one that of the loan, which should be gratuitous, the other implying the custody of the object pawned, therefore, the use of space and personal responsibility, which should not be gratuitous; and it was precisely on account of these two conditions that interest was charged. The loan, therefore, was regarded merely as a *conditio sine qua non*, and not as a direct cause of the interest. On the other hand, even the adversaries of the montes admitted that the *damnum emergens* or the *lucrum cessans* were legitimate titles upon which to require interest; and these two principles may be applied to the mons pietatis. Many other objections to which it was easy to reply were adduced, and in these disputations the friends of the montes were victorious. Only at Pienza, in 1494, was the defender of the montes unable to answer the objections of the Augustinian Bariano, who is the author of a work entitled "De Monte Impietatis". It was among the Dominicans, however, that the montes found a greater number of antagonists, notably the young Tommaso de Vio, who became Cardinal Cæstano. It cannot be said that the order as a whole was opposed to these institutions, for several of its members favoured the establishment of the montes as has been seen in the case of Monte-rubbiano, and as was the case at Florence, where Savonarola (1495) reopened the montes which had been established in 1484. Meanwhile other Dominicans, e. g. Annio da Viterbo and Domenico da Imola, wrote juridical opinions in favour of the montes, but the writer who most exerted himself in their defence was the Franciscan Bernardino de Bustis (*Defensorium Montis Pietatis*). The legal and theological faculties of the universities, as well as individual jurists, gave opinions favourable to the montes. The popes had approved of several of these institutions that appealed to the Holy See, either for its sanction, in general, or for special concessions; Holzapfel (10 sq.) refers to sixteen of these acts, anterior to the Bull "Inter multiplicis" of Leo X (4 May, 1515). By this Bull the pope and the Lateran Council, which took up the case of the montes in its tenth session, declared the institutions in question in no way illicit or sinful, but on the contrary meritorious, and that whosoever preached or wrote against them in the future, incurred excommunication. This Bull also provided that montes established thereafter should obtain the Apostolic approbation. The Bishop of Trani was the only member of the council who spoke against the montes, and Cardinal Cæstano, general of the Dominicans, who was absent at that session, subsequently abandoned his position on the subject of these establishments.

The question of moral right having been determined in their favour, the montes pietatis spread rapidly, especially in Italy, where, in 1896 there were 556 of them, with a combined capital of nearly 72,000,000 lire. Outside of Italy the first mons pietatis to be established was at Ypres in Belgium, (1534) but the institution did not develop in that country until 1618, when the Lombards were forbidden to receive objects in pawn; since 1848 the law has transformed the montes into municipal establishments. In France the first mons pietatis appeared at Avignon, then a papal possession (1577); the next at Beaucaire (1583); and in 1626, an ordi-

nance prescribed the creation of montes pietatis in all the cities that might need them. However, they were not merely charitable institutions, because they were bound to lend money to all applicants, whether in need or not, while not infrequently the rate of interest was high. They were reorganized by the law of 1851, with the special feature that their directors be appointed by the Government. In Germany and in Austria the montes pietatis were introduced at the end of the fifteenth century. At present they are municipal establishments—although some of them belong to the Government—and their net profits are applied to the account of public charities. The first mons pietatis in Spain was created in 1702 at Madrid. In England this form of charity never obtained a foothold, on the contrary it was held in aversion on account of its connexion with the papacy; an attempt to establish such an institution at London in 1797 failed in less than twenty years, through default on the part of its managers.

The aversion in which montes pietatis are held by many, even in our own day, leads to the question of the advantages and of the defects of these institutions; it is held that they promote carelessness in contracting debts, that they destroy love for labour, incite to theft, are often the cause of financial ruin, and, lastly, that they are contrary to the principle of free competition. On the other hand, they are a necessity; for without them the needy would be exposed either to the extortions of private lenders or to ruin, into which they might be plunged by some misfortune from which a momentary loan might save them. Their disadvantages are undeniable, but disadvantages are common to all human contrivances. For the rest the montes pietatis, besides the relief that they brought to the poor, exerted great influence upon the ideas concerning interest on loans; for the rigid views of the theologians of the Middle Ages in that connexion underwent a first modification, which prepared the way for a generalization of the principle that moderate interest might justly be charged, and also the mere existence of the montes pietatis compelled private speculators to reduce their rates of interest from the usurious rates that had hitherto prevailed.

U. BENIGNI.

Montesquieu, CHARLES-LOUIS DE SECONDAT, BARON DE, French writer and publicist, b. in the Château de la Brède near Bordeaux, 18 January, 1689; d. at Paris, 10 February, 1755. His family was of noble rank; his grandfather, President of the Bordeaux Parliament, his father, a member of the royal bodyguard, and his mother, Marie de Penel, who died when he was eleven, traced her ancestry to an old English family. Young Charles de la Brède, as he was then known, was sent to the Oratorian College at Juilly (1700-11), where he received a wholly literary and classical education in which religion held but a minor place. When, at twenty-five years of age he returned home, after having been called to the bar, he received from his paternal uncle the style and title of Baron de Montesquieu, by which he was afterwards known, and became councillor of the Bordeaux Parliament. He married a Protestant, Jeanne Lartigue,

and they had three children; but neither his profession nor his family seem to have claimed much of his attention. At the end of nine years he sold his office, and gave himself up entirely to study which henceforth became his life's one and only passion. "Study", he wrote afterwards, "has been my sovereign remedy against the worries of life. I have never had a care that an hour's reading could not dispel". As a matter of fact the story of his life is but the chronicle of the preparation and composition of his books. His earliest productions were read before the Academy of Bordeaux, of which he became a member (1716). They deal with a variety of subjects, but mainly with scientific topics, history, and politics. For a time he thought of writing a "physical history of the Earth" for which he began collecting material (1719), but two years later was busy in a very different direction, publishing the "Lettres persanes" (Amsterdam, 1721), so named because it pretended to be a correspondence between two Persian gentlemen travelling in Europe, and their friends in Asia, who sent them the gossip of their seraglio.

Under this fictitious guise the writer goes on to describe or rather satirize French, and especially Parisian manners between 1710 and 1720. The king, the absolute monarchy, the Parliament, the Academy, the University, are all very transparently ridiculed; but it was the Catholic religion, its dogmas, its practices, its ministers from pope to monks that came in for his bitterest railery. Because of its ideal of celibacy, the Catholic Church is accused of being a cause of depopulation, and because of its teaching concerning this world's goods, it is charged with weakening the prosperity of the nation, while its intolerant proselytism is a source of disturbance to the state. On the other hand Protestantism is held up as more favourable to material progress. Coming ostensibly from Mohammedans these criticisms may have seemed less shocking to thoughtless minds, but they were none the less one of the first and rudest attacks directed against the Church during the eighteenth century. In them, he showed himself as incapable of understanding the Church's dogmas as he was of appreciating her services to society. Though in later years he was to find a juster point of view, his witty criticisms in their lively setting of romance and sensualism, quite to the taste of that age, assured a great success for the "Lettres persanes". Eight editions were published within a year. Montesquieu had not signed his name to them, but the author was quickly discovered, and the public nominated him for the French Academy. He was elected in 1726, but owing to the scandal the "Lettres persanes" had caused, the king did not approve and an excuse was given that the author did not live in Paris, as the rules of the Academy required. Whereupon Montesquieu took up his residence in Paris, and was elected once more, and admitted in 1728.

Side by side with their frivolous levity the "Lettres persanes" contain some profound observations on history and politics. They show even then Montesquieu's meditation on the laws and customs of mankind, from which was to result his later work, "L'Esprit des lois". As a preparation for this work he set out (1728) on a long series of travels through Europe, and visited Vienna, and Hungary, spent some time in Venice, Florence, Naples, Genoa, and Rome, where he was received by Cardinal de Polignac and Benedict XIII. In the suite of Lord Chesterfield he went to England where he remained eighteen months, and was the guest of Prime Minister Walpole, of Swift, and Pope. Wherever he went he made the acquaintance of statesmen, took copious notes of what he saw and heard, and read with avidity. After an absence of three years he returned to his family, his business, his vineyards and the farming of his estates at Château de la Brède. As a relaxation he paid occasional

visits to Paris, and mixed with literary men and their friends in the salons of Madame de Tencin, Madame Geoffrin, and Madame du Deffand. Yet he studiously avoided over familiarity with what was known as the philosophical set. Though his religious convictions were not deep, his serious and moderate turn of mind had nothing in common with the noisy and aggressive impiety of Voltaire and his friends.

Henceforth his great aim in life was to write the "Esprit des lois", and all his spare time in the studious seclusion at La Brède was devoted to it. To begin with, ancient Rome gave him ample material for thought, but took up so much space in his work that in order not to mar the proportions of his book he published all that concerned it as a distinct work, "Les Considérations sur les causes de la grandeur et de la décadence des Romains" (Amsterdam, 1734).

In this book he shows successively the glorious progress and slow decay which the Empire experienced from the foundation of Rome to the capture of Constantinople by the Turks. He does not narrate events, but supposing that they are already known, he seeks to discover the links in the chain of events, and to point out the sources from which they sprang,

choosing preferably political causes, that is, institutions. By exhibiting them in their natural relationships he throws unexpected light on certain events of ancient history and those of more recent date. Bossuet had already devoted two chapters of his "Histoire Universelle" to explaining "the sequence of changes at Rome". Montesquieu treats the same subject in a larger way and with closer correlation of facts. His point of view is that of the statesman rather than of the moralist, and every religious preoccupation is left aside. Such indeed is his indifference that he has not a word about religion. This concession to the prejudices of his age was a mistake, as modern criticism has shown, especially in the works of Fustel de Coulanges, that religion played a greater part in the political conduct of the Romans than Montesquieu credited it with.

"Les Considérations" was but an advance chapter of "L'Esprit des lois" which Montesquieu published after twenty years of labour (2 vols., Geneva, 1748). In this second work the author studies human laws in their relationships with the government, climate, and general character of the country, its customs, and its religion. He undertakes, not to examine various laws and discover their meaning, but to point out their underlying principles and to lay down the conditions which must be verified if such laws are to work for the happiness of man in society. In his judgments and conclusions Montesquieu is careful to take into account experience and tradition. He believes that laws can be enacted only for men in definitely known conditions of time and place. In so far he differs from the theorists and utopians of his day and of a later age, who had no hesitation in drafting laws for man in the abstract or for a humanity freed from all spatial and temporal determinations, and who took as the basis

of their deductions either the idea of a social contract in primitive times, or of a state of nature which had to be developed or restored. He thus avoids the errors of Hobbes, Locke, and Jean-Jacques Rousseau.

His personal sympathies went rather with the liberal ideas which have triumphed almost everywhere in the civilized world of to-day, but which were novelties then. He declared himself in favour of separating the executive, legislative, and judiciary powers (XI, vi), condemned slavery and torture, and advocated gentler treatment of criminals, toleration in religious belief, and freedom of worship. But in this work he treats the religious issue with more gravity than he had done in the "Lettres persanes". True, he passes over the truth of its teaching and the sanctity of its moral precepts, and treats of it "only as regards its advantages for civic life". But far from thinking that there can be a conflict between religion and society, he insists that the one is useful to the other. "Something", he says, "must be fixed and permanent, and religion is that something." He says again, more clearly: "What a wonderful thing is the Christian religion! it seems to aim only at happiness in a future life, and yet it secures our happiness in this life also." He does not dream of separating Church and State, nor of subjecting the former to the latter: "I have never claimed that the interests of religion should give way to those of the State, but that they should go hand in hand." Nevertheless on various points he seriously misunderstood Catholic teaching: "Les Nouvelles Ecclésiastiques" (Oct., 1749) called attention to several statements of this sort, and the Sorbonne drew up a list of passages from his writings that seemed to call for censure (August, 1752). Before this (March, 1752), "L'Esprit des lois" had been placed on the Roman Index. But these measures created no great stir. The success of the book was enormous, its political influence world-wide. The early American statesmen were very familiar with "L'Esprit des lois" and from it (XI, vi) derived much of their idea of federal government. Jefferson, the author of the Declaration of Independence, Hamilton, Madison, and Jay who wrote in the "Federalist" in defence of the new Constitution, were all enthusiastic readers of Montesquieu. Montesquieu's reputation became universal, and he was able to enjoy peacefully the homage it brought him until his death, for which he prepared himself by receiving the sacraments of the Church, and showing every outward mark of perfect obedience to her laws. The influence of his ideas was to be felt long afterwards both in France and elsewhere.

Besides the works which we have mentioned, and which are the most important, Montesquieu left a few papers which he read before the Academy of Bordeaux, and a few incomplete writings. "Le temple de Gnide", a short novel of a sensuous turn written for the licentious society of the Regency epoch, does him little credit. He wrote an "Essai sur le goût", a "Dialogue de Sylla et d'Eucrate", "Arsace et Isménie", an uninteresting novel, and over one hundred letters. These have all been collected in: the "Œuvres complètes de Montesquieu", edited by Edward Laboulaye (7 vols., Paris, 1875-79); "Mélanges inédits de Montesquieu" published by Baron de Montesquieu (Bordeaux, 1892); "Voyages de Montesquieu", published by the same (Bordeaux, 1894-96); "Pensées et fragments inédits de Montesquieu", published by the same (Bordeaux, 1899-1901: two volumes have appeared; others are in course of preparation).

R. COUNDESS (London and New York, 1900). For his influence upon the founders of the United States, see *The Federalist*, xxxvii, xxxviii, 1788, ed. GIDEON (Washington, 1818).

ANTOINE DEGERT.

Monteverde, CLAUDIO, distinguished musician, b. at Cremona, May, 1567; d. at Venice, 29 Nov., 1643. He studied under Ingegneri (composer of the "Responsoria", that until recently were regarded as by Palestrina), and at the age of sixteen he published a book of canzonets, followed by four volumes of madrigals. Although the majority of his early works show little trace of the inventive genius which afterwards revolutionized the prevalent system of harmony, one of his madrigals, printed in 1592, is remarkable for its many suspensions of the dominant seventh, and its inversion, as also suspended ninths. He was appointed Maestro di Cappella to the Duke of Mantua in 1602, and in 1613, was elected Maestro at Venice in succession to Martinengo, at a salary of three hundred ducats a year. So highly was he appreciated at St. Mark's that in 1616, the Procuratori increased his salary to five hundred ducats. From that date until his death he produced numerous choral compositions, as also operas, cantatas, ballets, most of which cannot now be traced. Fortunately, the score of his opera "Orfeo", printed in 1609, has come down to us, and is quite sufficient to indicate the inventive powers of a musician who broke away from the trammels of the older school and created a school of his own.

Monteverde not only showed his genius in his dramatic writing but in the employment of new instrumental effects, and the combination of instruments in the theatre band. In his interlude written for the festival at the palace of Girolamo Mocenigo, he employed the device of an instrumental tremolo, till then unknown. Another novel effect was his employment of trombones to accompany the "Gloria" and "Credo" of a Mass, in 1631. At this date he was studying for the priesthood, and he was ordained in 1633. Six years later he composed an opera "Atone" for the opera house of San Cassiano, followed by two others, and a ballet for the carnival at Piacenza, in 1641. His enduring fame consists in his use of unprepared discords, his improvement of recitative, his development of orchestral resources and his revolution of instrumentation. He may justly be claimed as the founder of dramatic music, as we now understand it, and he anticipated Wagner in the employment of *Leitmotiv*.

Monte Vergine (MONTIS VIRGINIS), an abbey in the province of Naples, Italy, near the town of Avelino, commanding a magnificent view of the Mediterranean along the Bays of Naples, Salerno, and Gaeta, and inland as far as the Abruzzi Mountains. Monte Vergine was formerly known as Mons Sacer because of a temple sacred to Cybele that stood there; also as Mons Virgilianus, from the legend that Virgil retired thither to study the Sibylline books. St. Felix of Nola is said to have taken refuge there, and in the seventh century St. Vitalian of Capua erected on the hill a chapel to the Blessed Virgin Mary, called "Sancta Maria de Monte Vergine". Whatever the origin of the name it is certain that a pagan shrine existed there, and the ruins of the temple of Cybele lie all about the hill. In 1119 St. William of Vercelli built a monastery of strict observance and perpetual abstinence on Monte Vergine, and in 1149 his successor Blessed Robert, with the approval of Alexander III, gave it to the Benedictines. According to Castellain, St. William was canonized by this pope, and his feast is kept on 25 June. As early as 1191 the abbey is spoken of as be-

longing "ad Dominum Papam specialiter". It received throughout the Middle Ages many marks of consideration from the kings of the Two Sicilies, within whose domains there were at one time no less than one hundred monasteries of this branch of the Benedictine order. After many vicissitudes, laxity of rule threatened ruin to the abbey, and in the sixteenth century Clement VIII charged Blessed John Leonard, founder of the Clerks Regular of the Mother of God, to restore the monastic spirit. The new constitutions were approved by Paul V in 1611, and included among other things a regulation that the monks of Monte Vergine should use the Camaldolese Breviary. The habit of the monks was to be white, and they were to wear a white scapular.

From the beginning the abbey seems to have been freed from diocesan control, and its abbots had the faculty of conferring the four minor orders and confirmation. Between 1440 and 1515 it was held in *commendam* by five cardinals, and in that year was united with the Hospital of the Nunziata at Naples. The governors of the hospital sent as their representative to Monte Vergine a sacristan who interfered with the discipline of the place, and from this indignity the monks were freed by St. Pius V in 1557. In 1579 Gregory XIII gave them charge of St. Agatha's in Subura, Rome; Paul V made it a privileged abbey, and it remained in their care until Gregory XVII gave it to the Irish students (see IRISH COLLEGE, ROME).

The monastery chapel contains an ancient Byzantine picture of the Blessed Virgin Mary, said to have come originally from Antioch. The dark features of the Blessed Virgin standing out from a background of bright gold have won for it from peasants and pilgrims the name of "Schiavona". The story runs, that the head of the picture was cut from its frame by Baldwin, the Latin Emperor of Jerusalem, to save it from desecration, that it was found among his possessions by his grand-niece Catherine of Valois (who lies buried in the chapel), and that she gave it to Monte Vergine. The lower portion of the picture as it exists in the shrine was added at a later date by the brush of Montana di Arezzo. The church is also said to contain relics of the bodies of the young men, Sadrach, Misach, Abdenago, who were saved from the fiery furnace. These relics were brought from Jerusalem by Frederick II. Pentecost and the eighth of September are the two great days of pilgrimage and rejoicing at Monte Vergine. The nearest town is Mercogliano and on these days its population is more than doubled. The present abbot is Mgr. Victor Corvaia, O.S.B., born at Palermo, 19 June, 1834, succeeded 18 January, 1884. The chapter consists of 15 canons. The abbot's jurisdiction extends over 7 parishes forming part of four communes in the border provinces of Avellino and Benevento. There are 27 chapels within the prelate, and the population of 8070 souls is ministered to by 31 secular priests and 18 regulars.

J. C. GREY

Montevideo, ARCHDIOCESE OF (MONTISVIDEI), in Uruguay, comprises the whole of the republic. This territory was under the jurisdiction of the Paraguayan Church till 1620, when it became subject to Buenos Aires. In 1828 the Holy See erected it into a vicariate Apostolic. On 15 July, 1878, it was raised to episcopal rank, Mgr. Hyacinth Vera being first bishop; on 19 April, 1897, it was made an archdiocese. It was decided at that time to erect two suffragan sees, Melo and Salto, but no appointments have yet been made (1910). Since colonial days ended, the Church has been persecuted at times, especially between 1880 and 1890 under Santos, who forbade religious under forty to make

vows, instituted civil marriage, and made it a crime to baptize a child before its birth was registered civilly. To-day, however, the Church is flourishing, and the archdiocese contains many congregations of men (Jesuits, Capuchins, Redemptorists, Salesians, etc.), and over 300 nuns engaged in teaching and charitable work. The diocese contains 72,210 square miles, and about 1,103,000 inhabitants (in 1906), almost all Catholics, of whom 308,000 were in the Department of Montevideo. There are 46 parishes, 7 filial cures, 122 priests, and about 100 chapels and churches. The present occupant of the see is Mgr. Mariano Soler, b. at San Carlo, Uruguay, 25 March, 1846; elected bishop, 29 June, 1891; consecrated archbishop, 19 April, 1897; he has two auxiliary bishops: Mgr. Ricardo Isasa (titular Bishop of Anemurium), b. at Montevideo, 7 February, 1847; elected, 15 February, 1891; and Mgr. Pio Gaetano Secondo Stella (titular Bishop of Amizona), b. at Paso del Molino, Uruguay, 7 August, 1857; elected, 22 December, 1893. Almost all the inhabitants are Catholics, there is, however, a small Piedmontese Waldensian agricultural colony in the East of Colonia.

Among the noteworthy buildings of the City of Montevideo may be mentioned the cathedral, begun in 1803, completed and restored in 1905; and the Jesuit, Redemptorist, and Franciscan churches. Within recent years conferences of St. Vincent de Paul have been established in all the city parishes; likewise an excellent Catholic club; and an institute for Catholic working-men. The city dates back to early in the seventeenth century; a small fort, San José, was built there in 1724; in January, 1728, the town was founded by Bruno de Zabala with the name San Felipe y Santiago; in 1807 it was captured by the British; in 1828 it became the capital of the republic; from 1842 to 1851 it withstood the nine years' siege by Oribe and his Argentine allies. Montevideo has within recent years grown to be one of the seven greatest seaports in the world (see URUGUAY). San José de Mayo (9000) contains a magnificent church, more massive than the cathedral; and also the college of the Sisters of Nuestra Señora del Huerto, which has a very pretty chapel attached. (For the early Uruguayan missions among the Indians see REDUCTIONS OF PARAGUAY.)

A. A. MACERLEAN.

Montfaucon, BERNARD DE, French scholar, b. in 1655, at the château de Soulatge, Department of Aude, *arrondissement* of Carcassonne; d. in Paris, at the Abbey of St-Germain-des-Prés, in 1741. He was the son of Timoléon de Montfaucon and of Flore de Maignan. His family, originally of Gascony, had settled in Languedoc after the Albigensian Crusade of the thirteenth century; its principal seat was the château de Roquetaillade (*arrondissement* of Limoux), where Bernard was reared. He was instructed by Pavillon, Bishop of Aleth, his father's friend, and in 1672, at the age of thirteen, he entered the Académie des Cadets at Perpignan, to prepare for a military career. After his father's death, he left home with his relative, the Marquis d'Hautpol, a captain of grenadiers in the Regiment of Languedoc, and served as a volunteer under Turenne (1673). He went through the campaign of Alsace, was at the battle of Marienthal, and fell dangerously ill at Saverne. In pursuance of a vow made to the Blessed Virgin, he then returned to his own country, resolved upon entering religion. On 13 May, 1676, he made his profession in the Benedictine monastery of Durade, at Toulouse. Being sent to the Abbey of Sorèze, he there learned Greek, making rapid progress. He next spent eight years at the priory of la Grasse (Aude). Claude Martin, assistant superior of the Congregation of St-Maur, noted his zeal and

caused him to be sent to the Abbey of Sainte-Croix at Bordeaux. Finally, in 1687, he was transferred to Paris, to the Abbey of St-Germain-des-Prés, which, under the rule of Mabillon, had become one of the chief centres of French erudition. He was then chosen to assist in preparing the edition of the Greek Fathers which the Benedictines had undertaken. To perfect his own training, he also began the study of Hebrew, Chaldean, Syriac, and Coptic, as well as that of numismatics, and in 1694 was appointed curator of the numismatic collection at St-Germain-des-Prés.

In 1690 Montfaucon had published a treatise on "La vérité de l'histoire de Judith". The monumental edition of the works of St. Athanasius, on which he laboured with Dom Pouget and Dom Lopin, appeared in 1698 and was well received (3 vols., folio, Paris; reproduced in P.G., XXV-XXVIII). Before undertaking new patristic labours, he resolved to study the manuscripts in the libraries of Italy. Obtaining permission in 1698, he set out with Dom Paul Briois. At Milan he made the acquaintance of Muratori; at Venice he was received very coldly, and was not even allowed to see the manuscripts in the Benedictine monasteries of San Giorgio Maggiore and San Marco. On the other hand, he was welcomed at Mantua, Ravenna, and especially at Rome by Innocent XI. Having been named by his superiors procurator general at Rome of the Order of St. Benedict, certain difficulties with the Jesuits led to his resignation of that office which brought with it so many distractions from his chief work, and in 1701 he secured his recall to France. The scientific results of his journey were embodied in the quarto volume of his "Diarium Italicum" (Paris, 1702). He also collected the notes of his companion, Dom Paul Briois, who had died on the journey (edited by Omont, "Revue des Bibliothèques", XIV, 1904).

In the full maturity of his powers, at liberty to satisfy his passion for work, with a large experience of life and an immense fund of general information, Montfaucon now took up his abode at the Abbey of St-Germain-des-Prés, where he spent the last forty years of his life. Here a choice body of scholars gathered around him, his avowed disciples, whose affection for their master prompted them to take the name of "Bernardins". Among these were Claude de Vic and Joseph Vaissette, authors of the "Histoire de Languedoc", the hellenist Charles de la Rue (his favourite disciple), Dom Lobineau, the historian of Brittany, and even the Abbé Prévost, who was then a collaborator on the "Gallia Christiana". Montfaucon, moreover, corresponded with scholars all over Europe, and, in spite of the heavy tasks he took upon himself, he succeeded, thanks to his abstemious and regular life, in working almost to his last day. During this, his most productive period, he supplemented the former edition of the Greek Fathers with a "Collectio nova patrum et scriptorum græcorum" (2 vols., folio, Paris, 1706). In 1709 he translated into French the "De vita contemplativa" of Philo Judæus, and essayed to prove that the Therapeutæ there mentioned were Christians. Next appeared the edition of Origen (2 vols., fol., Paris, 1713) and that of St. John Chrysostom (13 vols., folio, Paris, 1718), prepared with the assistance of François Faverolles, treasurer of St-Denis, and four Benedictines, who spent thirteen years in collating 300 manuscripts.

The thoroughly scientific bent of Montfaucon's mind led him to elaborate a new auxiliary science out of the studies he had made for the verification of his Greek texts. As Mabillon had created the science of diplomatics, so Montfaucon was the father of Greek palæography, the principles of which he established by the rigour of his method in grouping his personal

observations. His great "Palæographia Græca" (folio, Paris, 1708) inaugurated the scientific study of Greek texts. Another auxiliary science of history, that of bibliography, owes to him a work still of considerable value, the "Bibliotheca bibliothecarum manuscriptorum nova" (2 vols., folio, Paris, 1739), a catalogue of the Greek manuscripts of the chief libraries of Europe. Lastly, Montfaucon intuitively saw what benefit might accrue to history from the study of figured monuments, and, if he was not the creator of archæology, he was at least the first to show what advantages might be derived from it. Two of his works show him to be an originator. In 1719 he published "L'Antiquité expliquée et représentée en figures" (10 vols., folio, Paris), in which he reproduces, methodically grouped, all the ancient monuments that might be of use in the study of the religion, domestic customs, material life, military institutions, and funeral rites of the ancients. Of this work, which contains 1120 plates, the whole edition of 1800 copies was exhausted in two months, in spite of its enormous size. The regent, Philippe d'Orléans, desired that the author should become a member of the Académie des Inscriptions et Belles-Lettres, and he was elected to replace Père Letellier (1719). Montfaucon then conceived a more daring idea, a work, similar to "L'Antiquité expliquée", which should embrace the entire history of France. This work, the "Monuments de la monarchie française", dedicated to Louis XV, appeared from 1729 to 1733 (5 vols., folio, Paris). In it Montfaucon studies the history, as it is shown in the monuments, of each successive reign down to that of Henry IV. His reproductions are inexact, and the work remained incomplete. On 19 December, 1741, he read before the Academy of Inscriptions a plan for completing this work; two days later he passed away tranquilly, without any premonitory symptoms of illness. An indefatigable scholar, a bold thinker, an originator of scientific methods, he left after him a mighty generation of disciples to form the connecting link between the old Benedictine learning and modern scholarship.

LOUIS BRÉHIER.

Montfort, SIMON DE, Earl of Leicester, date of birth unknown, d. at Toulouse, 25 June, 1218. Simon (IV) de Montfort was descended from the lords of Montfort l'Amaury in Normandy, being the second son of Simon (III), and Amicia, daughter of Robert de Beaumont, third Earl of Leicester. Having succeeded his father as Baron de Montfort in 1181, in 1190 he married Alice de Montmorency, the daughter of Bouchard (III) de Montmorency. In 1199 while taking part in a tournament at Ecry-sur-Aisne in the province of Champagne he heard Fulk de Neuilly preaching the crusade, and in company with Count Thibaud de Champagne and many other nobles and knights he took the cross. Unfortunately, the crusade got out of control, and the French knights, instead of co-operating with the pope, decided on a campaign in Egypt, and on their arrival at Venice entered on a contract for transport across the Mediterranean. Being unable to fulfil the terms of the contract, they compounded by assisting the Venetians to capture Zara in Dalmatia. In vain the pope urged them to set out for the Holy Land. They preferred to march on Constantinople, though Simon de Montfort offered energetic opposition to this proposal. Notwithstanding his efforts, the expedition was undertaken and the pope's plans were defeated.

In 1204 or 1205 Simon succeeded to the Earldom of

Leicester and large estates in England, for on the death of the fourth Earl of Leicester in that year, his honour of Leicester devolved on his sister Alicia, Simon's mother; and as her husband, Simon (III), and her eldest son were already dead, the earldom devolved on Simon himself. But though he was recognized by King John as Earl of Leicester, he was never formally invested with the earldom, and in February, 1207, the king seized all his English estates on pretext of a debt due from him. Shortly afterwards they were restored, only to be confiscated again before the end of the year. Simon, content with the Norman estates he had inherited from the de Montforts and the de Beaumonts, remained in France, where in 1208 he was made captain-general of the French forces in the Crusade against the Albigenses. At first he declined this honour, but the pope's legate, Arnold, Abbot of Cîteaux, ordered him in the pope's name to accept it, and he obeyed.

Simon thus received control over the territory conquered from Raymond (VI) of Toulouse and by his

DEATH OF SIMON DE MONTFORT AT THE STORMING OF
TOULOUSE, 1218
Stone bas-relief in the cathedral of Carcassonne

military skill, fierce courage, and ruthlessness he swept the country. His success won for him the admiration of the English barons, and in 1210 King John received information that they were plotting to elect Simon King of England in his stead. Simon, however, concentrated his fierce energies on his task in Toulouse, and in 1213 he defeated Peter of Aragon at the battle of Muret. The Albigenses were now crushed, but Simon carried on the campaign as a war of conquest, being appointed by the Council of Montpellier lord over all the newly-acquired territory, as Count of Toulouse and Duke of Narbonne (1215). The pope confirmed this appointment, understanding that it would effectually complete the suppression of the heresy. It is ever to be deplored that Simon stained his many great qualities by treachery, harshness, and bad faith. His severity became cruelty, and he delivered over many towns to fire and pillage, thus involving many innocent people in the common ruin. This is the more to be regretted, as his intrepid zeal for the Catholic faith, the severe virtue of his private life, and his courage and skill in warfare marked him out as a great man.

Meanwhile the pope had been making efforts to secure for him the restitution of his English estates. The surrender of his lands by John was one of the conditions for reconciliation laid down by the pope in 1213; but it was not till July, 1215, that John reluctantly yielded the honour of Leicester into the hands of Simon's nephew, Ralph, Earl of Chester, "for the benefit of the said Simon". Simon's interest in Eng-

land was shown by his efforts to dissuade Louis of France from invading England in July, 1216, in which matter he was seconded, though fruitlessly, by the legate Gualo. Having at this time raised more troops in Paris, Simon returned to the south of France, where he occupied himself in waging war at Nîmes, until in 1217 a rebellion broke out in Provence, where Count Raymond's son re-entered Toulouse. Simon hastened to besiege the city, but was hampered by lack of troops. On 25 June, 1218, while he was at Mass he learned that the besieged had made a sortie. Refusing to leave the church before Mass was over, he arrived late at the scene of action only to be wounded mortally. He expired, commending his soul to God, and was buried in the Monastery of Haute-Bruyère. He left three sons, of whom Almeric the eldest ultimately inherited his French estates; the youngest was Simon de Montfort, who succeeded him as Earl of Leicester, and who was to play so great a part in English history.

EDWIN BURTON.

Montgolfier, JOSEPH-MICHEL, inventor; b. at Vidalon-lez-Annonay, Department of Ardèche, France, 26 August, 1740; d. at Balaruc-les-Bains, Department of Hérault, France, 26 June, 1810. His father was a prosperous paper-manufacturer, who brought up nine children, presenting to them an example of high virtue, honesty, economy, and piety. Joseph was educated at the local college in a very unsatisfactory manner. When he returned home he found in the manufacture of paper subjects of study more to his liking. He set up an independent establishment with his brother Augustine in order to exercise the inventive faculties that were held in check by his economical father. His numerous ideas and projects and his simplicity of character exposed him to financial losses, and eventually brought upon him an unjust temporary imprisonment.

He improved the manufacture of paper, invented a method of stereotyping, and constructed an air-pump for rarefying the air in the moulds. Numerous objects of everyday life occupied his inventive genius. His most important work, however, was in connexion with hydraulics and aeronautics. He interested his brother Etienne in these so-called chimerical projects. They invented the hydraulic ram, which uses the energy from a copious flow of water under a small head in order to force a small portion of that water to a considerable height. Observations on the behaviour of a sheet hung over a fire led them to attempt a number of experiments with balloons made of taffetas and filled with heated air. On 5 June, 1783, a successful exhibition took place before the Estates of Vivarais, assembled at Annonay. A globe, 110 feet in circumference and weighing about 500 pounds, was filled with air half as heavy as the atmosphere. This balloon rose to a height of 6600 feet and came down very gently at a distance of a mile and a half. This attempt naturally excited enormous interest throughout the civilized world. Joseph left to his brother the honour and duty of reporting to the Academy of Sciences at Paris and of repeating experiments at the expense of the Government. Balloons were constructed that carried with them a furnace for the purpose of keeping the air heated and therefore light, and two courageous physicists, Biot and Gay-Lussac made a successful ascent. At Lyons, Joseph and six others went up in a balloon 126 feet high and 102 feet in diameter. On 20 August, 1783, the brothers were placed by acclamation on the list of correspondents of the Academy, "as scientists to

whom we are indebted for a new art that will make an epoch in the history of human science". Etienne received the decoration of Saint-Michel for himself, and letters of nobility for his father. Joseph obtained a pension, and 40,000 livres for the construction of an experimental dirigible balloon. This he was unable to realize.

He was noted for extraordinary bodily strength and for courageous philanthropy. During the stormy days of the Revolution he offered and ensured protection and asylum to many proscribed persons, who

JOSEPH-MICHEL AND JACQUES-ETIENNE
MONTGOLFIER

were often not known to him even by name. "Siding with no faction, he submitted to the political laws unless they were in opposition to the laws of humanity, and awaited with confidence the return of order". His business having been ruined, he went to Paris, where the new Government welcomed and rewarded him. He was called to the consulting bureau of arts and manufactures, was named demon-

strator of the Conservatory of Arts and Trades, was received at the Institute, 1807, as the successor of Coulomb, and was made a Knight of the Legion of Honour.

Apart from a few memoirs in "Journal des Mines" and "Journal de l'Ecole polytechnique", he published very little, viz.: "Discours sur l'aérostat" (with his brother Etienne), Paris, 1783; "Voyageurs aériens" (with Etienne), Paris, 1784; "Mémoires sur la machine aérostatique", Paris, 1784; "Notes sur le bélier hydraulique", Paris, 1803.

WILLIAM FOX.

Months, SPECIAL DEVOTIONS FOR.—During the Middle Ages the public functions of the Church and the popular devotions of the people were intimately connected. The laity assisted at the daily psalmody, the sacrifice of the Mass, the numerous processions, and were quite familiar with the liturgy. Those few religious practices outside of official services, e. g. the Rosary (a substitute for the 150 Psalms) originated in the liturgy. Later, however, especially since the sixteenth century, popular devotion followed its own channels; unliturgical practices like the Stations of the Cross, the *Quarant' Ore*, various litanies and rosaries (*coronae*), prevailed everywhere; novenas and series of Sundays and week-days in honour of particular saints or mysteries were instituted. Entire months of the year were given over to special devotions. Following is a list of the more common devotions with the indulgences attached: (1) *January*, the Holy Name of Jesus (feast of the Holy Name, second Sunday after Epiphany); indulgences, one hundred days each day if the devotion is made privately, three hundred days each day, if the devotion be in a public church or chapel, plenary indulgence for daily assistance at the public functions, under the usual conditions (Leo XIII, "Brief", 21 Dec., 1901; "Acta S. Sedis", XXXIV, 425). (2) *March*, St. Joseph (feast, 19 March); in-

dulgences, three hundred days daily for those who privately or publicly perform some pious practice in honour of St. Joseph, during the month, a plenary indulgence on any day of the month under the usual conditions (Pius IX, "Rescript Congr. Indulg.", 27 April, 1865). This month of devotions may commence in February and be concluded 19 March (Pius IX, 18 July, 1877). March can be replaced by any other month in case of legitimate impediment (Raccolta, 404). The practice of a triduum before the feast of St. Joseph has been recommended by Leo XIII (Encycl. "Quamquam pluries", 15 August, 1889). (3) *May*, the Blessed Virgin Mary. The May devotion in its present form originated at Rome where Father Latomia of the Roman College of the Society of Jesus, to counteract infidelity and immorality among the students, made a vow at the end of the eighteenth century to devote the month of May to Mary. From Rome the practice spread to the other Jesuit colleges and thence to nearly every Catholic church of the Latin rite (Albers, "Bluethenkränze", IV, 531 sq.). This practice is the oldest instance of a devotion extending over an entire month. Indulgences, three hundred days each day, by assisting at a public function or performing the devotion in private, plenary indulgence on any day of the month or on one of the first eight days of June under the usual conditions (Pius VII, 21 March, 1815, for ten years; 18 June, 1822 in *perpetuum*).

(4) *June*, the Sacred Heart. This devotion, long privately practised, was approved by Pius IX, 8 May, 1873 (Rescript, auth., n. 409), and urgently recommended by Leo XIII in a letter addressed by the Cardinal Prefect S.R.C. to all the bishops, 21 July, 1899. Indulgences: (a) seven years and seven quarantines each day for performing the devotion publicly or privately; (b) if the devotion is practised daily in private, or if a person assists at least ten times at a public function, a plenary indulgence on any day in June or from 1-8 July (Decr. Urbis et orbis, 30 May, 1902); (c) the indulgence *toties quoties* on the thirtieth of June or the last Sunday of June (26 Jan., 1908) in those churches where the month of June is celebrated solemnly. Pius X (8 Aug., 1906) urged a daily sermon, or at least for eight days in the form of a mission (26 Jan., 1908); (d) to those priests, who preach the sermons at the solemn functions in June in honour of the Sacred Heart and to the rectors of the churches where these functions are held, the privilege of the Gregorian Altar on the thirtieth of June (Pius X, 8 Aug., 1906); (e) plenary indulgence for each Communion in June and to those who promote the solemn celebration of the month of June ("Acta Pontificia", IV, 388, 8 Aug., 1906). (5) *July*, the Precious Blood (feast of the Precious Blood, first Sunday of July). This devotion was propagated by Bl. Caspar Buffalo (d. at Rome, 28 Dec., 1837), founder of the Congregation of the Precious Blood of Jesus Christ. Indulgences, for the public devotion: seven years and seven quarantines each day; plenary indulgence on any day in July or 1-8 August, after having assisted eight times at a public function under the usual conditions; if the devotion be held privately three hundred days each day with plenary indulgence on 31 July, or 1-8 of August (Pius IX, 4 June, 1850). For this practice any other month or any period of thirty days during the year may be chosen (Raccolta, 178). (6) *September*, the Seven Dolours of the Blessed Virgin Mary (feast of the Seven Dolours, third Sunday in September); indulgences, three hundred days each day and the devotions may be performed in public or private; plenary indulgence on any day of September or 1-8 October under the usual conditions (Leo XIII, "Raccolta", 27 Jan., 1888, 232).

(7) *October*, the Holy Rosary (feast of the Holy Rosary, first Sunday in October). Leo XIII personally instituted this practice in an Encyclical (1 Sept., 1883) in which he admonished the faithful to

dedicate the month of October to the Queen of the Holy Rosary in order to obtain through her intercession the grace that God may console and defend His Church in her sufferings, and for nineteen years he published an encyclical on this subject. By the decree of the Congregation of Rites (20 Aug., 1885; 26 Aug., 1886; 2 Sept., 1887) he ordained that every year during the entire month of October, including the first and second of November, in every cathedral and parochial church, and in all other churches and chapels which are dedicated to the Blessed Virgin Mary, five decades of the Rosary and the Litany of Loreto are to be recited, in the morning during Mass or in the afternoon whilst the Blessed Sacrament is exposed, and by the encyclical letter of 15 August, 1889, a prayer in honour of St. Joseph was added. Indulgences (S. C. Indulg., 23 July, 1898): (a) seven years and seven quarantines every day for the public or private recitation of five decades; (b) plenary indulgence on the feast of the Holy Rosary or during the octave for those who during the entire octave recite daily five decades and fulfil the other usual conditions; (c) plenary indulgence on any other day of the month for those who, after the octave of the feast, recite for at least ten days five decades ("Raccolta", 354; Albers, "Bluethenkränze", III, 730 sq.). Also in October there are devotions in honour of St. Francis of Assisi (feast, 4 Oct.); indulgences, three hundred days each day by assisting at the public devotions in honour of St. Francis in a church or public oratory; plenary indulgence on the feast of St. Francis or during the octave (11 June, 1883, for ten years; 29 Feb., 1904, in *perpetuum*; "Acta Minorum", 1904, 106). Any other month may be selected instead of October. (8) November, the Holy Souls in Purgatory (2 Nov., Commem. of all the Faithful Departed); indulgences, seven years and seven quarantines each day; plenary indulgence on any day of month under the usual conditions (Leo XIII, 17 Jan., 1888). Popular devotion has also selected other mysteries and has dedicated January to the Holy Childhood and the hidden life of Jesus according to the Gospel of the first Sunday after Epiphany; March, to the Holy Family, on account of the feast of St. Joseph and the Annunciation (25 March); August, to the Maternal Heart of Mary (feast on the Sunday after twenty-second of August); October, to the Holy Angels (feast, 2 Oct.); December, to the Immaculate Conception (feast, 8 Dec.) or to the Holy Child in the stable at Bethlehem (25 Dec.). These practices, however, are not formally approved by the Church, nor enriched with indulgences.

These devotions, of course, vary with conditions in different countries. Though there is a wide variety, constantly changing, the prayers more commonly used are the litanies of the Holy Name, Sacred Heart, St. Joseph, the Blessed Virgin, the indulgenced prayers of the *Raccolta*, the rosary of the Dominicans. For the May and June devotions, a short sermon or instruction usually follows, with Benediction of the Blessed Sacrament concluding the services.

FREDERICK G. HOLWECK.

Monti di Pietà. See MONTES PIETATIS.

Montmagny, CHARLES HUAULT DE, second French Governor of Canada, b. in France towards the end of the sixteenth century, of Charles Huault and Antoinette du Drac; d. in the Antilles after 1651. Educated by the Jesuits, he joined the Order of Malta in 1622, and fought against the Moslems and the corsairs of Africa. Appointed to replace Champlain before the announcement of the latter's death, he reached Quebec on 15 June, 1636. He rebuilt Fort St-Louis, and traced the plan of the city, giving to its four primitive streets the names they still bear in hon-

our of King Louis, of the queen-mother, and the patron saints of Paris, and of his order. With him had come several noble families destined to contribute to the country's development and renown. During his administration were built the Jesuit College (founded 1635), the Ursuline monastery, and Hôtel-Dieu (1639). Isle Jésus, lying parallel to Montreal, was first called by the Jesuit Lejeune *Isle Montmagny* in his honour. From the outset, he was ardent for the conversion of the aborigines. In 1636 was begun the *reduction* of Sillery, where Montmagny strove to have the Indians instructed. When Maisonneuve, in the autumn of 1641, came with forty colonists to found Montreal, Montmagny kept them for the winter, and in the spring personally escorted them to their destination. He built Fort Richelieu (now Sorel) at the mouth of the river of the same name, where he victoriously repulsed the onslaught of 700 Iroquois. At the expiration of a third term of office, he was replaced by Daillebout (1648), and departed sincerely regretted by all and leaving behind him an undying reputation for prudence and wisdom. He had efficaciously aided in the progress of the colony by the concession of twenty large domains to the enterprising heads of as many noble families. Shortly after his return to France, he was sent to St. Christopher in the Antilles, a possession of his order, where he died. He lies buried in the church of Basseterre. Parkman accuses him of being a tool in the hands of the Jesuits, but his refusal to develop actively their missions in the region of the Great Lakes, to the detriment of the interests of Quebec, gives ample proof of his independent government. Awed by his imposing stature and dignity, the aborigines called him *Ononkio* or "High Mountain" (a translation of his name, Montmagny, *Mons magnus*). He was withal mild, courteous, and affectionate, winning the attachment of both Indians and whites. He was charitable and sincerely pious, free alike from bigotry and dissimulation.

LIONEL LINDSAT.

Montmirail (MONTE-MIRABILI), JOHN DE, son of Andrew, Lord of Montmirail and Ferté-Gaucher, and Hildarde d'Oisy, b. in 1165; d. 29 Sept., 1217. He was trained in piety by his mother, and well instructed in the secular sciences. Whilst young he embraced a military career, and was presented at the Royal Court, where he formed a lasting friendship with Philip Augustus, later King of France. The dissipations of court life led him to neglect the training of his youth; even his marriage with a most estimable lady, Helvide de Dampierre, failed to effect a change for the better. However, in his thirtieth year he met Jobert, Prior of St-Etienne de Montmirail, whose words of counsel proved sufficient to cause his conversion; and he turned to God with generosity and fidelity. He built an hospital for the sick of all kinds, but the objects of his predilection were the lepers, and those hopelessly afflicted. He loved the poor as brothers, and provided for them. He was severe on himself, wearing a coarse hair-shirt, passing frequently entire nights in prayer. Not satisfied with a life of holiness in the world, nor with that of a recluse, which he tried for a while, he entered the Cistercian monastery of Longpont, after having distributed amongst the poor all his possessions not needed by his wife and family; and he gave himself wholly to prayer and penance, so much so that he had to be reprimanded for going to excess. He had to bear every kind of insult from his former friends; even members of his own family abused him for having abandoned honour and wealth for poverty and subjection. But none of these things could weaken the fervor with which he sought perfection. Innumerable miracles were wrought at his

tomb, and attract pilgrims even to the present day. Leo XIII granted a special office in his honour for the Diocese of Soissons.

EDMOND M. OBRECHT.

Montmorency, ANNE, FIRST DUKE OF, b. at Chantilly, 15 March, 1492; d. at Paris, 12 November, 1567. He belonged to that family of Montmorency whose members from 1327 held the title of first Barons of France. Educated with the future Francis I, appointed marshal in 1522 as a reward for his services in the capture of Novara, his successful efforts to obtain the freedom of Francis I, taken prisoner at Pavia

ANNE DE MONTMORENCY

(1525), assured him of his favour. He immediately became grand master of the royal house and Governor of Languedoc. To his cleverness was due the treaty of Cambrai (1529), by which the two sons of Francis I, retained as hostages by Charles V since 1526, were released; in 1530 his power became unlimited. He inaugurated a new policy; his foremost aim was that France should re-

gain her strength and live at peace with the emperor and the pope. He arranged the interview at Marseille (1533) between Francis I and Clement VII in which the marriage of Catherine de Médicis with Prince Henry, the second son of the king, was arranged. The continued friendship of Francis I with certain German princes and his ambitions in Italy which were opposed to those of the emperor, made an understanding with Charles V very difficult. With the outbreak of war in 1538, Montmorency adopted the tactics of never giving battle; he laid waste Provence so that when the imperial forces invaded that province they were obliged by famine to retreat. The articles of agreement which Charles V and Francis I signed (July, 1538), were the work of Montmorency, who declared afterwards that "the interests of both might be considered identical". The journey of Charles V to France (January, 1540) led Francis I to believe that the emperor was about to cede Milan to him; but he was soon undeceived. Montmorency, constable since 1538, was disgraced (June, 1541) through the influence of the favourite, Mme. d'Etampes. In 1547 Henry II, hardly become king, recalled Montmorency and made him really his favourite: Charles V made advances to the constable who in 1551 became a duke and a peer. He soon found himself opposed to the Guises. In spite of the military glory of occupying Metz (April, 1552), his one desire was to secure peace between France and the Empire, and in 1555 he made a vain effort to bring this about through the mediation of Mary Tudor. The war was prolonged: at Saint-Quentin (August, 1557) Montmorency, defeated, was taken prisoner; it was in prison that he commenced the negotiations which terminated in the treaty of Cateau-Cambrésis (April, 1559) by which France obtained Metz, Toul, Verdun, and Calais but renounced any claim to Italy, Savoy, Brescia, and Bugey. Montmorency, in retirement during the reign of Francis II, under the regency of Catherine

de Médicis found his position very complicated. The uncle of Coligny and an enemy of the Guises, it seemed as if he ought to have sustained that policy of toleration towards the Protestants at first inaugurated by the queen-regent; but his Catholic convictions led him with the Duke of Guise and the Maréchal de Saint-André to form a triumvirate (6 August, 1561) to save Catholicism. Wounded and captured by the Huguenots at the battle of Dreux (19 December, 1562) after the peace, he joined with the Protestant Condé in the effort to take Havre from the English (30 July, 1563). In the second war of religion he again opposed Condé; and it was a follower of Condé who mortally wounded him at the battle of Saint-Denis (10 November, 1567).

Of indomitable courage, his cruelty towards conquered soldiers was shocking. He preferred defensive to offensive warfare. Although definitively the first of the great French lords, he worked towards the development of royal absolutism; under Francis I and Henry II he showed himself a faithful defender of the royal authority and suspected the Guises of being its enemies. A conservative in religion, he could not understand the intrigues of Catherine de Médicis and throughout the religious wars he fought vigorously for Catholicism under the same banner as the Guises whom he detested. An enlightened and generous protector of the writers and artists of the Renaissance, in his castle at Chantilly finished in 1530, he gathered together a numismatic collection which later, after the condemnation of the Duke of Montmorency, the descendant of Anne, Louis XIII gave to his brother, Gaston d'Orléans, and which was the beginning of the Cabinet des Médailles of the national library of Paris. The library of Chantilly as formed by Anne contained wonderful copies, luxuriously edited, of the first French translations of Latin authors. The Institut de France in 1900 bought "Les Heures du connétable" to add them again to this library from which they had been taken; they form one of the most admirable illuminated manuscripts of the sixteenth century, and we find in them a very beautiful prayer to Saint Christopher, composed by Anne himself during his years of disgrace; this manuscript was completed in 1549. During his disgrace Anne built the chateau of Ecouen where Jean Goujon, Rosso, and Bernard Palissy worked, and where were to be found two slaves in marble of Michael Angelo.

GEORGES GOYAU.

Montor, ALEXIS-FRANÇOIS ARTAUD DE, diplomat and historian, b. at Paris, 31 July, 1772; d. at Paris, 12 Nov., 1849. An émigré during the Revolution, he was entrusted by the royal princes with missions to the Holy See and served during the campaign of Champagne in Condé's army. Bonaparte made him secretary of the French Legation at Rome; Artaud occupied this post under Cacaault, left Rome for a short time when Cardinal Fesch, Cacaault's successor, brought Chateaubriand with him, and returned to Rome in the same capacity after Chateaubriand had resigned. Appointed chargé d'affaires of France to Florence in 1805 he was recalled in 1807 because he was wrongfully suspected of having employed his power in behalf of the Queen of Etruria whose possessions Napoleon wished to give to Elisa Bonaparte. Made censor during the last years of the empire, he became under the Restoration secretary of the embassy at Vienna, then again at Rome. In 1830 he retired upon a pension to devote himself exclusively to literary works. Besides

his translation of Dante's "Divina Commedia" (1811-1813) which was rated very highly, Artaud de Montor left important historical works: "Machiavel, son génie et ses erreurs" (Paris, 1833); the volume on the history of Italy in the collection of the "Univers pittoresque" (Paris, 1834); "Histoire du pape Pie VII" (2 vols., Paris, 1836); "Histoire de Dante Alighieri" (Paris, 1841); "Histoire des souverains pontifes romains" (8 vols., Paris, 1842); "Histoire de Léon XII" (Paris, 1843); "Histoire de Pie VIII" (Paris, 1843). Shortly before his death, he published in 1849 when Pius IX was banished to Gaeta, a work entitled: "La papauté et les émeutes romaines". His recollections and his observations as a diplomat form the valuable feature of Artaud de Montor's historical works. He was a member of the Académie des Inscriptions et belles lettres from 17 Dec., 1830.

QUÉRAUD, *La littérature française contemporaine*, I (Paris, 1840), 78-82; LORENZ, *Catalogue Général de la Librairie Française*, I (Paris, 1892), 79. GEORGES GOYAU.

Montpellier, DIOCESE OF (MONTIS PESSULANI), comprises the department of Hérault, and is a suffragan of Avignon. When the Concordat of 1802 re-established this diocese, it accorded to it also the department of Tarn, which was detached from it in 1822 by the creation of the Archdiocese of Albi; and from 1802 to 1822, Montpellier was a suffragan of Toulouse. A Brief of 16 June, 1877, authorized the bishops of Montpellier to call themselves bishops of Montpellier, Béziers, Agde, Lodève, and Saint-Pons, in memory of the different dioceses united in the present Diocese of Montpellier.

(A) Diocese of Montpellier.—Maguelonne was the original diocese. Local traditions, recorded in 1583 by Abbé Gariel in his "Histoire des évêques de Maguelonne", affirm that St. Simon the Leper, having landed at the mouth of the Rhône with St. Lazarus and his sisters, was the earliest apostle of Maguelonne. Gariel invokes in favour of this tradition a certain manuscript brought from Byzantium. But the chronicler, Bishop Arnaud de Verdale (1339-1352) was ignorant of this alleged Apostolic origin of Maguelonne. It is certain that the tombstone of a Christian woman named Vera was found at Maguelonne; Le Blant assigns it to the fourth century. The first historically known Bishop of Maguelonne was Boëtius, who assisted at the Council of Narbonne in 589. Maguelonne was completely destroyed in the course of the wars between Charles Martel and the Saracens. The diocese was then transferred to Substantion, but Bishop Arnaud (1030-1060) brought it back to Maguelonne which he rebuilt. Near Maguelonne had grown up by degrees the two villages of Montpellier and Montpellieret. According to legend, they were in the tenth century the property of the two sisters of St. Fulcran, Bishop of Lodève. About 975 they gave them to Ricuin, Bishop of Maguelonne. It is certain that about 990 Ricuin possessed these two villages; he kept Montpellieret and gave Montpellier in fief to the family of the Guillemes. In 1085 Pierre, Count of Substantion and Melgueil, became a vassal of the Holy See for this countship, and relinquished the right of nomination to the Diocese of Maguelonne. Urban II charged the Bishop of Maguelonne to exercise the papal suzerainty, and he spent five days in this town when he came to France to preach the Crusade. In 1215 Innocent III gave the countship of Melgueil in fief to the Bishop of Maguelonne, who thus became a temporal lord.

From that time the Bishop of Maguelonne had the right of coinage. Clement IV reproached (1266) Bishop Bérenger de Frédol with causing to be struck in his diocese a coin called "Miliarensis", on which was read the name of Mahomet; in fact at that date the bishop, as well as the King of Aragon and the Count of Toulouse, authorized the coinage of Arabic money, not intended for circulation in Maguelonne,

X.—35

but to be sold for exportation to the merchants of the Mediterranean.

In July, 1204, Montpellier passed into the hands of Peter of Aragon, son-in-law of the last of the Guillemes; Jaime I, son of Peter II, united the city to the Kingdom of Majorca. In 1282 the King of Majorca paid homage to the King of France for Maguelonne. Bérenger de Frédol, Bishop of Maguelonne, ceded Montpellier to Philip IV (1292). Jaime III of Majorca sold Montpellier to Philip VI (1349); and the city, save for the period from 1365 to 1382, was henceforth French. Urban V (Guillaume de Grimoard) had studied theology and canon law at Montpellier and was crowned pope by Cardinal Ardouin Aubert, nephew of Innocent VI, and Bishop of Maguelonne from 1352 to 1354; hence the attachment of Pope Urban for this diocese which he favoured greatly. In

CATHEDRAL, MONTPELLIER

1364 he caused the foundation at Montpellier, of a Benedictine monastery under the patronage of St. Germain, and came himself to Montpellier to see the new church (9 Jan.-8 March, 1367). He caused the city to be surrounded by ramparts, in order that the scholars might work there in safety; and finally he caused a large canal to be begun by which Montpellier might communicate with the sea. At the request of King Francis I, who pleaded the epidemics and the ravages of the pirates which constantly threatened Maguelonne, Paul III transferred the see to Montpellier (27 March, 1536). Montpellier, into which Calvinism was introduced in Feb., 1560, by the pastor, Guillaume Mauget, was much troubled by the wars of religion. Under Henry III a sort of Calvinistic republic was installed there. The city was reconquered by Louis XIII (October, 1622).

Among the 54 bishops of Maguelonne, and the 18 bishops of Montpellier, may be mentioned: Blessed Louis Aleman (1418-23), later Bishop of Arles; Guillaume Pellicier (1527-68), whom Francis I sent as an ambassador to Venice, and whose learning as a humanist and naturalist made him after Scévole de Sainte-Marthe, "the most learned man of his century"; the preacher Pierre Fenouillet (1608-52); François de Bosquet (1657-76), whose historical labours were

very useful to the celebrated Baluze; the bibliophile Colbert de Croissy (1696-1738), who induced the Oratorian Pouget to compose in 1702 the famous "Catechism of Montpellier", condemned by the Holy See in 1712 and 1721 for Jansenistic tendencies; Fournier (1806-34), who in 1801 was confined for a time in the madhouse at Bicêtre at the command of Napoleon, for a sermon against the Révolution. Among the numerous councils and synods held at Montpellier, the following merit mention: the council of 1162 in which Alexander III excommunicated the antipope, Victor; the provincial synod of 1195, which was occupied with the Saracens of Spain and the Albigenes; the council of 1215, which was presided over by Peter of Benevento, legate of the Holy See and passed important canons concerning discipline, and declared also that subject to the approval of the pope, Toulouse and all the other towns taken from the Albigenes should be given to Simon de Montfort; the council of 1224, which rejected the request of Raymond, Count of Toulouse, who promised to protect the Catholic Faith and demanded that Amaury de Montfort withdraw his claims to the countship of Toulouse; the council of 1258, which by permitting the seneschal of Beaucaire to arrest ecclesiastics taken in the act of crime, in order to hand them over to the bishop, made way for royal magistrates to exercise a certain power within the limits of ecclesiastical jurisdiction and thus inaugurated the movement as a result of which, under the name of "privileged cases", a certain number of offences committed by ecclesiastics became amenable to lay justice.

(B) Diocese of Agde.—Local traditions designate as the first Bishop of Agde, St. Venustus, said to have suffered martyrdom during the legendary invasion of the barbarian, Chrocus, about 407 or 408. The first historically known Bishop of Agde is Sophronius who assisted at the Council of Agde in 506.

(C) Diocese of Béziers.—Local traditions assign as the first Bishop of Béziers the Egyptian saint, Aphrodisius, said to have sheltered the Holy Family at Heropolis and to have become a disciple of Christ, also to have accompanied Sergius Paulus to Gaul when the latter went thither to found the Church of Narbonne, and to have died a martyr at Béziers. The first historically known bishop is Paulinus mentioned in 418; St. Guiraud was Bishop of Béziers from 1121 to 1123; St. Dominic refused the See of Béziers to devote himself to the crusade against the Albigenes.

Among the fifteen synods held at Béziers must be mentioned that of 356 held by Saturninus of Arles, Arian archbishop, against St. Hilary; those of 1233, 1246, and 1255 against the Albigenes.

Local traditions made St. Aphrodisius arrive at Béziers mounted on a camel. Hence the custom of leading a camel in the procession at Béziers on the feast of the saint; this lasted until the Revolution.

(D) Diocese of Lodève.—Since the fourteenth century local tradition has made St. Florus first bishop of Lodève, and relates that as a disciple of St. Peter, he afterwards evangelized Haute-Auvergne and died in the present village of St-Flour. It is historically certain that bishops of Lodève have existed since 421; the first historically known bishop is Maternus, who was present at the Council of Agde in 506. Among the bishops of Lodève are: St. George (863-884), previously a Benedictine monk; St. Fulcran (949-1006), who in 975 dedicated the cathedral of St. Genès and founded the Abbey of St. Sauveur; the Dominican Bernard Guidonis (1324-1331); Cardinal Guillaume d'Estouteville (1450-1453), who played an important part as papal legate, also in the rehabilitation of Joan of Arc; the brothers Guillaume Brignonnet (1489-1516) and Denis Brignonnet (1516-1520).

(E) Diocese of Saint-Pons-de-Thomières.—The Abbey of St-Pons was founded in 936 by Raymond, Count of Toulouse, who brought thither the monks of

St. Géraud d'Aurillac. By a Bull of 18 Feb., 1318, John XXII raised the abbey to a see.

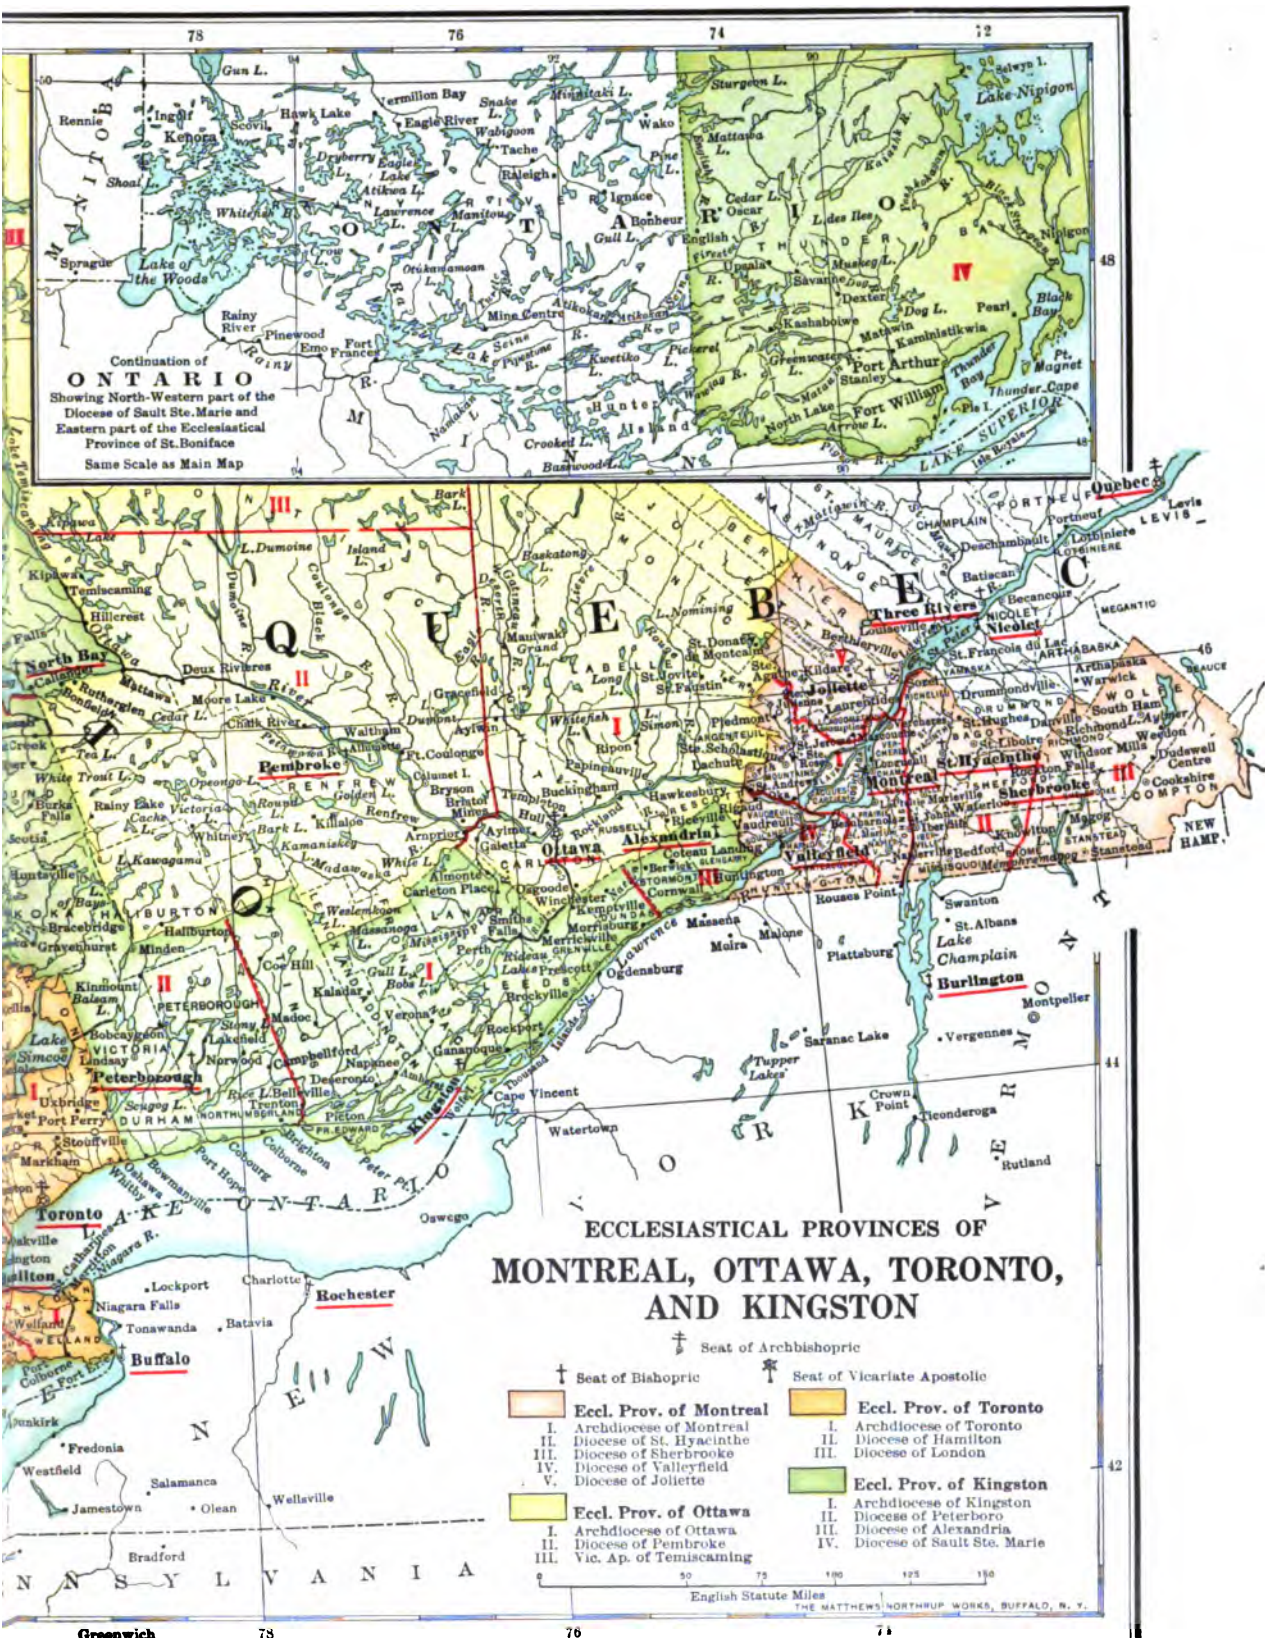

Special honour is paid in the present Diocese of Montpellier to St. Pons (Pontius) de Cimiez, martyr under Valerian, patron of St-Pons-de-Thomières; Sts. Tiberius and Modestus and St. Florence, martyrs at Agde under Diocletian; St. Severus, Abbot of St. André, at Agde (d. about 500); St. Maxentius, a native of Agde and founder of the Abbey of St-Maixent, in Poitou (447-515); St. Benedict of Aniane, and his disciple and first historian, Saint Ardo Smaragdus (d. in 843); St. Guillem, Duke of Aquitaine, who in 804, founded near Lodève, on the advice of St. Benedict of Aniane, the monastery of Gellone (later St-Guillem du Désert), died there in 812, and under the name of "Guillaume au Court Nez" became the hero of a celebrated epic chanson; St. Etienne, Bishop of Apt (975-1046), born at Agde; Blessed Guillaume VI, Lord of Montpellier from 1121 to 1149 and who died a Cistercian at Grandselve; Bl. Peter of Castelnau, Archdeacon of Maguelonne, inquisitor (d. in 1208); St. Gérard (or Géri), Lord of Lunel (end of thirteenth century); the celebrated pilgrim, St. Roch, who was born at Montpellier about the end of the thirteenth century, saved several cities of Italy from the pest, and returned to Montpellier to live as a hermit, where he died in 1325. The Benedictine Abbey of Aniane (see BENEDICT OF ANIANE) was in the ninth century a centre of monastic reform. The Benedictine Abbey of Valmagne was founded in 1138 by Raymond of Trencavel, Viscount of Béziers. As early as 1180 the Hospital of the Holy Ghost at Montpellier received exposed or abandoned children.

The chief pilgrimages of the diocese are: Notre Dame de l'Ermitage at St-Guillem du Désert (fourteenth century); Notre Dame de Grâce at Gignac, on the site of a sanctuary built by St. Flour, first Bishop of Lodève; Notre Dame de Grau near Agde, on the site of an oratory built in 456 by St. Severus; Notre Dame de Mougères at Mougères (fifteenth century); Notre Dame de Montaigu at Ceyras, a pilgrimage founded by the Franciscans in the first half of the seventeenth century; Notre Dame de Roubignac (dating from the tenth century); Notre Dame du Suc at Brissac, established by the Benedictines; Notre Dame de Trédos, a pilgrimage already in existence in 1612; Notre Dame des Tables at Montpellier, dating from the ninth century, and particularly developed after miracles in 1189. The Church of Notre Dame des Tables disappeared after the Revolution; but the cult transferred to the chapel of the Jesuits is still in vogue, and in 1889, Mgr de Cabrières crowned the statue in the name of the pope. Before the application of the Law of 1901 there were in the diocese, Carthusians, Jesuits, Franciscans, Lazarists, Missionaries of la Salette, Carmelites, Salesians of Dom Bosco, and various orders of teaching brothers. Congregations of women native to the diocese are: The Augustinian Sisters of Charity of Our Lady, hospitaliers, founded at Béziers in 1646; Sisters of Christian Doctrine, founded in 1853 (mother-house at Ceilhes); Dominican religious founded in 1855 (mother-house at Cette); the Nursing Sisters of Notre Dame auxilia-trice, founded 1845 by the Abbé Soulas (mother-house at Montpellier). At the beginning of the twentieth century the congregations directed in the diocese 2 crèches, 53 infant schools, 1 school for the blind, 1 school for deaf mutes, 8 orphanages for boys, 15 orphanages for girls, 1 institution of preservation, 1 establishment for correction, 1 institution of rehabilitation, 8 houses of mercy, 15 establishments for nursing the sick in their homes, 1 hospital for the insane, 6 hospitals or infirmaries.

In 1908 the diocese numbered 482,779 inhabitants, 43 parishes, 310 chapels, 27 vicariates.

Gallia Christiana, VI (nova, 1739), 223-256, 293-383, 525-579, 664-706, 727-831, 1123; and *instrumenta*, 73-102, 127-166, 263-

GEORGES GOYAU.

UNIVERSITY OF MONTPELLIER.—It is not known exactly at what date the schools of literature were founded which developed into the Montpellier faculty of arts; it may be that they were a direct continuation of the Gallo-Roman schools. The school of law was founded by Placentinus, a doctor from Bologna, who came to Montpellier in 1160, taught there during two different periods, and died there in 1192. The school of medicine was founded perhaps by a graduate of the Spanish medical schools; it is certain that, as early as 1137, there were excellent physicians at Montpellier. The statutes given in 1220 by Cardinal Conrad, legate of Honorius III, which were completed in 1240 by Pierre de Conques, placed this school under the direction of the Bishop of Maguelonne. Nicholas IV issued a Bull in 1289, combining all the schools into a university, which was placed under the direction of the bishop, but which in fact enjoyed a large measure of autonomy. Theology was at first taught in the convents, in which St. Anthony of Padua, Raymond Lullus, and the Dominican Bernard de la Treille lectured. Two letters of King John prove that a faculty of theology existed at Montpellier independently of the convents, in January, 1350. By a Bull of 17 December, 1421, Martin V granted canonical institution to this faculty and united it closely with the faculty of law.

In the sixteenth century the faculty of theology disappeared for a time, when Calvinism, in the reign of Henry II, held complete possession of the city. It resumed its functions after Louis XIII had re-established the royal power at Montpellier in 1622; but the rivalries of Dominicans and Jesuits interfered seriously with the prosperity of the faculty, which disappeared at the Revolution. The faculty numbered among its illustrious pupils of law Petrarch, who spent four years at Montpellier, and among its lecturers Guillaume de Nogaret, chancellor to Philip the Fair, Guillaume de Grimoard, afterwards pope under the name of Urban V, and Pedro de Luna, antipope as Benedict XIII. But after the fifteenth century this faculty fell into decay, as did also the faculty of arts, although for a time, under Henry IV, the latter faculty had among its lecturers Casaubon. The Montpellier school of medicine owed its success to the ruling of the Guilhems, lords of the town, by which any licensed physician might lecture there; there was no fixed limit to the number of teachers, lectures were multiplied, and there was a great wealth of teaching. Rabelais took his medical degrees at Montpellier. It was in this school that the biological theory of vitalism, elaborated by Barthez (1734-1806), had its origin. The French Revolution did not interrupt the existence of the faculty of medicine. The faculties of science and of letters were re-established in 1810; that of law in 1880. It was on the occasion of the sixteenth centenary of the university, celebrated in 1889, that the Government of France announced its intention—which has

since been realized—of reorganizing the provincial universities in France.

GEORGES GOYAU.

Montreal, ARCHDIOCESE OF, Metropolitan of the ecclesiastical Province of Montreal. Suffragans: the Dioceses of Saint-Hyacinthe, Sherbrooke, Valleyfield, and Joliette. Catholic population, 470,000; clergy, 720, of whom 395 are secular priests. Protestant population, 80,000, composed of different sects. The diocese, separated from Quebec by Gregory XVI (1836), has a maximum length of sixty and breadth of fifty-two miles. (See the official reports of His Grace the Archbishop to the Holy See, in the Archives of Montreal.)

The present article will be divided into: I. History; II. Present Conditions. Division I will be subdivided by periods: A. Before the Cession (1763); B. From the Cession to the Formation of the Diocese (1836); C. From 1836 to the present time (1910), in the last subdivision including an account of the Eucharistic Congress of 1910.

I. HISTORY.—A. *Before the Cession*.—On his second voyage (1535), Jacques Cartier, the discoverer of Canada, after stopping at Stadaconè (Quebec), went up the St. Lawrence to the savage village of Hochelaga, now Montreal. It was Cartier, who bestowed the beautiful and well deserved name of *Mont Royal* on the mountain that overhangs the present city. In 1608 Quebec was founded by Samuel de Champlain. While, in Canada, the youthful colony was endeavouring to live under the rather weak, because too selfish and mercantile, government of the Compagnie des Cent-Associés, the Compagnie de Notre-Dame-de-Montréal was being formed in France. Two men of God, M. Olier, of Saint-Sulpice, and M. de la Dauversière, were the life of this Compagnie de Montréal. They offered themselves without imposing any burden on the king, the clergy, or the people, having as their sole aim, the glory of God and the establishment of religion in New France. This association having addressed itself to M. Chomodey de Maisonneuve, found in him one who would carry out its wishes faithfully. The island of Montreal was purchased from the Compagnie des Cent-Associés, for purposes of colonization (7 August, 1640). On 18 May, 1642, M. de Maisonneuve arrived at the foot of Mount Royal, and landed with Mlle Jeanne Mance, the future foundress of the Hôtel-Dieu. Ville-Marie, as he first named Montreal, was then founded. (See CANADA.) For thirty years an heroic struggle had to be carried on against the Iroquois. In 1653 there arrived Marguerite Bourgeoys, who a little later established the Sisters of the Congregation. In 1657 the first Sulpicians, sent by M. Olier on his death-bed, settled under the direction of M. de Queylus. From that time the spiritual wants of Montreal have been entrusted mainly to the Fathers of Saint-Sulpice (see SAINT-SULPICE, CONGREGATION OF). It was at Montreal that Dollard formed his famous battalion in 1660. There also, Lemoyne and, before him, Lambert Closse, after Maisonneuve, had won great distinction.

M. de Queylus, the Sulpician, had come to Canada as Vicar-General of Rouen (1657). Rightly or wrongly, the Archbishop of Rouen believed that Canada was subject to him in spiritual matters, as the missionaries had gone thither from his diocese; neither the pope nor the king had raised any objection. Mgr de Laval arrived at Quebec in 1659. M. de Queylus, not having been informed directly, either by the Court or by the Holy See, of the nomination of Laval by Alexander VII, hesitated a moment before

yielding up the spiritual rights which he believed to be his (see LAVAL, SAINT-SULPICE). On 28 October, 1678, Mgr de Laval erected canonically the parish of Notre-Dame at Montreal, which was naturally confided to the Sulpicians. From that time to the cession, the successive curés were MM. François Dollier de Casson (30 Oct., 1678); François Vachon de Bellemont (28 Sept., 1701); Louis Normant (25 May, 1732); Etienne Montgolfier (21 June, 1759). The third successor of Mgr de Laval, Mgr Dosquet, from 1725 till 1739 Coadjutor, and later Bishop, of Quebec, was an old Sulpician from Montreal. In 1682, the Recollects were called to Montreal. From the time of their arrival at Quebec in 1615, these religious had been travelling through the country, and one of their number, Father Viel, had perished, with his disciple Ahuntsic, in the Sault-au-Récollet, near Montreal, both victims of the treachery of a Huron.

The Jesuit missionaries constantly journeying through these regions, frequently passed by Montreal in these early days. It was in 1669 that the Prairie

NOTRE-DAME DE LOURDES, MONTREAL

de la Magdeleine was established south of Montreal. This Jesuit Mission was transferred later to Sault-Saint-Louis, now Caughnawaga. The house, and the desk at which the celebrated Père Charlevoix wrote his "Relations", are still to be seen there. It was there, too, that the saintly Iroquois, Catherine Tegakwitha, lived. The Iroquois mission of Caughnawaga has lately been again taken under the care of the Jesuits. Mlle Mance had founded the Hôtel-Dieu, on her arrival, in 1642. In 1658 the Venerable Marguerite Bourgeoys established the Sisters of the Congregation, for the instruction of young girls. Then, in 1738, Venerable Marguerite Dufrost de la Jemmerais (the widow d'Youville) laid the foundations of the Institute of the Grey Sisters. The superiors of Saint-Sulpice, in addition to being curés of Notre-Dame, were also vicars-general of the Bishop of Quebec. After the victory of Wolfe over Montcalm on the plains of Abraham and the capitulation of Quebec (1760), Mgr de Pontbriant, the last bishop of the French period, withdrew to the Sulpicians at Montreal.

B. *From the Cession to the Formation of the Diocese (1836).*—Montreal remained a part of the Diocese of Quebec until 1836. The curés of Notre-Dame during this period were after M. Montgolfier, MM. Jean Brassier (30 August, 1791); Jean-Auguste Roux (24 Oct., 1798); Joseph-Vincent Quiblier (12 April, 1831). The Treaty of Paris (1763) provided that the Canadians should enjoy "the free exercise of their religion, as far as is permissible under the laws of Great Britain". A great struggle followed. The Sulpicians of Montreal, as well as the Recollects and the Jesuits, were forbidden to receive any additions to their ranks. They had numbered 30 in 1763, but in

1793 there remained only two, who were septuagenarians. The British Government, however, at that time allowed the French priests who were driven out by the Revolution to settle in Canada, and of the thirty-four who came twelve were Sulpicians. In 1767 the College of Montreal was founded by the Sulpician, M. Curatteau de la Blaiserie. In 1765, the Hôtel-Dieu, and in 1769 the establishment of the Sisters of the Congregation, which had been burnt, arose from their ruins, thanks to Saint-Sulpice. In 1801, Mgr Plessis (b. at Montreal in 1763) was consecrated at Quebec. This was the great bishop (1801–1815) who fought so ably and so resolutely for religious liberty. The clergy of Montreal supported him. Mgr Plessis, having asked for auxiliaries, obtained, among others Mgr Provencher for the West and Mgr Lartigue, a Sulpician, for Montreal. The latter was consecrated Bishop of Telmessus in 1820. In 1809 the College of St. Hyacinthe was founded by M. Girouard; in 1825 the College of Saint-Thérèse, by M. Ducharme; in 1832, the College of the Assumption, by M. François Labelle. This was the answer given to the English Protestants, who, with their Institution Royale, wished to monopolize education in all its branches. In 1824 the *fabriques* (administrative councils in charge of church revenues) were authorized to acquire and hold property for the support of the schools. In 1838 normal schools were established by the help of the clergy. In 1832, and again in 1834, a cholera epidemic afforded opportunities for the display of heroic zeal. In 1836 the Society for the Propagation of the Faith was established at Montreal, on the model of the society founded at Lyons in 1822, with which it became affiliated in 1843, but from which it separated in 1876. Mgr Plessis was succeeded in the See of Quebec by Mgr Panet, in 1825, and Mgr Signay (Sinai) followed in 1832. Finally, on 13 February, 1836, Montreal was erected into a diocese by Pope Gregory XVI.

C. *From 1836 to the Present Time (1910).*—This was a disturbed, but very fruitful and prosperous period. After the unfortunate events of 1837–38 (when several Montreal villages, on the Richelieu and at Deux Montagnes, inspired by a noble-hearted generosity rather than by prudence, rose up in arms against the encroachments of British bureaucracy) there followed the period called the Union of the Two Canadas (1840–67). Parliamentary institutions dependent on the people were established by the efforts of Lafontaine and Cartier. The Confederation was established in 1867. (See CANADA). During this period the bishops and archbishops of Montreal were: Mgr Lartigue, consecrated in 1821, titular in 1836, d. 1840; Mgr Bourget, coadjutor in 1837, titular in 1840, resigned in 1876, d. 1885; Mgr Fabre, coadjutor in 1873, titular bishop in 1876, archbishop in 1886, d. 1896; Mgr Bruchési, archbishop from 1897 to the present time. The superiors of Saint-Sulpice, after M. Quiblier, were MM. Bilaudèle (1846), Granet (1856), Bayle (1866), Colin (1881), and Lecoq (1902).

The foundation of the Grand Séminaire at Montreal took place in 1840; of the Canadian College at Rome, in 1888; of the Séminaire de Philosophie, near the Grand Séminaire, at Montreal, in charge of the Sulpicians, in 1894. The Brothers of the Christian Schools arrived in 1837; the Oblates of Mary Immaculate, in 1841. The Jesuits returned in 1842, their novitiate was opened in 1843, and the Collège Sainte-Marie, in 1848. The Viateurs and the Fathers of the Holy Cross arrived in 1847. Of the communities of women, the Religious of the Society of the Sacred Heart arrived from France in 1842; the Sisters of the Good Shepherd of Angers, for teaching and establishing homes for penitents, arrived in 1843; in the same year the Sisters of Providence were founded by Madame Gamelin, for teaching and works of charity, as were the teaching Sisters of the Holy Names of

Jesus and Mary; the Sisters of the Holy Cross, also a teaching institute from France, arrived in 1847; in 1848 the institute of *Sœurs de la Miséricorde* were founded for the care of Magdalenes and in 1850 the Sisters of St. Anne, for teaching. Colleges were founded at Joliette and Bourget, by the Clerics of Saint-Viateur, in 1846 and 1850; at Saint-Laurent, by the Fathers of the Holy Cross, in 1847. (For the Laval University, chartered in 1852, and its succursal at Montreal, see LAVAL UNIVERSITY OF QUEBEC.) In 1852 the Diocese of St. Hyacinthe was erected, and in 1874 that of Sherbrooke; both of these became suffragan of Montreal in 1886, when Montreal became a metropolitan see. The other two suffragans, Valleyfield and Joliette, were erected in 1892 and 1904 respectively. Other notable events were: in 1840, the missions of Mgr Forbin Janson, and the Act granting separate schools (denominational); in 1843, the preaching of temperance; in 1848, the establishment of colonization societies (celebrated later under the direction of Mgr Labelle, parish priest of St. Jérôme) to counteract the emigration movement towards the United States; in 1866, division of the parish of Notre-Dame (since divided further into more than 50 parishes); in 1868, the condemnation by Bishop Bourget, confirmed by the Holy See, of the "Institut Canadien", a club which by means of its books and its lectures had become a centre of Voltairianism and irreligion; also "the Guibord affair", a famous lawsuit in reference to the burial in consecrated ground of a member of the same club. About 1884, began at Montreal the Lenten lectures in Notre Dame, then those in the Gesù, and lastly those in the cathedral (in 1898) under Mgr Bruchési. In 1896 Loyola College was founded by the Jesuits for English-speaking Catholics; in 1905, Mgr Racicot was appointed auxiliary bishop to the Archbishop of Montreal.

The Eucharistic Congress of 1910.—The Twenty-first International Eucharistic Congress was held at Montreal, 7–11 September, 1910. (For the origin and object of these congresses, see CONGRESSES, CATHOLIC: *International Congresses*.) At the Eucharistic Congress of London, in 1908, the Committee offered Mgr Bruchési the opportunity to hold the Congress of 1910 in his archiepiscopal city. For a year the various committees at Montreal worked energetically in preparation for the event. Pius X sent as legate *a latere* His Eminence Vincenzo Vannutelli, Cardinal-Bishop of Palestrina. All the bishops of Canada and the United States and a large number from Europe were present in person or sent their representatives. Three cardinals, one hundred and twenty archbishops and bishops, between three and four thousand priests, and more than a half million lay visitors came to Montreal. The literary reunions of the French-speaking section were held at the house of the Fathers of the Blessed Sacrament, Laval University, and the National Monument, while those of the English-speaking section took place at the Convent of the Sacred Heart, Windsor Hall, and Stanley Hall. More than a hundred studies on the Blessed Eucharist—in relation to dogma, moral, history, discipline, pious practices, devotions, and associations—were read and discussed. Each séance was presided over by a bishop. Special reunions for priests, men and women, and for the young were held with great success.

A splendid gathering of twenty thousand young men received the papal legate with enthusiasm; thirty thousand school-children passed in review before him. It is estimated that a hundred thousand men marched in procession on the occasion of the solemn closing of the Congress, Sunday, 11 September, in the presence of 700,000 spectators. The streets of the city were magnificently decorated for the occasion with triumphal arches, draperies, and flags, under the direction of the committee of archi-

fects. On the side of Mont Royal, in the Parc Mance, an immense park in the form of an amphitheatre, a monumental altar had been erected; there Mass was celebrated in the open air on 10 September, and there on the following day, the great procession terminated, when nearly 800,000 Christians assembled to welcome Jesus in the Eucharist held in the hands of the cardinal legate, blessing Montreal, Canada, America, and the whole world. Besides the literary reunions already mentioned, two great meetings were held on Friday and Saturday evenings at Notre-Dame, where speeches in honour of the Christian Faith and the Blessed Sacrament were delivered by: Cardinal Vannutelli, Cardinal Logue, Archbishops Bruchési, Bourne, and Ireland. Bishops Touchet and Rumeau, Sir Wil-

BOURGET MONUMENT, MONTREAL

frid Laurier, Sir Lomer Gouin, Hon. Thomas Chapais, Judge Doherty, Deputy Tellier, Judge O'Sullivan, Deputy Henri Bourassa, M. Gerlier, and many other distinguished ecclesiastics and laymen of the Old and New World. These memorable displays of eloquence made a deep impression in the souls of the twelve to fifteen thousand auditors. Also in the church of Notre-Dame, at the first hour of Thursday, 8 September, as a religious prelude to the literary séances, an imposing midnight Mass was celebrated, at which thousands of men received Holy Communion, the Mass having been preceded by an hour's solemn adoration under the direction of members of the Association Adoration Nocturne of Montreal. The ceremony of the official reception of the papal legate, the special Mass on Thursday, 8 September, in favour of the numerous religious communities of Montreal, and also the high Mass on Sunday, 11 September, sung by the cardinal legate, at which Cardinal Gibbons and Mgr Touchet preached, all took place in the cathedral of St. James. At the open-air Mass on Saturday, 10 Sep., sung by Mgr. Farley, the preachers were Mgr O'Connell and the Rev. Father Hage.

What specially distinguished the Congress of Montreal from any previous Eucharistic Congress was the official participation of the civil, federal, provincial, and municipal authorities. The Canadian Pacific Railway Company had sent a representative to meet the legate in Rome, and His Eminence

crossed the ocean on board one of the Empress liners of the same company. At Quebec the Federal Government yacht met the cardinal and his suite, and conveyed them thence to Montreal. All along the route, the population on the banks of the river greeted the legate as he passed. At Montreal, despite most inclement weather, an immense crowd gave him an enthusiastic reception. Mayor Guérin presented addresses of welcome in French and English. During the congress, the Federal Government, the Provincial Government, and the City of Montreal each held a reception for the legate and other official personages.

Under the immediate direction of Archbishop Bruchési and the more remote direction of the Permanent Committee of the Eucharistic Congresses, presided over by Mgr Heylen, Bishop of Namur, four great committees laboured to organize the Congress of Montreal: Committee of Works: president, Canon Gauthier; vice-presidents, MM. Lecoq, McShane, Perrier, and Auclair. Committee of Finance: president, Canon Martin; vice-presidents, Sir Thomas Shaughnessy and Hon. L. J. Forget. Committee of Reception: presidents, Canon Dauth and Father Donnelley; vice-presidents, Canon Roy and Father Troie. Committee of Decorations and Procession: president, Canon Le Pailleur; vice-presidents, Fathers Bélanger, Laforce, Piette, Rusconi, O'Reilly, Martin, Deschamps, Heffernan. To these committees there had been added for press purposes a special committee presided over by Father Elie J. Auclair.

PRESENT CONDITIONS.—The Diocese of Montreal, at the present time (1910) is under the direction of Mgr Paul Bruchési, with an auxiliary bishop (at present the Rt. Rev. Mgr Zotique Racicot, titular Bishop of Pogle), and a cathedral chapter. The Catholic population is about 470,000, served by 720 priests; the non-Catholics, about 80,000; there are 150 parishes or missions, 66 of which are in the city and suburbs. Besides Laval University (see above), the seminaries and colleges are: the Grand Séminaire, with 350 students; the Seminary of Philosophy, 120; the Montreal College, 300; and Sacerdotal College, recently founded and under the direction of the Sulpicians; St. Mary's and Loyola College, under the direction of the Jesuits; those of Ste Thérèse and l'Assomption, under secular priests, and of Saint Laurent, under the Fathers of the Holy Cross. In all, some 2000 boys and young men are trained in these colleges. In addition to these, 64,000 children are taught in the schools or convents of religious orders, and 24,000 by lay Catholic teachers, men and women. Some 1500 Brothers, and more than 3700 Sisters devote themselves, in the diocese, to works of teaching or of charity. There are nearly 60 hospices, asylums, or orphanages, where some 45,000 old people, orphans, sick, and infirm are charitably cared for. Moreover, according to the latest official diocesan report, from which the above details are gathered, more than 200 secular priests from this diocese and more than 4000 Sisters minister or teach in other parts of Canada or in the United States.

In 1909, there were some 390 secular priests in the diocese, 80 Sulpicians, 150 Jesuits, 20 Oblates of Mary Immaculate, 30 Franciscans (in Montreal since 1890), 30 Trappists, 50 Redemptorists (in Montreal since 1884), 30 Fathers of the Holy Cross, 20 of the Holy Sacrament (1890), 8 of St. Viator, 5 of the Company of Mary, 10 Dominicans (1901), 2 Brothers of St. Vincent de Paul (1908). It would be impossible to give all the details of this useful and fruitful religious life. The Carmelites (1875) and the Sisters of the Precious Blood (1874) are vowed to the contemplative life. To these communities have been added the Little Sisters of the Poor (1887), the Sœurs de l'Espérance (1901), the Sisters of the Immaculate Conception (1904), the Daughters of Wisdom (1910), and the Brothers of the Presentation (1910). The parishes,

in town and country, are in a flourishing condition. Mgr Bruchési has devised a plan of giving poor churches help and protection by making certain rich, older parishes act as their sponsors. Every year, on one of the Sundays of September, all Montreal visits the cemetery, near the top of Mount Royal, where, in the presence of 50,000 Catholics, a service for the dead takes place, possibly the only one of its kind in the world. On the eve of the civic Labour Holiday, the archbishop has, for some years past, invited the workmen of his diocese to be present at a religious service.

Montreuil, Charterhouse of Notre-Dame-des-Prés, at Montreuil, in the Diocese of Arras, Department of Pas-de-Calais, France, founded by Robert, Count of Boulogne and Auvergne. The charter of foundation is dated from the château d'Hardelot on 15 July, 1324; the church was consecrated in 1338. The foundation, being close to Calais, was liable to disturbance in time of war. Thus it was often sacked by the English during the wars in the fourteenth and fifteenth centuries, and was for a time abandoned. The religious returned when peace was restored. In 1542 the monastery was again wrecked by the Imperial troops and in the wars of religion fresh troubles attended the community. Finally the house was rebuilt by Dom Bernard Bruyant in the latter part of the seventeenth century and remained undisturbed until the Revolution. In 1790 the monastery was suppressed and its property sold by auction the following year. Eighty-two years later the Carthusians repurchased a portion of their old estate and the first stone of the new monastery was laid on 2 April, 1872. The work was pushed forward with such energy by the Prior, Dom Eusèbe Bergier, that the whole was finished in three years. The monastery contains twenty-four cells in its cloister. Montreuil has taken a special position among Carthusian houses, owing to the establishment there of a printing press from which has been issued a number of works connected with the order. Dom le Couteulx's "Annales" (in eight vols.) and the edition of Denys the Carthusian may be quoted as examples of the fine printing done by the monks. By the recent "Association Laws" the community of Montreuil has been once more ejected. The monks are now lodged in the Charterhouse of Parkminster, England; the printing works have been transferred to Tournai in Belgium.

G. ROGER HUDLESTON.

Montreuil Abbey, a former convent of Cistercian nuns in the Diocese of Laon, now Soissons, France. Some incorrectly claim that it was the first convent of Cistercian nuns. It was founded in 1136 by Bartholomew, Bishop of Laon, and within a few years it numbered nearly three hundred. In early days the community busied themselves not merely in weaving and embroidery, but also in tilling the fields, clearing the forest, and weeding the soil.

So large a number in one community had its disadvantages, for within a century of its foundation the convent was forbidden by the Abbot of Clairvaux to take novices until the number of nuns at Montreuil was reduced to one hundred, which figure was not in future to be exceeded. In the seventeenth century the convent was so much disturbed by the wars which raged in the neighbourhood that the nuns abandoned it and settled in the hospital of St-Lazare close to the city. The list of abbesses is in Gallia Christiana (IX, 639); the convent was suppressed at the French Revolution.

Throughout the Middle Ages Montreuil was a place of pilgrimage, being famous for the "Sainte Face" or Veil of St. Veronica. This picture, which was regarded by many as the original relic, was really a copy of the "Vera Effigies" in St. Peter's at Rome. It was presented in 1249 to the Abbess of Montreuil by her brother Jacques Pantaleon, afterwards Urban IV. The painting, apparently of Eastern origin and already ancient when it came into the hands of the nuns, bore an inscription that seemed undecipherable, even Mabillon being completely baffled by it. Subsequently, however, some Russian savants declared the words to be Slavonic, and to read "Obras gospoden na-oubrouse" or "Imago Domini in linteo". It seems to have perished with the convent in the French Revolution.

G. ROGER HUDLESTON.

Mont-St-Michel, a Benedictine Abbey, in the Diocese of Avranches, Normandy, France. It is unquestionably the finest example both of French medieval architecture and of a fortified abbey. The buildings of the monastery are piled round a conical mass of rock which rises abruptly out of the waters of the Atlantic to the height of 300 feet, on the summit of which stands the great church. This rock is nearly a mile from the shore, but in 1880 a causeway was built across the dangerous quicksand that occupies this space and is exposed at low water, so that there is now no danger in approaching the abbey. The monastery was founded about the year 708 by St. Aubert, Bishop of Avranches, and according to the legend, by direct command of the Archangel Michael himself, who appeared to the bishop in a dream on three separate occasions. About 966, Richard the Fearless, third Duke of Normandy, finding the community in a relaxed condition, installed Benedictines from Monte Cassino at Mont-St-Michel. A few years later, in 1017, Abbot Hildebert II began the colossal scheme of buildings all round the rock which should form a huge platform level with the summit, on which the abbey church might stand. In spite of the enormous difficulties involved in the design, difficulties increased by fire and the collapse of portions of the edifice, the great scheme was persevered in during five centuries and crowned by the completion of the flamboyant choir in 1520. Even among religious communities, such an instance of steadfast purpose and continuity of plan stands unrivalled; but the completion was only just in time. In 1523 the abbey was granted in *commendam* to Cardinal Le Veneur and the series of commendatory Abbots continued until 1622 when the abbey, its community reduced almost to the vanishing point, was united to the famous Congregation of St-Maur. At the French Revolution the Maurist monks were ejected and the splendid buildings became a prison for political offenders while, with unconscious irony, the name of the place was changed from Mont St-Michel to Mont Libre. In 1863 the prison was closed and for a few years the abbey was leased to the Bishop of Avranches, but in 1872 the French Government took it over as a national monu-

ment and undertook, none too soon, the task of restoration. The work has gone on almost continually ever since, and the restorers must be praised for the skill with which the great pile has been saved from ruin, and the good taste with which the whole has been done.

This vast group of buildings has been the subject of several important monographs. Speaking generally, the monastic buildings consist of three main stories. Of these, the two lower take the form of vast irregular rings completely enclosing the natural rock, which forms a core to the whole edifice. The third story rests partly on the two lower stories and partly on the apex of the rock which is found immediately beneath the pavement of the church. The most remarkable part of all is the mass of buildings known as "la merveille" (the marvel) on the north side of the rock facing the ocean. This vast structure, half military,

GENERAL PLAN OF MONT-SAINT-MICHEL

half monastic, is built wholly of granite quarried on the mainland, and was entirely constructed between the years 1203 and 1228. Its foundations are one hundred and sixty feet above the sea level, and it consists of three stories of which two are vaulted. The lowest contains the almonry and cellar; above these come the refectory and "hall of the knights", on which again rest the dormitory and the cloister. The last named building, which is perhaps the finest gem of all, has a double arcade so planned that the columns in one row are opposite the centre of the arches in the other—a unique arrangement of wonderful beauty. The church is cruciform with a Norman nave which was formerly seven bays in length, but the three western bays were destroyed in 1776. The central tower has lately been restored and crowned with a copper-covered spire surmounted by a gilded statue of St. Michael by M. Frémiet. The choir is apsidal and has a chevet of chapels with a crypt or lower church beneath.

The position of the abbey rendered it of the highest strategic importance especially during the wars with England, and both it and the little town that had grown up at the foot of the rock on the land side, were enclosed by strong fortifications during the fourteenth and fifteenth centuries. So impregnable was the rock made in this way that, although frequently attacked by superior forces, it was never captured. The abbot was also commandant of the place by appointment of the King of France, and

he was empowered to bestow fiefs on the nobles of the province who bound themselves in return to guard the abbey in time of war. In 1469 King Louis XI founded the Order of St. Michael, and held the first chapter of its knights in the "salle des chevaliers." It is said that the cockle shell, horn, and staff, which became the recognized insignia of a pilgrim from the thirteenth century onwards, take their origin from Mont-St-Michel. The staff was used to test the path across the treacherous quicksand, the horns served to summon aid should tide or fog surprise the pilgrim; while the cockle shell was fixed in the hat as a souvenir to show that the pilgrim had accomplished his journey in safety. The abbey bore as its arms a cockle shell and fleurs-de-lis with the significant motto "Tremor immensi Oceani".

G. ROGER HUDLESTON.

Montyon, ANTOINE-JEAN-BAPTISTE-ROBERT AUGER, BARON DE, famous French philanthropist; b. at Paris, 23 December, 1733; d. there 29 December, 1820. He was the son of a wealthy official of the Exchequer. As soon as he had completed his education, young Montyon was made king's advocate at the court of Le Châtelet (Paris) where his inflexible integrity won for him the surname of "Grenadier of the Bar." In 1758 he entered the Great Council and in 1760 was appointed master of the petitions. In 1767 he became intendant of Auvergne, where his liberality to the poor endeared him to the people. It is said that he yearly spent as much as twenty thousand francs of his private income to give work and help to needy families. On his refusal to install the new magistrates appointed by Maupeou after the suppression of the Parliaments, he was transferred to the intendance of Provence and then to La Rochelle. In 1775, through the influence of the duc de Penhièvre, he was recalled to Paris and appointed councillor of State. Amidst the cares of public life, he had found time for the study of economics and belles-lettres. The French Academy awarded a distinction to his "Eloge de Michel de l'Hôpital" (Paris, 1777). The following year he published "Recherches et considérations sur la population de la France." Montyon's great concern, however, was philanthropy, which he delighted to practice in an anonymous way. In order to foster emulation for the good among his countrymen, he founded a number of prizes to be awarded by the French Academy, the Academy of Science, or the Academy of Medicine.

At the beginning of the French Revolution, he thought it was his duty to share the fortunes of the princes of the House of Bourbon, and he left the country. He travelled in Switzerland and Germany, but spent the greater part of his exile in London; during his stay in that city, he gave each year ten thousand francs to relieve the French refugees, and the French soldiers who were prisoners in England; the same amount was sent to the poor of Auvergne. Montyon returned to France in 1815 at the time of the second restoration and henceforth devoted all his time to the work that had made his name famous. He re-established the prizes which he had founded before the Revolution and which had been abolished by the National Convention. The best known of these prizes are "le prix de vertu", to reward a virtuous act done by a poor Frenchman, and

the prize to be bestowed on the author of the work most useful to morals. These prizes are to be awarded by the French Academy. Montyon also distributed large sums of money among the bureaux of charities in Paris. His will, in which are expressed sentiments of the deepest piety, bequeathed the bulk of his property to the hospitals and homes of his native city.

PIERRE MARIQUE.

Moor, HUGH, VENERABLE. See MORTON, ROBERT, VENERABLE.

Moore, ARTHUR, Count, b. at Liverpool, 1849; d. at Moorsfort, Tipperary, Ireland, 1904, was the son of Charles Moore, M.P. for Tipperary. Educated at Ushaw, he afterwards travelled in Spain, and in 1874 was elected M.P. for the Borough of Clonmel. In Parliament he was a follower of Mr. Butt, and strongly advocated land reform, better treatment of children in workhouses, university education for Irish Catholics, and Home Rule; and he specially interested himself in providing Catholic chaplains for the navy. In 1877 he married a daughter of an English baronet, Sir Charles Clifford, and the same year received the title of Count from the pope. During the Gladstone Parliament of 1880-85 Count Moore was usually on the side of Parnell. He favoured land purchase as the best settlement of the Irish land question; he advocated the providing of suitable cottages for Irish labourers, and better treatment of Irish emigrants on board ship; he always voted for Home Rule, and vehemently denounced coercion. But he had no faith in violent agitation, and did not favour the full programme of the Land League or that of the National League; and he voted for the second reading of Gladstone's Land Bill though Parnell and his friends abstained from voting. Count Moore would only follow where his convictions led, and he was too independent to be blindly obedient to Mr. Parnell: when the Redistribution Act of 1885 disfranchised Clonmel, he was left without a seat in Parliament. He had therefore no share in the stirring scenes which followed the general election of 1885. But he was not content to lead a life of ease and inactivity, believing that "a Catholic layman should be up and doing and not merely telling his beads in a corner". Blessed with ample wealth he was a generous contributor to schools, churches, convents, and hospitals; a militant but not an aggressive Catholic he was always ready to do battle for Catholic truth, and in speeches, lectures, and newspaper articles often did splendid service for the advancement of Catholic interests. He spared no effort to secure that Catholic sailors should not be left without religious instruction during life, or without a priest at the hour of death; and so valuable was his work in this matter that the Irish Bishops, at their meeting at Maynooth in 1903, thanked him by special resolution. He supported the Catholic Truth Society and attended its meetings; he desired to have a branch of the Benedictine Order in Ireland, and would have helped to endow it. He established and generously endowed the Cistercian Abbey at Roscrea. Always ready to help others he did not forget his own personal sanctity. He attended Mass every day, spent hours before the tabernacle in his own private oratory, fasted rigorously, made frequent retreats; and he went, year after year, to Lourdes and to the Holy Land, not as a mere sight-seeing traveller but as a pilgrim and a penitent. At home he was the kindest and the most indulgent of landlords, and no beggar went unrelieved from his door. When he died, his body, clothed in the Franciscan habit, was interred near the high altar in the church of the Cistercians at Roscrea.

MONT-SAINT-MICHEL
FROM AN ETCHING BY DELAUNAY

MOORE (or **MOOR**), MICHAEL, priest, preacher, and professor, b. at Dublin, Ireland, 1640; d. at Paris, 22 Aug., 1726. Educated at Nantes and Paris, he taught philosophy and rhetoric at the Collège des Grassins. Returning to Ireland, he was ordained priest in 1684, and appointed Vicar-General of the Diocese of Dublin by Archbishop Russell. When the Revolution of 1688 drove James II from his British dominions, Ireland was held for him by Richard Talbot, Earl (afterwards Duke) of Tyrconnell. The provost of Trinity College, Dublin, Dr. Huntingdon, fled to England when James landed in Ireland. The college was seized by the Jacobites, the chapel was made a powder magazine, one portion of the building was turned into a barrack, and another into a gaol for persons suspected of disaffection to the royal cause. Moore was chaplain and confessor to Tyrconnell through whose influence and on the recommendation of the Irish Catholic bishops, he was appointed (1689) by James, provost of Trinity College—the only Catholic who ever held that position. He upheld the rights of the college, secured it from further pillage, and endeavoured to mitigate the treatment of the prisoners. With the librarian, Father McCarthy, he prevented the soldiery from burning the library, and by preserving its precious collections rendered an incalculable service to letters. A sermon which he preached in Christ Church cathedral offended the king so deeply that he was obliged to resign (1690), and retired to Paris. When James, after the battle of the Boyne (1690), fled to Paris, Moore removed to Rome, became Censor of Books, and won the favour of Innocent XII and Clement XI. When Cardinal Barbarigo established his college at Montefiascone, he appointed Moore rector, and professor of philosophy and Greek. The college attracted men of learning, and received from Innocent XII an annual grant of two thousand crowns. After the death of James II (1701), Moore returned to France, where, through Cardinal de Noailles, he was appointed Rector of the University of Paris (10 Oct., 1701 to 9 Oct., 1702). He was also made principal of the Collège de Navarre, and professor of philosophy, Greek, and Hebrew in the Collège de France. In 1702 he was selected to deliver the annual panegyric on Louis XIV, founded by the City of Paris. Moore joined Dr. Farrelly (Fealy) in purchasing a house near the Irish College for poor Irish students. Blind for some years, he had to employ an amanuensis, who took advantage of his master's affliction to steal and sell many hundred volumes of his choice library. What remained Moore bequeathed to the Irish College. He died in the Collège de Navarre, and was buried in the vault under the chapel of the Irish College. His published works include: "*De Existentiâ Dei, et Humanae Mentis Immortalitate, secundum Cartesii et Aristotelis Doctrinam*" (Paris, 1692); "*Hortatio ad Studium Linguae Graecae et Hebraicae*" (Montefiascone, 1700); "*Vera Sciendi Methodus*" (Paris, 1716).

P. J. LENNOX.

MOORE, THOMAS, poet and biographer, b. 28 May, 1779, at Dublin, Ireland; d. 26 February, 1852, at Devizes, England. His father was a grocer till 1806 when he was appointed barrack-master at Dublin. His mother, a woman of varied accomplishments, did much to train him for his remarkable success in society. Thomas early manifested a remarkable power of rhyming, singing, and acting. When fifteen he was entered at Trinity College, Dublin, which by the Catholic Relief Act of 1793 had opened its doors to Catholics, who were, however, hardly more than tolerated. Denied all incentive because of his religious belief,

Moore gave little or no heed to academic honours. A curious point noted by a recent biographer is that Moore was entered as a Protestant, possibly by his school-master, Mr. Whyte, who himself a Protestant, wished to qualify his favourite pupil for all the good things that the college offered to non-Catholics. Moore probably was not aware of this; at any rate he never availed himself of it. Though his education and associations were mostly Protestant, and though he himself was in fact after his first year in college scarcely more than a nominal Catholic, he never changed his creed. Among his intimate friends was Robert Emmet, whose tragic death made on him a lasting impression. Moore shows this in his writings, as in the beautiful lyric, "O breathe not his name", and also in the veiled allusions in "The Fire Worshipers", one of the four long poems of "Lalla Rookh".

After graduating in 1798 he set out in the following spring for London to study law. He was never admitted to the Bar, as legal studies had for him no attraction. Literature was more to his liking. When scarcely fifteen, some verses of his appeared in a Dublin magazine "The Anthologia Hibernica". While in college he wrote a metrical translation of the "Odes of Anacreon" which he published in London in 1800, with a dedication "by permission" to the Prince of Wales. He published in the following year his first volume of original poems under the title of "The Poetical Works of the late Thomas Little", which met with severe criticism on the grounds of indecency. Later editions were expurgated; but Moore showed his fondness for amorous poetry by recurring to it in "The Loves of the Angels". Again criticized, he bent to the storm by "turning his poor Angels into Turks". Moore's success almost from the day he set foot in England was extraordinary. It was no doubt his personal charm and the masterly singing of his own songs that gave him the start in his successful career. Like the ancient bard he sang his own verses to his own accompaniment, and was welcomed everywhere.

Early in 1803 the Government proposed to establish an Irish laureateship and offered Moore the position with the same salary and emoluments as the English office of similar title; but Moore declined the honour. Another offer later in the year, that of Registrar of the Admiralty Court of Bermuda, he accepted and left England in September for his post of duty. After four months' trial, finding the office not to his liking he appointed a deputy and sailed for New York. He visited the principal cities of the States, and then went to Canada. He was delighted with his Canadian tour, but was far differently impressed by "the land of the free" and its people. Judging everything from his pro-English viewpoint, he could find scarcely anything to admire in the young republic which had so lately gained its independence from England. After an absence of fourteen months he returned to London "with a volume of poetic travels in his pocket" which with later additions he published in 1806 under the title of "Epistles, Odes and other Poems". In addition to his animadversions on America it contained several amatory pieces. The famous critic, Jeffrey, in an article in the "Edinburgh Review" attacked the book severely and called its author "the most licentious of modern versifiers". This brought on the famous "leadless duel", and paved the way for the lifelong friendship between the poet and the critic. Another challenge from Moore, this time to Lord Byron for his sarcastic reference to the "leadless pistols" used in the meeting with Jeffrey, resulted in another close friendship between "hostile forces".

In 1807 Moore published the first numbers of his "Irish Melodies". Were all his other works lost, these would give him the right to the title he so much prized, "The Poet of the people of Ireland". The importance and the difficulty of this undertaking—to

fit words to the old national airs of Ireland—Moore fully realized. But the task of marrying words to these airs was no easy one. "The Poet", as Moore himself wrote, "who would follow the various sentiments which they express, must feel and understand that rapid fluctuation of spirits, that unaccountable mixture of gloom and levity which composes the character of my countrymen and has deeply tinged their Music". Almost all contemporary writers, among them Shelley and Landor, spoke enthusiastically of the melodies, saying that they were lyrics of the highest merit. His friend and biographer, Lord John Russell, wrote in 1853 that "of all lyrical poets, Moore is surely the greatest". Moore continued to write these at intervals for twenty-seven years, receiving \$500 for each, which gave him an annual income of \$2500. Six of the ten numbers of his melodies were published, when he tried his hand with like success at "Sacred Songs" and "National Airs".

The lyrics, however, did not take up all his time. In 1808 he published poems on "Corruption" and on "Intolerance" and in the following year "The Sceptic". These attempts at serious satire, in which he used the heroic couplet of Pope, did not meet with success. Quite different was his next venture, this time in a lighter strain and directed against the prince, his former patron, who on becoming regent through the insanity of his father had changed front and broken with the Whigs, with whom Moore had previously allied himself. These pieces, together with those he wrote against several members of the Ministry, were gathered together and published in 1813 with the title "Intercepted Letters or The Two-penny Post-bag". In this sort of light-hearted satire Moore had struck a rich vein which he worked for more than twenty years with his "Fudge Family in Paris", "The Fudges in England", and "Fable of the Holy Alliance". Moore's reputation in the literary world of his time was of the highest, as is shown from the business arrangements made for the copyright of "Lalla Rookh" (1817). Longmans, the publishers, agreed to give the highest price ever paid for a poem, \$15,000, and that, too, without seeing a line of the work. And twenty years later they still called it the "cream of the copyrights". After considerable reading and some discouraging experiments, he hit upon the idea of founding a story on the long and fierce struggle between the Persian fire-worshippers and their haughty Moslem masters—a theme that had much to recommend it to an Irishman familiar with the long struggle between his countrymen and their rulers. Men who had lived long in the East marvelled at his skill in reproducing so faithfully life in the Orient with its barbaric splendours.

Scarcely was this off his hands when the news arrived that he must make good the loss of \$30,000 caused by his agent in Bermuda. Moore had not saved anything out of his large income. His friends would have come to his assistance; but he would not allow them. To escape arrest he took refuge in 1819 on the continent. More than three years he had of rather enjoyable exile, most of which was spent in Paris where his family joined him in 1820. He had in 1811 married a young actress, Miss Bessy Dyke. Towards the close of 1822, after settling the Bermuda claim, which had been reduced to \$5,000, he took up his residence again in England. Heretofore he had been almost exclusively a writer of verse; from this on he is primarily a writer of prose:—he becomes a biographer, a controversialist, an historian. During the summer of 1823, he accompanied Lord Lansdowne on a visit to the south of Ireland. While there he learned much of the discontent among the peasants, of their secret organizations, and of their mysterious leader, Captain Rock. On his return he read history, and as a result of his reading and his sight-seeing, he wrote a

"History of Captain Rock and his Ancestors" in which he gives the history of agrarian crimes and denounces, not the Shanavests of "Foggy Boggy Tipperary" whom eight years before he called murderous savages deserving the sword, but the bad laws of England that generated all sorts of crime. The book made its way everywhere. In England, perhaps for the first time, the cause of Ireland received a hearing. Naturally it became popular in Ireland where even Catholics, notwithstanding (in the words of Moore) "some infidelities to their religion which break out now and then in it", expressed in a formal manner their gratitude for his defence of their country.

This favourable reception delighted Moore; only now he began to know Ireland and her people. He came back at times to his own and endeavoured to make amends for his former lack of sympathy, as may be seen in some of his later writings, as the "Life of Lord Edward Fitzgerald" (1831). This, which is probably his best prose work, was a labour of love; for in writing a sympathetic account of a young Irish patriot who suffered for his country in the uprising of 1798, Moore could hardly hope for encouragement from an English reading public. In the meantime he had published the "Life of Sheridan" (1825), a work which had engaged his attention during the preceding seven years. So successful was it financially that the publishers added \$1500 to the original price of the copyright. Its chief value lay, as the critic Jeffrey said, in the historical view it gave of public transactions for the past fifty years. The next prose work, "The Epicurean" (1827), has some merit as a story, but not as a study of ancient manners or as a presentation of the Epicurean philosophy. Moore was to be Byron's editor; he became, instead, his biographer. His "Life of Byron" (1830) is one of the most popular biographies ever written, though the picture given is not wholly true to life.

After finishing the life of Fitzgerald he wrote a theological treatise which he dedicated "to the people of Ireland in defence of their Ancient National Faith", and called it "The Travels of an Irish Gentleman in Search of a Religion" (1834). The Irish Gentleman wishes to become a Protestant, studies hard at home and abroad, but fails to find anything either in Scripture or the Church Fathers to justify a change. This vindication of the Catholic Church is a curious book written as it was by one who had married a Protestant, and was glad to have his children brought up as Protestants. In his fifty-fifth year Moore doubtless took a different view of life, and saw the folly of mere worldly advantages when these involved a sacrifice of religious truth. Similar motives likely influenced him in his next and last work, "The History of Ireland" (1835-46). During much of his life he had been more of an English Whig than an Irish Nationalist. But the last of it he gave generously to his country by calling the attention of the English people to their misgovernment of Ireland. The task which he undertook was, however, too much for him; the one volume intended lengthened out into four, and then stopped at the reign of Queen Elizabeth.

Moore was now broken down. Financial troubles had constantly harassed him, notwithstanding his large income. He had expected, and with good reason, great things from the Government when his friends the Whigs got in power. A recognition came in 1833 when he received a literary pension of \$1500, to which was added, a few years before his death, another pension of \$500. He was not spared domestic troubles. Two daughters died in infancy; the third lived only to be a girl of sixteen. Of his two sons one died from consumption in 1841; the other, Thomas, wild and extravagant, died in Africa in 1845. At this time Moore wrote in his "Diary": "The last of our five children is now gone and we are left desolate and alone. Not a single relative have I now left in the world".

He had previously lost his parents and his sisters, his favourite Ellen dying suddenly at about the same time as his son Thomas. His life was now practically over, and he died in his seventy-third year and was buried at Bromham, near Devizes in Wiltshire. Moore's biographer, Lord John Russell, declared: "When these two great men" (Scott and Byron) "have been enumerated, I know not any writer of his time who can be put in comparison with Moore"; and yet when Moore wrote, England was rich in great writers. Such praises as this may appear exaggerated to-day when critical opinion has swung to the opposite extreme, especially among younger writers. The truth, as usual, seems to lie between two extremes. Much of Moore's work is ephemeral, but there remains a group of lyrics that are as perfect of their kind as anything in the world of literature. In 1841 Moore collected and arranged his poems, to which he wrote interesting prefaces.

MOORE, *Memoirs, Journals, and correspondence*, edited by LORD JOHN RUSSELL (London, 1863-6); GWYN, *Thomas Moore* (London, 1908); GUNNING, *Moore, Poet and Patriot* (Dublin, 1900); *Memoirs of the author prefixed to the poems collected by Moore himself* (1841); VALLER, *Étude sur la vie et les œuvres de Thomas Moore* (Paris, 1896).

M. J. FLAHERTY.

Mopsuestia, a titular see of Cilicia Secunda in Asia Minor and suffragan of Anazarbus. The founding of this city is attributed to the soothsayer, Mopsus, who lived before the Trojan war, although it is scarcely mentioned before the Christian era. Pliny calls it the free city of Mopsos (Hist. nat., V, 22), but the ordinary name is Mopsuestia or better Mompuestia, as found in all the Christian geographers and chroniclers. At one time the city took the name of Seleucia, but gave it up at the time of the Roman conquest; under Hadrian it was called Hadriana, under Decius Decia, etc., as we know from the inscriptions and the coins of the city. Constantius built there a magnificent bridge over the Pyramus (Malalas, "Chronographia", XIII; P. G., XCII, 488) afterwards restored by Justinian (Procopius, "De Edificiis", V, 5) and still to be seen in a very bad state of preservation. Christianity seems to have been introduced very early into Mopsuestia and during the third century there is mention of a bishop, Theodorus, the adversary of Paul of Samosata. Worthy of mention are Saint Auxentius, who lived in the fourth century and whose feast is kept on 18 December, and Theodore, the teacher of Nestorius. The Greek diocese which depended on the Patriarch of Antioch, still existed at the beginning of the fourteenth century (Le Quien, "Oriens christianus", II, 1002). At first a suffragan of Anazarbus, Mopsuestia was an autocephalous archbishopric in 879 (Mansi, "Concil. Collectio", XVII, XVIII, 472, 476-480, etc.), and perhaps it was already so in 713 (Le Quien, II, 1000). The city was taken by the Arabs at the very beginning of Islamism; in 686 we find all the surrounding forts occupied by them and in 700 they fortified the city itself (Theophanes, "Chronogr.", A. M. 6178, 6193). Nevertheless because of its position on the frontier, the city fell naturally from time to time into the hands of the Byzantines; about 772 its inhabitants killed a great number of Arabs (op. cit., A. M. 6264). Being besieged in vain by the Byzantine troops of John Tzimiscas in 964, Mopsuestia was taken the following year after a long and difficult siege by Nicephorus Phocas. The city then numbered 200,000 inhabitants, some of whom were killed, some transported elsewhere and replaced by a Christian population. Its river, the Pyramus, formed a great harbour extending twelve miles to the sea.

In 1097 the Crusaders took possession of the city and engaged in a fratricidal war under its walls; it remained in the possession of Tancred who annexed it to the Principality of Antioch. It suffered much from Crusaders, Armenians, and Greeks who lost it and re-

captured it alternately, notably in 1106, in 1152, and in 1171. The Greeks finally abandoned it to the Armenians. Set on fire in 1266, Mamissa, as it was called in the Middle Ages, became two years afterwards the capital of the Kingdom of Lesser Armenia, at the time that a council was held there. Although it was by this time in a state of decline it still possessed at least four Armenian churches. In 1322, the Armenians suffered a great defeat under its walls; in 1432 the Frenchman, Bertrandon, found the city occupied by the Mussulmans and largely destroyed. Since then it has steadily declined and to-day, under the name of Missis, is a little village of about 800 inhabitants, partly Armenians, partly Mussulmans; it is situated in the sanjak and the vilayet of Adana. The list of its Latin bishops may be found in Le Quien, III, 1197-200; in Ducange, "Les familles d'outre-mer", 770; in Eubel, "Hierarchia catholica medii ævi", I, 338; that of the Armenian bishops in Alishan, "Sissouan", 290.

ALISHAN, *Sissouan* (Venice, 1899), 284-291; LANGLOIS, *Voyage dans la Cilicie* (Paris, 1861), 440-463; SCHLUMBERGER, *Nicéphore Phocas* (Paris, 1890), 402-404, 480-483.

S. VAILHÉ.

Mopsuestia, THEODORE OF. See THEODORE OF MOPSUESTIA.

Mor (MOOR), ANTONIS VAN DASHORST, commonly called ANTONIO MORO, or ANTHONIS MORE, a Dutch painter, b. at Utrecht, in 1519; d. at Antwerp, between 1576 and 1578. Of his early life we only know that his artistic education was commenced under Jan van Scorel, and his earliest work is probably the portrait at Stockholm, dated 1538. Recent investigations would indicate that the group of knights of St. John, at Utrecht, supposed to have been painted about 1541, and a picture of two pilgrims at Berlin, dated 1544, together with the portrait of a woman unknown, in the Lille gallery, were probably among his earliest works, although their authenticity has not been proven. In 1547, he was received as a member of the Venerable Guild of St. Luke at Antwerp, and shortly afterwards (about 1548) he attracted the attention of Cardinal Granvelle, Bishop of Arras, who became his steady patron, and presented him to the Emperor Charles V. Of the portraits executed during the commencement of his Granvella-career, two are especially notable: of the bishop himself in the Imperial gallery at Vienna, and of the Duke of Alba, which now belongs to the Hispanic Society of New York. He probably visited Italy first in 1550, for we hear of him in Rome, where he copied some works by Titian, notably the "Danaë". He was sent by Queen Mary of Hungary to Portugal, doubtless his first visit to that country, and among its notable results are a portrait of the Infanta Maria and one of Queen Catharine of Portugal, both in the Prado, and those of King John III and his wife Catherine, preserved at Lisbon. After this he returned to Madrid, where he painted the portrait of Maximilian of Bohemia; he was in Rome again in 1552. It has been gravely suggested, but on insufficient evidence, that one of the masterpieces of the Prado gallery, the portrait of the unknown young Cardinal, hitherto attributed to Rafael, and regarded as one of his noblest works, should be credited to Mor. From Rome, he went to Genoa, and thence to Madrid. In 1553 he was sent to England, where he painted the portrait of Mary Tudor, perhaps one of his very noblest works; and in all probability the portraits of Sir Henry Sidney, and of Ambassador Simon Renard. That of Renard's wife was not painted until three years later. To this period should be attributed the miniature of Mary Tudor in the Duke of Buccleuch's collection, two portraits of Elizabeth at the age of twenty-one, one of which once belonged to Dr. Probert, and another even more notable, of Roger Ascham, now in the collection of Mr. Pierpont Morgan. This

was at one time the property of Ascham's college, and later, of the Marquess of Hastings.

At about this time Mor married, but we know little of his wife, save that her name was Metgen, and she is supposed to have been a widow. He became a man of large means, acquired property, and was known as Moro van Dashorst when residing in Utrecht. He had one son, Philip; afterwards a canon, and two daughters. At the end of 1554, he was back in Holland, where he painted a portrait of William of Orange, and other notable works. A little later he executed his own portrait, now in the Uffizi Gallery, one of his wife, now in the Prado, a portrait of a knight of St. James at Budapest, one of Alexander Farnese at Parma, the portrait of an unknown man in Verona, and a very extraordinary religious picture of the Resurrection, now at Nimwegen in a private collection. His portrait of Jean Le Cocq [Gallus], one of his wife, and that called Don Carlos, in the gallery at Cassel, those of the Duchess de Feria (?), and of a widow, in the Prado, of himself in Lord Spencer's collection, and of Campaña, the Brussels painter, in the Basle gallery, are of a subsequent period. Several very important works, executed towards the close of his life are, Elizabeth Queen of Spain, in the Bischoffsheim collection (London), Jacopo da Trezzo and three

other fine portraits, in the Stuers gallery (Paris), and the famous portrait of his own master, Jan van Scorel, belonging to the Society of Antiquaries (London). Other noted works are those representing a Professor of the University of Oxford in the Brunswick Gallery, and the very famous portraits of Sir Thomas and Lady Gresham, at one time at Strawberry Hill, now in the Hermitage collection (St. Petersburg). After the disgrace of Cardinal Granvelle, Mor remained in Spain for a while, and the following portraits belong to this period of his life: The Jeweller,

in the gallery of The Hague, Sir Henry Lee, in Lord Dillon's collection, Antonio del Rio, his sons, and his wife, in the Louvre, the Duke of Alba, at Brussels, Ferdinand of Toledo, at Vienna, and several others of unknown people. His last portrait appears to be that of "Goltzius", in the Brussels Gallery. The last document that refers to him was one issued at Antwerp, in 1573, and we obtain the date of his death from certain documents still extant in the church of Notre Dame in that city. The many refer-

ences to him and the numerous essays on his career, have been summed up by Henri Hymans in his memoir of Mor (Brussels, 1910), and to this invaluable work all students must now be referred.

SIR ANTHONY MORE

and effect, or philosophize in any way. His style is rather wearisome. See the "*Crónica general de España, prosiguiendo adelante los cinco libros que el Maestro Florian Docampo, Coronista del Emperador D. Carlos V dexó escritos*" (Alcalá, 1574, 3 vols., and

see also the ed. of Madrid, 1791-2). Other writings of Morales are "*De las antigüedades de las ciudades de España*"; and the "*Viaje por orden del Rey D. Felipe II etc.*"

Memorias de la Academia Española, VIII, 285 sqq.

J. D. M. FORD.

MORALES, JUAN BAPTISTA, missionary, b. about 1597 at Ecija in Andalusia, Spain; d. at Fu-ning, China, 17 Sept., 1664. He entered the Order of St. Dominic at a very early age, and, after devoting some years to missionary work in the Philippine Islands, accompanied in 1633 a band of Dominican missionaries to China, taking up their work

in the province of Fu-kien. Here he took an active part in the controversy between the Jesuits on the one side and the Dominicans and Franciscans on the other, regarding Chinese customs (see CHINA). The latter maintained that the Jesuits, to win over more easily the people to the religion of Christ, tolerated to a certain extent the cult of Confucius and of ancestors; and, seeing in this alleged condescension to heathen customs, a jeopardy to the purity of the faith, they despatched Morales to Rome in 1643, and on 12 Sept., 1645, obtained from Innocent

X a decision condemning the methods of the Jesuits. The latter also appealed to Rome, and obtained from Alexander VII a contradictory decree. In 1661 Morales again called the attention of the Holy See to the matter, and in 1669, five years after the death of Morales, Clement IX issued a new decree deciding against the Jesuits. About the same time the Dominicans discovered an enemy in their own ranks in the person of the Chinese friar, Gregory Lopez, Bishop of Basilea, who sent to the Holy See a memorandum favourable to the Jesuits. Among the works of Morales the following are the most important: (1) "Quæstæ xvii a Fr. J. B. de Morales, missionum sinarum procuratore, proposita Romæ 1643 S. Congreg. de Prop. Fide" (Rome, 1645); (2) "Tractatus ad explicandas et elucidandas opiniones et controversias inter Patres Societatis Jesu et religiosos S. Ord. Præd."; (3) "Commentarium super Litanias B. Virginis lingua sinica"; (4) "Tractatus ad Dei amorem in voluntate excitandum, lingua sinica."

JOSEPH SCHROEDER.

Morales, Luis de, Spanish painter, b. at Badajoz in Estremadura about 1509; d. at Badajoz, 1586. His life was spent in painting devotional subjects for churches and oratories. Painting was for him not merely a means of charming the sense of vision: he strove by his brush to express the religious enthusiasm which characterized his age. Critics have detected two styles in the long artistic career of Morales. In his earlier style, the influence of the Florentine school is more marked: he executed various studies and exercises after works of Michelangelo; notably, he copied at Evora a picture representing Christ on the Cross, with the Blessed Virgin and St. John. To this, not easily definable, period is referred a "Circumcision", now in the Prado Museum at Madrid, and six panels for the high altar of the church of La Higuera of Fregenal. In his second style Morales lessens the number of figures in his compositions, which seldom contain more than two or three, often in bust or in half-length. His favourite themes, frequently reproduced without any change, are "Ecce Homo", "Christ at the Column", and "The Blessed Virgin holding the Dead Christ". The drawing is clean and firm, the anatomy correct, the figures, which recall primitive German and Flemish work by their slenderness, are not wanting in grace, and at times are characterized by a certain air of melancholy. The colouring is delicate and as brilliant as enamel. Morales excels in the faculty of making his modelling stand out by the skilfully graduated employment of half-tones; like the early Northern painters, he exercises minute care in the reproduction of the beard and hair, and makes a point of rendering faithfully the drops of blood falling from the thorn-crowned brow of Christ, and the tears flowing from the eyes of the afflicted Mother.

No artist of his time knew better than he how to appeal to the ardent faith of his countrymen, because no one else in that day knew so well how to impart to his sacred characters so intense and infectious emotion. As an example of this we may take the "Christ at the Column" in the Church of San Isidro el Real at Madrid; here the painter pathetically places the disciple who has denied Him face to face with the Divine Master at the flagellation. The resignation of Jesus, His loving look directed towards Peter and fraught with forgiveness, the deep penitence of the Apostle, are so vividly rendered that one shares the enthusiasm of Morales's countrymen, and can understand why they called him *El Divino*. Naturally, his reputation spread rapidly through Spain; Philip II, however, whose preference was for the Italian painters, does not seem to have shared the general

enthusiasm: he gave Morales but one commission, for the "Christ going up to Calvary", which he presented to the Jeronimite church at Madrid. The king afterwards, in 1581, granted a pension to the artist, who had become destitute in his old age. Many imitators of Morales exaggerated his style into mannerism and caricature. His son Cristóbal accomplished little beyond mediocre reproductions of his works, but one of his pupils, Juan Labrador, became distinguished as a painter of still life. To the works of Morales already mentioned we may add: at Badajoz (Church of the Conception), "Virgin and Child playing with a bird", "Christ carrying the Cross", "St. Joachim and St. Anne"; at Madrid, "Ecce Homo", "Our Lady of Sorrows", "Mary caressing the Divine Child", "The Presentation in the Temple", a "Head of Christ" (Prado Museum), "Ecce Homo" (Church of San Felipe), "Virgin with the Dead Christ" (Academy of San Fernando); at Seville (in the chalice-room of the cathedral), "Ecce Homo", with the "Blessed Virgin and St. John" on the panels; at Toledo (in the Provincial Museum), a "Head of Christ", "Our Lady of Solitude"; at Basle (in the Museum), "Christ carrying the Cross", "Our Lady and St. John"; at Dresden (in the Museum), "Christ carrying the Cross", "Ecce Homo"; at Dublin (in the National Gallery), "St. Jerome in the Desert", at New York (in the Historical Society), "Ecce Homo"; at Paris (in the Louvre), "Christ carrying the Cross"; at St. Petersburg (in the Hermitage), "Our Lady of Sorrows"; at Stuttgart (in the Museum), "Ecce Homo".

GASTON SORTAIS.

Moralities (or MORAL PLAYS) are a development or an offshoot of the Miracle Plays and together with these form the greater part of Medieval drama. They were popular in the fifteenth and early sixteenth centuries and existed side by side with the Miracle Plays of that date. A Morality has been defined by Dr. Ward as "a play enforcing a moral truth or lesson by means of the speech and action of characters which are personified abstractions—figures representing vices and virtues, qualities of the human mind, or abstract conceptions in general", and, on the whole, that definition comprehends the main features of the Morality proper in its most characteristic form. Miracle Plays and Moralities existed throughout Europe, especially in France, and had various features in common while the manner of their presentation, at least in the early stages of the Morality, differed hardly at all—the performance being out of doors upon movable scaffolds with all the usual "properties". The aim of both was religious. In the Miracle Play the subject-matter is concerned with Bible narrative, Lives of Saints, the Apocryphal Gospels, and pious legends, a certain historical or traditional foundation underlies the plot, and the object was to teach and enforce truths of the Catholic faith. In the Morality the matter was allegorical rather than historical, and its object was ethical; the cultivation of Christian character. The intention of both Miracle Plays and Moralities, as we have said, was religious; in the one it aimed at faith, the teaching of dogma, in the other morals, the application of Christian doctrine to conduct. In the one medieval morality at all well known to the general public, that of "Everyman", this is clearly illustrated—a human life is brought face to face with the imperative facts of the Christian faith. It is not difficult, therefore, to see that the Morality is not only a development from the Miracle play but also its complement.

It is the custom with many dramatic and literary historians to decry the Moralities, especially in comparison with the Miracle plays, as unutterably dull, and to place them in the lowest rank of dramatic art;

yet that does not seem to have been contemporary opinion, for the multitude of extant printed editions of Moralities is stated by Mantzius to exceed by far that of the Miracles and farces. Mr. Pollard is, moreover, of the opinion that in its earlier days the Morality was not wholly unworthy to be ranked with the Miracle Play. It is, of course, clear that the substitution in the moralities of abstract ideas (Love, Friendship, etc.) in place of the human personalities of the Bible or legendary narrative, would tend to produce a less real effect if acted carelessly, or if the audience did not thoroughly comprehend, or was out of sympathy with, the meaning of the play (and this is practically the position of the modern reader, especially if non-Catholic). But the abstract ideas, after all, were represented as human beings (though typical human beings) on the stage, and if we put ourselves even slightly into the Catholic, religious, and moral atmosphere of the medieval audience (to which the ethical bearing of the play was not naturally dull but vivid, because of the tremendous human issues it was concerned with), we should be able to understand why the Moralities were popular not only in the Middle Ages but on into the time of the Renaissance. Besides this, in many Moralities the characters were not all abstract qualities—there were angels and devils, priests, doctors, and, especially in English plays, the fool, under various names, chiefly that of the "Vice". The versification of the Moralities was, too, on the whole, more varied than that of the Miracle Plays. One of the latest and most thorough of English writers upon this stage of the drama points out that four main plots can be distinguished in the earlier Moralities, sometimes occurring alone and sometimes in combination: the Debate of the Heavenly Graces; the Coming of Death; the Conflict of Vices and Virtues; and the Debate of the Soul and the Body.

In England, however, we have not extant examples of all the four, though the Morality Play is well represented in our literature. The earliest English Morality of which we hear is a play of the "Lord's Prayer" of the latter half of the fourteenth century "in which all manner of vices and sins were held up to scorn and the virtues held up to praise". This play is lost, but it must have been much thought of, for a Guild was formed in York (where it was played) with the special object of maintaining it. Also lost is another early and highly interesting Morality of the "Creed". The earliest complete Moral play extant, leaving out the still earlier fragment of the "Pride of Life" (ed. Waterhouse, see below), is the "Castell of Perseverance", 3650 lines long, and written perhaps in the early fifteenth century. This "traces (to quote Mr. Pollard's skilful summary) the spiritual history of *Humanum Genus* [Mankind or the typical man] from the day of his birth to his appearance at the Judgment Seat of God, personifying the foes by whom his pathway is beset, the Guardian Angel by whose help he resists them, and the ordinances of Confession and Penance by which he is strengthened in his conflict". Dramatic power is shown in this Morality; the plot forms a unity, and is developed in logical sequence. It must have been a thrilling moment for the audience when *Humanum Genus* after hearing the persuasive arguments of his Good and his Bad Angels, hesitates which to follow:—

"Whom to folowe, wetyn I ne may;
I stonde in stodye, and gynne to rave;
I wolde be ryche in gret aray,
And fayn I wolde my sowle save
As wynde in water I wave.
Thou (to Bad Angel) woldyst to the world I me
toke;
And he wolde that I it forsoke.
Now so God me helpe, and the holy boke
I not (know not) wyche I may have."

Other early Moralities approaching the same type are

"Mind, Will, and Understanding"; "Mankind" (these, with the "Castell of Perseverance", included in one MS. and named in modern times after a former owner, the "Macro Moralities", ed. Pollard and Furnivall, see below); "Everyman" (London, 1902), a translation from a Dutch original; the "World and the Child" (*Mundus et Infans*; ed. Manly, see below). All the above plays are lengthy and belong almost certainly to the fifteenth century. About the same date we may place two plays which though not pure Moralities are yet much influenced by the Moralities, "St. Mary Magdalene" (ed. Furnivall, see below), and what is known as the Croxton Play of the "Sacrament" (ed. Waterhouse, see below).

About the end of the fifteenth century a new kind of Morality play appeared. In the earlier Moralities of which we have been speaking, time was not an object, nor was there need to limit the number of actors, but little by little, as performances began to take place indoors, in the hall of a king or a noble, and as they passed into the hands of professional actors, compression began to be necessary both in time and in the number of personages introduced. The aim of the play, also, became gradually more secular. The result was a modified and shortened Morality known as an Interlude. The meaning of this term is not yet clearly defined. Its primary meaning according to Mr. Chambers is that of a play in dialogue between two or more performers, but its secondary meaning, that of a dramatic diversion in the pause or interlude between the parts of a banquet or other entertainment, which has been generally given to it, may still stand. The nature of the Moral Interlude and its close connexion with the earlier Morality proper is, however, clear. It deals with portions only of a man's life; and the ethical teaching, in some Interludes, is mainly limited to warnings against certain sins (especially those of youth) and in others to exhortations to learning and study. "Hick Scornor" (ed. Manly, see below) and the Interlude of the "Four Elements" (Hazlitt, "Doddsley's Old Plays", London, 1874) are early examples. This type of play was often used as a means of asserting Protestantism against Catholicism. Among the writers of this later type of Morality we find John Skelton in his "Magnyfycence" (ed. Ramsay, see below), and John Heywood, the dramatist, who was especially noted for his Interludes, some of which, however, are more like plays proper having a satirical rather than a definite moral aim, and leading to another development of the drama. Some of the Interludes are lively enough, but in others there appears something of the dramatic lifelessness which has been, perhaps rashly, attributed to Moralities in general. When we find an Interlude on the subject of Love, in which the characters are named "Loving not Loved", "Loved not Loving", "Both Loving and Loved", "Neither Loved nor Loving", it is plain that this type of work is reaching its end, or if it is to continue must take on a more living character. John Heywood's work, however, on the whole, brings us, in Interludes such as "The Four P's" and "The Pardner and the Frere" (both plays to be found in Hazlitt's "Doddsley"), to the threshold of real drama. Allegory has passed away, together with the recognized Moral plot, and the characters are drawn from contemporary life. This "transformed morality takes its place as one of the threads which went to make up the wondrous web of the Elizabethan drama".

K. M. WARREN.

Morality.—It is necessary at the outset of this article to distinguish between morality and ethics, terms not seldom employed synonymously. Morality is antecedent to ethics: it denotes those concrete activities of which ethics is the science. It may be defined as human conduct in so far as it is freely subordinated to the ideal of what is right and fitting. This ideal governing our free actions is common to the race. Though there is wide divergence as to theories of ethics, there is a fundamental agreement among men regarding the general lines of conduct desirable in public and private life. Thus Mr. Hobbouse has well said: "The comparative study of ethics, which is apt in its earlier stages to impress the student with a bewildering sense of the diversity of moral judgments, ends rather by impressing them with a more fundamental and far-reaching uniformity. Through the greatest extent of time and space over which we have records, we find a recurrence of the common features of ordinary morality, which to my mind at least is not less impressive than the variations which also appear" (*Morals in Evolution*, I, i, n. 11). Plainly this uniformity regards principles rather than their application. The actual rules of conduct differ widely. While reverence to parents may be universally acknowledged as obligatory, certain savage tribes believe that filial piety requires them to despatch their parents when the infirmities of old age appear. Yet making allowance for all such diversities, it may be said that the common voice of the race proclaims it to be right for a man to reverence his parents; to care and provide for his children; to be master of his lower appetites; to be honest and just in his dealings, even to his own damage; to show benevolence to his fellows in time of distress; to bear pain and misfortune with fortitude. And only within comparatively recent years has anyone been found to deny that beyond this a man is bound to honour God and to prefer his country's interests to his own. Thus, indeed, the advance of morality lies not so much in the discovery of new principles as in the better application of those already accepted, in the recognition of their true basis and their ultimate sanction, in the widening of the area within which they are held to bind, and in the removal of corruptions inconsistent with their observance.

The relation of morality to religion has been a subject of keen debate during the past century. In much recent ethical philosophy it is strenuously maintained that right moral action is altogether independent of religion. Such is the teaching alike of the Evolutionary, Positivist, and Idealist schools. And an active propaganda is being carried on with a view to the general substitution of this independent morality for morality based on the beliefs of Theism. On the other hand, the Church has ever affirmed that the two are essentially connected, and that apart from religion the observance of the moral law is impossible. This, indeed, follows as a necessary consequence from the Church's teaching as to the nature of morality. She admits that the moral law is knowable to reason: for the due regulation of our free actions, in which morality consists, is simply their right ordering with a view to the perfecting of our rational nature. But she insists that the law has its ultimate obligation in the will of the Creator by whom our nature was fashioned, and who imposes on us its right ordering as a duty; and that its ultimate sanction is the loss of God which its violation must entail. Further, among the duties which the moral law prescribes are some which are directly concerned with God Himself, and as such are of supreme importance. Where morality is divorced from religion, reason will, it is true, enable a man to

recognize to a large extent the ideal to which his nature points. But much will be wanting. He will disregard some of his most essential duties. He will, further, be destitute of the strong motives for obedience to the law afforded by the sense of obligation to God and the knowledge of the tremendous sanction attached to its neglect—motives which experience has proved to be necessary as a safeguard against the influence of the passions. And, finally, his actions even if in accordance with the moral law, will be based not on the obligation imposed by the Divine will, but on considerations of human dignity and on the good of human society. Such motives, however, cannot present themselves as, strictly speaking, obligatory. But where the motive of obligation is wanting, action lacks an element essential to true morality. Moreover, in this connexion the Church insists upon the doctrine of original sin. She teaches that in our present state there is a certain obscurity in reason's vision of the moral law, together with a morbid craving for independence impelling us to transgress it, and a lack of complete control over the passions; and that by reason of this inherited taint, man, unless supported by Divine aid, is unable to observe the moral law for any length of time. Newman has admirably described from the psychological point of view this weakness in our grasp of the moral law: "The sense of right and wrong . . . is so delicate, so fitful, so easily puzzled, obscured, perverted, so subtle in its argumentative methods, so impressionable by education, so biassed by pride and passion, so unsteady in its course, that in the struggle for existence amid the various exercises and triumphs of the human intellect, the sense is at once the highest of all teachers yet the least luminous" (Newman, "Letter to the Duke of Norfolk", in section on conscience).

In dealing with this subject, however, it is further necessary to take account of the historical argument. Various facts are adduced, which, it is alleged, show that morality is, in point of fact, capable of dissociation from religion. It is urged (1) that the most primitive peoples do not connect their religious beliefs with such moral code as they possess; and (2) that even where the moral consciousness and the religious system have reached a high degree of development, the spheres of religion and morality are sometimes regarded as separate. Thus the Greeks of classical times were in moral questions influenced rather by non-religious conceptions such as that of *aidōs* (natural shame) than by fear of the gods; while one great religious system, namely Buddhism, explicitly taught the entire independence of the moral code from any belief in God. To these arguments we reply, first: that the savages of to-day are not primitives, but degenerates. It is the merest superstition to suppose that these degraded races can enlighten us as to what were the beliefs of man in his primitive state. It is among civilized races, where man has developed normally, that we must seek for knowledge as to what is natural to man. The evidence gathered from them is overwhelmingly in favour of the contention that human reason proclaims the essential dependence of morality on religious belief. In regard to the contrary instances alleged, it must be denied that the morality of the Greeks was unconnected with religion. Though they may not have realized that the laws prescribed by natural shame were derived from a divine command, they most certainly believed that their violation would be punished by the gods. As to Buddhist belief, a distinction must be drawn between the metaphysical teaching of the Buddha or of some of his disciples, and the practical interpretation of that teaching as expressed in the lives of the great mass of the adherents of the creed. It is only the Buddhist monks who have really followed the speculative teaching of their master on this point and have dissociated the moral law from belief in God. The mass of adherents never did

so. Yet even the monks, while denying the existence of a personal God, regarded as a heretic any who disputed the existence of heaven and hell. Thus they too help to bear witness to the universal consensus that the moral law is based on supernatural sanctions. We may, however, readily admit that where the religious conceptions and the moral code were alike immature and inadequate, the relation between them was less clearly grasped in thought, and less intimate in practice, than it became when man found himself in possession of a fuller truth regarding them. A Greek or a Buddhist community may have preserved a certain healthiness of moral tone even though the religious obligation of the moral law was but obscurely felt, while ancestral precept and civic obligation were viewed as the preponderating motives. A broad distinction must be made between such cases and that of those nations which having once accepted the Christian faith with its clear profession of the connexion between moral obligation and a Divine law, have subsequently repudiated this belief in favour of a purely natural morality. There is no parity between "Fore-Christians" and "After-Christians". The evidence at our command seems to establish as certain that it is impossible for these latter to return to the inadequate grounds of obligation which may sometimes suffice for nations still in the immaturity of their knowledge; and that for them the rejection of the religious sanction is invariably followed by a moral decay, leading rapidly to the corruptions of the most degraded periods of our history. We may see this wherever the great revolt from Christianity, which began in the eighteenth century, and which is so potent a factor to-day, has spread. It is naturally in France, where the revolt began, that the movement has attained its fullest development. There its effects are not disputed. The birth-rate has shrunk until the population, were it not for the immigration of Flemings and Italians, would be a diminishing quantity; Christian family life is disappearing; the number of divorces and of suicides multiplies annually; while one of the most ominous of all symptoms is the alarming increase of juvenile crime. But these effects are not peculiar to France. The movement away from Christianity has spread to certain sections of the population in the United States, in England, in Germany, in Australia, countries providing in other respects a wide variety of circumstances. Wherever it is found, there in varying degrees the same results have followed, so that the unprejudiced observer can draw but one conclusion, namely: that for a nation which has attained maturity, morality is essentially dependent on the religious sanction, and that when this is rejected, morality will soon decay.

Granting religion to be the essential basis of moral action, we may further inquire what are the chief conditions requisite for the growth and development of morality in the individual and in the community. Three such may be singled out as of primary moment, namely: (1) a right education of the young, (2) a healthy public opinion, (3) sound legislation. It will be unnecessary for us to do more than touch in the briefest manner on these points. (1) Under education we include the early training of the home as well as the subsequent years of school life. The family is the true school of morality, a school which nothing can replace. There the child is taught obedience, truthfulness, self-restraint, and the other primary virtues. The obligation to practise them is impressed upon him by those whose claim on him he at once recognizes, and whose word he does not dream of doubting; while the observance of the precept is made easy by the affection which unites him with those who impose it. It is, therefore, with reason that the Church has ever declared divorce to be fatal to the truest interests of a nation. Where divorce is frequent, family life in its higher form disappears, and with it perishes the founda-

tion of a nation's morality. Similarly the Church maintains, that during the years of school life, the moral and religious atmosphere is of vital importance, and that apart from this the possession of intellectual culture is a danger rather than a safeguard. (2) It is hardly necessary to do more than call attention to the necessity of a sound public opinion. The great mass of men have neither opportunity nor leisure to determine a standard of morals for themselves. They accept that which prevails around them. If it is high, they will not question it. If it is low, they will aim no higher. When the nations were Catholic, public opinion was predominantly swayed by the teaching of the Church. In these days it is largely formed by the press; and since the press as a whole views morality apart from religion, the standard proposed is inevitably very different from what the Church would desiderate. Hence the immense importance of a Catholic press, which even in a non-Catholic environment will keep a true view before the minds of those who recognize the Church's authority. But public opinion is also largely influenced by voluntary associations of one form or another; and of recent years immense work has been done by Catholics in organising associations with this purpose, the most notable instance being the German *Volksverein*. (3) It may be said with truth that the greater part of a nation's legislation affects its morality in some way or other. This is of course manifestly the case with all laws connected with the family or with education; and with those, which like the laws regarding the drink traffic and the restriction of bad literature, have the public morals for their immediate object. But it is also true of all legislation which deals with the circumstances of the lives of the people. Laws, for instance, determining the conditions of labour and protecting the poor from the hands of the usurer, promote morality, for they save men from that degradation and despair in which moral life is practically impossible. It is thus evident how necessary it is, that in all such questions the Church should in every country have a definitely formed opinion and should make her voice heard. (See ETHICS; LAW.)

Moran, PATRICK FRANCIS. See SYDNEY, ARCHDIOCESE OF.

Moratín, LEANDRO FERNÁNDEZ DE, Spanish poet and playwright, b. at Madrid, 10 March, 1760; d. at Paris, 21 June, 1828. He is usually known as the younger Moratín, and was the son of Nicolás Fernández de Moratín (1737-80), a lawyer and professor of poetry at the Imperial College, also a playwright. The elder Moratín had devoted himself to attempting to reform the Spanish drama and had written several plays after the style of Racine and Corneille. In 1762 he had published his "*Desengaño al Teatro Español*" in which he criticised the old drama and especially the "*Auto Sacramental*" which still flourished. So successful was this work, that three years later the exhibition of "*Autos*" was forbidden by royal edict. Among his works were "*La Petimetre*", "*Guzmán el Bueno*" and, probably the best known, "*Hormesinda*", a tragedy. Knowing by his own experience how precarious was literature as a means of livelihood, the elder Moratín apprenticed his son to a jeweller, thinking in this way to develop his son's artistic skill. While serving as apprentice, young Leandro won two prizes offered by the Academy, one in 1779 with an epic ballad entitled "*La toma de Granada*", and the

other in 1782 with "La lección poética", a satire upon the popular poets of the day. These brought him to the notice of the statesman and author Jovellanos, through whose influence Moratín was appointed secretary to Count Cabarrus upon the latter's special mission to France in 1787. During the year that he spent in Paris he improved the opportunity to study the French drama and formed friendships with men of letters, both of which circumstances aided materially in the artistic development of the young poet. Returning to Spain in 1789, Moratín set out to continue the work begun by his father of reforming the Spanish drama upon the French classical model. He secured the patronage of Manuel Godoy, prime minister and favourite of Charles IV, through whose influence he was able in 1790 to stage the first of his plays, "El Viejo y la Niña", a comedy in three acts and in verse. This was followed in 1792 by "La Comedia nueva" or "El Café" in two acts and in prose. In the same year Godoy gave him the means for foreign travel and his journey through France, England, the Low Countries, Germany, and Italy completed his education. His next play "El Barón" was produced in 1803, followed in 1804 by "La Mojigata" (The female hypocrite), a weak imitation of Molière's "Tartuffe". An unsuccessful attempt was made to suppress this last piece on religious grounds by means of the Inquisition. Moratín's crowning triumph came in 1806 when the second of his prose comedies and his best work "El Sí de las Niñas" was produced. Performed before crowded houses night after night, it ran through several editions in one year, and was translated into several foreign languages. In 1808, upon the fall of his friend Godoy, Moratín was compelled to flee from Spain, but returned shortly afterward to accept from Joseph Bonaparte the post of royal librarian, a lack of patriotism which lost him the friendship of loyal Spaniards, so that when the Spaniards returned to power, Moratín was compelled to pass the rest of his days in exile, principally in Paris where he died. In addition to the works mentioned, Moratín made a rather poor translation of Hamlet, and translated and adapted to the Spanish stage Molière's "Ecole des Maris" and "Le Médecin Malgré Lui" under the titles respectively of "La Escuela de los Maridos" and "El Médico á Palos". During his exile he wrote a history of the Spanish drama entitled "Orígenes del Teatro Español". In his work, Moratín shows originality, he skillfully describes the manners of his time and is clever in his dialogue. He adheres to the French unities, but introduces certain peculiarities of the Spanish stage, dividing his plays into three acts and using the short romance verse. He was unquestionably the best dramatic writer Spain had produced since the famous ones of the *Siglo de oro*. The "Biblioteca de Autores Españoles", Vol. II, contains the plays of both the elder and the younger Moratín.

VENTURA FUENTES.

Moravia (German MÄHREN), Austrian crown land east of Bohemia. In the century before the Christian era the Germanic Quadi (a tribe closely related to the Marcomanni, who had just driven the Celtic Boii from Bohemia) took possession of the modern Moravia. Of these two tribes settled in Bohemia and Moravia we know nothing beyond their collisions with the Romans—e. g., their wars with Marcus Aurelius in A. D. 165 and 181 and with Valentinian I (364-75). The invasion of the Huns under Attila drove the majority of the Marcomanni and Quadi from their settlements. In the fifth century the deserted territory was occupied by Slav tribes. About the middle of the sixth century, these were conquered by the Atars, who advanced as far as Thuringia. The Slavs were

delivered from the Avar yoke temporarily (622-38) by Samo, who was perhaps of Frankish parentage, and finally by Charlemagne, whose defeat of the Avars in 796 enabled the Moravians to recover the territory extending from Mannhartsberg to the mouth of the Gran. During this period a uniform principality had developed on Moravian soil, and received the name of the Kingdom of the Moimorides from the founder of the dynasty, Moimir. Moravia stood towards the Frankish Empire in relations of dependence; at least, the "Maharaner" brought presents to Emperor Louis at the Diet of Ratisbon in 822. When Moimir sought to assert his independence of the empire, he was deposed by the Germans and his nephew Wratislaw appointed prince. The latter's struggle for complete freedom ended in his betrayal into the hands of Louis the German by his nephew Swatopluk, who then attained to power under German protection.

In the ecclesiastical domain Wratislaw had also desired independence of the German Empire. Christianity had already been preached in Moravia, but had failed to reach the great mass of the people, as the German and Italian missionaries were ignorant of the vernacular speech. In 863 Wratislaw asked the Greek emperor to send new apostles acquainted with the Slav tongue. This monarch dispatched the brothers Constantine (afterwards called Cyril) and Methodius in 864. Having only minor orders, the missionaries confined themselves to the training of the youth and the translation of a portion of the Bible into the Slav language, for which purpose they invented special Slav characters. In 867 they set out for Rome to seek papal permission to conduct the Divine Service in the vulgar tongue. Pope Adrian II, who consecrated both brothers bishops, is said to have acceded to their petition. While Constantine, having a presentiment of his approaching end (869), remained in Rome, Methodius returned to Moravia and there resumed his work of evangelization, in opposition to the German clergy. After the fall of Wratislaw, Methodius had to submit to the German spiritual authorities, was confined for two and a half years in a German monastery, and was freed only at the strict command of the pope in 873. His activity was, however, even now narrowly restricted by the Bavarian bishops, although the use of the Slav Liturgy was expressly recognized by the pope in 880.

The understanding between Swatopluk and the Frankish Empire was of short duration. From 882 Swatopluk was engaged in fierce conflict with Arnulf, who administered Carinthia and Pannonia. In 885, however, a complete reconciliation took place, and the Moravian prince lent Arnulf his zealous support until the latter successfully established his claim to the German Crown. But the energetic Arnulf was not likely to tolerate any longer the growth of Swatopluk's power, so dangerous to his empire. In 892 war again broke out, and Swatopluk died in 895 before any decisive result had been reached. Subsequently the Moravian Kingdom was rent asunder by the struggle of various claimants for the throne, and in the first decade of the tenth century succumbed to the attack of Hungary at the battle of Presburg. The country remained in the hands of Hungary until the battle of Lechfeld in 955, when it was united with Bohemia by the Bohemian Duke Boleslaw of the Přemysl family, the confederate of Emperor Otto I. Towards the end of the tenth century Moravia was conquered by the Polish duke, Boleslaw Chrobry (992-1025), but, when domestic disturbances broke out in Poland after his death, Duke Udalrich of Bohemia, with the assistance of his son Břetislav, recovered Moravia from the Poles. Břetislav administered the land as Duke of Moravia, and established his residence at Olmütz. With the booty from his campaigns against the Poles, he founded the first Moravian monastery, that of Raigern near Brünn (1048). The strife, caused by

the law establishing in Bohemia the right of succession by seniority (1054), extended also to Moravia (which would have been divided to provide petty principalities for the younger sons of the ducal house), especially to the principalities of Brünn, Olmütz, and Znaim. The suzerainty of the Bohemian duke was however maintained. In 1063 Duke Wratislaw (1061-92) gave the land its own ecclesiastical centre by establishing the Diocese of Olmütz, which was placed under Mainz.

The Moravian petty princes repeatedly rebelled against the sovereignty of the Bohemian duke; thus when, on the death of Wratislaw II, Břetislav II appointed his brother his successor in contravention of the law regulating succession by seniority, long wars were waged against him by the rightful heir, Duke Udalrich of Brünn (1101, 1105, and 1107). These wars reached their climax in 1125, when Prince Otto of Olmütz rose against Duke Sobeslaw, the youngest son of Wratislaw II, and was supported by Lothair of Supplinburg. Lothair led an army in person for his confederate Otto, but was defeated in a decisive battle near Kulm (1128). Sobeslaw (1125-40) and his nephew and successor, Wladislaw II, energetically maintained the Bohemian supremacy over Moravia; during the reign of the latter the Moravian branch of the Přemysl family became extinct, whereupon Prince Conrad Otto of Znaim, who

probably belonged to the collateral line of the Bohemian Přemysls, united the three divisions of the Moravian kingdom (1174). On his attempting also to annex Bohemia (from which, on the death of Wladislaw, his son Frederick had been expelled by his barons), Barbarossa, to whom Frederick had fled, summoned both the Přemysl nobles to appear before his tribunal at Ratisbon, and decided (29 Sept., 1182) that Frederick should rule in Bohemia, but that thenceforth Conrad Otto should hold Moravia as an immediate margraviate, independent of Bohemia. After Conrad Otto's death in Sicily (1191), a new war of succession broke out between the brothers Ottokar and Henry Wladislaw: to avoid bloodshed, the latter renounced in 1197 his claims to Bohemia, accepting Moravia as a margraviate feudatory to the Bohemian crown. Thenceforth, this was the political condition of Moravia.

The German colonization of Moravia, begun under Henry Wladislaw, greatly increased under his successors Henry Wladislaw II and Přemysl, as the invasions of the Mongols in 1241 and the Cumans in 1252 had swept away numbers of the inhabitants into captivity. This immigration of Germans led to the formation of German townships, the development of which was encouraged by the Přemysl family, especially by Ottokar II. The privileges, accorded to these towns, were based generally on those of Magdeburg and Nuremberg. After Ottokar had fallen in the battle of Marchfeld fighting against Rudolf of Hapsburg (1278), Moravia remained for five years as a pledge in Rudolf's hands, but was then under Ottokar's successor, Wenceslaus II, reunited with Bohemia, though its area was somewhat reduced. With Wenceslaus III the ruling line of the Přemysls became extinct in

1306. Moravia at first fell with Bohemia to Albert I of Hapsburg; then on Albert's death in 1307 to Henry of Carinthia, and in 1309 to John of Luxemburg, son of Emperor Henry VII. In the Privilege of 1311 John granted the country important liberties, which formed the foundation of the subsequently augmented rights of the estates. Under the provincial governor Henry of Lipa and Margrave Charles (1333), later Emperor Charles IV, a new period of prosperity began. In 1349 Charles enfeoffed his brother John in the margraviate. In 1371 John divided the country among his three sons, Jobst (Jodocus) receiving the title of Ancient Margrave and Overlord; his two younger sons were also given the title of Margrave, but they were to hold their lands in fief from Jobst. This partition and the great Western Schism, which evoked two ecclesiastical parties in Moravia as elsewhere, gave rise to much discord and disturbances between 1380 and 1405. On the death of the childless Jobst, Moravia, as a vacant

fief, reverted to the Bohemian Crown, and its administration was entrusted to certain district governors by Wenceslaus IV.

As in Bohemia, where similar political and ecclesiastical conditions prevailed, Hussitism made rapid and great progress in Moravia under the feeble rule of Wenceslaus, especially among the nobility and peasantry; the Bishop of Olmütz and almost all the imperial cities inhabited by Germans, however, remained true

to the Catholic cause. On Wenceslaus's death his brother, Emperor Sigismund, was recognized in Moravia as margrave, although the Bohemians refused to recognize him as king. Against the Hussites, who, under the leadership of two apostate priests, had established a fortified camp in the neighbourhood of Ungarisch-Hradisch (Neu Tabor), the emperor received vigorous support from Duke Albert of Austria. In 1423 Albert received for these services the Margraviate of Moravia in fief. After the chief power of the fanatical Hussites in Bohemia had been crushed in the battle near Lipau (1434), a treaty of peace was also arranged in Moravia, according to which the Hussites were allowed to receive Communion under both species, these *Compactata*, as they were called, being published at the Diet of Iglau (1436). Under Albert's son, Wladislaw Posthumus (1449), began the first attempts to stem Utraquism and to restore to the Catholic Church its earlier dominant position. Especially efficacious towards this end was the missionary activity of St. John Capistran, whose ignorance of the native speech, however, prevented him from attaining complete success. George of Podiebrand, who became King of Bohemia on Wladislaw's death in 1457, had to resort to arms to secure recognition in Moravia from the German and Catholic towns. In 1464 he promised the Moravian Estates that the margraviate should never be separated from the Crown of Bohemia by sale, exchange, or mortgage. After his death, however, the strife between Matthias Corvinus and Wladislaw of Poland for the Bohemian Crown resulted in the peace of 1478, according to which Corvinus received Moravia for life and Wladislaw Bohemia. On the death of Corvinus, Moravia also fell under the sway of Wladislaw (1490). Thanks to the excellent

MARKET AND CITY HALL, BRÜNN, MORAVIA

administration of the governor Ctibor of Cymburg (1469-94), who, although a Utraquist, enjoyed the confidence of both princes, Wladislaw was able to leave to his son Louis II in 1516, considering the troubled era, a splendidly ordered land. Louis was slain in the Battle of Mohács against the Turks (1526). As he was childless, Ferdinand of Hapsburg, husband of Anna Jagellon, the sister of Louis, claimed Moravia with Bohemia and Hungary. His claim was admitted by the assembly of the Moravian Estates, who did homage to Ferdinand at Brünn and Olmütz in 1527.

Turning to ecclesiastical affairs, there was in Moravia in the fifteenth century, besides the Catholics and Utraquists, a third confession, the so-called "Brethren's Union". This body had spread widely, thanks mainly to the patronage of certain influential nobles, who could defy all decrees of banishment. Luther's teaching thus found a favourable soil in Moravia, and spread rapidly, especially in the cities of Olmütz, Znaim, and Iglau. From 1526 Moravia was also the refuge and new home of the Anabaptists, the adherents of Hubmaier, the Gabrielists, and the Moravian Brethren, who later emigrated to Russia and thence to the United States. The friendly attitude of Emperor Maximilian II (1564-76) towards Protestantism favoured the growth of all these non-Catholic movements. With the foundation of the Jesuit Colleges of Brünn and Olmütz (1574) the Catholic Counter-Reformation set in, its direction being undertaken by Franz von Dietrichstein, Bishop of Olmütz (1599-1636). The Bohemian rising against the emperor in 1618 extended for a short time to Moravia, and on 19 August, 1619, the opposition party of the Moravian Estates voted in common with the Bohemian Estates at Prague for the deposition of Ferdinand and the election of Frederick of the Palatinate as King of Bohemia. In Feb., 1620, the latter succeeded in making his entry into Brünn as Margrave of Moravia, but the Battle of the White Mountain gave victory to the cause of the emperor and Catholicism, and the imperial generals occupied the land. Sharp punishment was meted out to the leaders of the rebellion and the revolting cities; in 1622 the Anabaptists were compelled to leave the land, and in 1623-8 the Brethren's Union.

An imperial edict of 9 March, 1628, ordered the return to the Catholic Church, and compelled all recusants to emigrate. The Protestant religion, however, continued under the surface, especially in the German townships. From 1642 Moravia was the theatre of the devastating wars between the imperial forces and the Swedes, who maintained a foothold in the land until the Peace of 1648 (in Olmütz until 1650). Sixty-three castles, twenty-two large towns, and three hundred and thirty villages were destroyed, and the plague swept away thousands of the inhabitants whom the war had spared. On the conclusion of the Thirty Years' War the Catholic restoration was actively resumed. From Olmütz, Brünn, Iglau, Znaim, and Hradisch outwards, the Jesuits displayed a fruitful activity by holding missions far and wide, while the Piarists performed valuable service by establishing schools in numerous places. The lack of secular clergy, however, continued for a long time an obstacle to complete Catholicization. Under Leopold I, Joseph I, and Charles VI, Moravia enjoyed as a rule peaceful conditions, although in 1633 the Turks and Tatars penetrated as far as Olmütz and Brünn, devastating the land. The wars begun by Frederick II of Prussia for the possession of Silesia reduced Moravia to a piteous state, especially northern Moravia and Olmütz. Maria Theresa and Joseph II introduced extensive alterations in almost all branches of the administrative system. The administration was greatly centralized, the autonomy of the estates and the Diet was abolished, and in 1782 Moravia was united with Silesia for purposes of administration. In favour of the Protestants a patent of tolerance was

issued, while on the other hand thirteen monasteries for men and six for women were suppressed. The University of Olmütz, deserted after the suppression of the Jesuit Order, was transferred in 1778 to Brünn, where a bishopric had been founded in 1777, Olmütz being simultaneously raised to an archdiocese. Emperor Leopold restored to the estates a certain independence.

The Napoleonic era did not pass by without leaving a landmark in Moravia, for at Austerlitz, in the centre of the land, was fought the decisive battle of the Third Coalition War, and the subsequent contest between Austria and Napoleon took place partly in Moravia (Battle of Znaim). The Restoration was followed by many years of peace. The Austrian Revolution of 1848 gave Moravia and the other crown lands of Austria a constitution, substantially unaltered to-day, and admitted the co-operation of the people in the making of laws. In 1866 Moravia was the scene of the latest war between Austria and Prussia, which was decided at the Battle of Königgrätz, and a Moravian town, Nikolsburg, witnessed the preliminary negotiations which resulted in the Peace of Prague. In the subsequent era of peace Moravia made great strides in cultural and economical development. The national quarrels between the Germans and Czechs, which even to-day (1910) convulse Austria and especially the portion of Bohemia bordering on Moravia, found a friendly settlement in Moravia in 1905. The electoral conditions were altered so as to include—in addition to the three electoral classes of the landed interests, the cities, and the rural districts—a fourth general electoral class consisting of every qualified voter; separate German and Czech electoral districts were established according to the national land registers, and curiae of the separate nationalities were instituted to settle all disputes involving the question of nationality. The question of language in the case of the autonomous national and district authorities has been settled on a bilingual basis, and the division of the school board according to nationality accomplished. Although, by the acceptance of this franchise reform, the Germans lost their previous majority in the Diet, they gave their consent to the change in the interests of public peace.

Politically speaking the Margraviate of Moravia is an Austrian crown land, the highest administrative authority being vested in the governor at Brünn. The Diet consists of 149 deputies: 2 members with individual vote, the Archbishop of Olmütz and the Bishop of Brünn; 30 members of the landed interests (10 German, 20 Czech); 3 deputies from the Chamber of Commerce of Olmütz and from that of Brünn; 40 representatives of the towns (20 German, 20 Czech); 51 representatives of the rural communes (14 German); 20 deputies from the electoral curiae (6 German). In the Imperial Diet of the Austrian Crownlands Moravia is represented by 49 deputies. Ecclesiastically, the land is divided into the dioceses of Olmütz and Brünn, which are treated in separate articles. The Protestants have 1 *Superintendentur*, 14 *Seniorate*, and 45 parishes; the Jews 50 cultural districts. The area of Moravia is 8573 square miles. According to the census of 1900 the population of Moravia was 2,437,706 inhabitants, including 2,325,574 Catholics, 185 Uniats, 66,365 Protestants, 44,255 Jews; and, according to nationality, 695,492 Germans and 1,727,270 Czechs. At the beginning of 1909 the population was estimated at 2,591,980.

Morcelli, STEFANO ANTONIO, an Italian Jesuit and learned epigraphist; b. 17 January, 1737, at Chiari near Brescia; d. there 1 January, 1822. He studied at the Jesuit College of Brescia and was admitted into the Society of Jesus, 3 Nov., 1753. He successively taught grammar at Fermo, humanities at Ragusa, and oratory at the Roman College where he established an academy of archaeology at the Kircher Museum. After the suppression of the Society of Jesus (1773) he became librarian to Cardinal Albani and in 1791 was appointed to a provostship in his native town. He declined the offer of the Archbishopric of Ragusa and died a member of the restored Society of Jesus. He owes his fame not only to his extensive knowledge of ancient inscriptions, but also to his classical Latinity. Among his numerous works the following may be mentioned: (1) "*De stilo inscriptionum latinarum*" (Rome, 1781); (2) "*Inscriptiones commentariis subjectis*" (Rome, 1783) — to a second edition of these two works was added the "*Parergon Inscriptionum novissimarum*" (Padua, 1818-22); (3) "*Μνημόειον τῶν Εὐαγγελίων ἱστορικῶν sive Kalendarium Ecclesie Constantinopolitane*" etc. (Rome, 1788); (4) "*Africa Christiana*" (Brescia, 1816-7); (5) "*Opuscoli Ascetici*" (Brescia, 1819 or 1820).

More, HELEN (DAME GERTRUDE), Benedictine nun of the English Congregation; b. at Low Leyton, Essex, England, 25 March, 1606; d. at Cambrai, France, 17 August, 1633. Her father, Cresacre More, was great-grandson of Blessed Thomas More; her mother, Elizabeth Gage, was sister of Sir John Gage, Baronet, of Fife, Sussex, lord chamberlain to Queen Mary. Her mother dying at an early age, Helen's care and education now devolved upon her father. By persuasion of Dom Benet Jones, O.S.B., she joined his projected foundation at Cambrai, and was first among nine postulants admitted to the order, 31 Dec., 1623, but vacillation of mind so disquieted her novitiate, that only with the greatest hesitation she pronounced her vows on 1 January, 1625; nor was she even then quite free from scruples and temptations, until she had availed herself of Dom Augustine Baker's prudent guidance. A year or two later, having now become Dame Gertrude, learning from him the use of affective prayer, a complete change was wrought in her; rapidly advancing in the interior life, she became a source of edification to the infant community, and, in 1629, when a choice of abbess must be made, her name, conjointly with that of Catharine Gascoigne, was sent to Rome for a dispensation on point of age. Catharine was eventually chosen, but Gertrude was always honoured as chief foundress. Supporting her abbess by lifelong devotion, promoting peace and good observance, she was universally beloved. None suffered more nor with more edifying fortitude than Dame Gertrude, under a heavy trial to which the community was subjected through interference of the vicar, Dom F. Hull, with Father Baker's teachings. Later, doubts arising as to her mode of prayer, formal inquiry was made, resulting in approval at the General Chapter in 1633, during the sessions of which, however, Gertrude was attacked by small-pox and died a peaceful death.

Some papers found after her death and arranged by Father Baker, were afterwards published in two separate works: one entitled "*The Holy Practices of a Divine Lover, or the Sanctity Ideot's Devotions*" (Paris, 1657); the other, "*Confessiones Amantis*", or "*Spiritual Exercises*", or "*Ideot's Devotions*", to which was prefixed her "*Apology*" for herself and for her spiritual guide (Paris, 1658), both recently republished.

BAKER, *Life and Death of Dame Gertrude More* (MS., written soon after her death—very rare); WELD-BLUNDELL, *Inner Life and Writings of D. Gertrude More* (2 vols., London, 1910); SWENKEY, *Life and Spirit of Father Baker* (London, 1861); WELDON, *Chronological Notes* (Stanbrook, 1881); LANE-FOX, introduction to his edition of *The Holy Practices of a Divine Lover* (Fort-Augustus, 1908).

E. B. WELD-BLUNDELL.

More, HENRY, great-grandson of the martyred English chancellor; b., 1586; d. at Watten in 1661. Having studied at St. Omer and Valladolid, he entered the Society of Jesus, and after his profession, and fulfilling various subordinate posts in the colleges, he was sent on the English Mission where he was twice arrested and imprisoned (1632, 1640), while acting as chaplain to John, the first Lord Petre. He became provincial in 1635, and in that capacity had a good deal to do with the negotiations of Panzani, Conn, and Rossetti, the papal agents at the court of Queen Henrietta Maria. He was rector of St. Omer in 1649-1652, and again in 1657-1660. During these latter years he wrote his important history of the English Jesuits: "*Historia Missionis Anglicanae, ab anno MDLXXX ad MDCXXXV*" (St. Omer, 1660, fol.). Besides translating Jerome Platus's "*Happiness of the Religious State*" (1632), and the "*Manual of Meditations*" by Thomas de Villa Castin (1618), he wrote "*Vita et Doctrina Christi Domini in meditationes quotidianas per annum digesta*" (Antwerp, 1649), followed by an English version, entitled, "*Life and Doctrines of our Saviour Jesus Christ*" (Ghent, 1656, in two parts; London, 1880).

More, SIR THOMAS. See THOMAS MORE, BLESSED.

Morel, GALL, a poet, scholar, aesthete, and educationist, b. at St. Fiden, Switzerland, on 24 March, 1803; d. at the Abbey of Einsiedeln on 16 December, 1872. His baptismal name was Benedict, but in the monastery he took the name of Gall. In 1814, he entered the gymnasium at St. Gall. A pilgrimage to Einsiedeln in 1817 influenced him deeply, and soon afterwards he entered the monastery school as a novice. In 1820 he took the final vows, and after several years spent in theological and philosophical studies, was ordained priest in 1826, being appointed forthwith instructor in the monastery school. From this period his life presents a picture of extraordinary activity. From 1826 to 1832 he was professor of rhetoric, and until 1835 he lectured on philosophy. In this latter year he became librarian of the abbey, and retained this office to the end of his life, while also fulfilling the offices of choral director (1835-40), prefect (1836), and rector (1848) of the abbey school, archivist of the abbey (1839-45), counsellor of education of the Canton Schwyz (1843-5), and subprior of the abbey (1846-52).

In spite of the many demands upon his time and strength, the industrious monk exhibited a many-sided literary activity. He is best known as a poet, ten volumes of lyric, didactic, and dramatic verse testifying to his prolific poetical talent. Endowed by nature in so many directions, it has been said that in his poems, "he shows himself now as a childlike pious monk, now as a good-natured humorist, now as a man fully conversant with worldly affairs, and often as a keen satirist, forceful and epigrammatic in ex-

pression." Though Morel may not rank among the princes of verse, still his modest muse produced many a poem of enduring worth. But Morel also proved himself a scholar of great versatility. Under his care the library of Einsiedeln was enriched in thirty-seven years by more than 26,000 volumes; many of these are most valuable, especially the manuscripts, which include a tenth-century MS. of Horace, rescued by Morel from the bindings of books, and named after him "Codex Morellianus". Drawing on these literary treasures, Morel published the "Lateinische Hymnen des Mittelalters", "Offenbarungen der Schwester Mechthild von Magdeburg", and other works. Another publication was the "Regesten der Archive der schweizerischen Eidgenossenschaft"; and he also compiled the Regesta of the Benedictine Abbey of Einsiedeln. Morel's compilations and catalogues are models of accuracy and arrangement. He was associate founder of the Swiss Society for Historical Research (1840), and wrote many valuable contributions for its "Archiv". He likewise assisted in the formation of "Verein der fünf alten Orte", and was a contributor to its organ, the "Geschichtsfreund".

In æsthetics, Morel became an authority by painstaking study and repeated art journeys to Munich, Vienna, Venice, Milan, Rome, and Paris. His conception of æsthetics was concisely expressed in the words that he considers it the prime object of æsthetics to reconstruct creation: the Divine ideas by the understanding in philosophy, the Divinely picturesque by our fancy in art, and God's creation by our will in our lives. An accomplished violinist, Morel critically treated music as an important branch of æsthetics. Morel's services as an educationist for nearly fifty years are easier to estimate than to describe. His energy and his quickening influence over teachers and scholars raised the humble *Klosterschule* to a high rank among institutions of learning. In this connexion special mention must be made of his efforts to foster school drama, including the publication of two volumes entitled "Jugend- und Schultheater". In the apt words of Bishop Greith of St. Gall, "Father Gall Morel was a living vindication of the monastic and cloistered life against the attacks of misunderstanding and prejudice."

N. SCHEID.

Morel, JULIANA, Dominican nun, b. at Barcelona, Spain, 16 February, 1594; d. at the convent of the Dominican nuns at Avignon, France, 26 June, 1653. The accounts of the learning of this celebrated Spanish lady seem to border on the miraculous. In a laudatory poem Lope de Vega speaks of her "as the fourth of the Graces and the tenth Muse", and says "that she was an angel who publicly taught all the sciences from the professorial chairs and in schools". The apparently extravagant praise of the poet is confirmed by the reports of contemporaries. Left motherless when very young, Juliana's first training was received from the Dominican nuns at Barcelona. At the age of four she began Latin, Greek, and Hebrew at home under competent teachers, and, when not yet seven years old, wrote a pretty Latin letter to her father who was away. Accused of taking part in a murder, the father fled to Lyons with his daughter, then eight years old. At Lyons Juliana continued her studies, devoting nine hours daily to rhetoric, dialectics, ethics, and music. At the age of twelve she defended in public her theses in ethics and dialectics "summa cum laude". She then applied herself to physics, metaphysics, and canon and civil law. Her father, who had meanwhile settled at Avignon, wanted his daughter to obtain a doctorate in the last-named

faculty. This was gained in 1608, when she publicly maintained her law theses at the papal palace of the vice-legat before a distinguished audience, among whom was the Princesse de Condé. Disregarding wealth and a desirable marriage, she entered during the same year the convent of Sainte-Praxède at Avignon. In 1609 she received the habit of the order, and on 20 June, 1610, took the vows. Just as she had distinguished herself in secular life by her learning, so in the order she excelled all others in piety, humility, and faithful observance of the rules, being on three occasions, notwithstanding her reluctance, named prioress. In this manner the pious nun spent the remainder of her life in the order, well-pleasing to God and beloved by the sisters. For two years before her end she was in great bodily suffering and her death agony lasted five days. She left a number of religious writings: (1) a translation of the "Vita Spiritualis" of St. Vincent Ferrer, with comments and notes to the various chapters (Lyons, 1617; Paris, 1619); (2) "Exercices spirituels sur l'éternité" (Avignon, 1637); (3) French translation of the Rule of St. Augustine, with addition of various explanations and observations for the purpose of instruction (Avignon, 1680); (4) History of the reform of the convent of St. Praxedis, with lives of some pious sisters, in manuscript; (5) Latin and French poems, some printed and some in manuscript.

N. SCHEID.

Morelos, JOSÉ MARÍA, Mexican patriot, b. at Valladolid (now called Morelia in his honour), Mexico, on 30 September, 1765; shot at San Cristóbal Ecatepec on 22 December, 1815. His father died while he was still a youth, and, being left destitute, he worked for some time as a muleteer, until he succeeded in obtaining admission, as an extern, to the College of San Nicolás at Valladolid, the rector of which institution was at that time the reverend Don Miguel Hidalgo. Having been ordained priest, he was appointed parish priest of Carácuaro and Nocupétaro in Michoacan. When Hidalgo left Valladolid for Mexico City, after uttering his *Grito de Dolores*, Morelos offered himself to him at Charo, and Hidalgo commissioned him to raise troops for the cause of Independence on the southern coast, and to get possession of the port of Acapulco. Returning to his parish, he collected a few ill-armed men, marched towards Zacatula, and, following the coast, reached Acapulco with some 3000 men whom he had recruited on the way and supplied with arms taken from the royalists. After defeating Paris, who had come from Oaxaca with the object of relieving Acapulco, he left part of his forces to continue the siege and made for Chilpancingo. Forming a junction there with the brothers Galiana and Bravo, he marched to Chilapa and captured that town. As the viceroy, Venegas, was keeping all the colonial troops occupied with the siege of Zitacuaro, Morelos, who had been joined at Jantelco by his fellow-priest Mariano Matamoros—thenceforward his right hand in almost every enterprise—organized four armies, which he distributed in various parts of Mexico. But the easy surrender of Zitacuaro to Calleja, and the approach of that commander with all his forces, placed Morelos, with some 4000 men, in the situation of being besieged at Cuautla by 8000 of the best troops of the viceroyalty. With indomitable courage, fighting day after day, Morelos held out for seventy-three days, until at last he succeeded in breaking away with all that remained of his army. He then passed over to Huajuapán, from thence to Orizaba and so on to Oaxaca, capturing all those places, and defeating every body of troops that encountered him.

On 14 September, 1813, the first Independent

Congress assembled at Chilpancingo and there passed the decree: "That dependence upon the Spanish Throne has ceased forever and been dissolved. That the said Congress neither professes nor recognizes any religion but the Catholic, nor will it permit or tolerate the practice, public or private, of any other; that it will protect with all its power, and will watch over, the purity of the Faith and its dogmas and the maintenance of the regular bodies". From Chilpancingo he turned towards his native Valladolid, which was then held by the royalist leaders Iturbide and Llano; driven back there he moved on Chupio. At Puruarán his brave companion Matamoros was captured, and was shot at Valladolid, 3 February, 1814. These reverses were followed by the recapture of Oaxaca by the royalist troops. The independent Congress of Chilpancingo had removed to Apatzingan, where it promulgated the Constitution of 22 October, 1814. Then it determined to remove again from Apatzingan to Tehuacán, Morelos accompanied it to protect it, and engaged in the Battle of Tescmalaca, where he was made prisoner.

Having been taken to Mexico City, on 22 November, 1815, proceedings were instituted against him by both the military and the ecclesiastical tribunal, and an advocate was appointed for him. The principal charges against him were: (1) Having committed the crime of treason, failing in his fealty to the king, by promoting independence and causing it to be proclaimed in the Congress assembled at Chilpancingo. Morelos answered to this that, as there was no king in Spain (Ferdinand VII having been taken to France, a prisoner), he could not have been false to the king; and that, as to the declaration of independence, of the said Congress, he had concurred in it by his vote because he believed that the king would not return from France and that, even if he should return, he had rendered himself unworthy of fealty by handing over Spain and its colonies to France like a flock of sheep. (2) Having ordered a number of prisoners to be shot. He declared that he had done this in obedience to orders sent first by the Junta at Zitacuaro and then by the Congress at Chilpancingo, by way of reprisals, moreover, because the viceregal Government had not accepted the exchange of prisoners proposed instead of General Matamoros. (3) Having ignored the excommunication fulminated against him and the Independents by the bishops and the Inquisition. He declared that he had not considered these excommunications valid, believing that they could not be imposed upon an independent nation, such as the insurgents must be considered to constitute, so long as they (the sentences) were not those of a pope or an oecumenical council. (4) Having celebrated Mass during the time of the Revolution. He denied this, since he had regarded himself as under irregularity from the time when blood began to be shed in the territory under his command.

The case having been concluded in the military tribunal that court requested of the ecclesiastical tribunal the degradation and surrender of the condemned priest, in accordance with the formalities prescribed by the canons; the ecclesiastical tribunal granted both requests, and communicated its decision to the viceroy. It was at this point that the tribunal of the Inquisition intervened, requesting the viceroy, Calleja (who had succeeded Venegas) to delay execution of the sentence four days, and citing Morelos to a public *auto de fe* on 27 November. On that occasion, with all the formalities proper to such proceedings, twenty-three charges were preferred against him: the Inquisitors added to the charges brought at the former trial others which they believed themselves competent to try, as implying, according to them, suspicions of heresy. These were: (1) Having received Communion in spite of the excommunications which he had incurred. Morelos answered that he had communicated because

he did not believe the excommunications valid. (2) Not reciting the Divine Office while he was in prison. He declared that he could not recite it in the dungeon for want of light. (3) Having been lax in his conduct. This he granted, but denied that scandal had been given, since it was not publicly known that he had begotten children. (4) Having sent his son to the United States to be educated in Protestant principles. He declared that, so far from wishing the son whom he had sent to the United States—as he could not place him in any institution within the kingdom—to be brought up in the doctrines of the Reformation, he had directed him to be placed in a college where he would not run that risk. In spite of these arguments, the tribunal decided: "that the priest Don José Morelos was a formal negative heretic, a favourer of heretics, a persecutor and disturber of the ecclesiastical hierarchy, a profaner of the holy sacraments, a traitor to God, the king, and the pope, and as such was declared forever irregular, deposed from all offices and benefices, and condemned to be present at his *auto* in the garb of a penitent, with collarless cassock and a green candle, to make a general confession and a spiritual retreat; and that, in the unexpected and very remote case of his life being spared, he was condemned for the remainder of it to confinement in Africa at the disposition of the inquisitor general, with the obligation of reciting every Friday in the year the penitential psalms and the rosary of the Blessed Virgin, and to have his *sambenito* (penitential inscription) placed in the cathedral church of Mexico as that of a reconciled formal heretic".

It was one of the decrees of the Inquisition which have done most to damage the reputation of that tribunal in New Spain. The proceedings lacked the legality and judicial correctness which should have marked them. Morelos was out of the jurisdiction of the Inquisition both as an Indian and as having been already tried and condemned by another, competent, tribunal; nor was there any reason in condemning him for charges to which he had made satisfactory replies. It may be that the tribunal, re-established in New Spain only a little more than one year before this, and carried away by an indiscreet zeal, was unwilling to miss the opportunity presented by so famous a case to ingratiate itself with the Government and call attention to its activity.

Morelos, degraded in pursuance of his sentence, according to the ritual provided by the Church in such cases, was transferred from the prison of the Inquisition to the citadel of Mexico and put in irons. On 22 December he was taken from the city to San Cristóbal Ecatepec, where he was shot. As a guerilla leader, Morelos must occupy a prominent place among those who struggled and died for Mexican independence. He appeared at the moment when the first great army of the Independents had been routed at the Bridge of Calderón, and when its first leaders were being executed at Chihuahua, and he achieved his first successes in the rugged mountains of the south. He began his campaigns without materials of war of any kind, expecting to take what he needed from the enemy, and no one ever used the resources of war better than he did, for the extension of the national territory. Profoundly astute and reserved, he confided his plans not even to those of his lieutenants for whom he felt the most affectionate regard. The stamp of genius is discernible in the astonishing sagacity with which he handled the most difficult problems of government, and in multiplied instances of his rapid and unerring insight into actual conditions. When, after the ill-starred campaign of Valladolid, the hour of adversity came upon him, he faced disaster as serenely as he had previously accepted good fortune, and, in that famous retreat upon Tehuacan, deliberately gave his own life to save the lives of his associates in the Independent Government.

CAMILLUS CRIVELLI.

Moréri, LOUIS, encyclopædist, b. at Bargemont, in the Diocese of Fréjus, France, 25 March, 1643; d. at Paris, 10 July, 1680. His grandfather, Joseph Chatranet, a native of Dijon, had settled in Provence under Charles IX and taken the name of the village of Moréri, the seignior of which he had acquired through marriage. Young Moréri studied humanities at Draguignan, rhetoric at the Jesuit College of Aix and theology at Lyons. During his stay in this city, he published several works, among them "Pratique de la perfection chrétienne et religieuse" (1667), a translation from the Spanish of Alphonso Rodriguez's work. After his ordination, he preached in Lyons for five years with great success. It was about that time that he formed the design of publishing a dictionary that would contain all the interesting data of history and mythology. In 1673 he was appointed chaplain to Gaillard de Longjumeau, Bishop of Apt, to whom he dedicated the first edition of his encyclopædia. In 1675 he accompanied that prelate to Paris where he became acquainted with de Pomponne, who gave him employment in his offices. After the downfall of that minister in 1678, he returned to his studies, but overwork had undermined his constitution and he died of consumption in 1680.

Moréri was a man of great erudition but lacked taste and judgment. His name is connected with a work that can hardly be considered as his own after all the changes which it has undergone. Bayle, who intended to make up the deficiencies of Moréri's dictionary, said of it: "I share the opinion of Horace on those who lead the way. The first compilers of dictionaries made many errors; but they deserve a glory of which their successors ought never to deprive them. Moréri has given himself a great deal of trouble, has been useful to everybody, and has given sufficient information to many." Moréri's encyclopædia appeared for the first time in Lyons in 1674, under the title: "Le grand Dictionnaire historique, ou mélange curieux de l'histoire sacrée et profane." It was defective in many respects and was greatly improved in later editions which appeared in Paris or Amsterdam. The best edition is the twentieth and last, published at Paris, in 1759.

P. J. MARIQUE.

Moreto y Cabaña, AUGUSTÍN, Spanish dramatist; b. at Madrid, 9 April, 1618; d. at Toledo, 28 October, 1669. He received what little academic training he had at the University of Alcalá de Henares and graduated Licentiate in Arts in 1639. From a very early age he began to write for the stage, and it is known that from 1640, probably through his friendship with Calderón, his plays began to be produced. The Spanish drama had reached the height of its success during Moreto's boyhood, and a gradual decline had set in. The clergy began to preach against plays as they were then given, and in 1644 the Royal Council instituted radical reforms by reducing the number of dramatic companies, modifying stage costumes, and establishing a strict censorship. It was furthermore ordered that thenceforth no comedies were to be played but those of an historical nature, or those dealing with the lives of the saints. This accounts for the fact that, for a time, Moreto devoted himself to this kind of drama. Like many famous writers of his time, Moreto received Holy orders toward the end of his life, though it is not known exactly when he did so. He entered the household of the Cardinal Archbishop of Toledo, Don Baltasar de Moscoso, and in 1659 joined the Brotherhood of St. Peter.

In 1654 twelve of his plays were published in one volume under the title of "First Part of the Comedies of Moreto". Among them may be mentioned "El lindo Don Diego", "Los jueces de Castilla" dealing with the life of Peter the Cruel, "San Franco de Sena", and "Trampa Adelante".

As a writer, Moreto lacked the creative genius of some of his contemporaries, but he excelled them all in knowledge of stagecraft, in the power of coming quickly to the point in evolving his plots. He also excelled in the variety of his characters and in depicting human passions, while at character drawing he was a master surpassed by none. He handles a humorous situation with great delicacy of touch, and is at his best in comedies of the lighter and gayer sort. His best play "El desdén con el desdén" (Disdain met with Disdain), published at Valencia in 1676, is borrowed from Lope de Vega's "Milagros del desprecio" (Scorn works Wonders), and is generally conceded to be better than the original. Molière, in his "Princesse d'Elide", tried to repeat Moreto's success, but fell far short of his model. The "Biblioteca de Autores Españoles", XXXIX (Madrid, 1856), contains a collection of Moreto's plays with a biography of the author by Luis Fernández Guerra.

Consult, besides the above-mentioned life by GUERRA, TICKNOR, *History of Spanish Lit.* (Boston, 1866); FITZMAURICE-KELLY, *History of Spanish Lit.* (New York, 1906).

VENTURA FUENTES.

Moretto da Brescia, IL. See BONVICINO, ALESSANDRO.

Morgagni, GIOVANNI BATTISTA, called by Virchow, the "Father of Modern Pathology", a distinguished Italian physician and investigator in medicine; b. at Forlì, 25 February, 1682; d. at Bologna, 6 December, 1771. His father died when Morgagni was very young, but his mother, a woman of uncommon good sense and understanding, devoted her life to the education of her gifted son. At sixteen he went to the University of Bologna for his higher studies, where before his graduation he attracted attention by his powers of observation.

His two great teachers, Albertini and Valsalva, became deeply interested in him, and Valsalva picked him out as his special assistant in anatomy. In the year following his graduation as Doctor of Medicine and Philosophy, though not yet twenty-two, he was sometimes allowed to take Valsalva's classes during his master's absence. He became a leader in thought among the young men and founded a society called the "Academia Inquietorum" (the Academy of the Restless), a title indicating that the members were not satisfied with previous knowledge but wanted to get at science for themselves by direct observation and experiment. After several years of graduate work at Bologna, Morgagni spent a year in special medical investigations at the Universities of Pisa and Padua. His incessant work impaired his sight and he returned to his native town to recuperate. At the age of 24 he

went to Bologna to lecture on anatomy, and there published a series of notes called "Adversaria Anatomica" (1706). These gained him such a reputation that he was called to the University of Padua, and later became second professor of anatomy at Bologna.

He studied particularly the throat, and the sinus and hydatid of Morgagni in this region perpetuate his name. After a few years he succeeded to the first professorship of anatomy, the most important post in the medical school, for anatomy was to medicine at that time what pathology is now. Here Morgagni wrote his great book, "De sedibus et causis morborum per anatomem indigatus"—"On the Seats and Causes of Disease"—(Venice, 1771, trans. French, English, and German) which laid the foundation of modern pathology. Benjamin Ward Richardson said (Disciples of Æsculapius): "To this day no medical scholar can help being delighted and instructed by this wonderful book." Morgagni's studies in aneurisms and in certain phases of pulmonary disease were especially valuable. He thought tuberculosis contagious and refused to make autopsies on tuberculous subjects. As a consequence of his teaching laws were introduced at the end of the seventeenth century in Rome and Naples, declaring tuberculosis contagious and requiring upon the death of the patients that their rooms be disinfected and their clothing burned. Venesection was one of the fads of his time, but Morgagni refused to credit its power for good and would not allow it to be performed on himself. He studied the pulse, and especially palpitation of the heart apart from organic cardiac affection, thus anticipating most of our modern teaching. With regard to cancer, Morgagni insisted that though it was the custom to try many remedies, the knife was the only remedy that gave fruitful results.

Morgagni was most happy in his private life. He lived with such simplicity that he was blamed for parsimony, but his secret charities, revealed after his death, disprove this charge. Of his fifteen children there were three sons, one of whom died in childhood, another became a Jesuit and did some striking scientific work after the suppression of the Society, while the third followed his father's profession but died young. All of Morgagni's daughters who grew to womanhood, eight in number, became nuns. The estimation in which he was generally held can be judged from the fact that twice, when invading armies laid siege to Bologna, their commanders gave strict orders that no harm was to come to Morgagni. He was one of the most profoundly learned men of his time not only in science, but in the literature of science. The Royal Society of England elected him a fellow in 1724, the Academy of Sciences of Paris made him a member in 1731, the Imperial Academy of St. Petersburg in 1735, and the Academy of Berlin in 1754. He was in correspondence with most of the great scientists of his time, among them such men as Ruysch, Boerhaave, Sir Richard Meade, Haller, and Meckel. Cooke, his English biographer, declares "that the learned and great who came into his neighbourhood did not depart without a visit to Morgagni". The patricians of Venice counted him a personal friend. King Emanuel III of Sardinia often turned to him for advice. The five popes of the second half of his life consulted him on educational and medical matters. Benedict XIV (De Beatificatione) mentions him in special terms of commendation. Clement XIII lodged him at the papal palace on his visits to Rome. He was probably the most respected man of his time and even more beloved than respected.

Journal*, I (1894), 725; RICHARDSON, *Disciples of Æsculapius* (London, 1901); WALSH, *Makers of Modern Medicine* (Fordham University Press, New York, 1907); NICHOLS, *Morgagni, Father of Modern Pathology in Montreal Medical Journal* (1903).

JAMES J. WALSH.

Morgan, Edward, VENERABLE, Welsh priest, martyr, b. at Bettisfield, Hammer, Flintshire, executed at Tyburn, London, 26 April, 1642. His father's Christian name was William. Of his mother we know nothing except that one of her kindred was Lieutenant of the Tower of London. From the fact that the martyr was known at St. Omer as John Singleton, Mr. Gillow thinks that she was one of the Singletons of Steyning Hall, near Blackpool, in Lancashire. Of his reported education at Douai, no evidence appears; but he certainly was a scholar at St. Omer, and at the English colleges at Rome, Valladolid, and Madrid. For a brief period in 1609 he was a Jesuit novice, having been one of the numerous converts of Father John Bennett, S.J. Ordained priest at Salamanca, he was sent on the English Mission in 1621. He seems to have laboured in his fatherland, and in April, 1629, was in prison in Flintshire, for refusing the oath of allegiance. Later about 1632 he was condemned in the Star Chamber to have his ears nailed to the pillory for having accused certain judges of treason. Immediately afterwards he was committed to the Fleet Prison in London, where he remained until a few days before his death. He was condemned at the Old Bailey for being a priest under the provisions of 27 Eliz., c. 2 on St. George's Day, 23 April, 1642. At the same time was condemned John Francis Quashet, a Scots Minim, who subsequently died in Newgate Prison. The last scene of the martyrdom is fully given (apparently by an eye witness) in Father Pollen's work cited below.

JOHN B. WAINWRIGHT.

Morganatic Marriage. See MARRIAGE.

Morghen, Raffaello, an Italian engraver, b. at Portici, 19 June, 1758 (1761?); d. at Florence, 8 April, 1833. His father, Filippo, came of a family of German engravers, his mother was the daughter of Liani, court painter to Charles III. Raffaello's first teachers were

RAFFAELLO MORGHEN

his father and his uncle Jean, and before he was twelve he had achieved a good plate. When only twenty he produced seven noteworthy plates illustrating the carnival of 1778, and later went to study in Rome, under Volpato, whose daughter he married. Impressed with Sanzio's pictures in the Vatican, Morghen engraved his "Poetry" and "Theology". In 1787 he finished one of his principal works, Guido's "Aurora" from the fresco in the garden-house of the Rospigliosi Palace, his art and his time being far better suited to this style than to translating the work of greater masters. When he visited Naples in 1790, the court offered him a salary of six hundred ducats, which he declined, but later accepted (1793) the invitation of Ferdinand of Tuscany to live in Florence. Here he received only four hundred scudi, but he was free to found a school of engraving, to engrave what he chose, and own all the prints from his plates. His next

BALDINUCCI, *Notizie de' Professori del disegno*, II (1688); LANZI, *Storia Pittorica*, I (1809).

GEORGE CHARLES WILLIAMSON.

Morimond, ABBEY OF, fourth daughter of Cîteaux, situated in Champagne, Diocese of Langres, France; was founded in 1115 by Odelric d'Aigremont and his wife, Adeline de Choiseul. Arnold, its first abbot, a member of one of the noblest families of Germany, was for many years considered as one of the columns of the Cistercian Order. Thanks to his zeal and influence, Morimond took on a rapid growth; numerous colonies therefrom established themselves in France, Germany, Poland, Bohemia, Spain, and the Island of Cyprus. Amongst the most celebrated foundations were Ebrach (1126) the most flourishing in Germany; Holy Cross (1134), the glory of the Order in Austria; Aiguebelle (1137), in France, which the Reformed Cistercians have now resuscitated from its ruins. This extension was so prodigious that toward the end of the eighteenth century Morimond counted amongst its filiations nearly seven hundred monasteries for both sexes. Briefs from various popes placed the principal Military Orders of Spain under the spiritual jurisdiction of the Abbot of Morimond: the Order of Calatrava (1187); of Alcantara (1214); the Militia of Christ, in Portugal (1319), and later on those of St. Maurice and St. Lazarus, in Savoy. The vast wealth that gradually accumulated, and the continual wars wherefrom Morimond had particularly to suffer, on account of its geographical position, became the cause of decadence. Various attempts at reform were made, but the constant political disorders paralyzed the efforts of the reformers. In 1791 the religious were dispersed, and Morimond ceased to exist.

Morimond had sheltered a great number of religious, renowned both for sanctity and science. The abbatial chair was often filled by abbots whose names are yet celebrated, to whom kings and emperors had confided tasks of the most delicate importance, and whom the popes had honoured with their confidence. A large number of bishops and several cardinals were given to the Church by Morimond; and Benedict XII, before his election, was a monk of affiliation of this abbey. Of the magnificent buildings that formed the abbey and its church, so remarkable for architectural beauty and the richness of ornamentation, nothing now remains but ruins; nevertheless the organ, one of the most wonderful in France, and the choir-stalls now beautify the cathedral of Langres.

EDMOND M. OBRECHT.

Morin, JEAN, a French priest of the Oratory, b. at Blois, in 1591; d. at Paris, 28 Feb., 1659. According to Dupin, whose judgment posterity has confirmed, he was the most learned Catholic author of the seventeenth century. Born a Calvinist, he was converted by Cardinal Duperron, and in 1618 joined the Oratory at Paris. At first he was superior in houses of his congregation at Orléans and Angers; in 1625 he was in attendance on Queen Henrietta of France in England; in 1628 he returned to Paris, where he remained until his death, with the exception of a sojourn of a few months in Rome, whither he had been called by Urban VIII in 1640 to aid in bringing about the union of the Greeks and Latins. An order from Richelieu recalled him to Paris, where he continued the publishing of his learned works, at the same time labouring to convert heretics and Jews, many of whom he brought to the true Faith. The General Assemblies of the French clergy often appealed to his great erudition, and entrusted him with various tasks. He kept up a correspondence and was often in controversy with the noted savants of the day, such as Muis, Buxtorf, etc.

His chief works are: "Histoire de la délivrance de l'Eglise chrétienne par l'empereur Constantin et de la grandeur et souveraineté temporelle donnée à l'Eglise romaine par les rois de France" (Paris, 1630); "Exercitationes ecclesiasticæ in utrumque Samaritanorum Pentateuchum" (Paris, 1631), in which he maintained that the Samaritan text and the Septuagint should be preferred to the Hebrew text, a position he upheld again in the following work: "Exercitationes biblicæ de Hebræi Græcique textus sinceritate . . ." (Paris, 1663, 1669, 1686); "Commentarius historicus de disciplina in administratione sacramenti Pœnitentiæ XIII primus sæculis" (Paris, 1651); "Commentarius de sacris Ecclesiæ ordinationibus" (Paris, 1655; Antwerp, 1695; Rome, 1751). The two preceding works are very important for the history of the sacraments. Morin also published: "Biblia græca sive Vetus testamentum secundum Septuaginta" (Paris, 1628); and in Lejay's "Polyglotte," vol. V (1645), "Pentateuchus hebræo-samaritanus" and "Pentateuchus samaritanus." He left several manuscript works.

CONSTANTIN, *Sciagraphia vite J. Morini* (Paris, 1660); NICÉRON, *Mémoires*, IX, 90; SIMON, *Vita Morini* taken from *Antiquitates ecclesiæ . . . dissertationibus epistolicis enucleata* (London, 1682): a satire rather than a life; BATTEREL, *Mémoires domestiques*, II, 435; GODIN, *Notice sur Morin* (Blois, 1840); RAMSES, *Die Conversationen*, IV, 447; INGOLD, *Essai de bibliographie oratorienne*, 112.

A. M. P. INGOLD.

Mormons, or the CHURCH OF JESUS CHRIST OF LATTER-DAY SAINTS.—This religious body had its origin during the early part of the nineteenth century. Joseph Smith, the founder and first president of the sect, was the son of a Vermont farmer, and was born in Sharon township, Windsor County, in that state, on 23 December, 1805. In the spring of 1820, while living with his parents at Manchester, Ontario (now Wayne) County, New York, he became deeply concerned upon the subject of his salvation, a condition partly induced by a religious revival which proselytized a few of his relatives to the Presbyterian Faith. Joseph himself was inclined toward Methodism: to satisfy his mind as to which one of the existing sects he should join, he sought Divine guidance, and claimed to have received in answer to prayer a visitation from two glorious beings, who told him not to connect himself with any of these Churches, but to bide the coming of the Church of Christ, which was about to be re-established. According to his own statement, there appeared to him on the night of 21 September, 1823, a heavenly messenger, who gave his name as Moroni, and revealed the existence of an ancient record containing the fullness of the Gospel of Christ as taught by the Saviour after His Resurrection to the Nephites, a branch of the House of Israel which inhabited the American continent ages prior to its discovery by Columbus. Moroni in mortal life had been a Nephite prophet, the son of another prophet named Mormon, who was the compiler of the record buried in a hill anciently called Cumorah, situated about two miles from the modern village of Manchester. Joseph Smith states that he received the record from the Angel Moroni in September, 1827. It was, he alleges, engraved upon metallic plates having the appearance of gold and each a little thinner than ordinary tin, the whole forming a book about eight inches long, six inches wide, and six inches thick, bound together by rings. The characters engraved upon the plates were in a language styled the Reformed Egyptian, and with the book were interpreters—Urim and Thummim—by means of which these characters were to be translated into English. The result was the "Book of Mormon," published at Palmyra, New York, in March, 1830; in the preface eleven witnesses, exclusive of Joseph Smith, the translator, claim to have seen the plates from which it was taken. On renouncing Mormonism subsequently, Cowdery, Whitmer, and Harris, the three principal witnesses, declared this testimony false.

The "Book of Mormon" purports to be an abridged account of God's dealings with the two great races of prehistoric Americans—the Jaredites, who were led from the Tower of Babel at the time of the confusion of tongues, and the Nephites, who came from Jerusalem just prior to the Babylonian captivity (600 B. C.). According to this book, America is the "Land of Zion", where the New Jerusalem will be built by a gathering of scattered Israel before the second coming of the Messiah. The labours of such men as Columbus, the Pilgrim Fathers, and the patriots of the Revolution, are pointed out as preparatory to that consummation. The work of Joseph Smith is also prophetically indicated, he being represented as a lineal descendant of the Joseph of old, commissioned to begin the gathering of Israel foretold by Isaiah (xi, 10-16) and other ancient prophets. In another part of his narrative Joseph Smith affirms that, while translating the "Book of Mormon", he and his scribe, Oliver Cowdery, were visited by an angel, who declared himself to be John the Baptist and ordained them to the Aaronic priesthood; and that subsequently they were ordained to the priesthood of Melchisedech by the Apostles Peter, James, and John. According to Smith and Cowdery, the Aaronic priesthood gave them authority to preach faith and repentance, to baptize by immersion for the remission of sins, and to administer the sacrament of the Lord's Supper; the priesthood of Melchisedech empowered them to lay on hands and bestow the Holy Ghost. The "Book of Mormon" being published, its peculiar doctrines, including those just set forth, were preached in western New York and northern Pennsylvania. Those who accepted them were termed "Mormons", but they called themselves "Latter-Day Saints", in contradistinction to the saints of former times. The "Church of Jesus Christ of Latter Day Saints" was organized on 6 April, 1830, at Fayette, Seneca County, New York; Joseph Smith was accepted as first elder, and subsequently as prophet, seer, and revelator. The articles of faith formulated by him are as follows:

"(1) We believe in God, the Eternal Father, and in His Son, Jesus Christ, and in the Holy Ghost.

"(2) We believe that men will be punished for their own sins, and not for Adam's transgression.

"(3) We believe that through the atonement of Christ all men may be saved, by obedience to the laws and ordinances of the Gospel.

"(4) We believe that these ordinances are: First, faith in the Lord Jesus Christ; second, repentance; third, baptism by immersion for the remission of sins; fourth, laying on of hands for the gift of the Holy Ghost.

"(5) We believe that a man must be called of God by prophecy, and by the laying on of hands by those who are in authority, to preach the Gospel and administer the ordinances thereof.

"(6) We believe in the same organization that existed in the primitive church, viz. apostles, prophets, pastors, teachers, evangelists, etc.

"(7) We believe in the gift of tongues, prophecy, revelation, visions, healing, interpretation of tongues, etc.

"(8) We believe the Bible to be the word of God, as far as it is translated correctly; we also believe the 'Book of Mormon' to be the word of God.

"(9) We believe all that God has revealed, all that He does now reveal, and we believe that He will yet reveal many great and important things pertaining to the Kingdom of God.

"(10) We believe in the literal gathering of Israel and in the restoration of the Ten Tribes. That Zion will be built upon this continent. That Christ will reign personally upon the earth, and that the earth will be renewed and receive its paradisaic glory.

"(11) We claim the privilege of worshipping

Almighty God according to the dictates of our conscience, and allow all men the same privilege; let them worship how, where, or what they may.

"(12) We believe in being subject to kings, presidents, rulers and magistrates, in obeying, honouring and sustaining that law.

"(13) We believe in being honest, true, chaste, benevolent, virtuous, and in doing good to all men; indeed, we may say that we follow the admonition of Paul, 'We believe all things, we hope all things', we have endured many things, and hope to be able to endure all things. If there is anything virtuous, lovely or of good report, or praiseworthy, we seek after these things."

Six months after its inception, the Mormon Church sent its first mission to the American Indians—called in the "Book of Mormon" the *Lamanites*, the degenerate remnants of the Nephite nation. Oliver Cowdery was placed at the head of this mission, which also included Parley P. Pratt, a former preacher of the Reformed Baptists, or Campbellites. The missionaries proceeded to northern Ohio, then almost a wilderness, where Elder Pratt presented to his former pastor, Sidney Rigdon, a copy of the "Book of Mormon", published several months before. Up to that time Rigdon had never seen the book, which he was accused of helping Smith to write. The Mormons are equally emphatic in their denial of the identity of the "Book of Mormon" with Spaulding's "Manuscript Story", now in Oberlin College; they quote in this connexion James H. Fairchild, president of that institution, who, in a communication to the "New York Observer" (5 February, 1885), states that Mr. L. L. Rice and he, after comparing the "Book of Mormon" and the Spaulding romance, "could detect no resemblance between the two, in general or detail". Elder Cowdery and his companions, after baptising about one hundred persons in Ohio, went to western Missouri, and, thence crossing over at Independence into what is now the State of Kansas, laboured for a time among the Indians there. Meanwhile the Mormons of the East, to escape the opposition awakened by their extraordinary claims, and to be nearer their proposed ultimate destination, moved their headquarters to Kirtland, Ohio, from which place, in the summer of 1831, departed its first colony into Missouri, Jackson County in that state having been designated as the site of the New Jerusalem. Both at Kirtland and at Independence efforts were made to establish "The United Order", a communal system of an industrial character, designed to make the church members equal in things spiritual and temporal. The prophet taught that such a system had sanctified the City of Enoch, whose people were called "Zion, because they were of one heart and one mind, and dwelt in righteousness," with "no poor among them". He also declared that the ancient Apostles had endeavoured to establish such an order at Jerusalem (Acts, iv, 32-37), and that, according to the "Book of Mormon", it had prevailed among the Nephites for two centuries after Christ. In the latter part of 1833 trouble arose between the Mormons and the Missourians, based largely, say Mormon writers, upon a feeling of apprehension concerning the aims and motives of the new settlers. Coming from the north and the east, they were suspected of being abolitionists, which was sufficient of itself to make them unpopular in Missouri. It was also charged that they intended to unite with the Indians and drive the older settlers from the land. The Mormons asserted their innocence of these and other charges, but their denial did not avail. Armed mobs came upon them, and the whole colony—twelve hundred men, women, and children—were driven from Jackson County, and forbidden on pain of death to return.

In Ohio the Mormons prospered, though even there they had their vicissitudes. At Kirtland a temple was built, and a more complete organization of the priesthood effected. Mormonism's first foreign mission was opened in the summer of 1837, when Heber C. Kimball and Orson Hyde, two of the "twelve apostles of the Church", were sent with other elders to England for that purpose. While this work of proselytizing was in progress, disaffection was rife at Kirtland, and the ill-feeling grew and intensified until the "prophet" was compelled to flee for his life. It is of importance to bear in mind that the opposition to the Mormons in the localities where they settled is, from the contradictory and divergent statements made by the Latter-Day Saints and the neighbours not of their belief, difficult of explanation. It is safe to assume that there was provocation on both sides. The main body of the Mormons, following their leader to Missouri, settled in and around Far West, Caldwell County, which now became the chief gathering-place. The sect had been organized by six men, and a year later it was said to number about two thousand souls. In Missouri it increased to twelve thousand. A brief season of peace was followed by a series of calamities, occasioned by religious and political differences. The trouble began in August, 1838, and during the strife considerable blood was shed and much property destroyed, the final act in the drama being the mid-winter expulsion of the entire Mormon community from the state.

In Illinois, where they were kindly received, they built around the small village of Commerce, in Hancock County, the city of Nauvoo, gathering in that vicinity to the number of twenty thousand. Another temple was erected, several towns founded, and the surrounding country occupied. Up to this time there had been no Mormon recruiting from abroad, all the converts to the new sect coming from various states in the Union and from Canada. In 1840-1 Brigham Young and other emissaries visited Great Britain, preaching in all the principal cities and towns. Here they baptized a number of people, published a new edition of the "Book of Mormon", founded a periodical called the "Millennial Star", and established a permanent emigration agency. The first Mormon emigrants from a foreign land—a small company of British converts—reached Nauvoo, by way of New York, in the summer of 1840. Subsequently the emigration came via New Orleans. The Legislature of Illinois granted a liberal charter to Nauvoo, and, as a protection against mob violence and further drivings and spoiliations, the Mormons were permitted to organize the "Nauvoo Legion", an all but independent military body, though part of the state militia, commanded by Joseph Smith as lieutenant-general. Moreover, a municipal court was instituted, having jurisdiction in civil cases, as a bar to legal proceedings of a persecuting or vexatious character. Similar causes to those which had resulted in the exodus of the Mormons from Missouri brought about their expulsion from Illinois, prior to which a tragic event robbed them of their prophet, Joseph Smith, and their patriarch, Hyrum Smith, who were killed by a mob in Carthage jail on 27 June, 1844. The immediate cause of the murder of the two brothers was the destruction of the press of the Nauvoo "Expositor", a paper established by seceders from Mormonism to give voice to the wide indignation caused by the promulgation of Smith's revelation of 12 July, 1843, establishing polygamy, which had been practised personally by the prophet for several years. Another avowed purpose of this paper was to secure the repeal of the Nauvoo Charter, which the Mormons looked upon as the bulwark of their liberties. The "Expositor" issued but once, when it was condemned as a public nuisance by order of the city

council, its printing-office being destroyed and its editor, Foster, expelled. This summary act unified anti-Mormon sentiment, and, on Smith's preparing to resist by force the warrant procured by Foster for his arrest, the militia were called out and armed mobs began to threaten Nauvoo. At Carthage was a large body of militia, mustered under Governor Thomas Ford to compel the surrender of Nauvoo. Smith submitted and repaired to Carthage, where he and his brother Hyrum, with others, were placed in jail. Fearful of a bloody collision, the governor disbanded most of his force, and with the remainder marched to Nauvoo, where the Mormons laid down their arms. During the governor's absence, a portion of the disbanded militia returned to Carthage and assaulted the jail in which the Mormon leaders were imprisoned, shooting Joseph and Hyrum Smith, and all but fatally wounding John Taylor; Willard Richards, their fellow-prisoner, escaped unhurt.

In the exodus that ensued, Brigham Young led the people westward. Passing over the frozen Mississippi (February, 1846), the main body made their way across the prairies of Iowa, reaching the Missouri River about the middle of June. A Mormon colony, sailing from New York, rounded Cape Horn, and landed at Yerba Buena (San Francisco) in July, 1846. Prior to that time only a few thousand Americans had settled on the Pacific Coast, mostly in Oregon, which was then claimed both by Great Britain and the United States. So far as known, no American had then made a permanent home in what was called "The Great Basin". The desert region, now known as Salt Lake Valley, was then a part of the Mexican province of California, but was uninhabited save by Indians and a few wandering trappers and hunters. The Mormon pioneers, marching from the Missouri River in April, 1847, arrived in Salt Lake Valley on 24 July. This company, numbering 143 men, 3 women, and 2 children, was led by Brigham Young. Most of the exiles from Nauvoo remained in temporary shelters on the frontier, where they entered into winter quarters in what is now Nebraska. Well armed and disciplined, they accomplished the journey of over a thousand miles to Salt Lake Valley without one fatality. A few days after their arrival they laid out Salt Lake City. The people left upon the Missouri migrated in the autumn of 1848, and after them came yearly to the Rocky Mountains, generally in Church wagons sent to the frontier to meet them, Mormon emigrants from the states, from Europe, and from other lands to which missionaries continued to be sent. Most of the converts were drawn from the middle and working classes, but some professional people were among them.

While awaiting the time for the establishment of a civic government, the Mormons were under ecclesiastical rule. Secular officers were appointed, however, to preserve the peace, administer justice, and carry on public improvements. These officers were often selected at church meetings, and civil and religious functions were frequently united in the same person. But this state of affairs did not continue long. As soon as a civic government was organized, many of the forms of political procedure already in use in American commonwealths were introduced, and remained in force till statehood was secured for Utah. In March, 1849, thirteen months after the signing of the treaty by which Mexico ceded this region to the United States, the settlers in Salt Lake Valley founded the provisional Government of the State of Deseret, pending action by the American Congress upon their petition for admission into the Union. Deseret is a word taken from the "Book of Mormon", and signifies honey-bee. Brigham Young was elected governor, and a legislature, with a full set of executive officers, was also chosen. Congress denied the petition for

statehood, and organized the Territory of Utah, naming it after a local tribe of Indians. Brigham Young was appointed governor by President Millard Fillmore (September, 1850) and four years later was reappointed by President Franklin Pierce. The period between 1850 and 1858, during which the Mormons defied the authority of the Federal Government, is one of the least creditable chapters of their history.

One reason given for the persistent hostility to the Mormons was the dislike caused by the acrimonious controversy over polygamy or plural marriage. Joseph Smith, the founder of Mormonism, claimed to have received a revelation and a command ordering him to re-introduce plural marriage and restore the polygamous condition tolerated among the pre-Judaic tribes. Polygamy now became a principle of the creed of the Latter-Day Saints, and, though not enforced by the laws of the Mormon hierarchy, was preached by the elders and practised by the chiefs of the cult and by many of the people. The violation by the Mormons of the monogamous law of Christianity and of the United States was brought to the attention of Congress, which prohibited under penalty of fine and imprisonment the perpetuation of the anti-Christian practice, refusing, however, to make the prohibition retroactive. The Mormons appealed to the Supreme Court, which sustained the action of Congress, and established the constitutionality of the anti-polygamy statutes. The Latter-Day Saints, strangely enough, submitted to the decrees of Congress, unwittingly admitting by their submission that the revelation of their founder and prophet, Joseph Smith, could not have come from God. If the command to restore polygamy to the modern world was from on High, then, by submitting to the decision of the Supreme Court, the Mormon hierarchy reversed the apostolic proclamation and acknowledged it was better "to obey man than to obey God".

So long as Utah remained a territory there was much bitterness between her Mormon and non-Mormon citizens, the latter termed "Gentiles". The Mormons submitted, however, and their president, Wilford Woodruff, issued a "Manifesto", which, being accepted by the Latter-Day Saints in General Conference, withdrew the sanction of the Church from the further solemnization of any marriages forbidden by the law of the land. One of the results of this action was the admission of Utah into the Union of States on 6 January, 1896.

Instances of the violation of the anti-polygamy laws subsequent to the date of the "Manifesto" having been brought to light, the present head of the Church, President Joseph F. Smith, in April, 1904, made the following statement to the General Conference assembled at Salt Lake City, and it was endorsed by resolution and adopted by unanimous vote:

"OFFICIAL STATEMENT.

"Inasmuch as there are numerous reports in circulation, that plural marriages have been entered into, contrary to the official declaration of President Woodruff, of September 24th, 1890, commonly called the 'Manifesto', which was issued by President Woodruff and adopted by the Church at its General Conference October 6th, 1890, which forbade any marriages violative of the law of the land; I, Joseph F. Smith, President of the Church of Jesus Christ of Latter-day Saints, hereby affirm and declare that no such marriages have been solemnized with the sanction, consent, or knowledge of the Church of Jesus Christ of Latter-day Saints; and

"I hereby announce that all such marriages are prohibited, and if any officer or member of the Church shall assume to solemnize or enter into any such marriage, he will be deemed in transgression against the

Church, and will be liable to be dealt with according to the rules and regulations thereof, and excommunicated therefrom.

Joseph F. Smith,

President of the Church of Jesus Christ of Latter-day Saints."

In an "Address to the World", adopted at the General Conference of April, 1907, President Smith and his counsellors, John R. Winder and Anthon H. Lund, in behalf of the Church, reaffirmed its attitude of obedience to the laws of Congress. The practice of plural marriage is indeed fast becoming a thing of the past.

Mormonism announces as one of its principal aims the preparation of a people for the coming of the Lord; a people who will build the New Jerusalem, and there await His coming. The United Order, the means of preparation, is at present in abeyance, but the preliminary work of gathering Israel goes on, not to Zion proper (Jackson County, Missouri), but to the Stakes of Zion, now numbering sixty-one, most of them in Utah; the others are in Idaho, Arizona, Wyoming, Colorado, Oregon, Canada, and Mexico. A stake is a division of the Mormon Church, organized in such a way as to constitute almost a "church" in itself; in each stake are subdivisions called wards, also fully organized. The area of a stake is usually that of a county, though the extent of territory differs according to population or other conditions. Each stake is presided over by three high-priests, who, with twelve high councilors, constitute a tribunal for the adjudication of differences among church members within their jurisdiction. Each ward has a bishopric of three, a lower tribunal, from whose decisions appeals may be taken to the high council. The extreme penalty inflicted by the church courts is excommunication. In each stake are quorums of high-priests, seventies, and elders, officers and callings in the Melchisedech priesthood: and in each ward, quorums of priests, teachers, and deacons, who officiate in the Aaronic priesthood. This lesser authority ministers in temporal things, while the higher priesthood ministers in things spiritual, which include the temporal.

Presiding over the entire Church is a supreme council of three high-priests, called the First Presidency, otherwise known as the president and his counsellors. Next to these are the twelve apostles, equal in authority to the First Presidency, though subject to and acting under their direction. Whenever the First Presidency is dissolved, which occurs at the death of the president, the apostles take the government and reorganize the supreme council—always, however, with the consent of the Church, whose members are called to vote for or against this or any other proposition submitted to them. The manner of voting is with the uplifted right hand, women voting as well as men. Besides the general conferences held semi-annually and the usual Sabbath meetings, there are stake and ward conferences, in which the consent of the people is obtained before any important action is taken. The special function of the apostles is to preach the Gospel, or have it preached, in all nations, and to set in order, whenever necessary, the affairs of the entire Mormon Church. Among the general authorities there is also a presiding patriarch, who, with his subordinates in the various stakes, gives blessings to the people and comforts them with sacred ministrations. The first council of the Seventies, seven in number, assist the twelve apostles, and preside over all the quorums of seventies. Upon a presiding bishopric of three devolves the duty of receiving and disbursing the revenues of the Church, and otherwise managing its business, under the general direction of the first presidency.

The Mormon Church is supported by the tithes and

offerings of its members, most of whom reside in the Stakes of Zion, though a good number remain in the several missions, scattered in various countries of the globe. About two thousand missionaries are kept in the field; while they consider themselves under the Divine injunction to "preach the Gospel to every creature", they have special instructions to baptize no married woman without the consent of her husband, and no child under age without the consent of its parents. The tithes are used for the building of temples and other places of worship, the work of the ministry, the furtherance of education, the support of the sick and indigent, and for charitable and philanthropic purposes in general. Nearly every male member of the Church holds some office in the priesthood, but only those who devote their entire time to its service receive support. In every stake are institutions known as auxiliaries, such as relief societies, sabbath schools, young men's and young ladies' mutual improvement associations, primary associations, and religious classes. The Relief Society is a woman's organization, having a special mission for the relief of the destitute and the care of the sick. An "Old Folks Committee" is appointed to care for the aged. The Church school system comprises the Brigham Young University at Provo, the Brigham Young College at Logan, and the Latter-Day Saints University at Salt Lake City. There are also nearly a score of stake academies. There are four Mormon temples in Utah, the principal one being at Salt Lake City. It was begun in April, 1853, and completed in April, 1893, costing, it is said, about \$4,000,000. In these temples ordinances are administered both for the living and the dead. It is held that vicarious work of this character, such as baptisms, endowments etc., will be effectual in saving souls, once mortal, who believe and repent in the spirit state. The Mormons claim a total membership of 584,000. According to the United States Census Report of 21 May, 1910, there are 256,647 Mormons within the Federal Union.

W. R. HARRIS.

MOROCCO, PREFECTURE APOSTOLIC OF.—The country known as Morocco (from Marrakesh, the name of one of its chief cities) forms the northwest corner of the Continent of Africa, being separated from French Algeria by an imaginary line, about 217 miles in length, running from Nemours to Tenish es Sassi. It is the Gatulia or Mauretania Tingitana (from *Tingos*=Tangier) of the ancient Romans. The natives call it *Gharb* (West), or *Magreb el Akas* (Extreme West). The total area is a little more than 308,000 square miles; the population, about 10,000,000. Excepting Abyssinia, it is now the only independent native state in Africa, and is one of the most difficult countries for Europeans to penetrate. Though Morocco is often spoken of as an empire, the authority of the sovereign is a mere fiction throughout the greater part of its territory, which is, on this account, divided, more or less

precisely, into the *Bled el Maksen*, or "country subject to taxes", and the *Bled es Siba*, or "unsubdued country". Physically, the surface is broken up into three parallel mountain-chains: the most important of these, the Great Atlas, forms a plateau, forty to fifty miles in width, from which rise peaks, often snow-clad, 10,000 to 13,000 feet high. Facing the Mediterranean are the mountains of the Rif, below which stretches the well-watered and fertile range of the Tell. On the other side, to the extreme south lies the arid Sahara, broken only by a few oases. Between the Mediterranean littoral and the Sahara, the Atlas Plateau, broken by ravines and valleys, rivers and smaller streams, contains many tracts of marvelously fertile country. The sea-coast of Morocco is for the most part dangerous, and offers few advantages for commerce. The best harbours are those of Tangier, Mogador, and Agadir. El Arais, or Larache, and Tangier are the maritime outlets for Fez, which is one of the three capitals of Morocco, the other two being Marrakesh and Meknes. Owing to the high mountains, the sea breezes and the openness of the country, the climate is healthy, temperate, and equable. The temperature is much higher in the south than in the north, the heat, in certain districts, becoming at times insufferable. The soil is adapted to every kind of crop, and sometimes yields three harvests in a year. Cattle-breeding is also carried on. There is very little industry, and commerce is chiefly in the hands of Europeans and Jews.

From the earliest period known to history, Morocco has been inhabited by the Berbers (whence the name *Barbary*). These people were known to the Romans as *Numidæ*, but to the Phœnicians as *Maurin* (Westerners); from the Phœnician name the Greeks, and, after them, Latin writers, made *Mauri*, whence the English *Moors*. These Moors, Numidians, or Berbers, were subjugated by the Romans, then by the Vandals, the Byzantines, the Visigoths, and, lastly, the Arabs, whose political and religious conquest began in 681. Arabs and Berbers together crossed over into Spain, and thence into France, where their progress was stopped at Poitiers (732) by Charles Martel. Not until 1492, when Granada fell, were the Christians of the Iberian Peninsula definitively rid of the Moors on European soil, and able to carry the war against them into Africa. Portugal no longer retains any of her possessions in Morocco; but Spain still holds eight ports, known as the *presidios*, one on the Atlantic Coast and seven on the Mediterranean. Besides the Berbers, the population of Morocco includes Jews, who in all the cities are confined to separate quarters (*mellah*), Sudanese negroes, mostly slaves, and Europeans engaged in commerce on the coast, chiefly at Tangier and Mogador. For two hundred years Morocco has been ruled by a dynasty of Arab sherifs, who claim descent from Ali, the uncle and son-in-law of Mohammed. The sherif, or sultan, is theoretically supreme in both temporal and spiritual affairs, his wishes being carried out by viziers, or secretaries, in the various branches of the administration (*maghzen*). As a matter of fact, the normal condition of the country is revolution and anarchy. In 1906 the International Conference of Algieras provided for a combined French and Spanish system of police, but the Morocco question is still (1910) unsettled.

With the exception of the European residents, the segregated Jews mentioned above, and a body of aborigines (Berbers), living in the Atlas, who have proved refractory to Islam, the whole population of Morocco is Mohammedan, and is inaccessible to Christian propaganda. The first Catholic mission to this country was organized in 1234, when Father Angelo, a Franciscan friar and papal legate, was appointed Bishop of Morocco. The succession lasted until 1566, when the see was suppressed, and its jur-

diction given to the Archbishop of Seville. In 1631 the Prefecture Apostolic of Morocco was founded; its first incumbent, Blessed Giovanni da Prado, O.F.M., was martyred at Marrakesh in that year, and his feast is kept by the Franciscan Order on 29 May. Other missionaries continued to exercise their ministry through trials and persecutions of every kind until 1859, when the prefecture was reorganized on its present basis. It is administered by the Franciscans of the College of Compostela. There are in Morocco about 10,000 Catholics, nearly all Europeans; 24 missionaries, 8 stations (in the leading ports), 16 schools, with 1200 children, and a hospital at Tangier, where the prefect Apostolic resides.

A. LE ROY.

Morone, GIOVANNI, Cardinal, Bishop of Modena, b. at Milan 25 Jan., 1509; d. at Rome, 1 Dec., 1580. He belonged to a distinguished Milanese family, raised to the nobility in the twelfth century. His father held the dignity of chancellor of Milan, and it was probably to bind the father to his interest that Clement VII in 1529 named his son Giovanni, then only twenty years of age, to the See of Modena. By this appointment great offence was given to Cardinal Ippolito d'Este, who on the pretext that the See of Modena had previously been promised to himself, invoked the aid of Duke Alfonso of Ferrara and took forcible possession of the see, appropriating all its revenues. The dispute was not settled until 1532, when Morone at last bought off the opposition of d'Este by agreeing to pay him an annual pension of 400 ducats. Even as early as 1529, the young bishop-elect, whose talents had already attracted attention at the University of Padua, was chosen by Clement VII for a diplomatic mission to France. Under Paul III Morone's gifts as a negotiator placed him at once in the very front rank of ecclesiastical politicians. He was sent as papal envoy to Duke Sforza of Milan in 1535, and in the following year accepted, not altogether without reluctance, the important mission of nuncio at the court of Ferdinand, King of the Romans. His instructions were to press on the affair of the council in Hungary and Bohemia. He was to obtain from Ferdinand a safe-conduct for those who intended to take part in it, and to insist upon Mantua or some other Italian city as the place of meeting.

With the exception of an interval from September, 1538 to July, 1539, and another in 1541, Morone remained at his post in Germany for nearly six years, and he was present at the diets of Hagenau in 1540 and Ratisbon in 1541, while at the important meeting of Spiers in 1542 he appeared as the pope's special representative, and played a leading part, though even his great tact and resolution were able to do little in the complicated tangle of German religious affairs. During these early years in Germany, and indeed throughout his life, Morone remained a conspicuous member of a little group of moderate and intellectual men who saw that in the deadly struggle with Lutheranism, the faults were not all on one side. When Cardinal Sadoletto in 1537 for addressing a courteously worded appeal to Melancthon was denounced by many of his own side as little better than a traitor and a heretic, Morone wrote the cardinal a letter of sympathy. "There are in these parts", he said, "many reputed defenders of the Catholic faith who think that our religion consists in nothing but hatred of the Lutherans . . . and they are so wedded to this point of view that, without ever looking into the matter itself, they take in bad part not only all negotiations with the Lutherans, but every single word spoken about them which is not abusive". Morone further advises Sadoletto to

treat his critics with silent contempt, and states his own conviction that to show charity to heretics was a better way than to overwhelm them with abusive language, adding: "if only this course had been adopted from the first, there would probably be less difficulty than there is in bringing about the union of the Church" (see the letter in "Archiv f. Reformationsgeschichte", 1904, I, 80-81).

On 22 May, 1542, Paul III published his Bull, which had been drafted by Sadoletto, summoning the council to meet at Trent, on 1 Nov., of the same year. On 2 June, Morone was created a cardinal, and on 16 Oct., he and Cardinals Parisio and Pole were named legates to preside over the assembly as the pope's representatives. But this first attempt to launch the long-desired council was a failure. Morone went to Trent and waited until the handful of representatives, who never met in public session, gradually dispersed, the council being formally prorogued 6 July, 1543. Before the assembly was again convened Morone was named legate (practically papal governor) at Bologna, and he had nothing to do with the sessions of the council which took place at Trent between December, 1545 and June, 1546, though after the council had been ostensibly transferred to Bologna, he was named by Julius III as one of the commissioners to arrange for its return to Trent. In 1555 he was sent to the Diet of Augsburg, but the death of Julius necessitated his recall and under the Pontificate of Paul IV Morone, who owing to his wide and liberal views had the misfortune to awaken the pope's suspicions when the latter presided over the Roman Inquisition, was arrested by the pontiff's order, confined in the Castle of Saint Angelo (31 May, 1557), and made the object of a formal prosecution for heresy, in which his views on justification, the invocation of saints, the veneration of relics and other matters were incriminated and submitted to rigid inquiry.

The cardinal strenuously repudiated these charges, but he was kept in confinement until the death of Paul IV. In 1560 his successor Pius IV authorized a revision of the process against Morone, and as a result the imprisonment of the cardinal and the whole procedure against him were declared to be entirely without justification; the judgment also recorded in the most formal terms that not the least suspicion rested upon his orthodoxy. A few years later when the cardinal legates Gonzaga and Seripandi died at Trent, Morone and Cardinal Navagero were appointed to succeed them, and the former eventually presided over the concluding sessions of the council with conspicuous tact and dignity. He was also placed upon the commission appointed to see that the conciliar decrees were duly carried into execution. Under the succeeding pontiffs his credit was in no way impaired. He was sent on a mission to Genoa in 1575, and in 1576 was appointed to attend the Diet of Ratisbon as papal legate. As Cardinal Protector of England, Morone in 1578-1579 had much to do with the administration of the English College (see Catholic Record Society, "Miscellanea", II, London, 1906); and when he died he had been for some time Cardinal Bishop of Ostia. Few ecclesiastics in that century were so successful in retaining the esteem of men of all parties and all creeds as this large-minded and eminently able and honest churchman. His reports as nuncio, recently published of late years in the German series of "Nuntiatuberichten", throw a flood of light upon the religious conditions of the empire, and it is interesting to note that the "Claudius internuntius" whose letters were so often turned to good account by Raynaldi proves to be no other than Morone himself (see Ehse in "Römische Quartalschrift", 1903). It may be mentioned in conclusion that Morone had much to do with the founding of the important Collegium Germanicum in Rome.

a work in which he was closely associated with St. Ignatius Loyola.

CANTÙ, *Gli Eretici d'Italia*, II, (Turin, 1865); CANTÙ, *Il Cardinale Giovanni Morone in Atti dell'Istituto Lombardo* (Turin, 1866); BERNABEI, *Vita del Cardinale Morone* (Modena, 1885). The most interesting and satisfactory materials for Morone's life are to be found in his own despatches and in the prefaces contributed by his editors: see FRIEDENSBURG, *Nuntaturberichten aus Deutschland*, part I, II (Gotha, 1892); DITTRICH, *Quellen und Forschungen auf d. Gebiete der Geschichte*, I (Paderborn, 1892); IDEM in *Historisches Jahrbuch*, IV (Bonn, 1893); LÄMMER, *Monumenta Vaticana* (Freiburg, 1901); MERKLE, *Concil. Trident. Diaria* (Freiburg, 1901); EISES, *Concilium Tridentinum*, IV (Freiburg, 1904); STEINHÜBER, *Gesch. d. Collegium Germ.* (Freiburg, 1906); TACCHI VENTURI, *La Vita Religiosa in Italia*, I (Rome, 1910), in the appendix, pp. 534-49, is printed Father Salmeron's evidence before the Inquisition given in Morone's trial. PASTOR, *Geschichte der Päpste*, V (Freiburg, 1909); this last work is particularly valuable for an account of Morone's early missions.

HERBERT THURSTON.

Moroni, GAETANO, author of the well-known "Dizionario di erudizione storico-ecclesiastica", b. at Rome, 17 October, 1802; d. there, 3 November, 1883. He received his early education from the Brothers of the Christian School at Rome. Apprenticed later to a barber, his duties frequently took him to the Camaldolese convent of San Gregorio on the Cœlian Hill; there the abbot, Mauro Cappellari, and several of the fathers recognized his exceptional gifts, and made use of him in a quasi-secretarial capacity. When Cappellari became a cardinal, he made Moroni his *cameriere*; and when he became pope, as Gregory XVI, he took Moroni for *primo aiutante di camera*, employing him also as private secretary, in which capacity Moroni wrote over 100,000 letters. Moroni also served Pius IX as *aiutante di camera*. Among the books of the Camaldolese convent and of the cardinal, as well as from conversation with learned people, Moroni acquired a vast store of information. He also gradually collected a considerable private library bearing on ecclesiastical questions, while he made notes from the daily papers and from other publications for his own instruction. The subsequent arrangement of these notes in order suggested to him the idea of turning his labours to the benefit of the public, an idea which he realized in the "Dizionario" (Venice, 1840-61; index, 1878-9), a mine of interesting data and authoritative in matters concerning the Pontifical Court, the organization of the Curia and the Church, and the administration of the Pontifical States. In matters of history, it depends on the writers whom its author consulted. It is, however, not a well-ordered or homogeneous work; but these defects may be readily forgiven in view of the fact that its author did his work alone, without real collaboration, and wrote at times sixteen hours a day. He was also the author of official articles on papal ceremonies, the journeys of the popes, etc. During the conclaves of 1829 and 1831, he wrote the "Giornale storico-politico-ceremoniale dalla sede vacante e il conclave per l'elezione di Pio VIII e Gregorio XVI", which, like others of his writings, remained unpublished. As a member of the household of Gregory XVI, Moroni was the object of much sectarian hatred. He was a friend of many car-

dinals, including Wiseman, and of other illustrious men. In the index of the "Dizionario" (s. v., Moroni), he indicates the various passages of the work in which he speaks of himself, and which thus constitute a kind of autobiography.

U. BENIGNI.

Moroni, GIOVANNI BATTISTA, painter, b. at Bondo, near Albino, in the territory of Bergamo, between 1520 and 1525; d. at Bergamo, in 1578. He was the pupil of Alessandro Bonvicino, called Moretto da Brescia (about 1498-1555), and one of the best imitators of his style. Moroni's work was done chiefly at Bergamo and in the vicinity. He was remarkable as a portrait painter, and as such was not inferior to his master. He has the same sincerity and nobility, but more originality. His portraits are among the most vigorous of the Renaissance; of these we may mention a "Scholar with an open book before him" and a "Man in Black" at the Uffizi (Florence); at the Gallery of Bergamo a "Young Man" and a "Woman",

"THE TAILOR".
GIOVANNI BATTISTA MORONI,
NATIONAL GALLERY, LONDON

of excellent workmanship; at the Brera (Milan) the portrait of Antonio Nava-giero, podestà of Bergamo; at the Ambrosiana Library in Milan, a "Man of sickly appearance"; at the National Gallery (London), portrait of a member of the Penaroli family, "The Tailor", and Canon Lodovico Tersi of Bergamo; at the Louvre "An Old man seated holding a book", "of large, firm workmanship, somewhat heavy as in some of Tintoretto's portraits" (E. Müntz); in the Dublin Museum, "A Gentleman and his two children"; in the Museum of Madrid a "Venetian Captain"; in the Dresden Gallery, portrait of a man; in the Gallery of Vienna, two portraits of men. In religious pictures, on the other hand, Moroni is inferior to Moretto, especially in drawing and inventiveness, but his colouring, of a clear grayish tone, is not disagreeable. "It is only in his last works that the

grey tone becomes monotonous and soft, together with a rather hard reddish colouring" (J. Burckhardt and Bode). Worthy of note are the "Coronation of the Virgin", painted for the church of the Trinity at Bergamo; the "Last Judgment" for the parish church of Gorlago, near Bergamo; "Virgin and Saints" and "St. Jerome" at the Carrara Academy of Bergamo; the "Assumption of the Virgin", the "Virgin surrounded by Saints" (two pictures) at the Brera of Milan; "The Jesuit" (portrait of Ercole Tasso), at Stafford House, the London residence of the Duke of Sutherland.

GASTON SORTAIS.

Morris, JOHN, canon, afterwards Jesuit, F.S.A., b. in India, 4 July, 1826; d. at Wimbledon, 22 Oct., 1893, son of John Carnac Morris, F.R.S. He was educated

partly in India, partly at Harrow, partly in reading for Cambridge with Dean Alford, the New Testament scholar. Under him a great change passed over Morris's ideas. Giving up the thought of taking the law as his profession, he became enthusiastic for ecclesiastical antiquities, took a deep interest in the Tractarian movement, and resolved to become an Anglican clergyman. Going up to Trinity College, Cambridge, in October, 1845, he became the friend, and then the pupil of F. A. Paley, grandson of the well-known divine, and already one of the leading Greek scholars of the university. The conversion of Newman, followed by the receptions of so many others, deeply impressed him, and he was reconciled by Bishop Wareing, 20 May, 1846. A storm followed, beginning in the "Times", which made itself felt even in Parliament. Paley had to leave Cambridge (which led to his subsequently joining the Church), while Morris was practically cast off by his family. He then went to the English College, Rome, under Dr. Grant (q. v.), and was there during the revolution of 1848. Soon after the restoration of the English Hierarchy in 1850, he was made Canon of Northampton, and then returned as vice-rector to Rome (1853-1856). He now became *postulator* for the English Martyrs (q. v.), whose cause owes perhaps more to him than to any other person. Returning to England, he took part in the third Synod of Westminster, became secretary to Cardinal Wiseman (q. v.), whom he affectionately nursed on his death-bed, and served under Archbishop Manning (q. v.), until he became a Jesuit in 1867. He taught Church History from 1873-1874; he was Rector of St. Ignatius' College, Malta, from 1877-78; master of novices in 1879; and director of the writers of the English Province in 1888. Always remarkable for his ardent affectionate nature, his untiring energy and earnest holiness of life, he was also an excellent scholar, an eloquent speaker, and a high-principled leader of souls. His death befitted his life; for he expired in the pulpit, uttering the words, "Render to God the things that are God's." His principal works are: "The Life and Martyrdom of St. Thomas Becket" (London, 1859 and 1885); "The Life of Father John Gerard" (London, 1881), translated into French, German, Spanish, and Polish; "Troubles of our Catholic Forefathers" (3 vols., London, 1872-1877); "Letter-books of Sir Amias Poulet" (London, 1874); and many contributions to "The Month", "The Dublin Review", "Archæologia", and other periodicals.

POLLIN, *Life and Letters of Father John Morris* (London, 1896); MORRIS, *Journals kept during Times of Retreat* (London, 1895); SOMMERVOGEL, *Bibl. de la C. de Jésus*, V, p. v-viii; IX, 692.

J. H. POLLIN.

Morris, JOHN B. See LITTLE ROCK, DIOCESE OF.

Morris, JOHN BRANDE, b. at Brentford, Middlesex, 4 September, 1812; d. at Hammersmith, London, 9 April, 1880; he studied at Balliol College, Oxford, graduating in 1834 (B.A. honours) and 1837 (M.A.). He was at once elected Petrean Fellow of Exeter College, and lectured on Hebrew. His favourite field of study was Eastern and patristic theology. While at Oxford he wrote an "Essay towards the Conversion of learned and Philosophical Hindus" (1843); a poem entitled "Nature: a Parable" (1842); and translated "Select Homilies from St. Ephraem" from the Syriac (1846), likewise St. Chrysostom's "Homilies on the Romans" (1841) for the "Library of the Fathers". Having joined the Tractarian Movement, he was received into the Church, 16 January, 1846, resigning his Oxford fellowship a few days later. He was ordained at Oscott in 1851 and in the same year was appointed professor at Prior Park, near Bath. He soon began parish work and for the next nineteen years ministered in Plymouth, Shortwood (Somersetshire), and other parts of England. He was for a time chaplain to Sir John Acton and Coventry Patmore. In 1870 he became spiritual director of the *Sœurs de*

X.—37

Miséricorde, Hammersmith, which post he occupied till his death. After his conversion he contributed to the "Dublin Review", the "Lamp" and other Catholic periodicals; and wrote "Jesus the Son of Mary" (1851), a treatise on the Incarnation and devotion to Our Lady; "Taleetha Koomee" (1858), a metrical religious drama; and "Eucharist on Calvary", an essay on the first Mass and the Passion.

Tablet (17 April, 1880); *Times* (12 April, 1880); GILLOW, *Dict. Biog. of Eng. Cath.*, s. v.

A. A. MACERLEAN.

Morris, MARTIN FERDINAND, lawyer and jurist, b. 3 December, 1834, at Washington, D. C.; d. 12 September, 1909, at Washington, D. C. Descended from an Irish Catholic family, he was educated at Georgetown University, from which he was graduated in 1854. On leaving Georgetown he entered the Jesuit Novitiate, at Frederick, Md., to prepare himself for the priesthood, to which high calling his inclinations from early youth had impelled him, and for which, by reason of his studious habit, scholarly tastes, and high moral standards, he was in every way fitted. His ambition, however, could not be realized, as the death of his father left him the sole support of his mother and sisters. In 1863 he began the practice of law in Baltimore, Maryland, and in 1867 removed to Washington to enter into partnership with the late Richard T. Merrick. He continued a member of the firm of Merrick and Morris until the death of Mr. Merrick (1885) when he formed a partnership with George E. Hamilton, and continued actively to practise his profession, being connected with important litigation both in the local courts and in the Supreme Court, until appointed by President Cleveland an Associate Justice of the Court of Appeals of the District of Columbia upon the establishment of that Court in 1893. Modest, unassuming, almost diffident in manner, he was best adapted to office practice, and yet, when occasion required it, was forceful and successful in the trial of cases. A skilled lawyer, standing high in his profession, judicial labours did not prevent him from taking an active interest in civic and social conditions, or from broadening the scope of his researches into the fields of science, of literature, and of art. Actively interested in his Alma Mater, and in the growth and development of Catholic education, he was one of the founders of Georgetown Law School (1871), then under the direction of the late P. F. Healey, S.J., to-day one of the largest and most successfully conducted law schools in this country. In 1877 he received from Georgetown, in recognition of his nobility of character, his broad scholarship, and achievements as lawyer and judge, the degree of LL.D. He wrote "Lectures on the History of the Development of Constitutional and Civil Liberty" (1898); also numerous monographs and addresses.

GEORGE E. HAMILTON.

Morse (Lat. *morsus*), also called the MONILE, FIBULA, FIRMALE, PECTORALE, originally the rectangular ornamented piece of material attached to the two front edges of the cope near the breast to prevent the vestment from slipping from the shoulders. Morses were provided with hook and eye, and were often richly ornamented with embroidery or precious stones. The name was also applied to metal clasps used instead of such pieces of woven fabric. As early as the eleventh century such metal clasps are found represented in miniatures and mentioned in inventories. These clasps, however, gradually lost their practical use and became mere ornaments, which were sometimes sewn firmly to the flaps that served to fasten the cope, sometimes only attached to the flaps by hooks, so that, after the vestment had been worn, the clasps could be removed and cared for separately. This latter was especially the case when, as frequently happened at least in the later Middle Ages, the clasp was very heavy or very valuable. As

early as the thirteenth century inventories mention clasps which formed distinct ornaments in themselves. Many churches had a large number of such morses. They were generally made of silver covered with gold, and were ornamented with pearls, precious stones, enamel, niello-work, architectural designs, small figures of saints, ornamental work in flowers and vines, and similar designs. Such clasps were frequently the finest products of the goldsmith's art; they were generally either round, square, quatrefoil, or like a rosette in form; yet there were also more elaborate and at times peculiar shapes. Abundant proof of the desire for costly clasps for the cope is shown by the old inventories and by the numerous medieval morses preserved (especially in Germany) in churches and museums. According to present Roman usage the morse is reserved to cardinals and bishops ("Cær. episc.", I, c. vii, n. 1; S. R. C., 15 September, 1753).

JOSEPH BRAUN.

Morse, HENRY, VENERABLE, martyr; b. 1595 in Norfolk; d. at Tyburn, 1 February, 1644. He was received into the Church at Douai, 5 June, 1614, after various journeys was ordained at Rome, and left for the mission, 19 June, 1624. He was admitted to the Society of Jesus at Heaton; then he was arrested, and imprisoned for three years in York Castle, where he made his novitiate under his fellow-prisoner Father John Robinson, S.J., and took simple vows. Afterwards he was a missionary to the English regiments in the Low Countries. Returning to England at the end of 1633 he laboured in London, and in 1636 he is reported to have received about ninety Protestant families into the Church. He himself contracted the plague but recovered. Arrested 27 February, 1636, he was imprisoned in Newgate. On 22 April he was brought to the bar charged with being a priest and with having withdrawn the king's subjects from their faith and allegiance. He was found guilty on the first count, not guilty on the second, and sentence was deferred. On 23 April he made his solemn profession of the three vows to Fr. Edward Lusher. He was released on bail for 10,000 florins, 20 June, 1637, at the instance of Queen Henrietta Maria. In order to free his sureties he voluntarily went into exile when the royal proclamation was issued ordering all priests to leave the country before 7 April, 1641, and became chaplain to Gage's English regiment in the service of Spain. In 1643 he returned to England; arrested after about a year and a half, he was imprisoned at Durham and Newcastle, and sent by sea to London. On 30 January he was again brought to the bar and condemned on his previous conviction. On the day of his execution his hurdle was drawn by four horses, and the French Ambassador attended with all his suite, as also did the Count of Egmont and the Portuguese Ambassador. The martyr was allowed to hang until he was dead. At the quartering the footmen of the French Ambassador and of the Count of Egmont dipped their handkerchiefs in the martyr's blood. In 1647 many persons possessed by evil spirits were relieved through the application of his relics.

JOHN B. WAINEWRIGHT.

Mortification, one of the methods which Christian asceticism employs in training the soul to virtuous and holy living. The term originated with St. Paul, who traces an instructive analogy between Christ dying to a mortal and rising to an immortal life, and His followers who renounce their past life of sin and rise through grace to a new life of holiness. "If you live

after the flesh", says the apostle, "you shall die, but if through the spirit you *mortify* the deeds of the flesh, you shall live" (Rom. viii, 13; cf. also Col. iii, 5, and Gal. v, 24). From this original use of the term we see that mortification, though under one aspect it is a law of death, under another and more fundamental aspect it is a law of life, and so does not destroy but elevates nature. What it slays is the disease of the soul, and by slaying this it restores and invigorates the soul's true life.

Of the diseases it sets itself to slay, sin, the one mortal disease of the soul, holds the first place. Sin committed it destroys, by impelling to true penitence and to the use of those means of forgiveness and restoration which our Lord has confided to His Church. Temptations to sin it overcomes by inducing the will to accept hardships, however grave, rather than yield to the temptations. To this extent, mortification is obligatory on all, but those who wish to be more thorough in the service of Christ, carry it further, and strive with its aid to subdue, so far as is possible in this life, that "rebellion" of the flesh against the spirit which is the internal incentive to sin. What is needed to achieve this victory is that the passions and sensual concupiscences, which when freely indulged exercise so pernicious an influence on human conduct, should be trained by judicious repression to subordinate and conform their desires to the rule of reason and faith, as discerned by the mind. But for this training to be effectual it is not sufficient to restrain these desires of the flesh only when their demands are unlawful. They represent a twist in the nature, and must be treated as one treats a twisted wire when endeavouring to straighten it, namely, by twisting it the opposite way. Thus in the various departments of ascetic observance, earnest Catholics are constantly found denying themselves even in matters which in themselves are confessedly lawful.

Mortification, viewed thus as a means of curing bad habits and implanting good ones, has its recognised place in the methods even of those who are engaged in pursuing purely natural ends. What is peculiar to Christian mortification is, that it relies for the attainment of its spiritual objects, not merely on this natural efficacy of its methods, but still more on the aids of divine grace, for which, by its earnestness in self-discipline and the Christian motive which inspires it, it can plead so powerfully with God. And here, as further contributing to increase its spiritual efficacy, another motive for which it is practised comes in. It is practised likewise as an expiation for past sins and shortcomings, for it is the belief of the Catholic Church that, although only the Atonement of Christ can offer adequate expiation for the sins of men, men ought not to make that an excuse for doing nothing themselves, but should rather take it as an incentive to add their own expiations to the extent of their power, and should regard such personal expiations as very pleasing to God. This explains why many of the mortifications practised by devout persons are not directly curative of evil propensities, but take the form of painful exercises or privations self-inflicted because they are painful, e. g., fastings, hard beds, abstention from lawful pleasures, etc. Not that these external mortifications are of themselves available, for spiritual writers never tire of insisting that the internal mortification of pride and self-love in their various forms are essential, but that external penances are good only so far as they spring from this internal spirit, and react by promoting it (see ASCETICISM).

ALVAREZ DE PAZ, *De mortificatione virum animæ in Opera*, t. III (Paris, 1875), I, II; BAKER, *Holy Wisdom*, ed. SYDNEY F. SMITH.

Mortmain (Old Fr., *morte meyn*), dead-hand, or "such a state of possession of land as makes it inalienable" (Wharton, "Law Lexicon", 10th ed., London, 1902, s. v.), is "the possession of land or tenements by any corporation" (Bouvier, "Law Dictionary", Boston, 1897, s. v.), or "where the use came *ad manum mortuam*, which was when it came to some corporation" (Lord Bacon, "Reading on the Statute of Uses"), alienation of lands or tenements to a corporation being termed alienation in mortmain (Stephen, "New Commentaries on the Laws of England", 15th ed., London, 1908, I, 296). The alienation was formerly expressed by the now obsolete words *amortization* and *amortissement*, the person so alienating being said to *amortize* (Murray, "New English Dictionary", Oxford and New York, 1888), a verb used by Chaucer in connexion with good works "amortised by sinne following" (The *Persones Tale*). In Old French *amortissement* was used in connexion with licences termed *chartes d'amortissement*, validating an alienation, *amortir* being defined *éteindre en tout ou en partie les droits de la seigneurie féodale* ("La Grande Encyclopédie", Paris, s. d.; "Century Dictionary", New York, s. d., s. v. *amortization*; cf. the same use of the English word in statute 15 Richard II, c. 5).

Corporate ownership, recognized by the Roman Law, did not become obsolete under feudalism (q. v.). Throughout the Middle Ages there were numerous associations having, by their titles of association, "a perpetual body" or "a perpetual commonalty". Such were the mayors, bailiffs, and commons of cities, or of boroughs and towns, and such, too, were various guilds and fraternities.

These associations "of many individuals united into one body, under a special denomination having perpetual succession under an artificial form" (Shelford, "A practical treatise on the Law of Mortmain, &c.", Philadelphia, 1842, 22) had become established for purposes which, in respect to any property they were allowed to acquire or to retain, implied an ownership free from the vicissitudes and limited duration of ownership by natural persons.

The Catholic Church, having been recognised "since the time of the Emperor Constantine" in the countries which adopted the feudal system "as possessing a legal personality and the capacity to take and acquire property" (Ponce vs. Roman Catholic Church, 210 United States Supreme Court Reports, 311), feudalism recognized not only the Church, but its religious communities, as spiritual corporations. Such a community has been thought to be appropriately described to be *gens eterna eadem perpetuo permanens quasi in ea nemo unquam moritur* (an everlasting body continuing perpetually the same as if in it no one may ever die). The communities might consist of men, each of whom was deemed, because of his vows, civilly dead. But to the communities themselves, *virī religiosi*, "people of religion", *gens de main morte*, the law attributed a perpetual existence and perpetual ownership of property.

English Law, admitting the corporate existence of associations, which were corporations aggregate, and also allowing of such an artificial existence in an official individual, considered not only the king, but each bishop, parson, and vicar as a corporation sole. And such might be a chantry (q. v.) priest, to whom land had been given by its owner, subject to a perpetual service *a chanter pur ly e pur ces heysra a tou jours* (see Year Books of the reign of King Edward the First, Years XX–XXI, London, 1866, 265).

Corporate ownership of land, however, by subjects of the realm was repugnant to feudal theory. According to this theory all land of subjects was deemed to have been acquired, immediately or mediately, by grant of the king. Of land directly acquired from the king, the person to whom the grant or feoffment was made, the feoffee, held as tenant *in capite* of the

Crown. If the tenant *in capite* made a feoffment, he became immediate lord of his feoffee, and as to the king a mediate lord. And thus from successive feoffments there might result a long succession of lords, mediate and immediate, the king being ultimate lord of all land in the kingdom which was held by feudal tenure. A freeman who became a landowner was bound in many instances to render military service to his immediate lord, and liable to forfeit the land for crime. Should he die without a proper heir, the land escheated. If he left a male heir under age, the lord was entitled to his guardianship (q. v.). In the case of a female heir, the lord was entitled to her disposal in marriage (Stephen, op. cit., I, 103–140).

The Magna Carta of King Henry III (9 Henry III, c. 32; 1224), afterwards repealed as to this provision by implication (Shelford, op. cit., 15), prohibited the giving or selling by a freeman of so much of his land as that the unsold residue should be insufficient to render to the lord of the fee the services due to him.

Feudal theory, therefore, favoured ownership of land by some natural person liable to death and capable of committing crime, or according to the Norman expression, *homme vivant, mourant et confisquant* (Thornton vs. Robin, I, Moore's Privy Council Reports, 452). An artificial being, existing in contemplation of law, not competent to render military service, incapable of crime, and not subject to death, was thus not possessed of the attributes which, according to feudal polity, became a landowner.

In France a custom arose of the *gens de main morte* supplying a knight to fulfil the services of a feudal vassal. As early, however, as 1159 this custom began to be superseded by *chartes d'amortissement*, and these licences became, in the course of time, an important fiscal resource of the Crown. Of the conferring of relief from feudal obligations a notable instance was the exemption given in 1156 by Frederick Barbarossa to the Dukes of Austria from all service, except almost nominal military service. Land held by individuals free from feudal liabilities was designated as allodial (Fr. *alleu*), or a *fief de Dieu*, or in Germany as *Sonnenlehn*.

A third of the value of property is said to have been sometimes the price of its *amortissement* (Littre, "Dictionnaire de la langue française", Paris, 1889, s. v.).

William the Conqueror sought to promote in England holding of land by feudal tenure. That allodial holdings were known in England at the time of the Conquest seems quite possible (see "La Grande Encyclopédie", s. v. *Alleu*). And many of the holders would doubtless consent to change to the feudal tenure, which implied feudal protection.

But there appears to have arisen a somewhat widespread repugnance on the part of landowners to hold land subject to the faith and homage which accorded with the law doctrines of the Norman feudists. A method of escape was resorted to, which the Magna Carta of King Henry III indicates. Owners availed themselves of the property rights of the religious communities in order to hold land under these communities. For to contrivances of this kind the Charter evidently alludes, prohibiting the same land being given to and taken again from any religious house, and forbidding any house of religion to take land under an agreement of returning it to its former owner, *terram alicujus sic accipere quod tradat illam ei a quo ipsam recepit tenendam* (see c. 36).

This early statute of mortmain applies only to action by religious houses in the way of enabling lay owners to hold their lands. The statute does not seem directed against the holding by the houses of land in their own possession. The correctness of Sir William Blackstone's surmise that even before the Conquest licences in mortmain had become necessary "among the Saxons" (Commentaries, B. 11, c. 18, 269) does not appear to be confirmed by this Magna Carta,

nor, in any general sense, by the fact that the allusion in the Constitutions of Clarendon (1164) to mortmain was confined to advowsons (ibid.).

The mortmain statute of Edward I, known as "*Statutum de viris religiosis*", 7 Edward I, enacted in 1279, and so often referred to by writers on English real property law, recites that religious men have entered into their own fees as well as into the fees of other men, and that those services due "and which at the beginning were provided for the defence of the Realm" are wrongfully withdrawn and the escheats lost to the chief lords (Duke, "*The Law of Charitable Uses*", London, 1805, 193).

The statute thereupon ordains that "no person, religious or other", *nullus religiosus aut alius quicumque*, shall buy or sell lands or tenements or receive them, or appropriate them (under pain of forfeiture) so as to cause the land to come into mortmain, *per quod ad manum mortuam terræ et tenementa hujusmodi decedant quoquo modo*.

A violation of the statute renders lawful to the king "and other chief lords of the fee immediate", *nobis et aliis immediatis capitalibus dominis fædi*, to enter and hold the land. The chief lord immediate is afforded a year to enter, the next chief lord immediate the half-year next ensuing, and so every lord immediate may enter into such land, if the next lord be negligent in entering. If all the chief lords who are "of full age, within the four seas and out of prison be negligent or slack", "we", the king, namely, "shall take such lands and tenements into our own hands", *capiemus in manum nostram*.

The term *manus mortua* is not applied to the sovereign, yet land so taken "in manum nostram" is not to be retained. Such a retaining would be in mortmain. And the king promises to convey the land to other persons subject to services from which ownership by the "religious men" or others had withdrawn it, services for the defence of the realm, *alios inde feoffabimus per certa servitia nobis inde ad defensionem regni nostri facienda*, saving to the lords "their wards and escheats and other services". A statute of 1290 permits any freeman to part with his land, the feoffee to hold of the same lord and by the same services as his feoffor held. But the statute cautiously adds that in no wise are the lands to come into mortmain against the statute (see 18 Edward I, c. I, c. II, c. III).

Where churches stood "the ground itself was hallowed" (see *Ponce vs. Roman Catholic Church*, 210 United States Supreme Court Reports, 312). And a statute of Richard II (15 Richard II, c. V; 1391) recites that "some religious persons, parsons, vicars and other spiritual persons have entered in divers lands and tenements, which be adjoining to their churches and of the same by surffurance and assent of the tenants, have made churchyards and by bulls of the bishop of Rome [(sic)—the French and more authoritative text reads: *par bulles del apostoil*] have dedicated and hallowed the same" and in these make "parochial burying". Therefore all persons possessed of land "to the use of religious people or other spiritual persons", of which these latter take the profits, are required upon pain of forfeiture to procure licence of amortisation within a time limited, or to "sell and aliene" to some other use.

This statute does not confine its operation to "spiritual persons" and churchyards, but enacts that the statute of 1279 shall "be observed of all lands, tenements, fees, advowsons, and other possessions purchased or to be purchased to the use of guilds and fraternities" and "Mayors, Bailiffs and Commons of Cities, Boroughs and other towns that have a perpetual commonalty", all of whom are forbidden to purchase.

Licences allowing, in particular instances, transfers into mortmain, notwithstanding the statute, were issued from time to time. The text of a licence of Edward I himself has been preserved, permitting a cer-

tain person to give a parcel of land to a certain prior and convent to be held *sibi et successoribus suis in perpetuum*, but subject to the due and accustomed services to the *capitalibus dominis fædi illius* (Year Books of the reign of King Edward I, years XXXII-XXXIII, London, 1864, 499). This licence recites that it is given *ob affectionem et benevolentiam* towards the religious order. Nor do licences in mortmain seem to have ever become in England, as in France, recognized sources of royal revenue.

Legal devices, too, as in the times before the Magna Carta of Henry III, were resorted to for the purpose of escaping the operation of the statute, such as purchases alluded to in the statute of Richard II "to the use" of persons other than those to whom the legal title was transferred. These devices have produced far-reaching and enduring influence on the development of English jurisprudence. Concerning English aggregate ecclesiastical bodies of former times, Sir Edward Coke observes in language which we might imagine to be applied to modern "trusts" and combinations of capital, that those bodies "in this were to be commended, that they ever had of their counsel the best learned men that they could get" (Blackstone, "*Commentaries*", B. 11, c. 18, 270).

Before the coming of the Conqueror and his feudal lawyers much land in England had been acquired to be held by the spiritual tenure of frankalmoin, a tenure subjecting the holders to what was termed the *trinoda necessitas* (or threefold obligation) of repairing highways, building castles, and repelling invasions, but otherwise to no service other than praying for the souls of the donor and his heirs, dead or alive (Stephen, op. cit., I, 139, 140). To such pious foundations already established none of the mortmain legislation applied.

When Henry VIII commenced his ecclesiastical alterations, the general body of the parochial clergy holding, in a corporate way, their lands by this tenure (ibid.) "acknowledged", to quote Sir Edward Coke (1 Reports, 24, a), "King Henry VIII to be supreme head of the church of England", and thus continued to hold their lands by the Saxon tenure, by which "the parochial clergy and very many ecclesiastical and eleemosynary foundations", observes Sergeant Stephen, "hold them at this day" (op. cit., I, 139).

Land held in mortmain by some of the religious corporations were confiscated by the statute 27 Henry VIII, c. 28 (1535), and thus, according to Lord Bacon (Reading on the Statute of Uses), "The possessions that had been in mortmain began to stir abroad", a "stir" extended by the statute 37 Henry VIII, c. 4 (1545), to other religious houses and to chantries, this statute transferring their lands to the sovereign's possession in consideration of His Majesty's great costs and charges in his then wars with France and Scotland.

During the brief period of reaction after the death of King Edward VI, the statutes of mortmain, in so far as they applied to future conveyances to spiritual corporations, were suspended (1554) for twenty years (1 and 2 Philip and Mary, c. 8, sec. LI).

The expressions quoted from Lord Bacon, and an allusion of his to "plenty and purchasing", suggest the view that holding of land in mortmain, being opposed to land stirring abroad and its ready purchase, was in the nature of a public inconvenience or mischief. Similar views had not actuated the English kings and barons previous to Henry VIII, who (to quote Barrington, "*Observations on the more ancient Statutes*", London, 1796, 113), "had no notion of an inconvenience or mischief to the public from a stagnation of property", realizing, however, that, "as the land was given to God, the king and the barons lost all the usual profits of what was held under them" (ibid.).

But opposition to mortmain holdings as being per-

pettities appears in a statute of Henry VIII, which preceded the confiscating statutes. This is the statute 23 Henry VIII, c. X (1531), directed against holding of lands, "to the use of parish churches, chapels, churchwardens, guilds, fraternities, commonalties, companies, or brotherhoods", purposes previously acknowledged as charitable and religious.

Excluding from its operation cities and towns corporate, having, by their ancient customs, power to "devise into mortmain", the statute alluded to declares trusts or assurances to the uses just mentioned "erected and made of devotions or by common assent of the people without any corporation", or "to the uses and intents to have obites perpetual or a continual service of a priest forever", or for sixty or eighty years, to be within the mischiefs of alienation "into mortmain", and as to future gifts void except for terms not exceeding twenty years (cf. 1 Edward VI, c. XIV).

Sir Edward Coke explains this statute to have been directed against some purposes which were thenceforth to be condemned as superstitious, although formerly approved as charitable, "such superstitious uses", he points out, "as to pray for souls supposed to be in purgatory, and the like". Not long before the date of the statute, Coke observes "by the light of God's word", "diverse superstitions and errors in the Christian religion which had a pretence and semblance of charity and devotion were discovered". With true charity, he claims, the statute was not intended to interfere. For, he observes, "no time was so barbarous as to abolish learning and knowledge nor so uncharitable as to prohibit relieving the poor" (op. cit., 24 a). And he allows us to infer such to be the fact, even though the charity might constitute a perpetuity.

Dispositions for charity, which the law would specially commend, a statute of Queen Elizabeth mentions (43 Elizabeth, c. IV, 1601). Dispositions in aid of "superstitions" were not to be deemed charitable, and these the courts were to ascertain and condemn, in the varying light of English Statutes, as evils like to alienations in mortmain.

An authority on the law of charitable uses (Duke, op. cit., 125) states that "religion being variable, according to the pleasure of succeeding princes, that which at one time is held for orthodoxy may at another be accounted superstitious". And accordingly the English courts even condemned as superstitious the charge on land of an annual sum for education of Scotchmen to propagate in Scotland the doctrines of the Church of England. For, by statute, presbyteries had been settled in that portion of the United Kingdom [Methodist Church vs. Remington, 1 Watts (Pa.), Reports, p. 224].

The manner of establishing a charity was in the course of time restricted by "the statute of mortmain commonly so called", remarks the Master of the Rolls in *Corbyn vs. French*, 4 Vesey's Reports, 427, "but", he adds, "very improperly, for it does not prevent the alienation of land in mortmain, nor was that the object of the Act".

Reciting that gifts of lands in mortmain are restrained by Magna Carta, and other laws as against the public utility, but that "nevertheless this public mischief has of late greatly increased by many large and improvident alienations or dispositions to uses called charitable uses", this statute (9 George II, c. XXXVI, 1736) provides that thenceforth such dispositions shall be "null and void", unless executed with certain prescribed solemnities, and not less than twelve months before the death of the donor.

The statutes 23 Henry VIII and this statute of George II, in their effect on the dispositions of land, which they prohibit, differ from the old mortmain acts. The statutes referred to render such dispositions void, that is, of no effect whatsoever. But alienations in mortmain properly so termed were not

mere nullities, but were effectual to transfer ownership of land to a corporation, by which the land might be retained until its forfeiture.

Enforcement of a forfeiture and the declaring void a charge on, or use of, land are in their nature and result very different.

Notwithstanding the statement in the case cited from Vesey's Reports that devises for charitable uses are not in themselves alienations in mortmain, the latter word's meaning has yet been claimed to embrace any perpetual holding of land "in a dead or unserviceable hand". And such, it is claimed, "is the characteristic of alienations to charitable uses". Land dedicated to the service of charity and religion is said to be "practically inalienable", because any disposition of it, which is incompatible with the carrying out or continuity of the benevolent purposes of the conveyance, will be restrained by Courts of Equity (Lewis, "A practical treatise on the Law of Perpetuity", Philadelphia, 1846, 689), in England the Court of Chancery.

For, notwithstanding mortmain statutes, and as if to protect the sovereign from the reproach which, according to Coke, he might otherwise have incurred, the lord chancellors seem, from a period long previous to that of King Henry VIII, to have protected and guarded trusts or uses in favour of charity. The chancellors seem to have administered this duty in their capacity as guardians of the king's conscience, and by force of an assumed, if not expressed, delegation of the royal prerogative and sovereign will.

We cannot here consider the subject of royal prerogative, nor how the modern differs from the ancient theory concerning it. Whether modern legislation against perpetual holdings of land is to be deemed to prohibit by implication trusts for charity, because they imply perpetual ownership, has been the subject of extensive legal discussion and of discordant judicial decisions.

But according to the existing law of England we learn from Sergeant Stephen (op. cit., III, 174) that "there is now practically no restraint whatsoever on gifts of land by will for charitable purposes. Pure personal estate", he adds, "may, of course, be freely bequeathed for these purposes". All corporations, however, are yet precluded by English law from purchasing land "except by licence in mortmain from the Crown" (ibid., 26).

As to what dispositions of property which otherwise would be charitable are to be deemed legally superstitious, the modern law of England is less narrow and rigid than the law was formerly interpreted to be (ibid., 180).

The statutes of mortmain themselves were not extended to the colonies. And respecting the United States Chancellor Kent observes, "We have not in this country re-enacted the Statutes of Mortmain or generally assumed them to be in force; and the only legal check to the acquisition of lands by corporations consists in those special restrictions contained in the acts by which they are incorporated . . . and in the force to be given to the exception of corporations out of the Statute of Wills" (Commentaries on American law, 14th ed., Boston, 1896, II, 282). The commentator states, by way of exception, that the statutes of mortmain are in force in the State of Pennsylvania. The supreme court of that State, in 1832, stated that these statutes had been extended to the State "only so far as they prohibit dedications of property to superstitious uses and grants to corporations without a statutory licence" (1 Watts Reports, 224). The court had in mind, but seemed reluctant to follow, the "Report of the Judges" made in 1808, and which is to be found in 3 Binney's Reports. The "Report" almost follows the statute of Henry VIII, in declaring all conveyances "void made either to an individual or to any number of persons associated, but not incorporated, if the said conveyances are for

uses or purposes of a superstitious nature, and not calculated to promote objects of charity or utility".

Notwithstanding this early declaration, no such doctrine as that of the English courts on the subject of superstitious uses or trusts can well have a place in the jurisprudence of the United States, where "all religious beliefs, doctrines and forms of worship are free" (Holland vs. Alcock, 108 New York Court of Appeals Reports, 329).

The people of the States make known their sovereign will by enactments of the State legislatures, to which bodies the prerogatives of sovereignty have been delegated. And, therefore, the validity of dispositions of land in favour of charity is controlled by the law of the State where the land is situated, and without any implied delegation of prerogative to any judicial officer. And the same remark applies to the general power of corporations to acquire and to hold land in the several States. (See PROPERTY, ECCLESIASTICAL.)

Corporations.

CHARLES W. SLOANE.

Morton, JOHN, Cardinal, Archbishop of Canterbury, b. in Dorsetshire about 1420; d. at Knowle, Kent, 15 Sept., 1500. He was educated at Oxford (Balliol College) where he graduated D.C.L. Being ordained priest he practised in London as an ecclesiastical lawyer. The patronage of Cardinal Bouchier obtained for him much preferment and he became privy councillor, Chancellor of the Duchy of Cornwall, master in Chancery, subdean of Lincoln (1450), principal of Peckwater Inn, Oxford (1453), and prebendary of Salisbury and Lincoln (1458). During the Civil War he joined the Lancastrians, was attainted by the Yorkists and lost all his offices. During the reign of Edward IV his attainder was reversed on his submission, and he was made Master of the Rolls (16 March, 1472-3), Archdeacon of Winchester and Chester (1474), and was elected Bishop of Ely on 31 Jan., 1478-9. During the reign of Richard III he was imprisoned but escaped to Flanders, returning to England when Henry VII became king in 1485. He was much trusted by the king and was all-powerful in the government. He was elected Archbishop of Canterbury, 8 Oct., 1486, and in the following March became Lord Chancellor of England. In 1493 Alexander VI created him Cardinal of St. Anastasia. He was made Chancellor of Oxford in 1495. It is probable that he was the author of the "History of Richard III", usually ascribed to Blessed Thomas More, who as a boy was a page in his household and who subsequently translated it into English.

EDWIN BURTON.

Morton, ROBERT, VENERABLE, English priest and martyr, b. at Bawtry, Yorks, about 1548; executed in Lincoln's Inn Fields, London, Wednesday, 23 August, 1588 (the catalogue probably compiled by Fr. John Gerard, S.J., and printed by Fr. Pollen, S.J., in "Cath. Rec. Soc. Publ.", V, 288-293, gives the date of the deaths of the Venerables Morton, Moor, Holford, Claxton, and Felton as 30 August, but this seems to be an error). He was the son of Robert Morton, and nephew of Dr. Nicholas Morton, was ordained deacon at Rome and priest at Reims in 1587, and con-

demned at Newgate 26 August merely for being a priest contrary to 27 Eliz., c. 2. At the same time and place suffered Hugh Moor, a layman, aged 25, of Grantham, Lincolnshire, and Gray's Inn, London, for having been reconciled to the Church by Fr. Thomas Stephenson, S.J. On the same day suffered (1) at Mile End, William Dean, a priest (q. v.); and Henry Webley, a layman, born in the city of Gloucester; (2) near the Theatre, William Gunter, a priest, born at Raglan, Monmouthshire, educated at Reims; (3) at Clerkenwell, Thomas Holford, a priest, born at Aston, in Acton, Cheshire, educated at Reims, who was hanged only; and (4) between Brentford and Hounslow, Middlesex, James Claxton or Clarkson, a priest, born in Yorkshire and educated at Reims; and Thomas Felton, born at Bermondey Abbey in 1567, son of B. John Felton, tonsured 1583 and about to be professed a Minim, who had suffered terrible tortures in prison. According to one account there also suffered on the same day at Holywell, London, one Richard Williams, a Welsh priest of Queen Mary's reign. Another, however, puts his death in 1592 or 1593. Fr. Pollen thinks his name occurs in this year in mistake for that of John Harrison, alias Symonds, a letter carrier, who was it seems executed at Tyburn, 5 October, 1588.

J. B. WAINWRIGHT.

Mosaic Legislation, the body of juridical, moral, and ceremonial institutions, laws, and decisions comprised in the last four books of the Pentateuch, and ascribed by Christian and Hebrew tradition to Moses.

Name.—As early as the Davidic era, the name תּוֹרָה, *tôrâh* was popularly used to designate this compilation, which, however, might not then have embraced all the enactments it now contains. After the captivity, the term became synonymous with the Pentateuch, and this usage has obtained ever since. Side by side with these meanings are others less comprehensive and more ancient. If, as is generally admitted, *yārâh* (to cast) be the root, there would be a peculiar historic interest attaching to the word, because of the implication that the first *tôrâh*, or decisions, of whatever kind, were arrived at chiefly, or at least in important cases, by the casting of lots. The deity would then be regarded as the author of them. More developed than these are the first available historic *tôrâh*, such as were pronounced in cases of private litigation at Raphidim (Ex., xviii, 13 sq.) by Moses, relying for his direction on the analogies of precedent or custom. On the lips of the priests and prophets *tôrâh* was sometimes referred to the moral and religious prescriptions of the Law alone, or again, to the ceremonial part of it, whether in theory or practice; in short, to any direction, written or oral, given in Jehovah's name by one enjoying an official capacity.

Quite naturally, when the period of formal codification set in, each new code was styled a *tôrâh*, and these separate *tôrâh* were the stepping-stones to, and afterwards the constituent parts of, the "Torah" or Corpus, which has always been identified with the name of Moses.—More restricted in their signification are the following Biblical terms: מִצְוָה, *mitzvâh*, precepts; מִצְוָה, *mitzvâh*, commandment; עֲדוּת, *ed(w)ûth*, testimonies, i. e. expressions of God's will to man, chiefly in moral and religious matters; מִשְׁפָּט, *mišpâṭ*, a judgment, usually though not exclusively relating to civil or criminal law, and, eventually, implying an obligatory force arising from the nature of moral rectitude, which is enhanced, not obscured, by the notion of theocratic economy; and קֶרֶן, *hōq*, *hūqqâh* (root, to engrave), statute, or thing engraved (e. g. on stone), thereby becoming fixed, so to speak, as an ordinance. From this varied terminology, however indiscriminate

the use made of it may have been as time went on, it seems right to conclude that its originators had more than a faint perception of the distinction between the different classes of law, and of their respective binding force. If, in given cases, equal penalties were meted out for delinquencies from the moral and ceremonial laws, it was because the nearness of the latter to the national God by reason of their universal character, seemed to give offences against them a peculiar heinousness, not found in other crimes. The legislators understood well that when monotheistic ceremonies declined, polytheistic institutions would supplant them, and then there would be no morality left to guard.

Origin.—The Torah, as a whole, was neither miraculously communicated from heaven, nor was it laboriously thought out and put together by Moses independently of external influences. It is sometimes hazardingly asserted that it antedated Moses by a thousand years or more, since much that is in the Torah is found also in the Code of Hammurabi. Indeed, certain decrees in the Babylonian code are more excellent than their Mosaic parallels; in more important ones, however, the Torah takes precedence. It was the primitive condition of Hebrew society that dictated Israel's first laws, by leading to the establishment of family and tribal customs. Yet it would be wrong to maintain with too much assurance that the same or a similar collection of laws would have resulted spontaneously and independently from the same natural conditions in any other period or clime. There had been precedents of just such customs and practices as Israel adopted, among other races with which the founders of Israel's laws had come in contact, and it seems an irresistible conclusion that, since Israel borrowed its language from its neighbours and could be so easily won over to heathen rites as to defy the vigilance of judges, priests, and prophets, it could not but be influenced by the social and political life of the neighbouring peoples.

The possibilities then, are the following: the migration of Abraham from Chaldaea would be responsible for the nucleus of Mosaic Legislation, which is peculiarly Semitic. The sojourn of the patriarchs among the Canaanites, coupled with their relations with the Pharaohs, would impart a foreign colouring, with a slight strengthening of the original stock during Jacob's retreat to Mesopotamia. The Egyptian oppression would certainly elicit some well-defined views regarding justice and right. The education of Moses by Pharaoh's daughter would prepare a master-mind for tribal unification, while his experiences among the Semitic Midianites would teach him the necessity of certain institutions peculiar to desert life, with a due respect for established usages, such as must be taken into account even to-day in dealing with the Sinaitic tribes. Any real influence from the Code of Hammurabi would have to operate, as it likely did, through one or other of these channels. The direct result of these antecedents would be a transmission of principles through the knowledge of concrete examples illustrating them, the primitive mind not being capable of grasping or forming bare abstractions. What these traditional laws were, and how they were reduced to practice in domestic and political life, is set forth at large in the article on BIBLICAL ANTIQUITIES.

No matter how much, or how little can be explained in this way, room must always be left for direct, external, and Divine intervention, that is for an historic revelation made by God of Himself to the chosen people, in such a way as to guarantee them a special Providence and direction in working out their high destiny. Since such direction could be secured to future generations only through the Law by which they would be governed, the Sinaitic manifestations must be explained as placing a Divine seal upon

existing laws, which they did not abrogate, and upon any normal development of them in the future which would be calculated to carry out the designs of Jehovah more efficiently. Then, too, there must have been something settled and fixed on the spot, as a norm to which subsequent prophets might appeal in their judgments of future laws and contingencies. It would be strange if some such remote preparation had not been made for a stupendous event like the Incarnation. Hence it is that the more reflecting among Christian critics, whatever be their views as to the literary composition of the Pentateuch, are at one in asserting that the Pentateuchal laws, even those of a ceremonial character, are traceable back to Moses as their founder; hence, too, the peculiar psychological phenomenon all through Israel's history, that observance of the law or any of its parts was superior to (non-compulsory) sacrifice, because it was a homage of obedience paid directly to the nation's God.

Codification.—In its present form the Mosaic Legislation appears without logical order, and interspersed with historical reminiscences. It is largely casuistic, as might be expected from the manner of its early transmission. (1) The Decalogue, with its two versions (Ex., xx, 2-17; Deut., v, 6-21) is basic, setting forth, as it does, the sovereignty and spirituality of God, together with the sacredness of His and the neighbour's rights. (2) The "Book of the Covenant", so called in Ex., xxiv, 7, embraces Ex., xxi-xxiii, 19 (or xx, 20-xxiii, 33), and contains judicial, moral, and religious regulations for people living in primitive agricultural conditions. It is remarkable for its humanitarian character. (3) The Deuteronomic code amplifies the preceding and adapts it to new conditions. (4) The "Law of Holiness" as contained in Lev., xvii-xxvi has reference chiefly to holiness of a moral and ceremonial nature. It forms a small part of what is now critically styled the (5) "Priest's Code". This last group abounds in ceremonial enactments, and comprises nearly all Leviticus and Numbers, with a few chapters of Exodus. In the light of criticism there is no need of abandoning the traditional belief that Moses compiled, under the influence of inspiration, any or all of these codes as they stood originally, or in that stage of development they had attained in his time. The literary peculiarities of the Pentateuch merely entitle us to assert that these various divisions were by later writers revised, enlarged, and brought up to date, while the changes in Israel's life, from a nomadic to a sedentary state, from a dispersed to a king-ruled nation, explain full well the appearance, as time went on, of a limited amount of new legislation quite consonant with the soul and spirit of the old. Common Law, as it were, grew and developed, but the statutory enactments remained inviolable.

Contents.—Abstracting from the distinction of codes, the Torah exhibits a dogmatic system that is rigorously monotheistic. A moral standard issues from this, having as its peculiar feature the identification of civil, social, and religious observance, with service performed directly and immediately for Jahweh, and at His bidding. A ceremonial characterized by its picturesqueness and wealth of detail follows, the evident purpose of which was to keep the people constantly in mind of the Covenant into which they or their ancestors had entered, and to assure them of God's fidelity to His promises, if only they would do their part. The civil and criminal enactments are sufficiently well explained elsewhere. The article on BIBLICAL ANTIQUITIES dispenses us from treating in detail any of these topics save the ceremonial. Even that is largely dealt with in the paragraph on *Sacred Antiquities* (loc. cit.) and the articles ATONEMENT, DEDICATION, JUBILEE, PASCH, PENTECOST, PURIM, SABBATH, TABERNACLES, TRUMPETS.

The Tabernacle was the centre of public worship. This was a portable tent measuring fifty-two by seven-teen feet, and divided by a veil into two unequal parts, the Holy Place and the smaller Holy of Holies. The latter contained only the Ark of the Covenant, and might be entered by no one but Moses and the high priests. Any priest might enter the Holy Place. This was furnished with a table for the Loaves of Proposition, a seven-branched golden candlestick, and the Altar of Incense. Outside, in the surrounding court, were the Altar of Holocausts and the brazen laver for priestly ablutions. The tribe of Levi furnished the ministers, the descendants of Aaron being priests, and the remaining majority, Levites properly so-called. The priests were consecrated, wore special vestments, offered sacrifice, attended to the Holy Place, and acted as judges and teachers. For the peculiar distinction of highpriesthood, see the article AARON (section II). The Levites were the priests' assistants. They carried the Tabernacle whenever it was moved. Bloody and unbloody sacrifices were prescribed. The former class embraced the Holocaust, in which the entire victim was consumed on the altar by fire and the Expiatory and Pacific sacrifices, when only the fat was burned on the altar. The rest was either burned elsewhere or given to the priest as in the first instance, but divided between priest and offerer as in the second, and followed by a sacrificial meal. The Unbloody sacrifices included first-fruits, tithes, meat and drink offerings, and incense. Both oblations and sacrifices were seasoned with salt.

The most striking feature of the ceremonial legislation is the distinction between legal cleanliness and uncleanness, with its concomitant provision for numerous external purifications. The faithful Hebrew had always to abstain from blood. He might not use for food any quadruped that did not divide the hoof and chew the cud, nor any fish that did not have both fins and scales, nor birds of prey, nor water fowl, nor reptiles, nor insects, the locust excepted. To do so would make him unclean. The use of marriage, childbirth, and leprosy also induced uncleanness. It is true that this legislation is largely hygienic, but the Hebrews did not commonly conceive it in that light. As diseases were regarded as direct from Jahweh, precautions against them were designed primarily to avert them by appeasing the sender. Those, therefore, who failed to take such precautions, either necessarily or otherwise, were displeasing to Jahweh, and legal defilement was the result. How effectually the *Torah* prepared the Hebrews for the acceptance of the New Law is attested by the work of Christ, who came not to destroy but to perfect it. It was only those who, while sitting in the chair of Moses, preferred for their personal guidance the traditions of men, who proved inimical to our Saviour's work.

York, 1897). Invaluable for thoroughness and concentrated form are tables XXIX-XXXIX and XLII-LVI in *Concordantiarum U. S. S. Thesaurus, Auditoribus P. P., S. J.* (Paris, 1897) sect. I.

THOS. A. K. REILLY.

Mosaics, as a term, according to the usual authorities is derived through generations of gradual change from the Greek *μοσαϊκός*, "appertaining to the Muses." In the later Latin there are the terms *opus musivum*, "mosaic work," *musivarius*, "mosaic worker"; but probably the English word "mosaic" is derived immediately from the French *mosaïque*, which with its earlier form *mousaïque* can only be borrowed

from the Italian or Provençal, and cannot be the descendant of the earlier French form *musike*. It is, however, questionable if these terms were applied to all the different species of work which may now be classed as "mosaic", and it is probable that they were only properly applied to the products of the worker in *opus tessellatum* or *vermiculatum*, formed of small cubes of glass, marble or other material. If we define mosaic as a collocation of pieces of marble, glass, ceramic material, or precious stone embedded in some species of cement so as to form an ornamental entity, we should have to include the *opus Alexandrinum*, and other ordinary pavings such as were used for the less dignified portions of Roman houses. The term mosaic would also be made to apply to the *opus sectile* (Vitruvius, VII, i) made of pieces of marble and glass forming geometrical or foliated patterns, each piece being ground exactly to fit into the design, or in the case of pictures, ground to make the shapes necessary for the completion of the subject. We also apply the term to the pavement work of later date, like that in St. Mary Major's in Rome, and that in Canterbury Cathedral and in the sanctuary of Westminster Abbey in England, as well as to mosaics of a miniature species

used for jewellery and small pictures—such as the Head of Our Lord which was presented by Pope Sixtus IV to Philip de Croy in 1475 and is now in the Treasury of Sts. Peter and Paul's, Chimay. This latter tradition of work still exists, and every visitor to Rome or southern Italy is acquainted with the cheap but wonderfully executed mosaic jewellery which is sold in most of the shops, and even in the streets of Rome. There is little doubt but that mosaic in jewellery is of considerable antiquity.

History.—In passing these various species in historical review, the earliest to be mentioned is that in Exodus, a pavement (xxiv, 10), "a work of sapphire stones", and the pavement of Ahasuerus at Susa "paved with porphyry and white marble, and embellished with painting of wonderful variety", which here, probably, means varied inlaid colour, since surface painting would be out of place on a pavement. And we may well believe that the Persians knew of tessellated work when we consider the enamelled bricks, which may be called a large kind

of "tessellatum," now in the Louvre from this same palace at Susa. This is the only record earlier than the existing examples in the Roman pavements of the Republic and Empire such as remain in the Regia, the Temple of Castor, the House of Livius, Pompeii, etc. Suetonius says that Cæsar was accustomed to carry in his campaign both tessellated and sectile pavements. It appears according to Pliny (XXXVI, i) that in the theatres and basilicas, as well as in certain palaces of noble Romans, the pavements were in tessellated work or in marble sectile, and the walls decorated with marble or glass subjects and patterns. Here is the passage from Holland's quaint translation: "Scaurus when he was Edile, caused a wonderfull piece of worke to be made, and exceeding all that had ever been knowne wrought by man's hand . . . and a theatre it was: the stage had three lofts one above another . . . the base or nethermost part of the stage was all of marble, the middle of glass, an excessive superfluitie never heard of before or after." Signor Luigi Visconti informed Herr von Minutoli (Ueber die Anfertigung und die neu-Anwendung der färbigen Gläser bei den Alten", p. 13, Berlin, 1836) that the walls of a chamber in a palace between the gate of St. Sebastian and that of St. Paul at Rome were found covered up to five or six feet from the pavement with beautiful marbles and above that with coloured glass plaques and patterns. Some existing examples appear to have been of curious structure, the pieces of coloured glass were laid upon a flat surface and a sheet of glass laid over these and melted to a sufficient heat to join them together.

Concerning the method called "tessellatum" we have existing remains to prove the perfection to which the art was carried by the Romans in the pavements, and in remains of wall glass mosaic at Pompeii. One of the finest examples of pavements is the representation of the "Battle of Issus" from the Casa del Fauno at Pompeii [Fig. 1], now in the Naples Museum. Many of the pictures and mosaics in

FIG. 3—SPECIMEN OF ROMAN PAVEMENT
Found at Silchester, England

Pompeii are supposed to be traditional copies of celebrated antique paintings; and it is suggested that this "Battle" is a traditional copy of a celebrated picture by Helen, a daughter of Timon, of the Egyptian Hellenic school. From Pompeii came further the very beautiful columns in glass mosaic now in the Naples Museum [Fig. 2]. Pompeii, as we know, was destroyed on 24 August, A. D. 79, so

that these works precede the Christian Era. Their perfection argues a development of considerable antiquity, the genesis of which is at present unknown. Of the subsidiary work in mosaic of Roman pavements, mention has already been made—it consists of patterns in black and white, plain floors with orna-

FIG. 4—SPECIMEN OF CARTHAGINIAN PAVEMENT
Now in the British Museum, London

mental borders; groups of still life, festoons of flowers, and other designs. These exist in sufficient quantity to show how general was their use. That mosaic pavements continued in use during the Christian era is proved by the numerous examples that have been discovered, apparently of Roman origin, at places as distant from one another as Carthage, Dalmatia, Germany, France, and England. In England a great variety have been found in London and in all parts of the country dominated by the Romans; an example from Silchester is given in Figure 3. The British Museum contains many mosaic fragments; amongst these is the fine specimen of work from Carthage, [Fig. 4]. Some of the earlier Carthaginian pavements have glass tesserae; the later ones are of marble or ceramic cubes.

Entirely different in method from the work formed of cubes was the *opus sectile*, where, as already described, the ornament or picture was formed of pieces of marble, stone, or glass of different colours cut to a required shape, in the same way that a painted glass window is now made. The manufacture of the necessary opaque glass was carried to a very great perfection by the Romans, as is testified by the multitude of fragments that have been found in mounds of rubbish or in the Tiber. *Opus sectile* as a wall decoration seems to have been very subject to decay, the pieces of glass becoming detached by their own weight, on the wall becoming damp, decayed, or shaken. There are some very fine specimens in the Naples Museum; others have been found in the church of St. Andrea in Catabarbara, Rome, which is supposed to have been originally the basilica of the house of the Bassi on the Esquiline, dating from about A. D. 317. From this house comes the spirited work [Fig. 5] of the "Tiger and Heifer," now preserved in the church of St. Antonio Abbate. The background and stripes of the tiger are in green porphyry, the rest of the tiger's skin of *giallo antico*; the heifer is pale fawn marble, and its eyes of mother-of-pearl. Other decorations of the same house showed that the walls had *opus sectile* in glass ornament and figures, much in the manner described in the quota-

tion from Pliny, already given. Sectile work in glass is found in some examples of Christian art, but marble is more common, although the tessellated work in the same buildings may be of glass. This use of marble probably arose from the decay in the manufacture of the special glass and the difficulty of cutting and

FIG. 5—MOSAIC OF "THE TIGER AND HEIFER" (A. D. 317)
Preserved in S. Antonio Abbate, Rome

grinding it exactly to the forms. Sectile in marbles is found in Santa Sabina, Rome (425-450); in the baptistery of the cathedral, Ravenna; in San Vitale, Ravenna (sixth century); at Parenzo (sixth century); in Sancta Sophia at Constantinople and at Thessalonica, (sixth century); its use thus has been continuous ever since, and was an especial feature of the Renaissance.

The portion of this theme of the greatest importance in the present article is that concerned with the glass mosaic of Christian churches. The initial steps by which it gradually emerged from Pagan art are in a measure lost, for it rises suddenly like a phoenix from the ashes, complete, entire in its manipulation, whilst the character of the subjects and designs represented bespeak the traditions adopted by the artists of the catacombs. Mosaic, as far as one can at present ascertain, became a vehicle of Christian art in the fourth century. The earliest examples, such as those of the first basilica of St. Peter and St. Paul, are all destroyed. In the church of St. Costanza on the Via Nomentana there still remains interesting work. We have also preserved in the Chigi Library some mosaic from the catacomb of Cyriacus. A mosaic of St. Agnes in the catacomb of St. Callistus was, however, so decayed, that the existing picture was painted over it in the sixth century. Other mosaics have been found on sarcophagi in the catacombs. The most interesting early work is, however, that now existing in the apse of the church of St. Pudenziana (398) [Fig. 7]. It has been much restored in parts and was added to in 1588, but the design remains. Of the same period is the mosaic in the baptistery at Naples. It is uncertain whether the apse of St. Rufinus's is of the fourth or fifth century, but it is interesting as early work.

A great impetus to the art occurred when Constantine, in establishing himself on the throne of Byzantium, commenced to give his capital an imperial appearance as far as art was concerned. He gathered together artists from all celebrated centres, and gave to them special legal and civil or civic favours. Of the works carried out by them, the mosaics of the church of St. George at Thessalonica in many cases yet occupy their original position. The nave of St. Mary Major's in Rome still retains some of the fine mosaics placed there in the fifth century (430-440) and the churches of St. Sabina (422-433), of St. Paul without the walls, and of St. John Lateran were also so decorated in the same era (446-462). St. Paul's, destroyed by fire in 1823, has since been restored and

little of the original remains. What remains of the original mosaics of St. John Lateran's dates from 432-440. The mosaics of the church of Saints Cosmas and Damian (526-530) were restored in 1660. At Ravenna the mosaic work in the various churches is the finest of its period. That in the baptistery of the cathedral dedicated to St. John the Baptist [Fig. 6] is an especially good example, the church being originally built at the end of the fourth century but burnt in 434. The mosaics of the Mausoleum of Galla Placidia (450) are also of excellent design and workmanship. Unfortunately some of these have been restored with painted stucco. Those in the chapel of the archiepiscopal palace and of the church of St. John the Evangelist are too of this period. The mosaics of the cathedrals of Novara and Aosta and the chapel of St. Satira in St. Ambrose's, Milan, are also of the fifth century. In France at Nantes, Clermont, and Toulouse historians record the placing of mosaics which no longer remain.

The greatest works of the sixth century, and perhaps the greatest of all mosaic works in extent, were those carried out under the Emperor Justinian in Sancta Sophia, Constantinople. In 533, a fire destroyed what then existed, but in a quarter of a century the restoration was commenced under Anthemios and Isidore, who, it is recorded, employed ten thousand builders, craftsmen, and artists. The colour is subdued, and the design and execution good of its period. Justinian also caused the church of Sancta Sophia at Thessalonica to be built, and decorated with mosaic. Further great works were executed at Ravenna at the same period. After the conquest by Belisarius in 539, it became the residence of the exarchs in 552, and S. Apollinare Nuovo [Fig. 8], S. Maria in Cosmedin (553-566), S. Vitale (524-534) [Fig. 9], and S. Apollinare-in-Classe (534-549) were built and filled with mosaics. It will be observed that these churches were commenced under the Ostrogoths and finished under Justinian, who probably had the mosaics executed by local artists.

FIG. 6—FOURTH-CENTURY MOSAIC
From Baptistry of Cathedral, Ravenna, Italy

The names of Euserius, Paulus, Statius, Stephano, etc. are recorded. Greeks may have worked with them. The design of the work in St. Apollinare Nuovo is new to western art and consists of two processions of figures, all very similar, which extend along the whole of the nave over the arches. It is curious that in the mosaics of the Adoration of the Magi, the Magi wear the same Persian costume we find

Monte Cassino with mosaics, he brought artists and workmen from Constantinople in 1066 for that purpose. These mosaics are lost or decayed, but it is not unlikely that the artists so engaged, designed and worked on the wall paintings of Sant' Angelo-in-formis, a subsidiary church of the monastery near

FIG. 10—TWELFTH-CENTURY MOSAIC
From apse of Cathedral of Cefalù, Sicily

Capua. These most interesting paintings are still in a fair state of preservation. It is probable that this action of Desiderius had a far-reaching influence in importing fresh energy, especially when he came to occupy the papal chair. The schools of Paulus Laurentius and Rainerius were founded, which were ultimately influenced by the Cosmati, and all the work of this character was at one time erroneously called *cosmati* work. The generation of these schools is of considerable interest in the history of mosaic, and is given by Mr. A. L. Frothingham, in the "American Journal of Archaeology", I, 182. The main features of the decorative mosaic of the Roman School were derived from southern Italy, indirectly from Byzantium, in the eleventh century. The mosaics of the twelfth century are remarkable both for their number and the development of design in Christian art. A new period was inaugurated in Rome under Innocent II. In Italy, in Greece, in Arabia, as well as in Germany and France, important examples are preserved. In Rome, S. Maria in Trastevere (where the design and execution of the mosaic in the apse is extremely grand), S. Crisogono, S. Maria, and S. Francesca Romana were also so decorated.

The Roman artists exerted great influence in Umbria, and the Abruzzi, including the Marches. These men were at times both architects, mural painters, and mosaic workers. From the Roman centre their work went west to considerable distances. Other great works in Italy of this period are in the cathedral of Torcello, in the chapel of St. Zeno, and in the apse of St. Mark's at Venice, 1159; in the Palatine chapel, in S. Maria Martorana or S. Maria dell' Ammiraglio in Palermo, in other Sicilian churches both of Monreale and of Cefalù [Fig. 10] (1140)—in the Palatine chapel Arab workmen assisting the Greeks both in the design and execution. The Mohammedans themselves, notwithstanding the order of the prophet, had occasionally figure design in the mosaic of their mosques; that of Abd-el-Melik at Jerusalem has figures of prophets in the porch, and on the walls inside an *Inferno* and a Mohammedan *Paradiso*. The mosaic ornamentation in the mosques of Seville, Cordova, and Granada are well known to travellers. In Greece there still remain most interesting mosaics of the churches of Daphne, and of St. Luke of Stiris in Phocis [Fig. 11]. In Syria, there remain the celebrated series of mosaics in the church of the Nativity,

Bethlehem; those in the Church of the Holy Sepulchre, and the Mosque of Omar. The mosaics of this period in the churches of Mount Athos are all lost excepting a few figures at Vatopedi. In France, Abbot Suger had mosaics executed for the church of Saint Denis, and there are records of such work at Lyons and Troyes.

The great period of Christian mosaic was probably in the thirteenth century. Rome, Florence, Pisa, Venice, Porence, and Spoleto still possess great works of this era, and the names of Cimabue, Giotto, P. Cavallini, Gaddo Gaddi, Jacobus Torriti, Tafi, Apollonio, and others are connected with the craft. Torriti did important work in St. Mary Major's and St. John Lateran's; Pietro Cavallini designed the subjects under the apse of S. Maria in Trastevere; important mosaics were done in St. Peter's, St. Clement's, and other churches. In 1298, the great Giotto was called to Rome to design the "navicella" for the Porch of S. Peter's; that now *in situ* is a restoration. In Florence the mosaics of the baptistery commenced in 1225 by Jacobus, a Franciscan, were continued at the end of the century by Andrea Tafi, Gaddo Gaddi, Apollonio, and afterwards by Agnolo Gaddi. Gaddo Gaddi also did the beautiful "Madonna" at Santa Maria del Fiore, and the "majesty" at San Miniato is also attributed to him, but it is so much restored that it is difficult to pass judgment upon it. At the end of the century (1298-1301) there was executed the celebrated "majesty" in the apse of the cathedral at Pisa. This has generally been attributed to Cimabue and the side figures to Vicino. To this opinion Venturi adheres with strong evidence (*Storia dell' Arte Italiana*, V, 239-240). Gerspach, however, will not have Cimabue amongst the mosaicists (*La Mosaïque*, 127). At Civit  Cas-

FIG. 9—SIXTH-CENTURY MOSAIC
From roof of San Vitale, Ravenna, Italy

tellana there is considerable work by the Cosmati, who possessed a school of architects, artists, and mosaicists. They not only did mosaic pictures or subjects, but enriched the altars, pulpits, columns, pavements, and other portions of the architecture with geometrical mosaic patterns.

The earliest Christian mosaics in England are of this century, when the beautiful pavement placed be-

others. Unfortunately many of the earlier mosaics were destroyed by the senate, it is said, on the advice of Titian, to make room for the new work. The condition of many of them was bad. Amongst his many other works, Raphael designed for mosaic. The "Creation of the World" in the Chigi Chapel, Santa Maria del Popolo, Rome, from his design, is very fine. It was done in mosaic by Luigi di Pace, who came from Venice for the purpose. Baldassare Peruzzi also designed mosaic for Santa Croce in Gerusalemme, and F. Zucchio executed a mosaic in Santa Maria Scala-Cæli, whilst the work in St. Peter's was commenced under Muziano da Brescia. That the mosaic art had degenerated altogether and lost its vitality is evi-

FIG. 12.—MOSAIC OF "ANNUNCIATION" (1291) BY PIETRO CAVALLINI
From apse of S. Maria in Trastevere, Rome

denced by the work done in St. Peter's, Rome, from the seventeenth century under this same Muziano da Brescia (1528-1592) and other artists.

The establishment of the pontifical works commenced in 1727 when the Cristoferi were appointed superintendents by order of Benedict XIII. After occupying various localities these mosaic works were finally settled in a *cortile* of the Vatican in 1825. In the first half of the seventeenth century the paintings and frescoes of the basilica began to be imitated in mosaic. The quality of the work errs on the side of excessive smoothness, as much as some modern work errs on that of excessive and affected roughness. Other works of the eighteenth and nineteenth centuries and great restorations kept the art alive, notably those of St. John Lateran's and St. Mark's, Venice, by the Italian mosaicists. The "Last Judgment" on the façade of St. Mark's was designed by Latanzio Querano in 1836. In 1839 a school of mosaicists arose in Russia, its primary object being the restoration of the mosaics of Sancta Sophia in Kieff, and eventually Pius IX allowed certain of the pontifical mosaicists in 1850 to go to St. Petersburg and join the Russian mosaicists. An example of their work was shown in the international exhibition held in Hyde Park, London. The mosaics of the Russian church, London, are not, however, very successful.

Numerous mosaics have been executed in England during the last half century, notably the figures of great painters in the Museum of South-Kensington. The earliest of these were done by Venetians, but some of the more recent figures were executed at the works of South-Kensington itself. Many mosaics were done in St. Paul's cathedral, London; those in the choir were designed by Sir W. B. Richmond, and under the dome some strong figures were designed by

Mr. Watts, R.A. The mausoleum at Frogmore is also elaborately decorated with mosaic, as is the monument of Prince Albert in Hyde Park, both designed by John Clayton, who is also responsible for the Brampton chapel in Westminster cathedral. Mr. W. C. Symons designed the mosaics for the chapel of the Holy Souls of Westminster cathedral in which mosaic work is still being inserted in the various chapels. The writer of the present article designed a mosaic of the "Last Judgment" for the church of the Annunciation, Chiselhurst; a figure of Blessed Giacomo di Ulma for South-Kensington, and an "Epiphany" for the frontal of an altar at the Assumption Church, Warwick Street, with other works elsewhere.

In Aachen the mosaic of the dome of Charlemagne was restored, or rather redone, in 1869. In France, various mosaics of fair excellence have been executed, but unfortunately the grand style of the early centuries, so exceptionally suitable to the art, has not been attempted. The modern French mosaic appears to have been initiated by Signor Bellini, one of the Vatican mosaicists, at the close of the eighteenth century, who became the principal of the "manufacture royale"—one of its productions is in the Salle de Melpomène in the Louvre; the design was by Baron Gérard and M. Baudry Garnier, and the mosaic by Curzon Facchino. The mosaics at the Opéra are of Italian execution. In 1876 a national school of mosaic was formed, when M. Gerspach was sent to Rome and obtained, with the consent of the pope, the services of Signor Poggessi of the Vatican works. The execution of the apse of the Panthéon from designs of M. Herbert was the principal work that followed, but the design is moderate, although considered good in its time. This national school soon became extinct, and the mosaics since done have been by private enterprise. Amongst these is that in the apse of the Madeleine and that over the grand staircase of the Louvre. M. Ravoli has designed some mosaics for the new cathedral of Marseilles.

Technique.—The making of a mosaic picture has differed in various periods and under various manufacturers, and the cements into which the tesserae were fixed have been the subject of discussion and, in some medieval examples, of secrecy. Historically no cement has effected a permanent mosaic, as nearly every ancient example not destroyed is partially restored. The following interesting account is from the personal examination by Messrs. Schultz and Barnsley of the old work at St. Luke's of Stiris:

"The method of fixing the mosaic was as follows:—Over the structural brickwork of the surfaces to be covered, a coat of plaster was spread; this, like the first coat of plaster in ordinary wall coverings, was roughened on the face in order to make a second coat of finer stuff adhere. On the surface of this second coat, which was evidently of a very slow-setting nature, the main lines of the mosaic figure or composition were sketched on in tone with a brush, and the mosaic cubes were then pressed into this from the face, forcing up the stuff between the cubes in order to act as a key. We are inclined to think that, at any rate in the case of the single figures, the first cubes put in position were the double or treble row of gold tesserae which enclosed the subject; we have found in many cases that these do not correspond with the lines of the figures as executed, odd spaces between the lines and the final outline of the figure having been filled up with further gold cubes after the mosaics of figure had been finished in position. The backgrounds are universally formed of gold tesserae, while the figures of subjects are composed of cubes of many colours and gradations of tone. The principal coloured cubes are cut out of sheets of opaque coloured glass, while the lighter ones, such as the flesh tints, etc., are of marble. The gold mosaics are formed in the usual manner; a piece of gold leaf,

having been laid on glass, a thin transparent film was then spread over the same, and the whole afterwards annealed to a solid mass. The cubes do not vary greatly in size, the average being about three-eighths of an inch. They are, however, slightly larger in the main outlines of the draperies, etc., and smaller in the delicate gradations of the face and hands. The main portion of the gold background is laid fairly regularly in horizontal lines up to the rows enclosing the subjects" (Schultz and Barnsley, "The Monastery of St. Luke in Stiris", 43).

N. H. J. WESTLAKE.

Moschus (ὁ τοῦ Μόσχου, son of Moschus), JOHANNES, a monk and ascetical writer, b. about 550 probably at Damascus; d. at Rome, 619. He was surnamed The Abstemious (ὁ ἐκπαράς). He lived successively with the monks at the monastery of St. Theodosius (now Deir Dosi) in Jerusalem, among the hermits in the Jordan valley, and in the New Laura of St. Sabas south-east of Bethlehem. About the year 578 he went to Egypt with Sophronius (afterwards Patriarch of Jerusalem) and came as far as the Great Oasis. After 583 he came to Mt. Sinai and spent about ten years in the Laura of Eliata; he then visited the monasteries near Jerusalem and the Dead Sea. In 604 he went to Antioch but returned to Egypt in 607. Later he came to Cyprus and in 614-615 to Rome. On his deathbed he requested Sophronius to bury him, if possible, on Mt. Sinai or else at the monastery of St. Theodosius in Jerusalem. Mt. Sinai being then invaded by the Arabs, Sophronius buried him in the monastery of St. Theodosius. He is the author of one of the earliest hagiological works entitled "Λευμός" (Pratum spirituale, Spiritual Meadow). In it he narrates his personal experiences with many great ascetics whom he met during his extensive travels, and repeats the edify-

ing stories which these ascetics related to him. Though the work is devoid of critical discrimination and teems with miracles and ecstatic visions, it gives a clear insight into the practices of Eastern monasticism, contains important data on the religious cult and ceremonies, and acquaints us with the numerous heresies that threatened to disrupt the Church in the East. It was first edited by Fronton du Duc in "Auctarium biblioth. patrum", II (Paris, 1624), 1057-1159. A better edition was brought out by Cotelier in "Ecclesiæ Græcæ Monumenta", II (Paris, 1681), which is reprinted in Migne, P. G., LXXXVII, III, 2851-3112. A Latin translation by Bl. Ambrose Traversari, is printed in Migne, P. L., LXXIV, 121-240, and an Italian version made from the Latin of Traversari (Venice, 1475; Vicenza, 1479). Conjointly with Sophronius, Moschus wrote a life of John the Almoner, a fragment of which is preserved in the first chapter of the "Vita S. Joanni Eleemosynarii" by Leontius, under the name of "Simeon Metaphrastes" (P. G., CXIV, 895-966).

BARDENHEWER, *Patrologie*, tr. SHAHAN, *Patrology* (Freiburg in Br. and St. Louis, 1908), 559-61; HOLZ in *Dict. Christ. Biog.*, III, 406-8; VAILLÉ, *St. Jean Mosch in Echos d'Orient*, V (Paris, 1901), 107-16 and 356-87; IDEM, *Sophronie le sophiste et Sophronie le patriarche in Revue de l'Orient chrétien*, VII (Paris, 1902), 360-385; VIII (1903), 32-69. A Latin translation of an old life, originally in Greek, is printed in P. L., LXXIV, 119-22, and in USENER, *Der hl. Tychon* (Leipzig, 1907), 91-3.

MICHAEL OTT.

Moscow (Russian MOSKVA), the ancient capital of Russia and the chief city of the government (province) of Moscow, situated in almost the centre of European Russia. It lies on both sides of the River Moskva, from which it derives its name; another small stream called the Yauza, flows through the eastern part of the city. Moscow was the fourth capital of Russia—the earlier ones being Novgorod, Kieff, and Vladimir—and was the residence of the Tsars from 1340 until the time of Peter the Great in 1711. It is the holy city of Russia, almost surpassing in that respect the city of Kieff, and is celebrated in song and story under its poetic name *Bielokamennaya*, the "White-Walled". The population, according to the latest (1907) available statistics, is 1,335,104, and it is the greatest commercial and industrial city of Russia. It is the see of a Russian Orthodox metropolitan with three auxiliary or vicar bishops, and has 440 churches, 24 convents, over 500 schools (with high schools, professional schools, and the university besides), some 502 establishments of charity, mercy, and hospital service, and 23 cemeteries. The population is composed of 1,242,090 Orthodox, 26,320 Old Ritualists, 25,540 Catholics, 26,650 Protestants, 8905 Jews, and 5336 Mohammedans, together with a small scattering of other denominations.

Historically, the city of Moscow, which has grown up gradually around the Kremlin, is divided into five principal parts or concentric divisions, separated from one another by walls, some of which have already disappeared and their places been taken by broad boulevards. These chief divisions are the Kremlin, Kitaigorod (Chinese town), Bielygorod (white town), Zemlianoigorod (earthwork town), and Miestchanskygorod (the bourgeois town). The actual municipal division of the city is into seventeen *chasti* or wards, each of which has a set of local officials and separate police sections. The city hall or *Duma* is situated on Ascension Square near the Kremlin. The Kremlin itself is a walled acropolis and is the most ancient part of Moscow, the place where the city originated; it is situated in the very center of the present city, some 140 feet above the level of the River Moskva. The Kitaigorod, or Chinese town, is situated to the north-east and outside of the Kremlin, and is in turn surrounded by a wall with several gates. It is irregularly built up, contains the Stock Exchange, the *Gostinny Dvor* (bazaars), the *Riady* (great glass en-

closed arcades), and the printing office of the Holy Synod. Just why it was called the *Chinese* town is not known, for no Chinese have ever settled there. The allusion may be to the Tatars, who besieged and took Moscow several times, camping outside the Kremlin.

The Kremlin and Kitaigorod are considered together and known as the "City" (*gorod*), much as the same word is applied to a part of London. The enormous walls surrounding them were originally whitewashed and of white stone, and are even yet white in places, thus giving rise to the poetic name.

where the Tatars dwelt for a long time after they had been driven from Moscow proper. Now it is the Old Russian quarter, where old-fashioned merchants dwell in state and keep up the manners and customs of their fathers. The famous Tretyakoff art galleries are situated here. There are six bridges across the River Moskva connecting both parts of the city.

The name Moscow is mentioned in Russian chronicles for the first time in 1147. In March of that year Yuri Dolgoruki (George the Long-armed), Grand Duke of Kieff and son of Vladimir Monomachus, is

Trinity Gate

Imperial Palace

Cathedral of the Annunciation

Cathedral of the Assumption

MOSCOW: LOOKING NORTHWARD, TO THE

Just outside of it lies the Bielygorod, or white town, extending in a semicircle from the Moskva on the one side until it reaches the Moskva again. The Bielygorod is now the most elegant and fashionable part of the city of Moscow. Containing as it does, beautiful and imposing palaces, many fine public monuments and magnificent shops, theaters, and public buildings, it presents a splendid appearance worthy of its ancient history. Around this, in a still wider semicircle, is the Zemlianygorod, or earthwork town, so called because of the earthen ramparts which were constructed there by Tsar Michael Feodorovich in 1620 to protect the growing city in the Polish wars. They have been levelled and replaced by the magnificent boulevards known as the *Sadovaya* (Garden Avenues).

The wealthy merchants and well-to-do inhabitants dwell here, and fine buildings are seen on every side. The remainder of the city is given over to the industrial and poor classes, railway stations, and factories of all kinds. In addition, there is that part of the city which lies on the south side of the Moskva, the so-called *Zamoskvarechie* (quarter beyond the Moskva)

said to have met and entertained his kinsmen there at the village on the Moskva. So pleased was he with the reception which he had received and so impressed by the commanding location of the situation that he built a fortified place on the hill where the meeting took place, just where the present Kremlin is situated. The word Kremlin (Russian *Kreml*) seems to be of Tatar origin, and means a fortified place overlooking the surrounding country. Many other Russian cities dating from Tatar times have kremlins also, such as Nizhni-Novgorod, Vladimir, Kazan, and Samara.

In the beginning of its early history Moscow was nothing but a cluster of wooden houses surrounded by palisades; in 1237 the Tatar Khan laid siege to it, and his successors for several centuries were alternately victors and vanquished before it. In 1293 Moscow was besieged and burned by the Mongols and Tatars, but under the rule of Daniel, son of Alexander Nevsky, its fame increased and it became of importance. He conquered and annexed several neighbouring territories and enlarged his dominions to the entire length of the River Moskva.

out as Demetrius, the son of Ivan the Terrible, who had in some way escaped Boris Godunoff, another child having been murdered. King Sigismund of Poland espoused his claims, furnished him an army, with which and its Russian accessions the pretender fought his way back to Moscow, proclaiming himself the rightful heir to the throne. All who looked on Boris Godunoff as a usurper flocked to his standard, the widow of Ivan, then a nun, recognized him as her son, and he was crowned in the Kremlin as the Tsar of the Russians. For ten months he ruled, but, as he was too favourable to the Poles and even allowed Catholics to come to Moscow and worship, the tide then turned against him, and in 1606 he was assassinated at his palace in the Kremlin by the *Streltsi* or sharpshooters who formed the guard of the Tsars of Russia.

After seven years of civil war and anarchy Michael Romanoff, the founder of the present dynasty, was elected Tsar in 1613. But Moscow never regained its earlier pre-eminence, although it became a wealthy commercial city, until the first part of the reign of Peter the Great (1689-1725). He sent persons abroad, and, having observed the advancement and progress of Western Europe, determined to improve his realm radically by introducing the forms of western civilization. All the earlier part of his life was spent in war with the Swedish invaders and the Polish kings. In 1700 he abolished the Patriarchate of Moscow, left the see vacant, and established the Holy Synod. These acts set Moscow, the old Russians and the clergy against him, so that in 1712 he changed the imperial residence and capital from Moscow to St. Petersburg, which he had caused to be constructed for the new capital on the banks of the Neva. After the departure of the Tsars from Moscow, it diminished in political importance, but was always regarded as the seat and centre of Russian patriotism. In 1755 the University of Moscow was founded. In 1812 during the invasion of Russia by Napoleon, the Russians determined after the Battle of Borodino to evacuate Moscow before the victorious French, and on 14 September, 1812, the Russian troops deserted the city, followed by the greater part of the inhabitants. Shortly afterwards the French entered, and Napoleon found that he had no submissive citizens to view his triumphal entry, but that the inhabitants were actually burning up their entire city which was even then built largely of wood. He revenged himself by desecrating churches and destroying monuments. The Russian winter begins in October, and, with a city in smoking ruins and without supplies or provisions, Napoleon was compelled on 19-22 October, to evacuate Moscow and retreat from Russia. Cold and privation were the most effective allies of the Russians. The reconstruction of the city commenced the following year, and from that time hardly any wooden buildings were allowed. In May, 1896, at the coronation of Nicholas II, over 2000 persons were crushed and wounded in a panic just outside the city. In 1905 the Grand Duke Sergius was assassinated in the Kremlin and revolutionary riots occurred throughout the city. Although Moscow is no longer the capital, it has steadily grown in wealth and commercial importance, and, while second in population to St. Petersburg, it is the latter's close rival in commerce and industry, and is first above all in the heart of every Russian.

In the religious development of Russia Moscow has held perhaps the foremost place. In 1240 Kieff was taken by the Tatars, who in 1299 pillaged and destroyed much of that mother city of Christian Russia. Peter, Metropolitan of Kieff, who was then in union with Rome, in 1316 changed his see from that city to the city of Vladimir upon the Kliazma, now about midway between Moscow and Nizhni-Novgorod, for Vladimir was then the capital of Great

Russia. In 1322 he again changed it to Moscow. After his death in 1328 Theognostus, a monk from Constantinople, was consecrated Metropolitan at Moscow under the title "Metropolitan of Kieff and Exarch of all Russia", and strove to make Great Russia of the north ecclesiastically superior to Little Russia of the south. In 1371 the South Russians petitioned the Patriarch of Constantinople: "Give us another metropolitan for Kieff, Smolensk, and Tver, and for Little Russia." In 1379 Pimen took at Moscow the title of "Metropolitan of Kieff and Great Russia", and in 1408 Photius, a Greek from Constantinople, was made "Metropolitan of all Russia" at Moscow. Shortly afterwards an assembly of South Russian bishops was held at Novogrodek, and, determined to become independent of Moscow, sent to the Patriarch of Constantinople for a local metropolitan to rule over them. In 1416 Gregory I was made "Metropolitan of Kieff and Lithuania", independently of Photius who ruled at Moscow. But at the death of Gregory no successor was appointed for his see. Gerasim (1431-5) was the successor of Photius at Moscow, and had correspondence with Pope Eugene IV as to the reunion of the Eastern and Western Churches. The next Metropolitan of Moscow was the famous Greek monk, Isidore, consecrated under the title of "Metropolitan of Kieff and Moscow". When the Council of Florence for the reunion of the East and the West was held, he left Moscow in company with Bishop Abraham of Suzdal and a large company of Russian prelates and theologians, attended the council, and signed the act of union in 1439. Returning to Russia, he arrived at Moscow in the spring of 1441, and celebrated a grand pontifical liturgy at the cathedral of the Assumption in the Kremlin in the presence of Grand Duke Vasilii II and the Russian clergy and nobility. At its close his chief deacon read aloud the decree of the union of the churches. None of the Russian bishops or clergy raised their voices in opposition, but the grand duke loudly upbraided Isidore for turning the Russian people over to the Latins, and shortly afterwards the Russian bishops assembled at Moscow followed their royal master's command and condemned the union and the action of Isidore. He was imprisoned, but eventually escaped to Lithuania and Kieff, and after many adventures reached Rome.

From this time the two portions of Russia were entirely distinct, the prelates of Moscow bearing the title "Metropolitan of Moscow and all Russia" and those of Kieff, "Metropolitan of Kieff, Halich, and all Russia". This division and both titles were sanctioned by Pope Pius II. But Kieff continued Catholic and in communion with the Holy See for nearly a century, while Moscow rejected the union and remained in schism. After Isidore the Muscovites would have no more metropolitans sent to them from Constantinople, and the grand duke thereupon selected the metropolitan. Every effort was then made to have the metropolitans of Moscow independent of the Patriarch of Constantinople. After the Turks had captured Constantinople, the power of its patriarch dwindled still more. When the Bishop of Novgorod declared in 1470 for union with Rome, Philip I, Metropolitan of Moscow, frustrated it, declaring that, for signing the union with Rome at Florence, Constantinople had been punished by the Turks. This hatred of Rome was fomented to such a point that, rather than have one who favoured Rome, a Jew named Zozimas was made Metropolitan of Moscow (1490-4); as, however, he openly supported his brethren, he was finally deposed as an unbeliever. Yet in 1525 the metropolitan Daniel had a correspondence with Pope Clement VII in regard to the Florentine Union, and in 1581 the Jesuit Possevin visited Ivan the Terrible and sought to have him accept the principles of the Union. In 1586, after

the death of Ivan, the archimandrite Job was chosen Metropolitan of Moscow by Tsar Feodor under the advice of Boris Godunoff. Just at that time Jeremias II, Patriarch of Constantinople, who was fleeing from Turkish oppression, visited Russia and was received with all the dignity due to his rank. In 1589 he arrived at Moscow and was fittingly received by Boris Godunoff, who promised to take his part against the Turks if possible, and who requested him to create a patriarch for Moscow and Russia, so that the orthodox Church might once more count its five patriarchs as it had done before the break with Rome. Jeremias consented to consecrate Job as the Patriarch of Moscow and all Russia, and actually made him rank as the third patriarch of the Eastern Church, preceding those of Antioch and Jerusalem. This patriarchate was in fact a royal creation dependent upon the Tsar, its only independence consisting of freedom from the sovereignty of Constantinople.

In 1653 the Patriarch Nikon corrected the Slavonic liturgical books of the Eastern Rite by a comparison with the Greek originals, but many of the Russians refused to follow his reforms, thus beginning the schism of the Old Believers or Old Ritualists, who still use the uncorrected books and ancient practices. The Patriarchate of Moscow lasted until the reign of Peter the Great (that is 110 years), there being ten patriarchs in all. When Patriarch Adrian died, in 1700, Peter abolished the office at once, and allowed the see to remain vacant for twenty years. He then nominally went back to the old order of things, and appointed Stephen Yavorski "Metropolitan of Moscow", but made him merely a servant of the Holy Synod. To emphasize the new order of things more strongly, it is related that Peter himself sat on the patriarch's throne saying in grim jest: "I am the patriarch". Not until 1748 was the Eparchy or Metropolitanate of Moscow canonically established by the Holy Synod under the new order of things. In 1721 Peter published the "Ecclesiastical Regulations" (*Dukhovny Reglament*), providing for the entire remodelling of the Russian Church and for its government by a departmental bureau called the Holy Governing Synod. This body, usually known as the Holy Synod, has existed ever since. Its members are required to swear fidelity to the Tsar by an oath which contains these words: "I confess moreover by oath that the supreme judge of this ecclesiastical assembly is the Monarch himself of all the Russias, our most gracious Sovereign" (*Reglament, Prisiaga*, on p. 4, Tondini's edition). The Holy Governing Synod is composed of the Metropolitans of St. Petersburg, Moscow, and Kieff, several other bishops, and certain priests, but its active affairs are carried on by lay government officials (the bishops act rather as consultants or advisors), and the Chief Procurator, a layman, directs its operations, while none of its acts are valid without the approval (*Soizvoleniya*) of the Tsar. No church council or deliberative church organization has been held in Russia since the establishment of the Holy Synod.

The chief and most historic buildings in Moscow are situated in the Kremlin, which is a triangular enclosure upon a hill or eminence on the north bank of the Moskva. It is surrounded by a high wall of brick and stone, provided with high towers at intervals, and has five gates, one (for pedestrians only) in the wall on the riverside and two in each of the other walls of the triangle. The most celebrated gate is the *Spassakaya Vorota*, or Gate of the Saviour, opening out upon the Red Square. It contains a venerated image or icon of Christ, and all persons passing through the gate must remove their hats in reverence. Inside the Kremlin are churches, palaces, convents, a parade ground, a memorial to Alexander II, also the Senate (or law courts building), the arsenal, and the great Armoury. Directly inside the Gate of the

Saviour is the convent of the Ascension for women, founded in 1389 by Eudoxia, wife of Dimitri Donskoi. The present stone convent building was erected in 1737. Just beyond it stands the Chudoff monastery, founded in 1358 by the Metropolitan Alexis, and here in 1667 the last Russian church council was held. The present building dates from 1771. Next to it is the Nicholas or Minor Palace built by Catherine II and restored by Nicholas I. In front of this and across the parade ground near the river wall of the Kremlin is the memorial of Alexander II, very much in the style of the Albert Memorial in London. A covered gallery surrounds the monument on three sides, and on it are mosaics of all the rulers of Russia. To the west of the Minor Palace is the church and tower of Ivan Veliky (great St. John) with its massive bells. At the foot of the tower is the famous *Tsar Kolo-kol* (king of bells), the largest bell in the world. It was cast in 1734, and weighs 22 tons, is 20 feet high and nearly 21 feet in diameter. A triangular piece nearly six feet high was broken out of it when it fell from its place in 1737 during a fire. Towards the north of the great bell in front of the barracks at the other end of the street, is the Great Cannon, cast in 1586, which has a calibre one yard in diameter, but has never been discharged. Behind Ivan Veliky stands the Cathedral of the Assumption, the place of coronation of all the emperors of Russia, and the place where all the patriarchs of Moscow are entombed. The present cathedral was restored and rebuilt in part after Napoleon's invasion. Across a small square is the Cathedral of the Archangel Michael. Here lie buried all the Tsars of the Rurik and Romanoff dynasties down to Peter the Great. He and his successors lie entombed in the cathedral in the Fortress of St. Peter and Paul in St. Petersburg. To the west lies the Cathedral of the Annunciation, in which all the Tsars before Peter were baptized and married, still used for royal baptisms and marriages.

Towards the westerly end of the Kremlin is the Great Palace in which all the history of Moscow was focussed until after the time of Peter the Great. It is the union and combination of all the ancient palaces, and contains the magnificent halls of St. George and St. Alexander and also the ancient *Terem* or women's palace, which is now completely modernized. In the centre of the courtyard of the palace stands the church of Our Saviour in the Woods (*Spasa na Boru*). It was originally built here at the beginning of the thirteenth century, when the Kremlin was but a hill still covered with forest trees, and hence its name. Ivan I, in 1330, tore down the primitive wooden church and replaced it by a church of stone. Outside the Great Palace is the Armoury, one of the finest museums of its kind in Europe, being particularly rich in collections of Russian weapons and armour. The building towards the north of the palace, known as the Synod, was the residence of the patriarchs of Moscow and the first abiding-place of the Holy Synod. To the east of the Kremlin, outside the gates of the Saviour and of St. Nicholas, is the well-known Red Square, where much of the history of Moscow has been enacted. At the end of it towards the river stands the bizarre church of St. Basil the Blessed, of which Napoleon is said to have ordered: "Burn that mosque!" The Historical Museum is at the other end. At the east side of the Red Square is the *Lobno Miesto* or Calvary, to which the patriarchs made the Palm Sunday processions, and where proclamations of death were usually read in olden times. Behind it are the magnificent Riady or glass-covered arcades for fine wares, while at the northern entrance of the square behind the Museum is the chapel of the Iberian Madonna (*Iverskaya a Bogoroditsa*), the most celebrated icon in all Russia. It was sent to Moscow in 1648 from the Iberian monastery on Mount Athos.

One of the most celebrated modern churches in

Moscow is the Temple of Our Saviour and Redeemer, built as a memorial and thanks offering in commemoration of the retreat of the French from Moscow. It was consecrated in 1883, is probably the most beautiful church in Russia and is filled with modern art adapted to the requirements of the Greek Rite. There are two Arches of Triumph in Moscow—one celebrating 1812, near the Warsaw station, and the other called the Red Gate, commemorating Empress Elizabeth. At Sergievo, about forty miles to the east of Moscow, is the celebrated Trinity Monastery (*Troitsa-Sergievskaya Lavra*), which is intimately bound up with the history of Moscow, and is one of the greatest monasteries and most celebrated places of pilgrimage in Russia; it played a great part in the freeing of Russia from the Tatar yoke. There are three Roman Catholic churches in Moscow: the large church of St. Louis on the Malaya Lubianka, the church and school of Sts. Peter and Paul in the Miltinsky Pereulok, and another small chapel. There is also a Greek Catholic chapel recently founded by a priest converted from the Old Believers with a handful of worshippers.

ANDREW J. SHIPMAN.

Moses, Hebrew liberator, leader, lawgiver, prophet, and historian, lived in the thirteenth and early part of the twelfth century B. C.

NAME.—מֹשֶׁה *Moshéh* (M. T.), מֹשֶׁה, מֹשֶׁה. In Ex., ii, 10, a derivation from the Hebrew *Māshāh* (to draw) is implied. Josephus and the Fathers assign the Coptic *mo* (water) and *uses* (saved) as the constituent parts of the name. Nowadays the view of Lepsius, tracing the name back to the Egyptian *mesh* (child), is widely patronized by Egyptologists, but nothing decisive can be established.

SOURCES.—To deny with Winckler and Cheyne, or to doubt, as do Renan and Stade, the historic personality of Moses, is to undermine and render unintelligible the subsequent history of the Israelites. Rabbinical literature teems with legends touching every event of his marvellous career: taken singly, these popular tales are purely imaginative, yet, considered in their cumulative force, they vouch for the reality of a grand and illustrious personage, of strong character, high purpose, and noble achievement, so deep, true, and efficient in his religious convictions as to thrill and subdue the minds of an entire race for centuries after his death. The Bible furnishes the chief authentic account of this luminous life.

BIRTH TO VOCATION (Ex., ii, 1-22).—Of Levitic extraction, and born at a time when by kingly edict had been decreed the drowning of every new male offspring among the Israelites, the "goodly child" Moses, after three months' concealment, was exposed in a basket on the banks of the Nile. An elder brother (Ex., vii, 7) and sister (Ex., ii, 4), Aaron and Mary (AV and RV, *Miriam*), had already graced the union of Jochabed and Amram. The second of these kept watch by the river, and was instrumental in inducing Pharaoh's daughter, who rescued the child, to entrust him to a Hebrew nurse. The one she designedly summoned for the charge was Jochabed, who, when her "son had grown up", delivered him to the princess. In his new surroundings, he was schooled "in all the wisdom of the Egyptians" (Acts, vii, 22). Moses next appears in the bloom of sturdy manhood, resolute with sympathies for his degraded brethren. Dauntlessly he hews down an Egyptian assailing one of them, and on the morrow tries to appease the wrath of two

compatriots who were quarrelling. He is misunderstood, however, and, when upbraided with the murder of the previous day, he fears his life is in jeopardy. Pharaoh has heard the news and seeks to kill him. Moses flees to Midian. An act of rustic gallantry there secures for him a home with Raguel, the priest. Sephora, one of Raguel's seven daughters, eventually becomes his wife and Gersam his first-born. His second son, Eliezer, is named in commemoration of his successful flight from Pharaoh.

VOCATION AND MISSION (Ex., ii, 23-xii, 33).—After forty years of shepherd life, Moses speaks with God. To Horeb (Jebel Sherbal?) in the heart of the mountainous Sinaitic peninsula, he drives the flocks of Raguel for the last time. A bush there flaming unburned attracts him, but a miraculous voice forbids his approach and declares the ground so holy that to approach he must remove his shoes. The God of Abraham, Isaac, and Jacob designates him to deliver the Hebrews from the Egyptian yoke, and to conduct them into the "land of milk and honey", the region long since promised to the seed of Abraham, the Palestine of later years. Next, God reveals to him His name under a special form *Yahweh* (see art. *JEHOVAH*), as a "memorial unto all generations". He performs two miracles to convince his timorous listener, appoints Aaron as Moses's "prophet", and Moses, so to speak, as Aaron's God (Ex., iv, 16). Diffidence at once gives way to faith and magnanimity. Moses bids adieu to Jethro (Raguel), and, with his family, starts for Egypt. He carries in his hand the "rod of God", a symbol of the fearlessness with which he is to act in performing signs and wonders in the presence of a hardened, threatening monarch. His confidence waxes strong, but he is uncircumcised, and God meets him on the way and fain would kill him. Sephora saves her "bloody spouse", and appeases God by circumcising a son. Aaron joins the party at Horeb. The first interview of the brothers with their compatriots is most encouraging, but not so with the despotic sovereign. Asked to allow the Hebrews three days' respite for sacrifices in the wilderness, the angry monarch not only refuses, but he ridicules their God, and then effectually embitters the Hebrews' minds against their new chiefs as well as against himself, by denying them the necessary straw for exorbitant daily exactions in brick-making. A rupture is about to ensue with the two strange brothers, when, in a vision, Moses is divinely constituted "Pharaoh's God", and is commanded to use his newly imparted powers. He has now attained his eightieth year. The episode of Aaron's rod is a prelude to the plagues. Either personally or through Aaron, sometimes after warning Pharaoh or again quite suddenly, Moses causes a series of Divine manifestations described as ten in number in which he humiliates the sun and river gods, afflicts man and beast, and displays such unwonted control over the earth and heavens that even the magicians are forced to recognize in his prodigies "the finger of God". Pharaoh softens at times but never sufficiently to meet the demands of Moses without restrictions. He treasures too highly the Hebrew labour for his public works. A crisis arrives with the last plague. The Hebrews, forewarned by Moses, celebrate the first Pasch or Phase with their loins girt, their shoes on their feet, and staves in their hands, ready for rapid escape. Then God carries out his dreadful threat to pass through the land and kill every first-born of man and beast, thereby executing judgment on all the gods of Egypt. Pharaoh can resist no longer. He joins the stricken populace in begging the Hebrews to depart.

EXODUS AND THE FORTY YEARS (passim after Ex., xii, 34).—At the head of 600,000 men, besides women and children, and heavily laden with the spoils of the Egyptians, Moses follows a way through the

desert, indicated by an advancing pillar of alternating cloud and fire, and gains the Peninsula of Sinai by crossing the Red Sea. A dry passage, miraculously opened by him for this purpose at a point to-day unknown, afterwards proves a fatal trap for a body of Egyptian pursuers, organized by Pharaoh and possibly under his leadership. The event furnishes the theme of the thrilling canticle of Moses. For upwards of two months the long procession, much retarded by the flocks, the herds, and the difficulties inseparable from desert travel, wends its way towards Sinai. To move directly on Chanaan would be too hazardous because of the warlike Philistines, whose territory would have to be crossed; whereas, on the south-east, the less formidable Amalacites are the only inimical tribes and are easily overcome thanks to the intercession of Moses. For the line of march and topographical identifications along the route, see ISRAELITES, subsection *The Exodus and the Wanderings*. The miraculous water obtained from the rock Horeb, and the supply of the quails and manna, bespeak the marvellous faith of the great leader. The meeting with Jethro ends in an alliance with Madian, and the appointment of a corps of judges subordinate to Moses, to attend to minor decisions. At Sinai the Ten Commandments are promulgated, Moses is made mediator between God and the people, and, during two periods of forty days each, he remains in concealment on the mount, receiving from God the multifarious enactments, by the observance of which Israel is to be moulded into a theocratic nation (cf. MOSAIC LEGISLATION). On his first descent, he exhibits an all-consuming zeal for the purity of Divine worship, by causing to perish those who had indulged in the idolatrous orgies about the Golden Calf; on his second, he inspires the deepest awe because his face is emblazoned with luminous horns.

After instituting the priesthood and erecting the Tabernacle, Moses orders a census which shows an army of 603,550 fighting men. These with the Levites, women, and children, duly celebrate the first anniversary of the Pasch, and, carrying the Ark of the Covenant, shortly enter on the second stage of their migration. They are accompanied by Hobab, Jethro's son, who acts as guide. Two instances of general discontent follow, of which the first is punished by fire, which ceases as Moses prays, and the second by plague. When the manna is complained of, quails are provided as in the previous year. Seventy elders—a conjectural origin of the Sanhedrin—are then appointed to assist Moses. Next Aaron and Mary envy their brother, but God vindicates him and afflicts Mary temporarily with leprosy. From the desert of Pharan Moses sends spies into Chanaan, who, with the exceptions of Josue and Caleb, bring back startling reports which throw the people into consternation and rebellion. The great leader prays and God intervenes, but only to condemn the present generation to die in the wilderness. The subsequent uprising of Core, Dathan, Abiron, and their adherents suggests that, during the thirty-eight years spent in the Badiet et-Tih, habitual discontent, so characteristic of nomads, continued. It is during this period that tradition places the composition of a large part of the Pentateuch (q. v.). Towards its close, Moses is doomed never to enter the Promised Land, presumably because of a momentary lack of trust in God at the Water of Contradiction. When the old generation, including Mary, the prophet's sister, is no more, Moses inaugurates the onward march around Edom and Moab to the Arnon. After the death of Aaron and the victory over Arad, "fiery serpents" appear in the camp, a chastisement for renewed murmurings. Moses sets up the brazen serpent, "which when they that were bitten looked upon, they were healed". The victories over Sehon and Og, and the feeling of security animating

the army even in the territory of the hostile Balac, lead to presumptuous and scandalous intercourse with the idolatrous Moabites which results, at Moses's command, in the slaughter of 24,000 offenders. The census, however, shows that the army still numbers 601,730, excluding 23,000 Levites. Of these Moses allows the Reubenites, Gadites, and the half-tribe of Manasses to settle in the east-Jordan district, without, however, releasing them from service in the west-Jordan conquest.

DEATH AND POSTHUMOUS GLORY.—As a worthy legacy to the people for whom he has endured unparalleled hardships, Moses in his last days pronounces the three memorable discourses preserved in Deuteronomy. His chief utterance relates to a future Prophet, like to himself, whom the people are to receive. He then bursts forth into a sublime song of praise to Jahweh and adds prophetic blessings for each of the twelve tribes. From Mount Nebo—"the top of Phasga"—Moses views for the last time the Promised Land, and then dies at the age of 120 years. He is buried in "the valley of Moab over against Phogor", but no man "knows his sepulchre". His memory has ever been one of "isolated grandeur". He is the type of Hebrew holiness, so far outshining other models that twelve centuries after his death, the Christ Whom he foreshadowed seemed eclipsed by him in the minds of the learned. It was, humanly speaking, an indispensable providence that represented him in the Transfiguration, side by side with Elias, and quite inferior to the incomparable Antitype whose coming he had predicted.

Consult histories mentioned under articles AARON and ISAAO, commentaries under PENTATEUCH, Introductions to Old Testament (long list under INTRODUCTION BIBLICAL), and biblical dictionaries. BENNETT in HASTINGS, *Dict. of the Bible*, s. v., may be recommended for an exposition of the documentary hypothesis, and LAUTERBACH in the *Jewish Encycl.* for a summary of Rabbinical traditions. In VIGOUROUX, *Dict. de la Bible*, MANGENOT dovetails historical and Rabbinical data. See also VIGOUROUX, *La Bible et les découvertes modernes* (6th ed., Paris, 1896).

THOMAS A. K. REILLY.

Moses, ASSUMPTION OF. See APOCRYPHA, subtitle I.

Moses Bar Oephas, Syriac bishop and writer, b. at Balad about 813; d. 12 Feb., 903. He is known through a biography by an anonymous Syriac writer, and from references in the writings of Bar Hebræus. He embraced early the monastic life, and was later bishop over a territory including Beit-Ramman, Beit-Kiyonaya, and Moesul. On his elevation to the episcopate he received the name Severus. For ten years he also performed the duties of overseer of the neighbouring Diocese of Tagrita. He belonged to the Jacobitic branch of the Monophysites, and he was in his day the most voluminous writer of his sect. His works comprise a complete commentary on the Old and New Testaments, frequently quoted by Bar Hebræus in his "Auçâr Râzé" (Storehouse of Mysteries). Of this nothing has come down to us save fragments pertaining to Genesis, the Gospels, and the Pauline Epistles. He also wrote a treatise in four books on predestination and free will, of which a manuscript copy is preserved in the British Museum. Through a citation in Bar Hebræus (Chron. eccl., ii, 215) we learn that Bar Cephas composed an otherwise unknown commentary on Aristotle's "Dialectica". A manuscript copy of his "Hexameron", or treatise on the six days of creation in five books with a curious geographical drawing, is one of the treasures in the Bibliothèque Nationale in Paris. Other works of his are a treatise on paradise, of which there exists a Latin translation published by Masius in 1589; a treatise on the soul in forty chapters with a supplement on the utility of offerings for the dead; a book of controversy against heretics; homilies for the feasts of the liturgical year; a commentary on the works of Gregory Nazianzen; sermons on various subjects; and a history of the Church.

JAMES F. DRISCOLL.

Moses of Chorene (MOSES CHORENENSIS), perhaps the best known writer of Armenia, called by his countrymen "the father of history" and the "father of scholars", and celebrated as a poet, or hymn writer, and a grammarian. A native of Choren or Chorni in the province of Darou, when young, he was sent by Mesrop, the founder of Armenian literature, to study in Edessa, Constantinople, Alexandria, Athens, and Rome. Upon his return, he is said to have assisted Mesrop (407-433), in the translation of the Bible into Armenian. The date of his birth is unknown, but the above fact would indicate that he was born towards the end of the fourth century, and his death is generally placed about the end of the fifth. The following works are attributed to him: "Treatise on Rhetoric"; "Treatise on Geography"; "Letter on Assumption of B. V. M."; "Homily on Christ's Transfiguration"; "Oration on Hripsinia, an Armenian Virgin and Martyr"; "Hymns used in Armenian Church Worship"; "Commentaries on the Armenian Grammarians"; and "Explanations of Armenian Church Offices". The most celebrated work; however, is the "History of Armenia Major", practically the only work preserving the early history and traditions of pre-Christian Armenia, but like other histories of this kind, abounding in legendary and fictitious narratives, historical inaccuracies, etc. It is divided into three parts: (1) "Genealogy of Armenia Major", embracing the history of Armenia from the beginning down to the foundation of the Arsacide dynasty (149 B. C.); (2) "History of the middle period of our ancestors", extending from 149 B. C. to the death of St. Gregory the Illuminator and the reign of King Terdat (A. D. 149-332); (3) the third part brings the history down to the overthrow of the Arsacide dynasty (A. D. 428); a fourth part was added to the work by another and later writer who brought the history down to the time of the Emperor Zeno (474-491). Recent researches, however, have shown that this famous "History of Armenia" is not the work of Moses of Chorene.

The reasons for discarding the traditionally received attribution have been ably summarized by Dr. Bardenhewer as follows. The author of the "History of Armenia Major" calls himself Moses of Chorene and pretends to belong to the fifth century, to be a disciple of Saint Mesrop, and to have composed his work at the request of Isaac (Sahak), the Bagratunid prince who fell in battle in 482. These personal statements are shown to be untrustworthy for internal and external reasons. In his account of his own life the author contradicts such fifth-century writers as Koriun and Lazarus of Pharp. Carrière has shown recently that he makes use of historical sources posterior to the sixth and even the seventh century, e. g. Armenian versions of the "Vita St. Silvestri" and the "Church History" of Socrates. Only since the ninth century have traces of his work been found in Armenian literature. This, however, does not dispose of the historical personality of Moses of Chorene, who is one of the venerable fathers of the Armenian Church, and who really lived in the fifth century. Lazarus of Pharp bears witness to the existence in the fifth century of an Armenian bishop named Moses and a distinguished writer. We do not know the reason why this eighth- or ninth-century writer assumed the name of Moses of Chorene. He makes it clear that he intends to glorify the Bagratunid dynasty which from the end of the seventh century surpassed in splendour all the other noble houses of Armenia. In 885 Aschot I, a descendant of that house, was recognized by the Caliph as King of Armenia. Vetter conjectures that the secret aim of the pseudo-Moses of Chorene was to prepare the way for the accession of this house. In spite of its really late date, the author's narrative is

generally speaking, trustworthy. He draws largely on ancient authorities, though occasionally modifying them in a capricious way, and embodies his own ideas in their context; but it cannot be maintained, as some have done, that he invented these authorities. His witnesses for the ancient history of Armenia, even as late as the second or third century after Christ, were principally legends and folk-song, and it is precisely this legendary element that lends to the work its special charm and value. The "Geography" and "Rhetoric" mentioned above are of course no more genuine works of Moses of Chorene than the "History". All three works are by the same author, as is evident both from the testimony of the manuscripts and from intrinsic criteria. The author's own statement leads us to believe that the "Geography" is an extract from the description of the world by Pappus, an Alexandrine author of the fourth century of our era. The "Rhetoric" is entitled "Chria" in the Greek manuscripts, and follows such Greek models as Aphthonius and Theon. The minor writings mentioned above await a more thorough examination into their genuineness (Patrology, Shahan, 1908, pp. 595-6). The first edition of the "History of Armenia" was published at Amsterdam, 1695; the second at London, with a Latin translation, 1736; the third at Venice, 1752; it was translated into French (Venice, 1841), and Italian (ibid.). The best translation is that made by Langlois in his "Historiens Anciens de l'Arménie" (Paris, 1867), II, 47, 175. The Armenian Mechitarist Fathers of Venice have issued several editions of the work in 1827, 1843-64, etc.

GABRIEL OUSSANI.

Mossul, the seat of a Chaldean archdiocese, a Syrian diocese, and an Apostolic Mission. The origin of the town is unknown. It is not the Mosel of Ezechiel, xxvii, 19, which is but a mistranslation of Uzzal, a town in the north of Arabia. It is probable that there always has been on the right bank of the Tigris a small town named Mossul, which grew in importance as Nineveh on the left bank decayed and finally disappeared. In Arabic Mossul is called El-Mosil, the junction. Perhaps the name was originally Motal, a cotton or muslin thread. Near Mossul at the gates of Nineveh took place in 627 the great battle in which Heraclius finally broke the power of the Persians. Then the town passed into possession of the Arab caliphs, afterwards to the Hamdanids, the Beni-Okail (991), the Beni-Mervan (1102), and eventually to the Seljuk Turks. Melek-Shah, known also as Djelal-Eddin, built schools and academies there. His successors fought against the Franks of the First Crusade, and Kerboga was conquered 28 June, 1098, with an army of 200,000 men, under the walls of Antioch. Five years later (1103) Baldwin, Count of Edessa, was defeated and led prisoner to Mossul. In December, 1144, the famous Zenki took possession of Edessa; his son Nour ed-Din continued his conquests, and built many fine edifices at Mossul. On his death in 1174, Saladin was driven from Mossul, but it soon after yielded to him. In the middle of the thirteenth century, when the Mongolian Houlagou took the town, the Sultan Loulou, of the Zenki family and famous for his generosity and justice, was living there. Subsequently Mossul was taken and sacked by Timur (Tamerlane), the Turkomans, the Shah of Persia Ismail, and the Turkish Sultan Selim I (1516). Idria, the historiographer of this Sultan, was afterwards charged with the reorganisation of the province. The Persians under Nadir Shah vainly attempted to recapture the town in 1733; but they were driven back, as tradition says, by the Blessed Virgin, and in consequence the Turks allowed the Chaldeans and Syrians to build in her honour two churches which are still

standing. It was once a busy and prosperous town, trading in woollen goods and morocco leather, but during the nineteenth century, owing to lack of communications with the outside world and also to the opening of the Suez canal which changed the caravan route, it has decayed. At the present time it is the capital of a vilayet and has 70,000 inhabitants. Its girdle of wall more than six miles in circumference, has become too large for it. The town has sulphur springs and many very fine mosques and churches. Among its more famous citizens were Baha ed-Din, Ibn el-Athir, and Ibn Khalikan, Mussulmans; Thomas of Marga, Isaac of Nineveh, Hanna of Adiabene, etc. Christians.

In 410, at the council of Seleucia-Ctesiphon, the Metropolitan of Adiabene had the united titles of Arbela, Hazza, Assyria, and Mossul (Chabot, "Synodicon orientale", 265, 619). This is the earliest mention of the See of Mossul. It continued under the same style up to the seventh century. Soon after the Arab invasion the title of Adiabene was replaced by that of Assyria and Mossul. Le Quien (*Oriens christ.*, II, 1215-1220) gives a long list of titulars from the seventh to the sixteenth century. Many of the Nestorian patriarchs of Mossul became converts and resided there, beginning with Elias Denham in 1751. As there was already a Catholic Chaldean patriarch at Diarbekir, Rome in 1828 and especially in 1830 brought about the union of the two Churches and Mar Elias, also known as John VIII, was recognized as the only patriarch. He transferred the residence of the see to Bagdad, and since that time the Chaldean patriarchs have again taken up their residence at Mossul. The Chaldean archdiocese numbers 20,000 souls; 45 secular priests; 12 parishes; and 13 churches. In the neighbourhood of Alkosh is the convent of Rabban Hormuz, the home of the Antonian Congregation of St. Hormisdas of the Chaldean rite, who have two other convents in the diocese. The congregation numbers in all 63 religious of whom 30 are priests. The Jacobites took up their residence at Mossul at an early date, especially at the Convent of Mar Mattai, the principal centre of their activity. There also since 1089 dwells the "Maphrian" or delegate of the patriarch for the ecclesiastical provinces in Persia, a title or office now purely honorary. The Monophysites are very numerous in the city and the diocese. The Syrian Catholic diocese numbers 6,000 souls; 20 priests; 7 parishes; and 10 churches. Le Quien (*Oriens christ.*, II, 1559-1564) gives a list of Jacobite titulars of Mossul.

The Apostolic Mission of Mossul was founded in 1750 by Benedict XIV as a Prefecture Apostolic and entrusted to the Italian Dominicans who had repeatedly laboured in the province from the thirteenth century onwards. Thanks to them, a Syrian Catholic diocese was erected at Mossul in that same year. In 1780, the Nestorian patriarch Mar Yohannan, who resided at Alkosh, 25 miles north-east of Mossul, became a Catholic together with five bishops of his nation, the greater part of the inhabitants of his town, and of six villages in the vicinity. The French monks who replaced the Italians were able in 1856, thanks to M. Boré, and to the French Consul, the Assyriologist Botta, to open boys' and girls' schools, and to found a printing press for Arabic and Syriac works, and finally a college at Mossul. The Apostolic Mission at the present day is bounded by three other French Missions, those of the Capuchins at Mardin, the Carmelites at Bagdad, and the Lazarists in Persia. It includes the south-east of Mesopotamia, Kurdistan, and the north-east of Armenia Major, a stretch of territory covering the vilayets of Mossul, Bitlis, Van, and a part of Diarbekir. Besides the Arabs, Kurds, and Mussulman Turks (about 3,000,000), and the Yezidis or Devil-worshippers (about 30,000), the Mission numbers 300,000 schismatic Armenians: 70,000 Jacobites;

30,000 Nestorians; 5000 Protestants; and 10,000 Jews. The Catholics of all the rites scattered through the territory amount to 80,000. The Mission has 23 Latin priests, all Dominicans, and 15 native priests who assist them in teaching. There are 9 Latin churches, 5 residential stations (Mossul, founded in 1750; Mar-Yakoub in 1847; Van in 1881; Seert in 1882; Djezireh in 1884), and 98 secondary stations visited by the missionaries. In 1910 a station was founded in the heart of the Nestorian patriarchate. The Syro-Chaldean Seminary, founded at Mossul in 1882, has educated more than 60 priests; it has between 50 and 60 students. There are 50 parochial schools for boys; 8 for girls; 1 Normal School for Chaldean Catholic teachers at Mar-Yakoub; 3 colleges for boys; 4 boarding schools for girls; 4 orphanages opened in consequence of the massacres of 1895. The Dominicans of the Presentation have houses at Mossul, Seert, and Van.

CUIVET, *La Turquie d'Asie*, II (Paris, 1892), 818-827; PROLET, *Les Missions*, I (Paris), 256-271; *Missiones Cath.* (Rome, 1907), 162, 806-8.

S. VAILLÉ.

Mostar and Markana-Trebinje, DIOCESES OF (MANDATRIENSIS, MARCANENSIS ET TRIBUNENSIS).—When at the Berlin Congress (1878) Austria-Hungary was allowed to occupy Bosnia and Herzegovina, the religious situation was at once regulated. The religious hatred existing until then between the Orthodox (673,000, 43 per cent), Mohammedans (549,000, 35 per cent), Catholics (330,000, 21 per cent), and Jews (8000, 0.5 per cent), was moderated. In 1881 the Emperor Francis Joseph formed the ecclesiastical province of Sarajevo (Bosna-Serai; Sarahimur) with the three sees of Banjaluka (Banialucus), Mostar, and Markana-Trebinje as suffragans. The Bishop of Mostar, through his pro-vicar, administers Markana-Trebinje, in which there are only eight secular priests and 20,000 Catholics.

Mostar is the capital of Herzegovina, and numbers 15,000 inhabitants, among whom there are 3500 Catholics. Herzegovina, which lies east of southern Dalmatia, received its name from the title of *Herzog* (duke) conferred by the Emperor Frederick IV (1448) on the Grand Waywode Stephan Vukčić. In 1463 Stephan Tomašević, the last King of Bosnia, was made a prisoner by the Turks and beheaded, in defiance of a promise to spare him. Twenty years later Herzegovina came under the rule of Turkey. With Bosnia it received Christianity from the Romans. In the first half of the seventh century the Slavs took possession. In the eleventh century the Eastern Schism and the sect of the Bogomili did the Catholic Church great and unrepaid harm. National writers trace this sect to a Bulgarian priest, Jeremias, who was also called Bogomil. His followers were called Patarenes; they rejected matrimony, allowed no intercourse with those of other religions, unconditionally forbade war and taking of oaths, and wished to yield obedience to no authority but God. In 1483, during the Turkish occupation of the country, the majority of the Bogomili, those of the upper classes, went over to Mohammedanism. Those who remained faithful to Christianity became outlaws (*Kojaks*). After the siege of Vienna and the retreat of the Turks in 1683, the poor peasants repeatedly took up arms, but only made their condition worse. During this unhappy time the Franciscans, unaided and with great difficulty, preserved the life of the Catholic Church in the country. Not seldom they celebrated Divine service amid the cold and snow in the open air. They lived in the most wretched poverty, and many became martyrs.

The Franciscans deserved that one of their order should be chosen Bishop of Mostar and Markana-Trebinje in 1881. The order maintains two schools and six classes for the education of the rising genera-

tion. There are 12 secular priests and 64 Franciscans in the diocese, and the number of Catholics is estimated at 130,000.

C. WOLFSGRUBER.

Most Pure Heart of Mary, FEAST OF THE.—In its principal object this feast is identical with the feast of the "Inner Life of Mary", celebrated by the Sulpitians on 19 October. It commemorates the joys and sorrows of the Mother of God, her virtues and perfections, her love for God and her Divine Son, and her compassionate love for mankind. In a subordinate manner, its object is also the physical Heart of Mary, which, being part of her sinless and virginal body, is the symbol and sensible object representing the sentiments and virtues of Mary (see HEART OF MARY, DEVOTION TO THE). The feast originated with Blessed John Eudes as the patronal feast of his congregations of priests and nuns, and was, since 1644, kept at the seminary of Caen on 20 October. The office, which is very beautiful, was composed by Blessed John Eudes in 1641, but its text was not definitely fixed before 1672. In 1647 the date of the feast was changed to 8 February, the feast being solemnized publicly for the first time, with the permission of Bishop Ragny, at the cathedral of Autun on 8 February, 1648. In 1668 Cardinal Vendôme approved the office, and the feast was adopted the same year by the French Franciscans, the Benedictine Nuns of the Perpetual Adoration, and later by a number of dioceses and religious communities, contrary to decrees of the Congregation of Rites prohibiting the feast of the Heart of Mary. The bishops of the Church in France claimed at this period the right to institute new feasts, and to compose offices and new breviaries without consulting the Roman authorities. In 1672 Blessed John Eudes could state that the feast had spread over nearly all France. It was mostly kept on 8 February, but at the Hôtel-Dieu of Quebec (since 1690) on 3 July, and at Saint-Maclou, Rouen, on the Sunday after 22 August (Office pr. 1765; triple of the first class).

The Nuns of Notre Dame de Corbeil (8 Feb., 1787) were the first to obtain papal sanction for the feast from Pius VI (kept on 22 August as a double of the first class with octave). The same pope later approved it for the Carmelites of Saint-Denis (8 Feb.), and for the Nuns of Fontevault (Sunday after 2 July). On 22 March, 1799, it was granted to the city of Palermo (third Sunday after Pentecost); on 13 Aug., 1805, to the Clerics Regular of the Mother of God; in 1806 to Siena; in 1807 to the Discalced Carmelites; on 2 Sept., 1807, to the Capuchins and Hermits of St. Augustine for the Sunday after the Octave of the Assumption; on 19 Sept., 1807, to Tuscany. The city of Rome adopted the feast in 1879. In the Society of Jesus it is observed on the Sunday within the Octave of the Assumption. The feast has not yet been extended to the entire Church. It is kept as the patronal feast of the Republic of Ecuador, of the Congregation of the Holy Ghost, of the Society of the Sacred Hearts of Jesus and Mary, and of the Missionary Society of the Heart of Mary on the Sunday after 22 August. The feast is celebrated at Cosenza (Calabria) on 7 February (earthquake, 1783), by the English Benedictines on the first Sunday of May; in the ecclesiastical province of Lemberg on the last Saturday in May; at Bologna, Pescia, Volterra etc., on the second Sunday in July; at Salerno on the last Sunday after Pentecost, etc. The office of Blessed John Eudes, universally used in France for over a hundred years, was finally approved for the Eudists (8 Feb.) in 1861. The office contained in the Appendix of the Roman Breviary was granted on 21 July,

1857; the dioceses of Palermo, Salerno, Catanzaro, etc., use that composed by Père Gallifet in 1726.

The feast of the Archconfraternity of the Immaculate Heart of Mary, refuge of sinners, is celebrated on the Sunday before Septuagesima at Paris, Chartres, Reims, Limoges, Vannes, Nantes, at Lucca in Toscana, in the ecclesiastical province of St. Louis, Missouri, etc.

FREDERICK G. HOLWECK.

Mostyn, FRANCIS. See MENEVIA, DIOCESE OF.

Mosynoupolis, titular see, suffragan of Trajanopolis in Rhodope. A single bishop is known, Paul, who assisted at the council of 878, which re-established Photius (Le Quien, "Oriens christ.", I, 1205). The see is mentioned in the "Notitia" of Leo the Wise, about 900 (Gelzer, *Ungedruckte . . . Notitiæ episcopatum*, 558); in that for 940 (Gelzer, "Georgii Cyprii Descriptio orbis romani", 79); in that for 1170 under the name of Misinoupolis (Parthey, "Hierocles Synecdemus", 122). The monk Ephrem (Cæsares, V. 5695, in P. G., CXLIII, 216) says that the city was taken in 1190 by the Emperor Frederick of Swabia; and that Calojan, Tsar of the Bulgarians, ravaged it about 1206 (Cæsares, V. 7816). It is not known exactly where this town of Macedonia was situated nor what name it bears to-day.

S. VAILHÉ.

Motet.—A short piece of music set to Latin words, and sung instead of, or immediately after, the Offertorium, or as a detached number in extra-liturgical functions. The origin of the name is involved in some obscurity. The most generally accepted derivation is from the Latin *motus*, "movement"; but the French *mol*, "word", or "phrase", has also been suggested. The Italian *motetto* was originally (in the thirteenth century) a profane polyphonic species of music, the air, or melody, being in the Tenor clef, taking the then acknowledged place of the *canto fermo*, or plainchant, theme. Philip de Vitry, who died Bishop of Meaux, wrote a work entitled "*Ars compositionis de motetis*", the date of which was probably 1320. This volume (now in the Paris Bibliothèque Nationale) contains our oldest specimens of sacred motets, and these continued in vogue for over two centuries. Gerbert prints some other motets of the first half of the fourteenth century, but they are not of any particular interest, and are mostly in two parts. It was not until the commencement of the following century, especially between the years 1390 and 1435, that a number of distinguished composers—e. g., Dunstable, Power, Dufay, Brastart, and Binchois—produced polyphonic motets that are still worthy of attention.

Dunstable's "*Quam pulchra es*" is a charming specimen of a three-part motet, the concluding Alleluia being far in advance of any similar work during the first quarter of the fifteenth century, betraying a genuinely artistic style. Equally beautiful are the motets of Lionel Power, the manuscripts of which are at Vienna, Bologna, and Modena. One of his happiest efforts is a four-part motet in which the treatment is peculiarly melodious and of an Irish flavour. Dufay, who was a Walloon, composed numerous motets, including "*Salve Virgo*", "*Flos florum*", "*Alma Redemptoris*", and "*Ave Regina celorum*"; and by his will he ordered the last named exquisite composition to be sung by the altar boys and choristers of Cambrai cathedral at his death-bed. Brastart, also a Walloon, whose name appears among the pontifical singers in 1431, composed motets, including a four-part "*Fortis cum quevis actio*" and a very pretty "*Ave Maria*". Binchois, another native of Flanders has left some motets in three parts, including "*Beata Dei Genitrix*", but the treatment is

archaic, and not at all comparable to the work of Power or Dufay. He died in 1460. Like Dufay, he was a priest and canon of Mons. From 1435 to 1480 the motet was treated by such masters as Caron, Okeghem, and Obrecht, and though the style is far in advance of similar compositions of the mid-fifteenth century, not many of the surviving specimens can compare with the best efforts of Power and Dufay. Okeghem was a priest, and was principal chaplain to Charles VII of France and to Louis XI, being subsequently made canon and treasurer of St. Martin's at Tours. His motet, "Alma Redemptoris", displays much contrapuntal ingenuity, and he also wrote a motet for thirty-six voices, probably performed by six choirs of six voices each.

But it is between the years 1480 and 1520 that the motet as an art-form progressed, favoured by the nascent devices of the modern school, with Josquin Després as leader. The outstanding feature of the motets of this period is the extraordinary skill displayed in weaving melodious counterpoint around a short phrase of plainchant or secular melody. Josquin (Canon of St. Quentin) stands head and shoulders over his fellows, and his motets were among the earliest printed by Petrucci, in 1502-05. In all, one hundred and fifty of his motets have been printed, the best known being the beautiful one, founded on the plainchant theme of "Requiem æternam", on the death of his master Okeghem, and the settings of the genealogies in the Gospels of St. Matthew and St. Luke. His fellow-pupil, Pierre de la Rue, also composed some charming motets, of which twenty-five have been printed. One of the best known is founded on a theme from the Lamentations of Jeremias. Another famous motet-writer of this period was Eleazar Genet, better known as Carpentras (from the place of his birth), a priest and papal nuncio. His "Motetti della corona" were published by Petrucci, in 1514, but he is best known for his "Lamentations", which continued to be sung by the pontifical choir at Rome until 1587. A third motet-writer was Jean Mouton, canon of St. Quentin, whose "Quam pulchra es" has often been ascribed to Josquin. A fourth is Jacques Clément (Clemens non Papa), who issued seven books of motets, published by Phalèse (Louvain, 1559). Three typical specimens have been reprinted by Proske in his "Musica divina". Jacob Vaett composed a motet on this French composer's death in 1558. John Dygon, Prior of St. Augustine's, Canterbury, was a composer of motets, one of which was printed by Hawkins. Other English composers who cultivated this art-form in the sixteenth century were: Fayrfax, Tallis (who wrote one in forty parts), Whyto, Redford, Taverner, and Shepherd. Many of the Latin motets by these musicians were subsequently adapted to English words. Arcadelt, a pontifical singer, composed an eight-part Pater Noster; his better known Ave Maria is of doubtful authenticity. Willaert, *maestro di cappella* at St. Mark's, Venice, and "father of the madrigal", published three collections of motets for four, five, and six voices, not a few of which are extremely inventive and melodious though intricate.

The acme of motet composition was reached in the period from 1560 to 1620, when Orlandus Lassus (Roland de Lattre), Palestrina, Morales, Anerio, Marenzio, Byrd, de Rore, Suriano, Nanini, Gabrieli, Croce, and Monteverde flourished, not forgetting English Catholic composers like Bevin, Richard Dering, and Peter Philips. Palestrina, who has been aptly styled *Princeps Musicæ*, composed over 300 motets, some for twelve voices, but mostly for from four to eight voices, of which seven books were printed. One of his exquisite motets is, "Fratres, ego enim accepi", for eight voices, while another is the much simpler "Sicut cervus desiderat". Lassus composed 180 Magnificats, and 800 motets. The other masters quoted above

have left us beautiful specimens. However, in the case of Monteverde (1567-1643), he broke away from the old traditions and helped to create the modern school of music, employing unprepared dissonances and other harmonic devices. Croce, who was a priest, published many beautiful motets, including "O sacrum convivium". In the mid-seventeenth century, owing to the conflict between the older and the newer schools, no appreciable advance was made in motet-writing. The only two composers who nobly upheld the true polyphonic school were Allegri and Casciolini. Allegri was a priest and a pontifical singer, and he is best known by his famous Miserere for nine voices in two choirs. A few of Casciolini's motets are still sung. From 1660 to 1670 the modern type of motet, with instrumental accompaniment, came into vogue, and the ancient ecclesiastical "modal" treatment was superseded by the prevalent scale-tonality. The masters of this epoch were Leo, Durante, Scarlatti, Pergolesi, Carissimi, Stradella, and Purcell. During the eighteenth century the motet received adequate treatment at the hands of Johann Sebastian Bach, Keiser, Graun, Hasse, Handel, and Bononcini. A further development, but on different lines, took place during the nineteenth century, specimens of which may be found in the published works of Mozart, Haydn, Cherubini, and Mendelssohn. However, the *motu proprio* of Pope Pius X has had the happy effect of reviving the polyphonic school of the sixteenth and early seventeenth centuries, when the motet in its truest form was at the height of perfection.

Motolinia, TORIBIO DE BENAVENTE, Franciscan missionary, b. at Benavente, Spain, at the end of the fifteenth century; d. in the City of Mexico, 10 August, 1568. He was one of the first band of Franciscans who sailed for Mexico with Fray Martin de Valencia, and survived all his companions. Upon entering religion, he changed his name of Paredes for that of Benavente, following the then regular custom of the order. As he and his companions, on their way to the City of Mexico, passed through Tlaxcala, the Indians, seeing the humble aspect and ragged habits of the religious, kept repeating to each other the word *motolinia*. Fray Toribio, having asked the meaning of this word and learned that it was the Mexican for *poor*, said: "It is the first word I have learned in this language, and, that I may not forget it, it shall henceforth be my name." Bernal Diaz del Castillo, an eyewitness of the arrival of the first friars, singles Motolinia out from the others, saying of him: "Whatever was given him he gave to the Indians, and sometimes was left without food. He wore very torn clothing and went barefoot, and the Indians loved him much, because he was a holy person." When Motolinia and his companions arrived at the City of Mexico, Cortes went out to receive them, accompanied by all his captains and the chief men of the place. The religious carried wooden crosses in their hands; Cortes and those with him knelt and kissed their hands with the deepest respect, and then conducted them to the lodgings prepared for them. The Indians wondered much when they saw those whom they considered supernatural beings prostrate at the feet of these humble and apparently despicable men. Cortes seized the opportunity to address a discourse to the *caciques* (chiefs) and lords who accompanied him, recommending due veneration and respect, as he himself had shown, for those who had come to teach them the Christian religion.

When Cortes set out on the expedition to Las Hibueras, the influence of Motolinia over the Indians

was so great that the conqueror commissioned him to see that "no rising took place in Mexico or the other provinces" during his absence. Motolinia subsequently made a journey to Guatemala, where he made use of the faculties which he had to administer confirmation, and thence passed to Nicaragua. Returning to Mexico, he was guardian successively at Texcoco and Tlaxcala, and was chosen sixth provincial of the Province of Santo Evangelio. When Don Sebastian Ramirez de Fuenleal, president of the second *Audiencia*, decided to found the settlement of Puebla, Fray Toribio, who had joined in requesting this foundation, was one of the commissioners chosen to carry out the work, with the auditor Don Juan de Salmeron. In association with the guardians of Tlaxcala, Cholula, Huexotzingo, and Tepeaca, and employing a large number of Indian labourers, they built the city. Motolinia said the first Mass here on 16 April, 1530, and with his companions made the allotments of land, choosing for the convent the site upon which is still to be seen the beautiful church of San Francisco. He himself left in writing the total of baptisms performed by him, amounting to 400,000, "which," says Padre Torquemada, "I who write this have seen confirmed by his name." The Indians loved him tenderly for his virtues and, above all, for his ardent charity. He died in the convent of S. Francisco, in the City of Mexico, and the crowd at his burial had to be restrained from cutting in pieces the habit which his corpse wore, pieces of which they would have taken as relics of a saint.

Among the writings of Motolinia is his famous letter to Emperor Charles V, written on 2 January, 1555. It is a virulent attack upon Bishop Bartolomé de las Casas, intended to discredit him completely, calling him "a grievous man, restless, importunate, turbulent, injurious, and prejudicial", and moreover an apostate in that he had renounced the Bishopric of Chiapas. The monarch is even advised to have him shut up for safe keeping in a monastery. While it is impossible to save the memory of Motolinia from the blot which this letter has placed upon it, some explanation of his conduct can be given. He may have foreseen the extremely grave evils that would have resulted to the social system, as it was then established in New Spain, if the theories of Las Casas had become completely dominant. Indeed, when it is remembered that these theories jeopardized the fortunes of nearly all the colonists, not only in Mexico, but also throughout the New World—fortunes which they had perhaps amassed illegally, but, in many instances, in good faith and at the cost of incredible labours and perils—it may well be understood why so tremendous an animosity should have been felt against the man who not only had originated the theories, but had effected their triumph at Court; who was endeavouring with incredible tenacity of purpose to put them into practice, and who, in his directions to confessors, asserts that all the Spaniards of the Indies must despoil themselves of all their property, except what they have acquired by commerce, and no longer hold *encomiendas* or slaves. The theory of *encomiendas* was not in itself blameworthy; for the Indians, being like all other subjects bound to contribute towards the expenses of government, it made no difference to them whether they paid tribute direct to the government or to the holders of royal commissions (*encomiendas*). What made the system intolerable was the mass of horrible abuses committed under its shadow; had las Casas aimed his attack more surely against these abuses, he might perhaps have been more successful in benefiting the Indians. It is certain that the "New Laws", the greatest triumph of las Casas, remained virtually inoperative in Mexico; in Chiapas and Guatemala they led to serious disturbances, and in Peru they resulted in a civil war fraught with

crimes and horrors, amidst which the aborigines suffered greatly. Such was the man whom Motolinia sought to oppose, and his attitude was shared by men of the most upright character, e. g. Bishop Marroquin, the viceroy, Don Antonio de Mendoza, and the *visitador* Tello. However pardonable the intention, it is impossible to forgive the aggressive and virulent tone of the aforesaid denunciation. He wrote some works which were of assistance to Mendieta and to Torquemada, one of the chief being his "*Historia de los Indios de Nueva España*".

CAMILLUS CRIVELLI.

Motu Proprio, the name given to certain papal rescripts on account of the clause *motu proprio* (of his own accord) used in the document. The words signify that the provisions of the rescript were decided on by the pope personally, that is, not on the advice of the cardinals or others, but for reasons which he himself deemed sufficient. The document has generally the form of a decree: in style, it resembles a Brief rather than a Bull, but differs from both especially in not being sealed or countersigned. It issues from the Dataria Apostolica, and is usually written in Italian or Latin. It begins by stating the reason inducing the sovereign pontiff to act, after which is stated the law or regulation made, or the favour granted. It is signed personally by the pope, his name and the date being always in Latin. A *Motu Proprio* was first issued by Innocent VIII in 1484. It was always unpopular in France, where it was regarded as an infringement of Gallican liberties, for it implied that the sovereign pontiff had an immediate jurisdiction in the affairs of the French Church. The best-known recent example of a *Motu Proprio* is the instructions issued by Pius X on 22 November, 1903, for the reform of church music.

The phrase *motu proprio* is frequently employed in papal documents. One characteristic result of its use is that a rescript containing it is valid and produces its effect even in cases where fraud would ordinarily have vitiated the document, for the words signify that the pope in granting the favour does not rely on the reasons alleged. When the clause is used in dispensations, the latter are given a broad interpretation; a favour granted *motu proprio* is valid even when counter to ecclesiastical law, or the decisions of the pope himself. Consequently, canonists call the clause the "mother of repose": "*sicut papaver gignit somnum et quietem, ita et hæc clausula habenti eam.*" (See **RESCRIPTS**.)

A. A. MACERLEAN.

Mouchy, ANTOINE DE (called DEMOCHARES), theologian and canonist, b. 1494, at Ressons-sur-Mats, near Beauvais, in Picardy; d. 8 May, 1574, at Paris. In 1539 he was appointed rector of the University of Paris. He was also professor at the Sorbonne and canon *Pœnitentiarius* of Noyon. As *inquisitor fidei* he exerted his influence against the Calvinists. In 1562 he accompanied the Cardinal of Lorraine to the Council of Trent, and in 1564 was present at the Synod of Reims. Mouchy wrote a work in defence of the Mass (Paris, 1562), and edited the "*Corpus juris canonici*" (3 vols. fol., including the glossa, Paris, 1561; 4 vols. 8vo, without the glossa, Paris, 1547-50; 7 vols. 12mo, Lyons, 1554).

SCHREIER in *Kirchenlex.*, s. v.

LEO A. KELLY.

Moufang, FRANZ CHRISTOPH IGNAZ, theologian, b. at Mainz, 17 Feb., 1817; d. there, 27 Feb., 1890. His early studies were made at Mainz. In 1834 he went to the University of Bonn, first taking up medicine, but soon turning to theology. Among his masters were Klee, Windischmann, and Walter. In 1837 he went to Munich, and the next year took the prescribed theological examinations at Giessen, after which he entered the ecclesiastical seminary at Mainz, where he was ordained priest 19 Dec., 1839. His first appointment was as curate in Seligenstadt on the Main, where his uncle, Adam Frans Lennig, later vicar-general and dean of the cathedral at Mainz, was pastor. Lennig stimulated in him a broad interest for the religious questions of the time. Moufang also taught at the pro-gymnasium at Seligenstadt. After brief charges of the parish of Bensheim, and that of St. Quentin in Mainz he was appointed in 1845 religious instructor at the Mainz gymnasium.

When Bishop von Ketteler re-established in 1851 the philosophical and theological school in connexion with the seminary at Mainz, he appointed Moufang regent of the seminary and professor of moral and pastoral theology. Moufang became a canon 6 Nov., 1854, and spiritual adviser and member of the diocesan court 2 December of the same year. On the occasion of the twenty-fifth anniversary of his priesthood the theological faculty of Würzburg bestowed the honorary degree of doctor of theology upon him. On the death of Lennig in 1866 the bishop wished Moufang to be his successor as dean of the cathedral and vicar-general. Moufang, however, declined, preferring to devote himself to the seminary. In November, 1868, he was summoned to Rome, for the preparatory work of the Vatican Council, and was placed on the committee for ecclesiastico-political matters under Cardinal Reisach. During the *Kulturkampf*, to Moufang's great sorrow, the theological school of the seminary was closed (1877) by hostile legislation. After the death of Bishop von Ketteler (13 July, 1877), the chapter elected Moufang administrator of the diocese. The hostile attitude of the Prussian Government made this office very difficult during the ten years' vacancy of the see. On 16 April, 1886, Leo XIII made him a domestic prelate. Under Bishop Haffner the theological school of the seminary was reopened on 25 October, 1887, and Moufang again directed the seminary as regent. But ill-health prevented him from remaining long at the work that was so dear to him.

Moufang rendered great and permanent services to the Archdiocese of Mainz as an educator of the clergy and in many other ways. He was soon prominent in the circle that centred about Lennig's strong, energetic personality, and he took an eager part in all efforts to improve religious and social conditions. He assisted in the formation of the "Piusverein", and as a member of the "St. Vincenz-und Elisabeth-Verein" did much to promote its prosperity. In the regeneration of Catholic Germany his name is inseparably linked with the history of the general conventions (Generalversammlungen) of the Catholics of Germany. Like his colleague, Heinrich, he was, for almost forty years, one of the leading personalities and most prominent speakers. For a number of years he was also active as a legislator. After 1863, as representative of the bishop, he had a seat in the upper chamber of the Hessian Landtag, and repeatedly took a prominent part in the debates on social and political questions, and questions of Church policy. In 1871 he entered the German Reichstag, where he was held in great esteem by the Centre for his political services and as an intermediary in harmonizing the differences between North and South Germany. The most prominent feature of his literary activity was his work

in reorganising and publishing the "*Katholik*", which in collaboration with Heinrich he edited from 1851 until his death.

His other literary work was mainly in the history of the older Catholic catechisms in Germany. His chief works on this subject are: "*Die Mainzer Katechismen von Erfindung der Buchdruckerkunst bis zum Ende des 18. Jahrhunderts*" (Mainz, 1878); "*Katholische Katechismen des 16. Jahrhunderts in deutscher Sprache, herausgegeben und mit Anmerkungen versehen*" (Mainz, 1881). Among his numerous shorter writings are: "*Die barmherzigen Schwestern, eine Darstellung ihrer Gründung, Verbreitung, Einrichtung und Wirksamkeit*" (Mainz, 1842); "*Der Informativ-Prozess. Eine kirchenrechtliche Erörterung*" (Mainz, 1850); "*Die katholischen Pfarrschulen in der Stadt Mainz*" (Mainz, 1863); "*Das Verbot der Ehen zwischen nahen Verwandten. Beleuchtung der Gründe dieses Verbotes*" (Mainz, 1863), I; "*Die Handwerkerfrage*" (Mainz, 1864), a speech delivered in the Upper Chamber of the Landtag at Darmstadt and published with notes; "*Die Kirche und die Versammlung katholischer Gelehrten*" (Mainz, 1864), a reply to Dr. Michelis's "*Kirche oder Partei*"; "*Cardinal Wiseman und seine Verdienste um die Wissenschaft und die Kirche*" (Mainz, 1865); "*Der Kampf um Rom und seine Folgen für Italien und die Welt*" (Mainz, 1868); "*Carl August, Cardinal von Reisach*", in "*Katholik*", 1870, I, 129-50; "*Der besondere Schutz Gottes über Papst Pius IX*" (Mainz, 1871); "*Aktenstücke betreffend die Jesuiten in Deutschland, gesammelt und mit Erläuterungen versehen*" (Mainz, 1872). Moufang also published a prayerbook, "*Officium divinum*", which is very widely used and has passed through numerous editions, the first appearing at Mainz, in 1851, the nineteenth in 1905.

Brück, Dr. Christoph Moufang, Päpstlicher Hausprälat, Domcapitular und Regens des bischöflichen Seminars zu Mainz. Eine Lebensskizze in *Katholik* (1890), I, pp. 481-93; II, pp. 1-25; *Allgemeine Deutsche Biographie*, LII, 486-88.

FRIEDRICH LAUCHERT.

Moulins, DIOCESE OF (MOLINENSIS), suffragan of Sens—comprises the entire department of Allier. Under the old régime Moulins did not even have a parish, the churches which served as parishes were succursal churches of two neighbouring country parishes, Yzeure and St-Bonnet. In 1788 a see was created at Moulins; and des Gallois de la Tour, who exercised in that city the functions of vicar-general to the Bishop of Autun, was appointed bishop, but had not been preconized when the Revolution broke out in 1789. The See of Moulins was re-established by the Concordat of 1817, and had titulars from 1822. This new diocese was formed of dismembered parts of the Dioceses of Autun, Bourges, and Clermont-Ferrand. In this diocese the cantonal districts do not bear their geographical names, as in all other dioceses, but the name of a saint which becomes the patron of the deanery: the Vichy deanery, for instance, is called the deanery of St-Raphael. Joan of Arc came to Moulins in November, 1429, and from there wrote letters to all the important surrounding towns, asking for assistance. In 1604 Henry IV authorized the Jesuits to found a college at Moulins. The devotion to the Sacred Heart of Jesus was inaugurated in 1676 at the Visitation monastery of Moulins; St. Jane Frances de Chantal died in this convent in 1641. The monastery of Saint Lieu Sept Fons, in the present territory of the diocese, was founded in 1132 by monks of Cl-teaux on a site where there were seven springs (*septem fontes*) and a sanctuary of the Blessed Virgin; it was reformed in 1663 by Dom Eustache de Beaufort, abbot from 1656 to 1709, a friend of de Rancé. In 1845 the monastery was restored by the Trappist Dom Stanislaus Lapiere. St. Benoit Labre passed two months there in 1769. The Benedictine monastery of Souvigny, founded in 916, had a fine Gothic church, where

even yet the tombs of many Seigneurs de Bourbon can be seen. Saint Mayeul (Majolus), second abbot of Cluny, died at Souvigny in 994, and St. Odilo, third abbot of Cluny, died there in 1049. The town of Gannat arose about an ancient abbey of Augustinians; the town of St. Pourçain owes its origin to the monastery founded in the sixth century by the slave St. Pourçain (Portianus) who put a stop to the devastations of Thierry, King of Austrasia, during his campaign against Auvergne. The preacher Jean de Lingendes (1595-1665) and the schismatic Abbé Chatel, founder of the "French Catholic Church" (1795-1857), were born in the territory of the present Diocese of Moulins.

The principal pilgrimages of the diocese are: Notre-Dame de St. Germain des Fossés; the body of the hermit

St. Patroclus (sixth century) at Colombar; the relics of St. Mayeul at Souvigny; and the church of St. George at Bourbon l'Archambault, which possesses one of the largest known fragments of the Holy Cross, a relic given by St. Louis to his son Robert of Clermont. Before the application of the Associations Law of 1901 there were Benedictines, Jesuits, Marists, Lazarists, Redemptorists, Missionary Fathers of the Sacred Heart, and several orders of School Brothers in the Diocese of Moulins. At the beginning of the twentieth century the religious congregations of the diocese had charge of: 1 crèche, 15 day nurseries, 2 boys' orphanages, 10 girls' orphanages, 5 industrial rooms, 1 Magdalen hospital, 6 "houses of mercy" for the relief of the poor, 13 hospitals or asylums, 3 houses for the care of the sick in their own homes.

In 1908 the Diocese of Moulins counted 390,812 inhabitants, 31 parishes, 281 succursal parishes, 55 vicariates.

ALART, *Histoire de l'établissement de l'évêché de Moulins* (Moulins, 1854); FISQUET, *France pontificale, évêchés de Troyes et de Moulins* (Paris, 1867); FAURE, *Histoire de Moulins* (2 vols., Moulins, 1900); MONTAGUT, *En Bourbonnais et en Forez* (Paris, 1875); *Sept-Fons, études historiques sur l'abbaye de Notre Dame Saint Lieu Sept Fons*, by a monk of the abbey (Moulins, 1872); CHEVALIER, *Topobibl.*, 2028.

GEORGES GOYAU.

Mount Calvary, CONGREGATIONS OF.—I. DAUGHTERS OF MOUNT CALVARY, founded in 1619 by Virginia Centurione (d. 1651), daughter of the Doge of Genoa and wife of Gasparo Grimaldi Bracelli (d. 1625), who during a time of famine gathered a number of abandoned children into a home, which she called Santa Maria del Refugio dei Tribolati in Monte Calvario. Under her inspiration those associated with her in the work decided to lead a common life, follow the rule of St. Francis, and pledge themselves to the service of the poor and sick. They bound themselves, however, by no vows, but by a solemn promise of perseverance. Among the prominent Genoese who promoted the work of the sisters was the Marquess Emmanuele Brignole, through whose munificence a second house was founded, in 1641, after which the sisters were often called "le suore Brignole". The congregation soon spread through northern Italy. In 1815 Pius VII invited the sisters to Rome, and in 1833 Gregory

XVI assigned them a house on the Esquiline, near the church of St. Norbert, now the chief house of the institute.

II. MISSIONARY SOCIETY OF MOUNT CALVARY, a congregation of secular priests, formed in 1633 by Hubert Charpentier to honour the Sacred Passion and to spread and maintain the Faith especially in regions under Huguenot control. The first houses were at Betharram in the Diocese of Lescar and at Notre-Dame de Ceraison in the Diocese of Auch. United with a similar association formed by the Capuchin, Père Hyacinthe, at the instance of Louis XIII, on Mont-Valérien near Paris, the congregation received royal confirmation in 1650. Later the pastors of Paris were admitted to membership, and during Holy Week pilgrimages were made from different parishes

of Paris to Mount Valérien. The society did not survive the Revolution.

Mount Carmel, FEAST OF OUR LADY OF.—This feast was instituted by the Carmelites between 1376 and 1386 under the title "Commemoratio B. Mariæ Virg. duplex" to celebrate the victory of their order over its enemies in obtaining the approbation of its

LATERAL FAÇADE, CATHEDRAL, MOULINS

name and constitution from Honorius III on 30 Jan., 1226 (see Colvenerius, "Kal. Mar.", 30 Jan., "Summa Aurea", III, 737). The feast was assigned to 16 July, because on that date in 1251, according to the Carmelite traditions, the scapular was given by the Blessed Virgin to St. Simon Stock; it was first approved by Sixtus V in 1587. After Cardinal Bellarmine had examined the Carmelite traditions in 1609, it was declared the patronal feast of the order, and is now celebrated in the Carmelite calendar as a major double of the first class with a vigil and a privileged octave (like the octave of Epiphany, admitting only a double of the first class) under the title "Commemoratio sollemnis B.M.V. de Monte Carmelo". By a privilege given by Clement X in 1672, some Carmelite monasteries keep the feast on the Sunday after 16 July, or on some other Sunday in July. In the seventeenth century the feast was adopted by several dioceses in the south of Italy, although its celebration, outside of Carmelite churches, was prohibited in 1628 by a decree *contra abusum*. On 21 Nov., 1674, however, it was first granted by Clement X to Spain and its colonies, in 1675 to Austria, in 1679 to Portugal and its colonies, and in 1725 to the Papal States of the Church, on 24 Sept., 1726, it was extended to the entire Latin Church by Benedict XIII. The lessons contain the legend of the scapular (q. v.); the promise of the Sabbatine privilege was inserted into the lessons by Paul V about 1614. The Greeks of southern Italy and the Catholic Chaldeans have adopted this feast of the "Vestment of the Bl. Virgin Mary" (Nilles, "Kal. Man.", II, 548, 665). The object of the feast is the special predilection of Mary for those who profess themselves her servants by wearing her scapular (see CARMELITES).

Mount of Olives. See OLIVET, MOUNT.

Mount St. Mary's College, the second oldest among the Catholic collegiate institutions in the United States, is located near Emmitsburg, Maryland, within the limits of the Archdiocese of Baltimore. Its situation on high ground at the foot of the Maryland range of the Blue Ridge Mountains is remarkable for beauty and healthfulness while it affords ample opportunity for physical exercise. Mount St. Mary's Theological Seminary has been maintained in connexion with the college since the foundation of the latter. The institution is directed by an association of secular clergymen who, with several lay professors, compose its faculty. Its material interests are controlled by a board of directors of which the Archbishop of Baltimore is, ex officio, the president. For the academic year 1909-10 the teaching corps included sixteen professors, besides assistant instructors in the various branches, with 298 students in the college and 54 in the seminary. Instruction is given in four departments: collegiate, academic, commercial, and modern languages. The degrees conferred are those of bachelor of arts and master of arts.

Mount St. Mary's College was founded in 1808 when the preparatory seminary established by the Sulpicians at Pigeon Hill, Pa., was transferred to Emmitsburg. Eight students formed the nucleus out of which the college developed. Its first president was Rev. John Dubois (q. v.) who had been labouring for some years in the neighbouring missions and had built a brick church on the slope above the present site of the college. He had been led to secure this site by Father (afterwards Bishop) Dubourg (q. v.), who directed Mother Seton also to Emmitsburg for the establishment of St. Joseph's Academy. Father Dubois had as his assistant Father Bruté (q. v.) who was consecrated first Bishop of Vincennes in 1834. Father Dubois himself became in 1826 Bishop of New York and was succeeded in the presidency by Rev. Michael de Burgo Egan (1826-28), Rev. J. F. McGerry (1828-29), and Rev. John B. Purcell (1830-33), later Archbishop of Cincinnati. In January, 1830, Father Purcell obtained from the General Assembly of Maryland a charter of incorporation for the college. This document prohibited the requiring of any religious test from students or professors, and limited the tenure of land to 1000 acres and the total value of the college property to \$25,000: all gifts or revenues in excess of this amount, after the payment of necessary debts, were to be held for the use of the State of Maryland. After the brief (five months) incumbency of Rev. F. Jamison during the latter half of 1833, Rev. Thomas R. Butler was chosen president (1834-38). During his administration, a new charter, still in force, was granted on 4 April, 1836, wherein the college authorities are empowered to confer all collegiate honours and degrees except that of doctor of medicine. Father Butler's successor was Rev. John J. McCaffrey, a man of great energy and zeal, whose long term as president (1838-1872) was marked on one hand by the growth and prosperity of the college, on the other by reverses that threatened its very existence. He was the builder of the new church at Emmitsburg which was dedicated in June, 1842. The corner-stone of Bruté Hall, for which \$12,000 had been appropriated, was laid on 2 May, 1843, and, in 1852, the foundation of McCaffrey Hall. On 25 June, 1857, Archbishop Purcell laid the corner-stone of the church which was to replace the structure on the hill. In 1858 the college celebrated its semi-centennial with appropriate exercises in which many distinguished alumni took part.

The "Mountain" already counted among its graduates such men as John Hughes, later Archbishop of New York; William Quarter, first Bishop of Chicago; John McCloskey, afterwards Archbishop of New York and Cardinal; William Henry Elder, Archbishop of Cincinnati; William George McCloskey, president of the American College, Rome, and later Bishop of Louisville; Francis S. Chatard, president of the American College, Rome, and later Bishop of Vincennes; Michael Augustine Corrigan, later Archbishop of New York; Richard N. Whelan, first Bishop of Wheeling; Francis X. Gartland, first Bishop of Savannah; Francis P. McFarland, third Bishop of Hartford.

Within three years after the celebration of its golden jubilee, the college was confronted by difficulties due to the outbreak of the war between the States. Though both North and South had strong partisans in the faculty as well as in the student body, the college as a whole remained neutral. But shortly after the beginning of hostilities, an exodus of students representing each section took place in such numbers that only seven were left for the graduating class of 1863, and only two for that of 1864. Moreover as parents were unable to meet tuition fees and other expenses of the pupils whom the college maintained during the four years of war, the financial standing of the institution was seriously compromised, and as a result the college at the end of the conflict was overwhelmed with debt. In June, 1872, Dr. J. J. McCaffrey, in consequence of failing health, withdrew from the presidency after thirty-four years of arduous and devoted service. Father John McCloskey was elected to the office with Rev. H. S. McMurdie as vice-president. Under their administration, the student body varied from 130 to 165. In 1877 Rev. John A. Watterson became president and retained the office until his promotion to the See of Columbus (1880). He introduced a thorough system of retrenchment in all departments; but the bulk of the debt remained. After his departure, Father John McCloskey once more took up the burden of the presidency, but only for a short time, as he died towards the close of 1880. In January, 1881, Rev. Wm. J. Hill, of Brooklyn, came to the college and petitioned to have a receiver appointed. The appointee was James McSherry, later Chief Justice of the Court of Appeals of Maryland. He turned over the affairs of the institution, in June, 1881, to Very Rev. William M. Byrne, Vicar-General of Boston, whose firmness, prudence, and wise economy restored prosperity to the college. His policy was continued by Rev. Edward P. Allen, who held office from 1884 until he became Bishop of Mobile in 1897. During his administration, McCaffrey Hall was completed (1894); and under his successor, Rev. Wm. L. O'Hara (1897-1905), Dubois Hall was completed, improvements were continued to accommodate the increasing number of students.

The presidency of his successor, Very Rev. Dennis J. Flynn (1905—), has been marked by the celebration, in October, 1908, of the centenary of the college. This occasion brought to the "Mountain" a large number of men prominent in ecclesiastical, professional, and public life who claim the college as their *Alma Mater* (for full account see "The Mountaineer", Oct. and Nov., 1908). It may indeed be said that the highest tribute to the college and the best proof of its efficiency is found in the careers of those whom it educated. Its service to the Church is shown by the fact that among its officers and graduates at least twenty-five have been bishops, including one cardinal and five archbishops—hence its well deserved title, "Mother of Bishops". But it has also given to the State and to every department of useful citizenship a large number of men distinguished by ability and integrity (see partial list in "The Mountaineer", Oct., 1908, 34-43). Among the causes which explain this success, the most

important is doubtless the united work of clergy and laity in building up the college, controlling its discipline, and conducting its courses. Scarcely less efficacious have been the relations between clerical and lay students which, continued beyond the years at college, have resulted in hearty cooperation for the highest civic, moral, and religious purposes, and have bound all the *alumni* in loyal devotion to the venerable institution which gave them their early training. This harmonious spirit found its latest expression at the dedication of the new college church on 12 Oct., 1910, which called together former graduates, both lay and clerical, from all parts of the United States (see "The Mountaineer", Nov., 1910).

Movable Feast. See FEASTS, ECCLESIASTICAL.

Movers, FRANZ KARL, exegete and Orientalist, b. at Koesfeld, Westphalia, 17 July, 1806; d. at Breslau, 28 Sept., 1856. He attended the gymnasium of his native town, and from 1822 to 1825 the gymnasium at Münster. The next four years he studied at the academy of Münster, taking up philosophy, theology, and especially Oriental languages under Laurenz Reinke. In the autumn of 1829 he was ordained priest at Paderborn, and then continued his Oriental studies for a short time at the University of Bonn. After that he remained as tutor for several years with Baron von Geyr at Rath, near Deutz. In 1833 he became pastor at Berkum, near Bonn, in 1839 extraordinary professor of Old-Testament exegesis at the University of Breslau, and in 1842 ordinary professor at the same university.

In the field of exegesis Movers published the following works: "Kritische Untersuchungen über die biblische Chronik, ein Beitrag zur Einleitung in das Alte Testament" (Bonn, 1834); "De utriusque recensione Vaticiniorum Jeremias, Græce Alexandrinæ et Hebraicæ masorethicæ, indole et origine Commentatio critica" (Hamburg, 1837); "Loca quidam historici canonis Veteris Testamenti illustrati, Commentatio critica" (Breslau, 1842); and various essays which appeared in theological magazines, especially in "Zeitschrift für Philosophie und katholische Theologie", published at Bonn. The first edition of the "Kirchenlexicon" contains a number of articles by him.

Movers showed great scholarship as an Orientalist and performed large and lasting services by his studies of the ancient Phœnicians. His chief work, "Die Phönizier", though never completed, is still an important contribution to the subject. It appeared in parts under separate titles, as follows: Vol. I, "Untersuchungen über die Religion und die Gottheiten der Phönizier, mit Rücksicht auf die verwandten Culte der Carthager, Syrer, Babylonier, Assyrier, der Hebräer und der Aegypter" (Bonn, 1841); vol. II, "Das phönizische Alterthum" in three parts, part I, "Politische Geschichte und Staatsverfassung" (Berlin, 1849); part II, "Geschichte der Colonien" (Berlin, 1850); part III, first half, "Handel und Schifffahrt" (Berlin, 1856). Movers gave a shorter compendium of the results of his researches in his article "Phönizien" in "Allgemeine Encyclopädie der Wissenschaften und Künste" (1848), section III, part XXIV, pp. 319-443. In addition to briefer essays appearing in magazines, Movers published "Phönizische Texte erklärt" (Breslau, 1845 and 1847), part I, "Die punischen Texte im Poenulus des Plautus kritisch gewürdigt und erklärt"; part II, "Das Opferwesen der Carthager, Commentar zur Opfer-tafel von Marseille". Another work to be mentioned is "Denkschrift über den Zustand der katholisch-theologischen Facultät an der Universität zu Breslau

seit der Vereinigung der Breslauer und Frankfurter Universität bis auf die Gegenwart" (Leipzig, 1845).

RASSMANN, *Nachrichten von dem Leben und den Schriften Münsterländischer Schriftsteller* (Münster, 1866), 223 sq.; REUSCH in *Allgemeine Deutsche Biographie*, XXII, 417 sq.; WERNER, *Geschichte der katholischen Theologie* (Munich, 1866), 544-46; WERNER, *Geschichte der apologetischen und polemischen Literatur* (Schaffhausen, 1867), V, 442-52.

FRIEDRICH LAUCHERT.

Moxos Indians (MOYOS INDIANS).—According to one authority, they are named from Musu, their Quichua name; according to others, from the Moxos word, *muha*, erroneously thought by the Spaniards to be the tribal name. This collective designation is that of a group of tribes famous in the mission annals of South America, originally ranging through the forests and prairies of the upper Mamoré, extending east and west from the Guapore (Itenes) to the Beni, and centring in the present Province of Mojos, Department of Beni, Bolivia. They numbered altogether at least 50,000 souls, in perhaps a hundred small tribes or sub-tribes, speaking at least thirteen distinct languages, each with dialects, viz., Moxo (spoken with dialectic variation by the Moxos proper, Baure, Ticomeri, and several small tribes), Paicone, Mopeciana, Icabicici, Mapiena, Movima, Cayubaba, Itonama, Sapibocona, Cheriba, Rocotona, Mure, Canichana. Of these, the Moxos and Paicone, with all their dialects, belong to the widespread Arawakan stock, which includes also the Maipure (q. v.) of the Orinoco; the Sapibocona belong to the Tacanan stock of Beni river; the Mure are an offshoot from the Mura of the great Tupian stock of eastern and central Brazil; the Movima, Cayubaba, Itonama, Canichana, and Rocotona (Ocorona) represent each a distinct stock; while the others remain unclassified. Besides all these, there were gathered in by the Jesuits some immigrant Chiquito, Siriono, and Chiriguano, each of different language, from the southern Bolivian missions. Of them all, the Moxos proper were the most important.

The mode of life of the Moxos, in their primitive condition, was determined by their peculiar environment. During the rainy season, lasting four months, nearly the whole country is inundated, excepting certain elevated places, where the scattered bands made their temporary villages. As the waters retreat the hot sun generates pestilence in the low grounds along the rivers, while the prevailing oppressive heat is varied by spells of piercingly cold winds from the mountains which prevent the ripening of corn. The natives therefore were generally without agriculture, but subsisted chiefly upon fish and roots during the greater part of the year, and upon the wild game of the mountains when driven from the low grounds by the floods. They were thus compelled to a wandering habit, at the same time that they were skilful fishers and river men. The constant shifting also brought the bands into collision, so that each tribe was constantly making war on its neighbours.

Their houses were low huts, occupied each by a single family, instead of being communal as in so many tribes. The larger villages had also well-built "town-houses" for the celebration of tribal functions. They slept upon mats upon the ground or in hammocks, with a smouldering fire close at hand to drive away the swarms of mosquitoes and other insects. They ate when they could find food, without regard to time, feasting equally upon putrid fish taken from stagnant pools, and upon human flesh of prisoners taken in war, for all or nearly all the tribes were cannibal. Of game, the monkey was their favourite food. They used dogs in hunting. They were greatly addicted to drunkenness, brought about by a fermented liquor of their own manufacture, and their frequent dance festivals always ended in general intoxication, frequently with bloody encounters in revenge for old injuries. Notwithstanding the generally rude culture, the Moxos proper and Baure excelled in hammock-weaving,

boat-making, pottery, and music, their favourite musical instrument being a sort of pan-pipes sometimes six feet in length. The Moxos had also a method of picture writing. This superiority may have been due in a measure to Peruvian influence, the Inca emperor Yupanqui having temporarily subdued the Moxos about 1460.

In most of the tribes both men and women went entirely naked, but painted their faces in different colours, wore labrets, nose pendants, and necklaces—particularly of the teeth of slain enemies—and various decorations of feathers. One of their tribes, the Tiboi, had heads of pyramidal shape, produced by pressure upon the skull in infancy. Their hair was worn at full length in a queue. Their weapons were the

orphaned children also were sometimes killed by the elders. The authority of the village chiefs was absolute. Interment was in the ground and the property, instead of being destroyed as in most tribes, was divided among the relatives. In several tribes the bones were dug up after a time, reduced to powder and mixed with pounded corn to form a cake, which was given to friends to eat as the strongest bond and token of friendship. Some of this bread was thus partaken of by the first missionaries before they knew its composition.

Their religion was a pure nature worship, special reverence being paid to the River, the Thunder, and the Jaguar. Their tribal ceremonials and religious rituals were in the keeping of their priests, who were

MAP OF THE MOXOS MISSION PROVINCE
From Eder

bow, with poisoned arrows, and a javelin with which they could kill at one hundred paces. They were very cruel in war, being addicted to the torture of prisoners—a practice rare in South America—as well as to cannibalism. The Canichana even fattened prisoners for their cannibal feasts and afterwards fashioned their skulls into drinking cups. In some cases prisoners were held as slaves. Unlike the Iroquois, who exorcised the ghosts of their murdered victims, the Moxos moved away from the spot of the sacrifice to escape the vengeance of the dead. The savage Canichana in particular were so persistent in cannibalism that after coming into the missions they would sometimes steal children secretly for this purpose, even casting lots among themselves to decide who should give up a child, until the missionaries took steps to note each birth immediately upon delivery.

Marriages were arranged between the parents, usually without consulting the young people, and polygamy was permitted, although not common, but adultery was considered disgraceful. The wife was the mistress of the household and always chose the camping place. If the mother died the infant was buried alive with her, and if twins were born, one also was always buried. The woman who suffered miscarriage was killed by her own husband. The helpless aged were put to death by their children, and

put through a severe course of training and initiation involving a year's abstention from all animal food, together with a battle with a jaguar—regarded as an embodied god—until wounded, and thus marked, by the divinity. Their principal festivals were regulated by the new moon, beginning with a day's fast and ending with a night dance and drinking orgy.

The earlier attempts to missionize the tribes of central Bolivia met with no success. About the year 1673 the Moxos province was brought to the attention of the Jesuits of the college at Lima by José del Castillo, a lay brother, author of the valuable "Relación", who had accompanied some traders into that region and had been greatly impressed by the apparent docility of the natives. Father Cipriano Baraza, afterwards so noted as a missionary, at once asked and obtained the permission to undertake their conversion. In 1674, accompanied only by Brother Castillo and some Indian guides, he entered their country from Santa Cruz by way of a twelve-days' canoe voyage down the Mamoré river. In four years he had won their love and nearly mastered the language, when serious illness compelled his return to the healthier climate of Santa Cruz. He employed his convalescence in learning weaving, in order to induce them to clothe themselves, as a beginning in civilization. In the meantime, however, he was assigned to labour

among the Chiriguano, among whom he spent five years before he was permitted to return to his first choice, the Moxos. In 1686 he founded the first mission, Loreto, followed in rapid succession by Trinidad (1687), San Ignacio (1689), San Xavier (1690), San José (1691), San (Francisco de) Borja (1693), the six missions soon containing altogether nearly 20,000 Indians, Loreto alone in 1691 having 4000. Later missions were: San Pedro (the capital, 1698), Santa Ana, Exaltación, Magdalena (*alias* San Ramón), Concepción, San Simón, San Joaquín, San Martín, San Luis, San Pablo, San Juan, San Nicolás, Santos Reyes, San Judas, Santa Rosa I (del Itenes), San Miguel, Patrocinio, Santa Rosa II, Desposorios, Santa Cruz. Of these, the two missions of Santa Rosa del Itenes and San Miguel occupied chiefly by the Mure, Meque, and Rocotona tribes, were entirely broken up by the raids of the Portuguese slave-hunters (see GUARANÍ INDIANS; MAMELUCO) subsequent to 1742, and the survivors removed to other foundations. Wars, epidemics, and removals led to the abandonment also of San Luis, San José, San Pablo, Patrocinio, and San Juan. Santa Rosa II (1765), Desposorios, and Santa Cruz (de la Sierra) were the latest, and were occupied by Siriono, Chiriguano, and Chiquito, south of the Moxos province proper. The whole number of missions at one time was about twenty, containing in 1736 about 30,000 converts, increased to nearly 50,000 before the close of the Jesuit period, but again reduced to 20,345 souls in eleven missions in 1797, thirty years after the expulsion of the Jesuits.

Baraza himself was their great apostle and civilizer. Besides learning the principal languages and adapting himself to the Indian life so that he was able to penetrate every part of the province and thus make successful discovery of a shorter mountain passage to Peru, he introduced cattle, weaving, agriculture, carpentry, and brick-making. The mission churches reared by the Indians under his supervision rivalled those of Peru. At last after twenty-seven years of labour he was treacherously murdered at the age of sixty-one, on 16 September, 1702, among the then unconverted Baure, a tribe of considerably higher native culture than the others, living in palisaded villages on the eastern border of the province.

On the expulsion of the Jesuits from Spanish America in 1767 the Moxos missions were turned over to the Franciscans, under whom they continued into the modern period. The population has been greatly reduced, first by the slave raids and epidemic fevers in the earlier times, and more lately by the constant drain of the able-bodied men to the rubber forests of Brazil, whence few of them ever return, their superiority as boatmen rendering their services in demand as far as the Amazon. They are comfortably dressed in clothing made by themselves from bark fibre. In physique they are robust, and taller than most of the Bolivian tribes. "They are distinguished by a remarkably equable disposition, a frank and upright character, and great industry. They give up less time to merry-making than their southern kinsfolk, and are gener-

ally of more laborious habits, hence their industries are greatly developed, and although living far from the large towns and markets the Moxos excel all the other Indians as weavers, builders and wood carvers" (Reclus). They are zealous Catholics, entirely under the spiritual authority of their priests, and noted for their voluntary penances, as were their convert forefathers two centuries ago. Under the two principal names of Moxos and Baure, they number now about 30,000, not including several tribes—as the Canichana, Movima, etc.—included in the Moxos missions, but still retaining their distinct name and language.

For all that relates to the primitive condition and early mission history of the Moxos tribes, our principal authorities are the valuable writings of the Jesuits CASTILLO, EDER, and EGUILUZ. For the language of the Moxos and its cognate dialects, both grammar and vocabulary, our principal source is the *Arte* of the Jesuit MARRAN. BALLIVIAN, *Documentos para la Historia Geográfica de la República de Bolivia*, I, *Las Provincias de Moyos y Chiquitos* (La Paz, 1906); BRINTON, *The American Race* (New York, 1891); CASTILLO, *Relación de la Provincia de Moyos* in BALLIVIAN, *supra*; EDER, *Descriptio Provincia Maziarum in Regno Peruano* (Buda, 1791); EGUILUZ, *Relación de la Misión de los Moxos* (1696); GIBSON, *Exploration of the Valley of the Amazon*, part II (Washington, 1854); smaller tribes, HEATH in *Kansas City Review of Science*, VI (Kansas City, 1883); HERVAS, *Catálogo de las Lenguas*, I (Madrid, 1800); *Lettres Edifiantes et Curieuses*, I-II (Paris, 1707), especially letter of ARLET on Canichana tribe and mission in vol. II; MARRAN, *Arte de la lengua moxa, con vocabulario y catecismo* (1701; reprinted, Leipzig, 1894); MARKHAM, *Tribes in the Valley of the Amazon in Jour. Anthropol. Institute*, XXIV (London, 1895), a brief notice; MORENO, *Biblioteca Boliviana; Catálogo del Archivo de Moyos y Chiquitos* (Santiago de Chile, 1888); D'ORBIGNY, *L'Homme Américain*, II (Paris, 1839); PAGE, *La Plata, the Argentine Confederation and Paraguay* (New York, 1859); RECLUS, *The Earth and its Inhabitants: South America*, I, *The Andes Regions* (New York, 1894); SOUTHEY, *History of Brazil*, III (London, 1819); *Sinopsis estadística y geográfica de la república de Bolivia* (La Paz, 1903); PORTER in Bolivia, published by the International Bureau of the American Republics (Washington, D. C., 1904).

JAMES MOONEY.

MOXOS PRIEST IN CEREMONIAL PERFORMANCE
From Eder

Moy de Sons, KARL ERNST, FREIHERR VON, jurist,

b. 10 August, 1799, at Munich; d. 1 August, 1867, at Innsbruck (Tyrol). He belonged to an ancient noble family of Picardy, banished from France in 1789 and settled in Munich. After completing his studies in his native city, he became auditor in the war office; in 1827 privatdozent; 1830-33 attorney at law, in 1833 extraordinary professor of natural and political law at Würzburg; finally in 1837 ordinary professor at Munich. Because of the address by the Senate of the university to King Ludwig II concerning the notorious dancer Lola Montes, he was deposed together with several other professors and appointed supernumerary counsellor of the Court of Appeals at Neuburg on the Danube. Obtaining leave of absence in 1848, he went to Innsbruck, where he devoted himself to literary work for the old Conservative party and in 1851, after his complete severance from the service of Bavaria, he accepted the chair of history of the German Empire and German law, in the university of that town. In 1863 he retired after having transferred the chair of German history to Ficker. In 1860-62 he was first vice-president and in 1864 president of the General Assembly of German Catholics. A tireless champion of Catholic ideas in speech and writing, on account of his peaceable disposition

he was never a leader in the struggle for the Catholic cause. In Austrian politics he soon abandoned his straightforward position and became reconciled to the modern trend, warmly defending the Concordat. Among his writings, in which he devoted the greatest attention to careful research and lucid arrangement, may be mentioned "Lehrbuch des bayerischen Staatsrechtes" (Ratisbon, 1840-46); "De impedimentis matrimonii" (Munich, 1827); "Die Ehe und die Stellung der katholischen Kirche in Deutschland rücksichtlich dieses Punktes ihrer Disciplin" (Lands-hut, 1830); "Das Eherecht der Christen in der morgenländischen und abendländischen Kirche bis zur Zeit Karls des Grossen nach den Quellen dargestellt" (Ratisbon, 1833), by all means his best work; "Grundlinien einer Philosophie des Rechtes vom Katholischen Standpunkt" (2 vols., Vienna, 1854-57); "Die weltliche Herrschaft des Papstes und die rechtliche Ordnung in Europa" (Ratisbon, 1860). He did a great service to canon law through his foundation of the "Archiv für Katholisches Kirchenrecht mit besonderer Rücksicht auf Oesterreich" later "mit Rücksicht auch auf Deutschland" (Innsbruck, 1857), which he edited as far as the fifth volume.

Biographisches Lexicon des Kaiserthums Oesterreichs, XIX (1868), 165-167; *Allgemeine deutsche Biographie*, XXII (1885), 420.

PATRICIUS SCHLAGER.

Moye, JOHN MARTIN, VENERABLE, priest of the Diocese of Metz, founder of the Sisters of Divine Providence (q. v.), missionary in China, b. at Cutting, Lorraine, 27 January, 1730; d. at Trier, 4 May, 1793. He was the sixth of the thirteen children of John Moye and Catharine Demange. His older brother, a seminarian, taught him the first rudiments of Latin, and he completed his classical studies at the College of Pont-à-Mousson. He then studied philosophy at the Jesuit College of Strasburg, and entered the theological Seminary of St-Simon, Metz, in the fall of 1751. Ordained a priest 9 March, 1754, he was appointed vicar in the episcopal city the same month. His great zeal for souls attracted attention; many pious ladies placed themselves under his firm and wise direction. This enabled him to find some select souls for the establishment of schools for country children whose education he had much at heart. He began the work in 1763; in 1767 in spite of the ill-will of many and the persecutions of a few, the Congregation of the Sisters of Divine Providence was founded. That same year he was appointed superior of the little seminary of St. Dié. Leaving the care of his sisterhood to two friends, Father Moye now determined to act upon his long delayed desire to become a missionary. In 1769 he joined the Séminaire des Missions Etrangères at Paris, and in 1773 he was at work in Oriental Su-tchuen, China. Nine years of hard labour, frequently interrupted by persecution and imprisonment, made him realise the necessity of native help. In 1782 he founded the "Christian Virgins", religious women following the rules of the Congregation of Providence at home, devoting themselves to the care of the sick and to the Christian instruction of pagan Chinese women and children in their own homes. After a hundred years of success, they are still active in the Chinese mission. Exhausted by labours and sickness, Father Moye returned to France in 1784. He resumed the direction of the Sisters of Divine Providence and evangelized Lorraine and Alsace by preaching missions. The Revolution of 1791 drove him into exile, and with his Sisters he retired to Trier. After the capture of the city by the French troops, typhoid fever broke out and, helped by his Sisters, he devoted himself to hospital work. He contracted the virulent disease and died, a martyr of Christian charity, 1793. The spot where he was buried is now a public square.

CAMILLUS P. MAES.

Moylan, FRANCIS, Bishop of Cork, b. at Cork, 1739; d. in 1815. He was the son of a rich merchant. As the penal laws made it impossible for him to obtain a suitable education at home, he was sent to Paris, and educated there. His father desired that he should adopt a mercantile calling; but young Moylan's vocation being for a religious life he wished to join the Carthusians. Delicate health, however, stood in his way, and after finishing his course at the University of Toulouse, where he was graduated as doctor of theology, he was ordained priest in 1761 and for some years laboured in Paris. Returning to Cork he was appointed pastor of St. Finbarr's in the city, and remained there till 1775, when he became Bishop of Kerry. In 1787 he was transferred to the See of Cork and continued to rule that diocese till his death. Like Dr. Troy of Dublin, Dr. Moylan had no sympathy with violence as a means of redressing wrong, and therefore he condemned the Whiteboys; and, in 1796, he urged his flock to resist the French, when Hoche's fleet was in Bantry Bay. Dr. Moylan had a share in the establishment of Maynooth College and was one of its first trustees. He also supported the Union, and was one of the bishops who agreed to the "veto" in 1799. He regretted, however, having done this, for he found that he had been tricked by Pitt and Castlereagh, and when the veto question was revived (1814) he opposed it. During his time in Cork, the Christian Brothers were introduced and also the Ursuline and Presentation Nuns. He was indeed for many years the trusted friend and adviser of Nano Nagle.

HUTCH, *Life of Nano Nagle* (Dublin, 1875).

E. A. D'ALTON.

Moylan, STEPHEN, American patriot and merchant, b. in Ireland in 1734; d. at Philadelphia, 11 April, 1811. He received his education in Ireland, but resided for some time in England, and seems to have travelled considerably on the Continent before emigrating to the American Colonies where he settled in the city of Philadelphia. He gave his hearty support to the patriot cause on the eve of the Revolution, and, when war was finally declared, hurried to join the Continental Army before Boston in 1775. The readiness of his patriotic zeal, coupled with a belief in his business acumen, won him the recognition of John Dickinson, upon whose recommendation he was placed in the commissariat department. Attracted by his unusual dignity of bearing and military manner, Washington, in March, 1776, appointed him one of his aides-de-camp. Restless to exploit his energies in a field of wider activity, he was chosen by Congress, upon Washington's recommendation, in June of the same year to be Commissary General of the Continental Army. Restless again, seemingly, for a more direct participation in the conflict, he resigned this position in the following October, raising at once a troop of light dragoons, the First Pennsylvania regiment of cavalry, of which he was colonel. With this troop he served at Valley Forge, through the dismal winter of 1777-8, at the battle of Germantown, on the Hudson River, and in Connecticut, with Wayne in Pennsylvania, and rounded out the full measure of his service with General Greene in his southern campaign at the close of the war. In acknowledgment of his indefatigable energy and bravery, before the war closed, in 1782, he was brevetted brigadier-general. After the successful termination of the war he quietly

resumed his mercantile pursuits in Philadelphia. In 1792 he was Register and Recorder of Chester County, Penn., and was Commissioner of Loans of Pennsylvania for a few years before his death. Duly allowing for the over excitability of the times, the eulogy of a fellow patriot quoted by Irving (*Life of Washington*, 111, ch. 30) remains a no uncertain estimate of esteem: "There is not in the whole range of my friends, acquaintance, and I might add, in the universe", exclaims Wilkinson, "a man of more sublimated sentiment, or who combined with sound discretion a more punctilious sense of honour, than Colonel Moylan." General Moylan was one of the organizers of the Friendly Sons of St. Patrick in Philadelphia in 1771, and was its first president. One of his brothers became Bishop of Cork, Ireland, and another, John, acted during the war as United States Clothier General.

JARVIS KEILEY.

Mozambique (MOÇAMBIQUE), the former official and still usual name given to the Portuguese possessions on the eastern coast of Africa opposite the island of Madagascar. Portuguese East Africa extends from Cape Delgado (10° 41' S. lat.) to the south of Delagoa Bay (25° 58'), that is about twelve hundred miles. It is bounded on the north by German East Africa; on the east by the Mozambique Channel; on the south by the Indian Ocean, and on the west by British South and Central Africa. It is the second largest Portuguese colony, its area approximating 293,000 square miles (that of Portuguese Angola is about 400,000); its population is between two and three millions. The coasts, in general low and marshy, are intersected here and there by rivers which terminate in almost every instance in muddy deltas or estuaries choked with sand. The low-lying tract between the Limpopo River and the delta of the Zambesi is barren, sprinkled with lagoons, malarial, and infested by the terrible tsee-tsee fly, which renders cattle-raising, the one industry otherwise suited to parts of this area, impossible. Between the Zambesi and the Rovuma the soil is very fertile, especially in the basin of the former river, where the land is fertilized by periodical inundations and produces abundant crops. The climate of the regions along the coast is torrid, unhealthy, and subject to sudden and great variations; the mean annual temperature is very high (76° at Beira). As one proceeds inland, the soil rises gradually, terrace over terrace, attaining a great altitude in the mountains which border on Lake Shirwa. In the interior both soil and climate are favourable to cultivation and European life; the chief crops are millet, maize, rice, wheat, sesame, earth-nuts, sugar-cane, cocoa, and tobacco. The large forests of the interior yield ebony, sandalwood, a number of other valuable timbers, and india-rubber. Besides an unusual variety of game, the fauna include the elephant, antelope, buffalo, lion, leopard, and, in certain districts, the rhinoceros and the hippopotamus. The mineral deposits, including coal, iron, and gold, are of exceptional importance, but not yet fully investigated.

Long before the arrival of the first European explorers, the Arabs, taking advantage of the regularity of the monsoons which greatly facilitated their voyages, carried on a brisk commerce with this portion of East Africa, and were in possession of the island of Mozambique when it was discovered by Vasco de Gama in 1498. Sofala had been already discovered by Covilham, another Portuguese, in 1489. The Portuguese had at first to contend with the fierce opposition of the Arabs who dominated all the adjacent country. In 1505 Albuquerque established at the mouth of the Sofala River the first European settlement. Vasco de Gama captured the island of Mozambique in 1506, and thanks to his exertions and those of other Portu-

guese captains (Saldanha, Almeida, and Tristão da Cunha) the neighbouring country was quickly brought under Portuguese rule. Although the Portuguese sent an expedition up the Zambesi about 1565 and occupied Tete in 1632, they seem to have paid scant attention to the interior. In 1607 and 1608 the Dutch made unsuccessful attempts on Mozambique, but in 1698 the resumed attacks of the Arabs, supported by the Sultan of Mascote, reduced the Portuguese territory to the country south of Cape Delgado. The waning political importance and power of Portugal rendered efficient colonization and control impossible. To the great feebleness of the authorities at home is due the late continuation of the slave trade between Mozambique and Madagascar, which was carried on surreptitiously until 1877. The discovery of gold in the interior of Africa about 1870 turned the tide of prosperity again in favour of Mozambique, as its ports were the natural outlets for the Transvaal and the more northern territories.

The explorations of Serpa Pinto in 1877 and subsequent years also led Portugal to take a keener interest in its possessions. In 1875 the dispute between England and Portugal for the possession of Delagoa Bay was decided by the arbitrator Marshal MacMahon, in favour of Portugal. The result of a subsequent collision between English and Portuguese claims was less favourable to Portugal. According to the modern theory of *hinterland*, Portugal claimed dominion over the territory situated between her possessions on the east and west coasts of Africa; but when in 1889 England proclaimed its protectorate over Matabeleland, Mashonaland, Nyassaland etc., Portugal, notwithstanding the immense indignation aroused by the occurrence at Lisbon, had to acquiesce. In 1891 lack of capital compelled the Portuguese government to lease with administrative authority a large portion of the colony to the Mozambique and Nyassa Companies; the former controls the Manica and Sofala regions, and the latter the territory enclosed between the Rovuma, Lake Nyassa, and the Lurio River. It is generally accepted that the Anglo-German Secret Treaty of 1898 dealt with the partition of Mozambique in the event that Portugal should be unable to extricate itself from its financial difficulties. The chief exports of Mozambique are rubber, sugar, various ores, wax, and ivory; it imports mainly cottons, hardware, spirits, beer, and wine. Lourenco Marques (9849 inhabitants), the capital of the colony, and Beira are thriving ports. The town of Mozambique (properly San Sebastian of Mozambique), situated on the island of the same name, has diminished greatly in importance since the abolition of the slave trade. The college built by the Jesuits in 1670, which was made the governor's residence after the suppression of the order, is one of the very few buildings of importance.

The early explorers were accompanied on their voyages by Franciscan fathers who founded under Alvarez of Coimbra the first mission in Mozambique in 1500. In 1560, after the arrival of the Jesuits, a glorious future seemed to await the mission, the King of Inhambane and the Emperor of Monomotapa being baptized with numbers of their subjects. The Dominicans also laboured for a period in this colony, their most illustrious representative being João dos Santos (d. 1622), whose work, "*L'Ethiopia oriental e varia historia de cousas nataveis do Oriente*", was long authoritative on the geography and ethnology of the country. The Jesuits returned in 1610 and were followed by the Carmelites. The work of evangelization was, however, attended with great difficulties owing to the fickleness of the natives, the opposition of the Mohammedans, the insalubrity of the climate, and the irregular communication with Europe. The powerlessness of Portugal to exercise a firm control and the demoralizing effects of the slave trade resulted in an equally low standard of morals in the case of

both the whites and the natives. In recent years the missionaries were still further hampered by the anti-Catholic policy of the Government. Ecclesiastically speaking, Mozambique is an exempt prelature belonging to the ecclesiastical province of Goa. The prelature formerly included all the territory as far as the Cape, but is now confined to the Portuguese possessions. In 1898 it was again entrusted to the Portuguese branch of the Friars Minor. According to the latest statistics it contains: 12 priests (4 Friars Minor), 13 Sisters, 3500 native Catholics, 11 churches and chapels, 10 stations.

THOMAS KENNEDY.

Mozarabic Rite.—This subject will be treated under the following heads: I. History and Origin; II. MSS. and Editions; III. The Liturgical Year; IV. The Divine Office; V. The Mass; VI. The Occasional Services.

I. HISTORY AND ORIGIN.—The name "Mozarabic Rite" is given to the rite used generally in Spain and in what afterwards became Portugal from the earliest times of which we have any information down to the latter part of the eleventh century, and still surviving in the Capilla Muzárabe in Toledo cathedral and in the chapel of San Salvador or Talavera, in the old cathedral of Salamanca. The name is not a good one. It originated in the fact that, after its abolition in Christian Spain, the rite continued to be used by the Christians in the Moorish dominions who were known as *Mozárabes* or *Muzárabes*. The form *Mosárabes* is also found. The derivation of the word is not quite certain, but the best theory seems to be that it is *musla'rab*, the participle of the tenth form of the verb *'araba*, and that it means a naturalized Arab or one who has adopted Arab customs or nationality, an Arabized person. Some, with less probability, have made it a Latin or Spanish compound, *Mixto-Arabic*. The meanings, which are not far apart, applied entirely to the persons who used the rite in its later period, and not to the rite itself, which has no sign of any Arab influence. The names *Gothic*, *Toledan*, *Isidorian*, have also been applied to the rite—the first referring to its development during the time of the Visigothic kingdom of Spain, the second to the metropolitan city which was its headquarters, and the third to the idea that it owed, if not its existence, at any rate a considerable revision to St. Isidore of Seville. Dom Férotin (*Liber Ordinum*) prefers *Rite Wisigothique*.

Its origin is still discussed, and the various theories have been already set forth under AMBROSIAN RITE (q. v.), CELTIC RITE (q. v.), and GALICAN RITE (q. v.). Suffice it to say that whatever theory applies to the Gallican Rite applies equally to the Mozarabic, which is so nearly identical with it in construction as to leave no doubt of a common origin. The theory of Pinus (op. cit. in bibliography) to the effect that the Goths brought with them from Constantinople and Asia Minor a Greek Liturgy, which, combined with the already existing Romano-Spanish Rite, formed the new rite of Spain, is not founded on more than conjecture. There is no definite information concerning the Spanish variety of the Hispano-Gallican Rite until the end of the sixth and beginning of the seventh century (that is to say, until the period of transition from Arianism to Catholicism in the Visigothic kingdom), and, since the whole of Spain, including the Suevic kingdom in Galicia which had been annexed by the Visigothic king Leovigild, was then under the ecclesiastical jurisdiction of Toledo, it may be presumed that the Toledo Rite was used throughout the whole peninsula.

This had not been the case somewhat earlier. In 538 Profuturus, Bishop of Braga and Metropolitan of the Suevic kingdom, had consulted Pope Vigilius on liturgical matters. Vigilius sent him rather full information concerning the Roman usages in the Mass and in baptism. The Council of Braga (561), held at the time of the conversion of the Arian Suevi to Catholicism, decided (cc. iv, v) that the orders of Mass and baptism obtained from Rome by Profuturus should be exclusively used in the kingdom. This probably continued as long as the Suevi remained independent, and perhaps until the conversion of the Visigothic king Recared to Catholicism in 589. Though until this date the kings and the Teutonic ruling class were Arians, the native Spanish population was largely Catholic, and the rite—which was possibly revised and added to by St. Leander of Seville and the first Council of Toledo in 589, described and perhaps arranged by his brother and successor, St. Isidore (d. 636), and regulated by the Fourth Council of Toledo in 633—was no doubt that previously in use among the Spanish Catholics. This is confirmed by the scanty liturgical decrees of the various Spanish councils of the sixth century. What the Arians used we have no means of knowing, and there is no reason to suppose that, whatever it was, its influence continued after the conversion of Recared and the submission of the Arian bishops. But the rite described by St. Isidore, allowing of course for the modifications and variations of many centuries, is substantially that now known as the Mozarabic.

Dom Marius Férotin, O.S.B. (to whom the present writer is indebted for much help), in his edition of the Mozarabic "*Liber Ordinum*", dismisses the idea of any Oriental origin, and describes it as a purely Western rite, "the general framework and numerous ceremonies of which were imported from Italy (probably from Rome)", while the remainder (lessons, prayers, hymns, etc.) is the work of Spanish bishops and doctors, with additions from Africa and Gaul. Without accepting the Italian or Roman origin as more than a very reasonable conjecture, we may take this as an excellent generalization. There was a period of development during the seventh century under St. Isidore, who was the moving spirit of the Council of Toledo of 633, Eugenius III of Toledo (646-57), to whom the chant known as "Melodico" or "Eugeniano" is attributed, St. Ildefonsus of Toledo (657-67), to whom certain masses are attributed, and St. Julian (680-90), who, according to his biographer and successor, Felix, wrote a Mass-book "*de toto circulo anni*", and a book of collects, as a revision of the old books with additions of his own. But after the Moorish invasion, which began in 710, the Spanish Christians had little leisure for improving their liturgies, and, except for some prayers, hymns, and masses attributed to Abbot Salvus of Albelda (tenth century), nothing seems to have been added to the rite from the eighth to the eleventh century. In 870 Charles the Bald, King of the Franks, and afterwards emperor, wishing to see what the ancient Gallican Rite had been like, had priests sent from Spain to say the Toledan Mass before him. In the latter part of the eighth century, the Spanish Rite had fallen under some suspicion owing to quotations cited by Elipandus of Toledo in support of his Adoptionist theories, and the Council of Frankfort (794) spoke somewhat disparagingly of possible Moslem influence on it. Some of the passages still remain, in spite of Aleuin's suggestion that the original and proper readings must have been *assumptio* and *assumptus*, not *adoptio* and *adoptivus* (or *adoptivus*); but they all can bear an orthodox explanation. It was in consequence of this suspicion that in 924 John X sent a legate (Zanelo, Zannello, or Jannello) to Santiago to examine the Spanish Rite. He reported favourably upon it, and the pope gave it a new approbation, changing only, as

Sr. Moraleda y Estaban says (*El Rito Mozárabe*), the Words of Consecration to the Roman Use. This condition is still observed, but whether that has always been the case since 924 or not, there is no evidence to show. The old Spanish formula is given in the modern books—"ne antiquitas ignoretur", as Leslie says in his notes to the Mozarabic Missal—but the Roman is used in actual practice.

Of the existing manuscripts of the rite, though a very few may possibly be of the ninth century, almost all are of dates between the ratification by John X and the introduction of the Roman Rite in the second half of the eleventh century, during which period the old Spanish Rite held undisturbed possession of the whole of Spain, whether under Christian or Moorish rule. During these centuries the Christian kingdoms were gradually driving back the Moors. Besides Asturias and Navarre, which had never been quite conquered, Galicia, Leon, and Old Castile had been regained, and the Kingdom of Aragon had been formed. In 1064 Cardinal Hugo Candidus was sent from Rome by Alexander II to abolish the Spanish Rite, some vague attempts in that direction having been already made by his predecessor Nicholas II, who had also wished to abolish the Ambrosian Rite at Milan. The centralizing policy of the popes of that period included uniformity of liturgical practice. The Spanish kings and clergy were against the change then, and Bishops Munio, of Calahorra, Eximino of Oca, and Fortunio of Alava were sent to Italy with Spanish office-books, including a *Liber Ordinum* from Albelda, and a Breviary from Hirache, to defend the rite. The books were carefully examined by the Council of Mantua (1067), and were pronounced not only free from heresy but also worthy of praise. But in Aragon King Sancho Ramirez was in favour of the change, and on 22 March, 1071, the first Roman Mass was sung in the presence of Cardinal Hugo Candidus and the king in the Monastery of San Juan de la Peña (near Jaca, at the foot of the Pyrenees, and the burial place of the early kings of Aragon). The Roman Rite was introduced into Navarre on the accession of Sancho of Aragon to the throne in 1074, and into Cataluña a little later. Meanwhile Alfonso VI became King of Castile and Leon, and St. Gregory VII became pope. Alfonso, influenced by the pope, by St. Hugh of Cluny, and by his first wife Agnes, daughter of William, Duke of Gascony and Guienne and Count of Poitiers, introduced the Roman Rite into Castile and Leon in 1077. This was resisted by his subjects, and on Palm Sunday, 1077, according to the "Chronicon Burgense", occurred the incident of "El Juicio de Dios". Two knights—"one a Castilian and the other a Toledan", says the chronicle—were chosen to fight "pro lege Romana et Toletana". The champion of the Spanish Rite, Juan Ruiz de Matanzas, who was the victor, was certainly a Castilian, but it is improbable that the champion of the Roman Rite, whose name is not recorded, was a Toledan, and the Annals of Compostella say that one was a Castilian and the other of the king's party. The "Chronicon Malleacense", which alleges treachery, calls the latter "miles ex parte Francorum", and at the later ordeal by fire in 1090 the Roman Rite is called impartially "romano", "frances", or "gallicano". It is said that two bulls, one named "Roma" and the other "Toledo", were set to fight, and there also the victory was with Toledo.

But, in spite of the result of the trials by battle, Alfonso continued to support the Roman Rite, and a Council of Burgos (1080) decreed its use in Castile. In 1085 Toledo was taken and the question of rites arose again. The Mozarabic Christians, who had many churches in Toledo and no doubt in the country as well, resisted the change. This time another form of ordeal was tried. The two books were thrown into a fire. By the time the Roman book was consumed,

the Toledan was little damaged. No one who has seen a Mozarabic manuscript, with its extraordinarily solid vellum, will adopt any hypothesis of Divine interposition here. But still the king, influenced now by his second wife Constance, daughter of Robert, Duke of Burgundy and son of King Robert the Pious of France, and by Bernard, the new Archbishop of Toledo, a Cistercian, insisted on the introduction of the Roman Rite, though this time with a compromise. All new churches were to use the Roman Rite, but in the six old churches, Sts. Justa and Rufina, St. Eulalia, St. Sebastian, St. Mark, St. Luke, and St. Torquatus, the Mozárabes might continue to have their old rite, and might hand it on to their descendants. Flores mentions also the Ermita de S. Maria de Alficeu, which is probably the church of St. Mary which Neale says "disappeared, we know not how, some centuries ago." But the rite still continued in the Moorish dominions, as well as in certain monasteries, apparently, according to Rodrigo Ximenes, Archbishop of Toledo (1210-49), even in the Christian kingdoms.

When King James of Aragon conquered Valencia in 1238, he found there Mozarabic Christians using the old rite, and the same apparently happened when Murcia and all Andalusia except Granada were conquered by Ferdinand III in 1235-51. When Ferdinand and Isabella took Granada in 1492, there were certainly some Mozarabic Christians there, as well as Christian merchants and prisoners from non-Moorish countries, but whether the Mozarabic Rite was used by them does not appear. With the discouragement which began with Alfonso VI came the period of decadence. The civil privileges (*fueros*) of the Toledo Mozárabes, which, though in 1147 Pope Eugene III had definitely put them under the jurisdiction of the bishop of the diocese, included a certain amount of independence, were confirmed by Alfonso VII in 1118, by Peter in 1350, by Henry II in 1379, and by Ferdinand and Isabella in 1480 (later also by Philip II in 1564, by Charles II in 1699, and by Philip V in 1740). But in spite of this the Roman Rite prevailed so much that it was introduced even into Mozarabic churches, which only used the old rite for certain special days, and that in a corrupted form from old and imperfectly understood MSS. This and the dying out of many Mozarabic families gradually brought the rite very low. There was a spasmodic attempt at a revival, when in 1436 Juan de Tordesillas, Bishop of Segovia, founded the college of Aniago (originally a Benedictine house, a little to the south-west of Valladolid), where the priests were to use the Gothic Rite. The foundation lasted five years and then became Carthusian. Thus, when Francisco Ximenes de Cisneros became Archbishop of Toledo in 1495, he found the Mozarabic Rite in a fair way to become extinct. He employed the learned Alfonso Ortiz and three Mozarabic priests, Alfonso Martinez, parish priest of St. Eulalia, Antonio Rodriguez of Sts. Justa and Rufina, and Jeronimo Gutierrez of St. Luke, to prepare an edition of the Mozarabic Missal, which appeared in 1500, and of the Breviary, which appeared in 1502. He founded the Mozarabic Chapel in Toledo cathedral, with an endowment for thirteen chaplains, a sacristan and two *mozos sirvientes*, and with provision for a sung Mass and the Divine Office daily. Soon afterwards, in 1517, Rodrigo Arias Maldonado de Talavera founded the Capilla de San Salvador, or de Talavera, in the Old Cathedral of Salamanca, where fifty-five Mozarabic Masses were to be said yearly. They were later reduced to six, and now the rite is used there only once or twice a year.

When the church of St. Mary Magdalene at Valladolid was founded by Pedro de la Gasca in 1567, an arrangement was made for two Mozarabic Masses to be said there every month. This foundation was in existence when Flores wrote of it in 1748, but is now extinct. At that time also the offices of the titular

saints were said according to the Mozarabic Rite in the six Mozarabic churches of Toledo, and in that of Sts. Justa and Rufina the Mozarabic feast of the Samaritan Woman (first Sunday in Lent) was also observed. Except for the Capilla Muzárabe in the cathedral, all else was Roman. In 1553 Pope Julius III regulated mixed marriages between Mozarabic and Roman Christians. The children were to follow the rite of the father, but, if the eldest daughter of a Mozarab married a Roman, she and her husband might choose the rite to which she and her children should belong, and if she became a widow she might return to the Mozarabic Rite, if she had left it at her marriage. These rules are still in force, and the writer is informed by Dom Férotin that the present Mozárabes are so proud of their distinctive rite, involving, as it does, pedigrees dating back to the eleventh century at least, that no Mozarabic heiress will ever consent to desert her own rite if she should marry a member of the Roman Rite. In the seventeenth and eighteenth centuries the Mozarabic Rite attracted some attention among the liturgical scholars of the period, and certain dissertations were written and texts published, of which more will be said in the section on MSS. and editions. In 1842 all the Mozarabic parishes in Toledo except two, Sts. Justa and Rufina and St. Mark, were suppressed, and their parishioners, something under a thousand in number, were added to those of the two surviving parishes. By the Concordat of 1851 the chaplains of the Capilla Muzárabe were reduced from thirteen to eight, but the continuance of the above two parishes was provided for, and at that time the parochial Mass in these was always Mozarabic. It has almost entirely ceased to be so now, and it is only in the Capilla Muzárabe in the cathedral and in the Capilla de Talavera at Salamanca that the rite can be seen at present—in the former daily (in a High Mass at nine a.m.), and in the latter once or twice a year. Only the Missal and Breviary were published by Ximenes, and only four manuscripts of the "Liber Ordinum" (which contains the services of the Ritual and Pontifical) are known to exist. Hence it is that in all the sacraments except the Eucharist, and in all the occasional offices the Mozárabes now follow the Roman Rite. One effect of the Mozarabic Rite yet remains in the cathedral services of the Roman Rite. According to Simonet (*Historia de los Mozárabes de España*), the *Canto Melódico* or *Eugeniano*, attributed to Eugenius II, Archbishop of Toledo (647–57), is still alternated with the Gregorian plain chant in all the Graduals of the Mass except on ferials, and certain hymns are still sung to the Eugénian melodies. When Jerónimo Romero, choirmaster of Toledo cathedral, wrote his note on the *Canto Melódico* in Lorenzana's edition of the Mozarabic Breviary of 1775, it seems to have been still more extensively used, but in the specimens which he gives (the beginning of the Gradual for Sts. Peter and Paul) the *textus* or *canto firmo* is only a variety of the ordinary plain chant, and the *glossa duplex* and *glossa simplex*, which he calls "Eugenian", seem rather too modern counterpoints for the seventh century.

II. MSS. AND EDITIONS.—Of the existing MSS. of the Mozarabic Rite many, as might be expected, are in the cathedral chapter library at Toledo, but until quite recent times the Benedictine Abbey of Silos, between thirty and forty miles to the south of Burgos, possessed nearly as many. Most of these are now elsewhere, some having been purchased in 1878 by the British Museum, and others by the Paris Bibliothèque Nationale. There are other MSS. in the Royal Library, in the Library of the Royal Academy of History, and in the Biblioteca Nacional at Madrid, in the Cathedral Library at Leon, in the University Library at Santiago de Compostela, and in the chapter library at Verona. It will be seen from the list which follows that nearly all the existing MSS.

come either from Toledo or from the neighbourhood of Burgos. There is also an interesting collection of transcripts, made from 1752 to 1756 under the direction of the Jesuit Father, A. M. Burriel, from Toledo MSS. in the Biblioteca Nacional at Madrid. All the original MSS. are anterior to the conquest of Toledo in 1085, most of them being of the tenth or eleventh century. The arrangement of the books of that period was peculiar. The variable parts of the Mass and the Divine Office, whether sung by the choir or said by the celebrant or the deacon, were usually combined in one book, a sort of mixed sacramentary, antiphonary, and lectionary, usually with musical *neumes* to the sung portions. Most of the MSS. are very imperfect, and it is not quite clear under what name this composite book was known. Probably it was called "Antiphonarium" or "Antiphonale". But such books existed also as antiphoners with choir parts only and sacramentaries with the priest's part only, and the usual modern practice is to call the composite books by the descriptive name of "Offices and Masses". They contain under each day the variables of Vespers and Matins and of the Mass. Sometimes one Mass is made fuller by the addition of some of the invariables, as a model of a complete Mass. The *Missale Omnium Offertorium*, the separate book answering to the Ordinary of the Mass (see Section V, THE MASS), does not exist in any early MS., but there is a *Missa Omnimoda* in the principal Silos MS. of the "Liber Ordinum", which is a model Mass of the type found in that book. The book of "Offices and Masses" was supplemented for the Divine Office by the Psalter, which in its fullest form (as in the British Museum Add. MS. 30851) contained the whole book of Psalms, the Canticles, chiefly from the Old Testament, sixty-seven to a hundred in number, the Hymns for the year, and the "Horæ Canonice." For the Mass it would seem to require no supplement, but the Prophecies, Epistles, and Gospels are found also in a separate book known as "Liber Comitis", "Liber Comicus" or "Comes". The Prayers of Vespers and Matins and the Prayers which follow the *Gloria in Excelsis* at Mass are also found combined in the "Liber Orationum", and the Homilies read at Mass are collected in the "Homiliarum", though some are also given in the composite "Offices and Masses". The occasional services of the Ritual and Pontifical are found in the "Liber Ordinum", which contains also a number of Masses. There is one MS. (at Silos) which contains the Lessons of the now obsolete Nocturnal Office.

The following are the MSS. of the several books: *Offices and Masses*.—(a) Toledo, Chapter Library, 35.4, eleventh century. Contains from Easter to the twenty-second Sunday after Pentecost. Belonged to the parish of St. Olalla (Eulalia) at Toledo. (b) 35.5, tenth or eleventh century, 194 ff. Contains from the first Sunday of Lent to the third day of Easter week. (c) 35.6, eleventh century, 199 ff. Contains from Easter to Pentecost and feasts as far as SS. Just and Pastor (6 Aug.). (d) Madrid, Royal Academy of History, F. 190, tenth or eleventh century, 230 ff. Belonged to the Monastery of San Millán (St. Emiliano) de la Cogolla in the Rioja. (e) Madrid, Biblioteca Nacional, formerly at Toledo (35.2), eleventh century, 121 ff. Contains the Lenten Offices up to Palm Sunday. Colophon "Finitur deo gratias hic liber per manus ferdinandi johannis presbiteri eglise sanctarum juste et rufine civitatis Toleti in mense Aprilis." (f) Silos, eleventh century, paper octavo, 154 ff. (g) British Museum, Add. 30844, tenth century. Contains Offices and Masses for the Annunciation (18 Dec.), St. Thomas, Christmas, St. Stephen, St. Eugenia (27 Dec.), St. James the Less (28 Dec.), St. James the Great (30 Dec., but called St. John), St. Columba (31 Dec.), the Circumcision, Epiphany, St. Peter's Chair (22 Feb.), the

Ascension, and the Sunday after the Ascension. The Mass for the Annunciation is a model Mass with some of the invariable parts inserted. Homilies are inserted in some of the Masses, and the liturgical part is preceded by a collection of Homilies. Belonged to the Abbey of Silos. (h) British Museum, Add. 30845, tenth century. Contains Offices and Masses for the Feast of St. Quiriacus (4 or 20 May), and of Feasts from St. John Baptist (24 June) to St. Emilian (12 Nov.), thirty-seven in all, though not all in their proper order. Belonged to the Abbey of Silos. (i) British Museum, Add. 30846, tenth century. Contains Offices and Masses for Easter Week, followed by the Canticles for the same period, and the Hymns for Easter tide to Pentecost, including the Feasts of Sts. Engratia (16 April), Torquatus and Philip (1 May), and the Invention of the Cross (3 May).

Antiphoners.—There is one MS. which describes itself as "Antiphonarium de toto anni circulo, a festivitate S. Acisli [17 Nov.] usque ad finem", containing the choir parts, but not the priest's part of the Offices and Masses. This is the book known, quite erroneously, as the "Antiphoner of King Wamba", preserved in the Cathedral Library at Leon. It is a vellum MS. of the eleventh century (Era 1107 = A. D. 1069), 200 ff., transcribed by one Arias, probably from a much older book, which perhaps did belong to King Wamba (672-80). Dom Férotin describes it as very complete.

Sacramentaries.—(a) Toledo Chapter Library, 35.3, late tenth century, 177 ff. Contains Masses for the year. In the initial of that for St. Peter's Chair (22 Feb.) are the words "Elenus Abbas Acai indignus scripsit". It belonged to the parish of St. Olalla (Eulalia) at Toledo. Dom Férotin describes it as a Sacramentary, and says that it is complete. An edition by him will soon be published. (b) There is another MS. at Toledo mentioned but with no identifiable number by Burriel, Eguren, and Simonet, which is said by them to contain "Missas omnes tam de tempore quam de sanctis per totum anni circulum". There is a copy of it among the Burriel manuscripts at Madrid, and Eguren ascribes the original to the ninth century.

Psalters.—(a) Madrid, Biblioteca Nacional, formerly at Toledo (35.1), tenth century, 174 ff. Contains the Psalter with antiphons, the Canticles, and the Hymnal. On f. 150 are the words "Abundantius presbyter librum mauro presbytero scriptor" (sic). The prologue of the Hymnal is an acrostic in verse which reads "Mavricus obtante Veraniano edidit". This MS. was used by Cardinal Lorenzana for the Psalter, Canticles, and Hymnal in his edition of the Mozarabic Breviary. There is a copy among the Burriel MSS. (b) British Museum, Add. 30851, eleventh century. Contains Psalter, Canticles, Hymnal, and "Horæ Canonice", the last (though imperfect) being much fuller than the printed Breviary and containing the now obsolete Night Offices, as well as the other Hours and a number of offices for special occasions. It has been edited by J. P. Gilson for the Henry Bradshaw Society. (c) Santiago de Compostela, University Library, Gabinete de Reservados No. 1, dated Era 1093 (= A. D. 1055), "Petrus erat scriptor, Frictosus denique pictor." Contains Psalter, 100 Canticles, and the Night Offices, but not the Hymnal. The Psalter is preceded by a poem addressed by Florus of Lyons to Hyldradus (here called Ysidorus Abbas), Abbot of Novales near Susa in Piedmont (825-7). There is a full description of this MS. in Férotin's "Deux Manuscrits wisigothiques de la Bibliothèque de Ferdinand I". (d) Royal Library, Madrid, 2. J. 5, dated Era 1097 (= A. D. 1059). Contains ninety-nine Canticles nearly agreeing with the Compostela Psalter. There is a formula of confession, in which the names of Queen Sancia and the Infanta Urraca appear, and which contain an extraordinary list of sins. The MS. belonged

in the fourteenth century to the Benedictine monastery of St. Maria de Aniago near Simancas, which in 1436 became for a time a Mozarabic chapter (see Section I. HISTORY AND ORIGIN), then to the Colegio de Cuenca at Salamanca. It is fully described in Férotin's "Deux Manuscrits wisigothiques". (e) A Psalter and Canticles of the tenth century, 122 ff., sold at the Silos sale in 1878, present owner unknown.

Liber Orationum.—(a) British Museum, Add. 30852, tenth century. Contains the *Orationes* at Vespers and Matins and the Collects following the *Gloria in Excelsis* at Mass from Advent to St. John Baptist (24 June), the Temporale and Sanctorale being mixed. (b) Verona, Chapter Library, probably eleventh century. Similar contents to those of the above MS. but continuing to St. Martin (11 Nov.). Printed in Bianchini's edition of the works of Cardinal Tommasi (Rome, 1741). *Lectionary*.—Silos, 1059, 90 ff. Contains lessons for the Night Offices.

Liber Comicus, Liber Comitis, Comes, containing the Prophecies, Epistles, and Gospels used at Mass. (a) Paris, Bibliothèque Nationale, Nouv. Acquis. Lat. 2171, eleventh century. Belonged to Silos from 1067, when it was given to the abbey by Sancho de Tabatiello to 1878. Edited by Dom Morin (Maredsous, 1893). (b) Toledo, Chapter Library, 35.8, ninth or tenth century. Imperfect, containing only from "Dominica post infantum" to the Saturday of the fourth week of Lent. (c) Leon, Cathedral Library. A little earlier than 1071, when it was given to the cathedral by Bishop Pelagius. Begins with the first Sunday of Advent and ends with what it calls "the twenty-fourth Sunday". According to Dom Férotin it is rich in Votive Masses, but incomplete in much else. (d) Madrid, Royal Academy of History, No. 22 (old number F. 192), dated Era 1111 (= A. D. 1073). Written by Petrus Abbas. Belonged to the Benedictine abbey of San Millán de la Cogolla.

Homiliarium.—(a) Toledo Chapter Library, 131 ff., mentioned by Burriel and Simonet. A copy of 1753 is among the Burriel MSS. at Madrid. (b) Paris, Bibliothèque Nationale, Nouv. Acquis. Lat. 2176, eleventh century, 390 ff. Contains Homilies from Christmas onward. Formerly belonged to Silos. (c) Nouv. Acquis. Lat. 2177, eleventh century, 770 ff. Contains homilies from Epiphany to Christmas. Belonged to Silos. (d) British Museum, Add. 30853, eleventh century, 324 ff. Contains Homilies and a Penitential.

Liber Ordinum.—(a) Silos, dated Era 1090 (= A. D. 1052), 344 ff. Copied by Bartolomeus Presbyter for Domingo, Abbot of San Prudentio de Laturce in the Rioja. Dom Férotin conjectures that it is the very copy sent in 1065 to Alexander II. San Prudentio was a cell of Albelda. Of the four books sent to Rome one was "Liber Ordinum majoris Albaldensis Cenobii", and one of the deputation, Eximino of Oca, was a personal friend of St. Dominic of Silos. The MS. contains a very full collection of the Ritual and Pontifical Offices and a large number of votive and other Masses. Fully edited and described by Dom Férotin in his "Liber Ordinum". (b) Silos, dated Era 1077 (= A. D. 1039). Written by Joannes Presbyter. Contains Calendar, Baptism, Visitation etc. of the Sick, Commendation of the Dead, Matrimony, a large collection of prayers and blessings, and Votive Masses. Edited by Dom Férotin. (c) Silos, eleventh century, 142 ff. Contains also Hours, which are offices for every hour of the twelve, as well as *Ordo Peculiaris* (Aurora), *ante Completam*, *ad Completam*, *post Completam*, *ante lectulum*, and *in nocturnis*. Edited, except the Hours, by Dom Férotin. (d) Madrid, Royal Academy of History, No. 56 (old number F. 224), eleventh century, 155 ff. Belonged to San Millán de la Cogolla in the Rioja. Contains a Ritual and a number of Masses. Edited by Dom Férotin.

The descriptions of all the above MSS. (except

those in the British Museum, which the writer has examined for himself) are worked out from those given by Férotin, Ewald and Loewe, Simonet, Eguren, and the list of the Burriel transcripts in *Fernandes de Navarrete's* "Colección de Documentos" (see bibliography). Very full descriptions of the principal MSS. will appear in Dom Férotin's forthcoming edition of the Mozarabic Sacramentary. The lists of Toledo MSS. given by Lorenzana and Pinus are too vague for purposes of identification. The four MSS. (Add. 30847-30850), described in the Catalogue of Additional Manuscripts of the British Museum for 1878 as Mozarabic, are all Roman, three being Romano-monastic and one secular.

Printed Editions: *Missale Mixtum* or Complete Missal.—Cardinal Ximenes's edition, Toledo, 1500, fol. Alexander Leslie's edition, Rome, 1755, 4to. Cardinal Lorenzana's edition, with Leslie's notes and additional notes by F. Arevalo, Rome, 1804, fol. Reprint of Leslie's edition in Migne, P. L., LXXXV, Paris, 1850.

Missale Omnium Offerentium, containing, besides the "Missal Omnium Offerentium", the Lesser Hours and the Commons. Edition by Lorenzana and F. Fabian y Fuero. Angelopolis (Los Angeles, Mexico), 1770, fol. Reprint, Toledo, 1875, fol. The "Missal Omnium Offerentium" is given also in La Bigne's "Bibliotheca Veterum Patrum", 1609, 1618, 1654; in J. M. Neale's "Tetralogia Liturgica", 1849; in Hammond's "Ancient Liturgies", 1878; translated and edited by T. Kransfelder in Reithmayer's "Bibliothek der Kirchenväter", No. 215, 1869, and in J. Perez's "Devocionario Mozárabe", Toledo, 1903.

Breviary.—Cardinal Ximenes's edition, Toledo, 1502, fol. Cardinal Lorenzana's edition, Madrid, 1775, fol. Reprint in Migne (P. L., LXXXVI), Paris, 1850.

Liber Ordinum. Edited by Dom M. Férotin in Cabrol and Le Clerc's "Monumenta Ecclesie Liturgica", V, Paris, 1904, quarto.

Liber Oratorium.—Printed in Bianchini's edition of the works of Cardinal Tommasi, Rome, 1741, fol.

Psalter, Canticles, Hymnal, and Hours.—In Lorenzana's Breviary of 1775 and the Migne reprint, from the Toledo manuscript. In the Henry Bradshaw Society's Publications, vol. XXX, edited by J. P. Gilson, London, 1905, from the British Museum MS.

Liber Comicus.—Edited by Dom G. Morin from the Paris MS. in "Anecdota Maredsolana", I, Maredsous, 1893.

III. THE LITURGICAL YEAR.—In the present printed books, the offices are divided after the Roman fashion into "Officium Canonicum per Annum" (answering to the "Officium de Tempore") and the "Sanctorale". As in the Roman books, the fixed feasts from Christmas Eve to the Epiphany (except that the Breviary puts two in the "Sanctorale") come in the "de Tempore", and the Missal, but not the Breviary, includes also St. Clement (23 Nov.), St. Saturninus (29 Nov.), St. Andrew (30 Nov.), St. Eulalia (10 Dec.), the Annunciation (18 Dec.), and St. Thomas the Apostle (21 Dec.) in the same part, though several intermediate feasts come in the "Sanctorale". In the manuscripts (e. g. in the two *Libri Oratorium*, Add. MS. 30852 and the Verona MS. printed in Bianchini's edition of Thomasius, which has a very complete sequence of the year) the two parts are not distinguished, and the whole set of days, fixed and moveable, are given in one series. The "Officium per Annum" of the modern books begins with the first Sunday of Advent, as in the Roman, but the "Sanctorale" begins with Sts. Julianus and Basilissa (7 Jan.), and ends in the Missal with St. Eugenia (12 Dec.), while the Breviary includes in it also Sts. Justus and Abundus (16 Dec.), the Annunciation (18 Dec.), St. Thomas the Apostle (21 Dec.), the Translation of St. James the Great (30 Dec.), and St. Columba (31 Dec.). There are six Sundays of Advent, as there

were in the Gallican and are now in the Ambrosian. The key day for Advent Sunday is therefore St. Martin (11 Nov.), as it is in the Ambrosian Rite, and, as according to the Council of Mâcon (581), it was in the Gallican, but Advent Sunday is that next after, not, as in the Roman, that nearest to the key day. Thus Advent Sunday may be on any day from 12 to 18 Nov.

The four feasts which follow Christmas Day are now the same as in the Roman Rite, including St. Thomas of Canterbury. The next day is the Translation of St. James the Great and the last day of the year is St. Columba, Virgin and Martyr, though the Calendar of the Missal includes also St. Silvester. But, according to the Calendar of the Breviary, the twenty-ninth is "Jacobi Fratris Domini", and there is an office for his feast, as well as a direction to use the Common of one pontiff martyr for St. Thomas of Canterbury, and for the thirtieth there is an Office for the feast (translation) "Sancti Jacobi Fratris Sancti Joannis". In the Missal St. James the Less is not mentioned here in the Calendar, but the Mass of the twenty-ninth is his; there is nothing of St. Thomas, and the table of contents of the Ximenes Missal refers to the Mass of that day as "in translatione Jacobi Zebedei", which it certainly is not. There is no Mass for the Translation of St. James the Great in the printed books, though that for his martyrdom (25 July) is given as the specimen full Mass "Omnium Offerentium" instead of the Ordinary; but in Add. MS. 30844 (tenth century) there is one which follows the Mass of St. James the Less, though by mistake it is called by the name of St. John the Evangelist. In that MS. the days after Christmas are St. Stephen, St. Eugenia, St. James (*Frater Domini*), St. James the Great, St. Columba, leaving one day unoccupied. In Add. 30850, a tenth-century *Liber Orationum*, "De Alisone Infantum", which according to the present calendars would occupy that day (28 or 29 December), is given next after the Epiphany. In the Hymnal printed with Lorenzana's Breviary, the vacant day is occupied by St. John the Evangelist, and the rest are as in Add. 30844. The Circumcision is on 1 January. If a Sunday occurs between that day and the Epiphany it is "Dominica ante Epiphaniam". The Mass is that of the Kalends of January (i. e. New Year's Day). The three days before the Epiphany are "Jejunia in Kalendis Januarii", said to have been set apart as fasts in *contemptum superstitionis gentilium*, just as fasts were forbidden during Advent *ad impietatem Priscillianistarum*, who, denying the Incarnation, fasted at that season. There are analogous instances of this sort of fasting (or not fasting) *ad lites et contentiones* in the Byzantine practice of not fasting on certain days before Lent begins because of the Artsiburion fast of the Armenians and the Ninevite Fast of the Jacobites and Nestorians. After the Epiphany (called also "Apparitio Domini") to Lent nine Sundays are given, the last being "Dominica ante Cineres", the rest being numbered one to eight "Post octavam Epiphaniæ".

Ash Wednesday (*Feria quarta in capite jejuniis*) is an evident late Roman borrowing, rather clumsily inserted, for the Sunday that follows, though called "Dominica prima Quadragesimæ", has a Mass and an Office in which *Alleluia* is used, and at Vespers there is the well-known "Endless Alleluia" (*Alleluia Perenne*) hymn. In the Hymnal this hymn is entitled "Ymnus in carnes tollendas". The true liturgical Lent does not begin till the Monday after Ash Wednesday. The old Mass Lessons of the Sundays in Lent have been disturbed in their order in consequence of the Gospel for the first Sunday (Christ in the Wilderness) being given to Ash Wednesday, and that of the second (The Samaritan Woman) is given to the first, that of the third (The Healing of the Blind Man) to the second, while, so as to keep the Gospel "Jam autem die festo mediante" for Mid-Lent Sunday, that of the fifth (The Raising of Lazarus) is given to the third and a new

Gospel (The Good Shepherd) is given to the fifth. The sixth is Palm Sunday, called only "Dominica in Ramis Palmarum", but including, between the Prophecy and Epistle at Mass, the *Traditio Symboli* in the form of a "Sermo ad Populum". On Maundy Thursday there occurs the same process of removing one of two consecrated Hosts to the Altar of Repose (called *monumentum* and *Sepulchrum*) as in the Roman Rite, and there is a service *ad lavandos pedes*, in both cases with different words. The Washing of the Feet takes place "clausis ostiis et laicis omnibus foris projectis", and the feet of certain priests are washed by the bishop and dried by the *archipresbyter*. "Postea ad cenam conveniunt." On Good Friday there is a penitential service "ad Nonam pro indulgentia", which consists largely of *preces* interspersed with cries of various cases of the word "indulgentia" many times repeated, and contains passages similar to the *Impropria* of the Roman Rite, as well as lections, including the Passion according to St. Matthew. It is the remains of the solemn reconciliation of penitents, and is mentioned by the fourth Council of Toledo (633), canon vi. This is followed by the Adoration of the Cross and the Procession and Communion of the Presanctified. The Easter Eve services are similar to those of the Roman Rite: the New Fire, the Easter Candle, the Prophecies (of which there are only ten, seven of which agree more or less with those of the Roman Rite, though not all in the same order), and the Blessing of the Font. But the words used throughout are very different. Even the "Exultet" is not used, but another hymn of similar import. Before the "Benedictio Cerei" there is a "Benedictio Lucernæ", and the Litany is used for the two processions, to the Font before the Blessing and back again after it.

From Easter to Pentecost there is no peculiarity except that the numbering of the Sundays includes Easter Day and that the four days before Whit-Sunday are fasts. Formerly (e. g. in the time of St. Isidore) these fasts came after Pentecost, though they answered to rogation or litany days. Leslie conjectures that the alteration was made because of the Whit-Sunday baptisms. There is no Blessing of the Font on the vigil of Pentecost, but there are allusions to baptism in the services of the vigil and the day itself. The following Sunday only commemorates the Holy Trinity in certain of the prayers at Mass (for which there is a direction to use those of Palm Sunday which have allusions to the Trinity, instead of those for the Sunday, which are to be transferred to the following Tuesday), in the title "in die Sanctissimæ Trinitatis", and in the hymns in the Breviary Office. Otherwise the day, as far as there is anything definite about it, is treated as the Octave of Pentecost and the allusions are to the Holy Spirit. Corpus Christi is kept on the following Thursday, and the Mass and Office, though naturally enough influenced by the Roman propers, are composed on a purely Mozarabic plan. In the Missal seven Sundays after Pentecost have Masses, as well as the Sunday before the fast of the Kalends of November. In the Breviary the Sundays after Pentecost are only three. There is a direction in the Breviary that if there is no Feast on any Sunday during that season, one of these three offices must be used. Two sets of three-day fasts occur in this season, one before the Feast of St. Cyprian (13 Sept.) and one before that of St. Martin (11 Nov.). They have nothing to do with either St. Cyprian or St. Martin, whose days only serve as key-days to them (cf. Holy Cross and St. Lucy, as key-days to the September and December ember-days). The November fast is called "jejunia Kalendarum Novembrium". They are really days of Litany or Rogation, and are both mentioned by St. Isidore; the September fast is evidently mentioned by the fifth Council of Toledo (can. i), though obviously by a mistake it calls it "dies Iduum Decembrium", and the November one by the

Council of Girona. In the *Sanctorale* there are of course a large number of Spanish saints who either do not occur at all or receive only cursory mention in the Roman Calendar, but there are also many that are common to the whole Church, and in the modern books a number of feasts, some of which were instituted after the period of the MSS., have been added.

There are two modern forms of the Calendar. In that prefixed to the Breviary a rather small number of days are marked, hardly any (as in the Ambrosian Calendar) during the possible Lenten period, but offices or references to the Common are given in a large appendix for a great number of other saints. In that prefixed to the Missal all these days are put in one series, as their Masses are in the body of the book. There are a good many discrepancies in the existing MS. calendars, and it is not always quite easy to determine the exact day of some of the older feasts, but now most of the days which are common to both have been assimilated to the Roman. The Annunciation is kept twice, on 25 March and on 18 December. The last, called "Annunciatio S. Mariæ Virginis de la O", is really the "Expectatio Partus B. M. V." Its name is referred to a curious custom in the Toledan Use, according to which the whole choir sing a loud and prolonged O at Vespers on that day, to signify, it is said, the eager desire of the saints in Limbo, the Angels in Heaven, and of all the world for the birth of the Saviour. This or the Antiphons known as the "Great O's" may be the cause of the name, which is known outside Spain. The tenth Council of Toledo (656) ordered the Annunciation to be kept on that day, because 25 March came either in the Lenten or Easter period, and thus was unsuitable, and shortly afterwards St. Ildefonsus, with reference to this decree, calls it "Expectatio Puerperii Deiparæ". In the printed Missal the same Mass is ordered also for 25 March, but no Office is given in the Breviary. (Cf. the Ambrosian custom of keeping the Annunciation on the sixth Sunday of Advent for the same reason.) Sometimes there are other disagreements between the modern Missal and Breviary. Thus, the Decollation of St. John Baptist is given for 29 Aug. (the Roman, and also the Byzantine day) in the Missal, but for 24 Sept. (the old Mozarabic day, as appears from the MSS.) in the Breviary. In both, 1 May is Sts. Philip and James, and the Mass is the same, *mutatis nominibus*, as that of Sts. Peter and Paul, while the Office is similar to that of Sts. Simon and Jude. But in the MSS. St. Philip alone is mentioned, St. James the Less being, as we have seen, already provided with a day in Christmastide, not only in them but also in the printed books. But 1 May is also the feast of St. Torquatus and his companions, the Apostles of Spain, who naturally eclipse the other Apostles. The Sunday before the Nativity of St. John Baptist is kept as "Dominica pro adventu S. Joannis Baptistæ". As its position with regard to the general sequence of Sundays is variable, its Mass and Office are given in the *Sanctorale*. The classification of feasts is very simple. There are Principal Sundays, which are those of Lent and Advent, and of course Easter Day and Whit-Sunday. Feasts are "sex capparum", "quatuor capparum", and "novem lectionum", the last being also called "duarum capparum". The distribution of these titles is occasionally rather arbitrary, and the Missal and Breviary do not always agree. If a feast comes on a Principal Sunday it is transferred to the next day, unless that is a greater feast, when it is put off to the next free day. If two equal feasts fall on the same day (the example given is Sts. Philip and James and St. Torquatus), the office is that of the saint who has a *proprietas* (proper), unless the other is the *Vocatio* (patronal feast) of the church, in which case the one with a proper is transferred. If a feast comes on an ordinary Sunday, the

Sunday is omitted (*quia satis habebit locum per annum*) and the feast is kept. During the Octaves which are kept "secundum Regulam Gregorianum", any vacant day is of the Octave, but the Office is not said *solemniter* except on the Octave day. If a greater feast is followed by a lesser one, the Vespers is of the greater but the last *Lauda*, with its prayer, is of the lesser. These rules, which do not differ in principle from those of the Roman Rite, are prefixed to the printed Breviary. Their comparative simplicity is probably more apparent than real.

IV. THE DIVINE OFFICE.—The present Mozarabic Divine Office differs from all others in several points. As a general rule, which applies to every other rite, Eastern or Western, the Divine Office may be defined as the recitation of the Psalter with accompanying antiphons, lections, prayers, canticles, etc., and the nucleus is the more or less regular distribution of the Psalter through the Canonical Hours, generally of one week. In the Mozarabic Rite there is now no such distribution of the Psalter. Psalms are used at all the Hours except Vespers—when, except in fasting time, there are none—but they are as a rule fixed psalms. In the first three weeks of Lent and during the three-day fasts before the Epiphany, St. Cyprian's Day, and St. Martin's Day, and the four-day fast before Pentecost, there are three selected psalms (or sometimes one or two psalms divided into three) at Matins, Terce, Sext, and generally at None, and usually one selected psalm at Vespers, but there is no consecutive order; some psalms are repeated many times, while others are omitted altogether. In the week after the first Sunday after the Epiphany, psalms i . . . xxi, xxiii, xxiv are said consecutively at Matins and Terce, three psalms or divisions of psalms at each until the Thursday, two at Terce on the Friday, and none except the usual fixed psalms on the Saturday. In the MSS. (e. g. in the Psalter in Add. MS. 30851) there are indications of a more regular distribution of the psalms. At Matins, which is a morning and not a night Office, there are no lessons like those of the Roman Rite and its variants, but a certain similarity of construction exists in the sets of three *Antiphonæ* followed by a responsory, which sets, though normally there is only one, are increased to two, three, four, and even five on certain days, though this increase is rather capricious and inconsistent. The Silos Lectionary of 1059 consists of lessons for the now obsolete Night Office; such lessons as there are now occur at Lauds, where there is one variable with the day, which is sometimes called *Prophetia*, and at Prime, Terce, Sext, and None, where there are two short Lessons, a *Prophetia* from one of the Prophets or from the Apocalypse and an *Epistola* from one of the Epistles. These have about four variations with the seasons, except during the fasts, when there are long additional lessons at Terce, Sext, and None (cf. the lessons at Terce during Lent in the Ambrosian Rite), varying every day and also of varying number. Another peculiarity is the existence of an extra hour, called *Aurora* (also *Ordo Peculiaris*), before Prime. In a *Liber Ordinum* at Silos, besides the usual Hours and this *Ordo Peculiaris*, Offices are given for all the intermediate hours of the twelve, as well as *ante Completæ*, *post Completæ*, and *ante Lectulum*. Vespers, Matins, and Lauds are very variable, but there is much less variability in the Lesser Hours and Compline. A considerable part of the Office is made up of *responsoria*, constructed on similar principles to those of the Roman Rite, but called by the various names of *Antiphona*, *Lauda*, *Sono* (or *Sonos*), or *Matutinarium* according to their position in the Office. (*Antiphona* also means the antiphon of a psalm or canticle, which is of the same form as in the Roman Rite.) They vary in form, but the general plan is: Verse, Response, Verse, repetition of first Response,

Gloria, second repetition of Response or of first Verse and Response. The first *Lauda* at Vespers and the *Sono* are generally without the Gloria and the second repetition of the Response. These various *responsories* and also the psalms, canticles, etc. are generally followed by *Orationes*, which are usually founded on them, with or without special reference to the day or season.

The construction of the Hours is as follows: Before every Hour except Lauds, which follows on after Matins: Kyrie eleison, Christe eleison, Kyrie eleison; Pater Noster; Ave Maria, are said secretly, kneeling. Then, standing, in nomine D.N.J.C. lumen cum pace. R. Deo gratias. V. Dominus sit semper vobiscum. R. Et cum spiritu tuo. This elongated form of the Dominus vobiscum is said very frequently after collects and *responsories* and in various other places. The form of the Gloria, which also occurs very frequently, is: Gloria et honor Patri et Filio et Spiritui Sancto in sæcula sæculorum. Amen.

Vespers (*Ad Vesperos*).—(1) *Lauda* followed by its *oratio*. Alternative names are *psalmus* and *vesperstinum*, and the words are nearly always from the psalms. This form of *Lauda* has no Gloria. (2) *Sono* on Sundays and feasts, but not on ferials except in paschal time. This is also without Gloria. (3) Alleluia, followed by an *antiphona* with Gloria. Sometimes there are two *antiphonæ*, each followed by its *oratio*. In Lent, on the fasts, and in the week after the Octave of the Epiphany, a selected psalm with its antiphon takes the place of this *antiphona*. (4) Second *Lauda*, with Alleluias interspersed in rather variable fashions, with Gloria. The *Regula* in the beginning of the Breviary has this definition: "*Antiphona est quæ dicitur sine Alleluia; et Lauda quæ cum Alleluia dicitur*", but this is not an exhaustive definition, and, as in the Roman Rite, Alleluia is not used in Lent. (5) Hymn. This of course varies with the day. There is a great wealth of hymns in the Mozarabic Breviary. (6) *Supplicatio*, a Bidding Prayer generally beginning "Oremus Redemptorem mundi D.N.J.C., cum omni supplicatione rogemus", and continuing with a clause applicable to the day, with response: "Præsta æternæ omnipotens Deus", and Kyrie eleison, Christe eleison, Kyrie eleison. (7) *Capitula*, a prayer of the diffuse Gallican type, often embodying the idea of the *Supplicatio*. (8) Pater noster, divided into petitions with a response of Amen to each except "Panem nostrum etc." when it is "Quia Deus es", and followed by an occasionally varying *Embolismus*. (9) *Benedictio* in four clauses with Amen after each, and preceded by "Humiliate vos ad benedictionem". (10) Third *Lauda*, with Gloria. Sometimes there are more than one of these, each followed by an *oratio*. On feasts *sex capparum* the altar is censured while this *Lauda* is sung. (11) Then follow Commemorations which are in the form of a short *Lauda* and *oratio*. (12) Dismissal: "In nomine D.N. J.C. perficimus in pace. R. Deo Gratias." The *orationes* at Vespers, unlike those at Matins and Lauds, begin immediately without "Dominus sit semper vobiscum". Each has two Amens, one before and one after the final clause, "Per misericordiam etc."

Compline (*Complectoria*).—(1) Ps. iv, 7-10, followed by three Alleluias. (2) Ps. cxxxiii, followed by three Alleluias. (3) Six selected psalms and other verses. (4) Hymn, "Sol Angelorum respice", with Ps. xii, 4, as versicle and response. (5) Ps. xc. (6) Ps. xc., 5, and Ps. cxxxiii, 3-5, with "Memor esto mei Domine" as response to each verse, and Gloria. (7) Hymn, "Cultor Dei memento". (8) Three *Supplicationes* of similar form to that at Vespers. (9) Pater noster, with Embolismus. (10) *Benedictio*. (11) Dismissal, as at Vespers. (12) *Commemoratio*. Ps. xvi., 8, 9, as *Lauda*, followed by an *oratio*. (13) "In nomine D.N.J.C. in hac nocte dormiamus et requiescamus in pace. R. Deo Gratias". There are a

few additions on Saturdays, the principal Feasts, in Lent (when there is also a short "Ordo ante Completoria"), and "De traditione Domini" (Passiontide) after the psalms, some variant hymns, and "Miserationes" with variant *capitula* and *Benedictiones* for each day of the week, and for the "Traditio Domini".

Matins (*Ad Matutinum*).—The week-day form is: (1) Antiphon of Our Lady, *Ave Regina Caelorum*. (2) In nomine D.N.J.C. etc., as before the other Hours. (3) Generally Ps. i with a variable antiphon (in the Roman sense) before and after it, and an *oratio*. Sometimes Ps. iii is used here (e. g. during Lent and on other fasts and during Paschal time), and sometimes Ps. lvi. (4) The *Antiphonæ*. These are in sets of three *antiphonæ* and a *responsorium*. The last only differs from the *antiphonæ* in name. To each is appended its *oratio*. During the first three weeks of Lent and the fasts of Epiphany, Pentecost, St. Cyprian, and St. Martin, and on four days of the week after the Octave of the Epiphany, three varying psalms with antiphons and *orationes* followed by a *responsorium* and *oratio* take the place of the *antiphonæ*. There is usually only one set of *Antiphonæ* etc., but there may be (e. g. on the Feast of Sts. Fructuosus, Augurius, and Eulogius) as many as five. On Sundays *Matins* begins with the hymn "Æterne rerum conditor", and, except during Paschal time (when only Ps. iii is said), there are three psalms (iii, l, and lvi) with their *orationes*, instead of only one of these.

Lauds (*In Laudibus*) follows immediately on *Matins* with no preliminary except "Dominus sit semper vobiscum". Its order is: (1) A variable Cantic from the Old and occasionally from the New Testament, with an antiphon before and after it. Sometimes an *oratio* follows. On Christmas Day the *Magnificat* is said in addition to the first Cantic and on the Annunciation instead of it. (2) On Sundays and feasts, the Cantic "Benedictus es Domine Deus Patrum nostrorum" (Daniel, iii, 52 sq.), which includes a very much compressed form of the *Benedicite*. It is sometimes followed by an *oratio*. On ferials an *antiphona* or *responsorium*, called *Matutinarium*, takes the place of this cantic. (3) The *Sono*, generally the same as that at Vespers. This, as at Vespers, is not used on ferials, except in Paschal time. (4) The *Laudate* Psalms (cxlviii, cxlix, cl) preceded by a variable *Lauda*. On some ferials only Ps. cl is ordered. (5) The *Propheta*, a lection from the Old Testament, or in Paschal time from the Apocalypse. (6) The Hymn of the day. (7) *Supplicatio*, as at Vespers. (8) *Capitula*, as at Vespers. (9) *Pater noster* and *Embolismus*, as at Vespers. (10) *Lauda*, as at Vespers. (11) *Benedictio*, as at Vespers. The Vesper order of these last two is reversed. The last six are as a rule a different set from those at Vespers. (12) *Commemorationes*, as at Vespers. (13) *Dismissal*, as at Vespers. In Lent and in the other fasts, *Lauds* begins with Psalm l and its antiphon. On these occasions Ps. iii is used at *Matins*.

Aurora.—A very simple office, without variations, said before *Prime* only on ferials. (1) Ps. lxi, cxviii, pts. 1-3, under the one antiphon, "Deus in adiutorium etc." (2) *Lauda*. (3) Hymn "Jam meta noctis transit", with its versicle, of which there are three variants. (4) *Kyrie eleison* etc. (5) *Pater noster* with *Embolismus*, said as at Vespers. (6) *Preces*, a short litany for all sorts and conditions of men. There are two forms of this.

Prime, Terce, Sext, Nona.—These are constructed on the same plan, and may be taken together. The order is: (1) The Psalms. At *Prime*, seven (lxvi; cxliv, 1-12; cxliv, 13-21; cxli; cxviii, pts. 4-6); at *Terce*, four (xciv, cxviii, pts. 7-9); at *Sext*, four (liii; cxviii, pts. 16, 17, 18); at *Nona*, four (cxlv; cxli; cxlii; cxliii), in each case under one antiphon. (2) *Responsorium*, varying with the day. These variations are chiefly "commons" of classes of saints and for

Lent, Advent, Christmas, and Easter. The Psalms and *Responsoria* are without *orationes*. (3) *Propheta*, a lection from the Old Testament or Apocalypse. (4) *Epistola*, a lection from the Epistles. At *Prime* these lections do not vary and are very short: at *Terce*, *Sext*, and *Nona* there is more variety, and during Lent and on the fasts, when these Hours are differently arranged, there are very long lections. (5) *Lauda*, with Alleluia or "Laud tibi etc." (6) Hymn. There are a few variants for different seasons in each hour. (7) At *Prime* on Sundays and Feasts here follow the *Te Deum*, *Gloria in Excelsis*, and *Credo*; on ferials, instead of the first two, the *Benedictus es Domine Deus* (Dan., iii) and the *Miserere* (Ps. l) are said. At the other three Hours the *Clamores*, short supplications for mercy and pardon (a different set for each Hour), are said here. (8) *Supplicatio*, as at Vespers. (9) *Capitula*, as at Vespers. (10) *Pater noster* etc., as at Vespers. (11) *Benedictio*, as at Vespers. The last four have only a few variants, and generally have reference to the usual events commemorated at the Hours. On the fasts and in the week after Epiphany there are special lessons varying in number, and these are generally followed by three psalms, with their antiphons and *orationes* and a *responsorium* with its *oratio*, as at the *Matins* of those seasons. Then follow *Preces*, the Hymn, *Capitula*, and the rest as on the other days.

At the end of Vespers, Compline, and *Lauds* certain fixed *Commemorationes*, appropriate to the Hour, are said, and after Compline and the Lesser Hours, *Salve Regina* is said throughout the year, but after *Lauds*, *Salve Regina*, *Alma Redemptoris Mater*, *Ecclesie Maria genuit Salvatorem*, *Sub tuum presidium*, and *Regina celi* according to the season. There are many other variations, for at Vespers, *Matins*, and *Lauds* nearly everything is variable according to the day and the season, and a good deal is so at the Lesser Hours. Some few things may have been altered and added since, but the Divine Office as described above, which is that in present use, does not seem to differ materially in structure from that indicated in the tenth and eleventh century MSS. in the British Museum, except that there were formerly also certain Night Offices—"Ordo ante Lectulum", "Ad Nocturnos", "Ad Medium Noctis" etc.—which are given in Add. 30851 and elsewhere. Possibly these were only for monastic use.

V. THE MASS.—In the present Mozarabic Mass two books are used, the *Missale Omnium Offerentium* and the complete Missal. The *Missale Omnium Offerentium* contains what in the Roman Rite would be called the Ordinary and Canon. As nearly the whole Mass varies with the day, this book contains a specimen Mass (that of the Feast of St. James the Great) set out in full with all its component parts, variable or fixed, in their proper order. On all other days the variables are read from the complete Missal. The reason of the name *Omnium Offerentium* has not been very satisfactorily determined. It would naturally mean "of all who offer", and the phrase "et omnium offerentium . . . peccata indulget" occurs at the oblation of the chalice. There does not seem to be any reason why this one phrase, which is not in a very striking position, should give its name to the whole service, unless those are right who (like Perez in his "Devocionario Mozárabe") apply the name only to the *Missæ Catechumenorum*. There are indeed quite as improbable origins as this in liturgical nomenclature. But it is possible to conjecture another origin. In the Celtic languages the word for Mass is derived from some Latin word whose origin was the verb *offero*. The Cornish, Welsh, and Breton have *offeren*; the Gaelic *aifrionn* or *aifreann*. These are generally referred to *offerendum*, and in support of this we find the French *offrande* and Spanish *ofrenda*, both in the sense of a religious offering, equivalent to the Welsh *offrum* and Cornish *offryn*. But the Celtic words are more prob-

ably derived from *offerentia*, a word which is used by Tertullian (Adv. Marc., xxiv) in the general sense of the act of presenting an offering, but which was perhaps used for a time in Celtic countries in the special sense of the Holy Offering. Thus it may be conjectured that the Spanish expression was originally "Missale Omnium Offerentiarum", "Missal of all Masses", which is just what it is. It has been suggested that *offerens* may have been used in very debased Latin in the sense of an act of offering as well as of one who offers. This would explain the Mozarabic phrase still better.

The Order of the Mass is as follows:

(1) *The Preparation*.—This consists of prayers during vesting, which for the most part resemble those of the Roman Rite in meaning and sometimes in actual wording. These are followed by a responsory and *oratio* for pardon and purity, after which the priest goes to the altar and says *Ave Maria, In nomine D.N.J.C., Sancti Spiritus adsit nobis gratia, Judica me*, with the Antiphon *Introibo, Confiteor*, with the absolution and the subsequent versicles and responses. The Confiteor differs from the Roman form and there are versicles and responses before it. Then *Aufer a nobis*, a longer form than the Roman. Then follows the Salutation of the Cross. The priest makes the sign of the cross on the altar, kisses the altar, and says a responsory "Salve crux pretiosa" and an *oratio*. A good deal of this preliminary matter was borrowed by Cardinal Ximenes from the Toletan (Roman) Missal, and is not Mozarabic. On great feasts the priest directly he enters sings to a rather florid piece of plain chant a prayer "Per gloriam nominis tui etc." for help.

(2) *The Preparation of the Chalice and Paten*.—The corporal is unfolded, the chalice and paten are ceremonially purified, the wine is poured into the chalice, the water is blessed and poured in, and the bread is placed on the paten. To each of these acts there is a prayer or a blessing. A preparation of the chalice before Mass, instead of at the Offertory, is to be inferred from the Irish tracts (see CELTIC RITE). It is still the Byzantine practice, and is retained by the Dominicans at low Mass. Yet in the Mozarabic *Missal Omnium Offerentiarum* there is a direction to put wine into the chalice during the Epistle, but it is not done.

(3) *Ad Missam Officium*.—This is the Introit. *Officium* is a common alternative name, used, among other places, in the Sarum Missal. The old Mozarabic term (see Add. MS. 30844) was *Prælegendum* or *Prolegendum*. *Antiphona ad prælegendum* is the name given by St. Germanus of Paris. It is in the form of a responsory, with Alleluias and Gloria.

(4) *The Canticle or Canticles*.—This is now *Gloria in Excelsis*, omitted in Advent (except on Feasts) and Lent. On Easter Day a Latin farced Trisagion; "Sanctus Deus, qui sedes super cherubim, etc.", with optionally also the *Benedicite* in its abridged form, and on the Sunday in *Adventu S. Joannis Baptiste* the *Benedictus* are sung as well. In Add. MS. 30844 the Trisagion (ἄγος ὁ θεός, κ.τ.λ.) is given in Greek (translated) and Latin in this place on the Annunciation (18 Dec.), the Mass for which day is in that manuscript a fuller one than the others, and like the Mass for Advent Sunday in the printed Missal is given by way of an Ordinary of the Mass) and the Circumcision, and the Latin farced Trisagion now used on Easter Day is given for Christmas Day. This shows that the *Ajus* of St. Germanus and the Bobbio Missal was certainly the *Trisagion*.

(5) *Oratio*.—Though this takes the position of the Roman Collect, it is really a supplementary prayer to the *Gloria in excelsis*. It is the usual practice (though like most things Mozarabic, not invariable) for psalms, hymns, canticles, and every sort of responsory to be followed by prayers which more or less sum up the leading ideas of what they follow. This is why so many Mozarabic, Gallican, and Celtic prayers are named with ref-

erence to what they follow—*post Ajus, post Prophetiam, post Nomina, post Pacem* etc. This *Oratio* on a considerable number of days merely continues the idea of the *Gloria* with little or no reference to the day, even on the Sundays of Advent, when the *Gloria* itself is omitted. These are mostly in the *Temporale*, and there are nine *Orationes* of frequent use; but on certain days (e. g. Christmas Day, the Sunday before the Epiphany, Epiphany, Ascension, Pentecost, Corpus Christi, all the Commons, and between thirty and forty days in the *Sanctorale*) this *Oratio* refers to the day and not to the *Gloria*.

(6) *The Prophecy*.—This is a lection usually from the Old Testament, except in Paschal time, when it is from the Apocalypse. (See AMBROSIAN RITE.) During Lent and other Fasts, there are two of these lections, one from one of the books of Solomon and the other from the Pentateuch or one of the Historical Books.

(7) *The Hymnus Trium Puerorum* occasionally follows the Prophecy. This is the *Benedictus es* (Dan., iii, 52-5) with an abridged form of the *Benedicite*, the whole preceded by Dan., iii, 49-51, rather freely quoted. The fourth Council of Toledo (can. xiv) ordered this "in omnium missarum solemnitate". It occurs in the MSS. on days when it is not given in the printed books. It used to be followed by Ps. cv, *Confitemini*, but now this is reduced to one verse.

(8) *Psallendo* (a responsory).—On the second and third Sundays and on weekdays in Lent it is a *Tractus*, which consists of psalm verses without repetitions, as in the Roman Rite. The *Tractus* or *Psallendo* on Sundays of Lent, except Palm Sunday when the *Tractatio Symboli* comes here, is followed by the *Preces*, a short penitential litany, differing each Sunday. Neale points out that these are in verse, though not written so.

(9) *The Epistle*, or in Paschal time a lection from the Acts of the Apostles, preceded by "silentium facite", proclaimed by the deacon.

(10) *The Gospel*, preceded only by a short prayer "Comforta me Rex Sanctorum" and the "Munda cor meum corpusque ac labia" (the rest as in the Roman Rite), followed by the Blessing, which is not in the Roman form. These of course are said secretly. The giving out of the Gospel and the response and the censuring are similar to the Roman. After the reading the priest signs the Gospel with the cross and kisses it, saying: "Ave Verbum Divinum: reformatio virtutum: restitutio sanitarum."

(11) *The Offertory*.—This consists of: (a) *The Lauda*, a verse between two Alleluias. It is what St. Germanus calls the *Sonus*, sung during the procession of the Oblation. There is now no procession, but while it is being sung the Oblation ceremonies go on. (b) The oblation of the bread and wine, with prayers resembling but not identical with the Roman. It is at the covering of the chalice with the *filiole* (pall) that the prayer containing the words "omnium offerentium" (see above) is said. (c) The Blessing of the Oblation, for which two alternative prayers are given, one of which, that generally used, is the "In spiritu humilitatis" and "Veni sanctificator" of the Roman Rite. (d) The censuring, with a blessing similar to the Roman blessing at the beginning of Mass, but a different prayer. (e) "Adjutate me fratres", with response—the Mozarabic form of the "Orate fratres". (f) *The Sacrificium*, which is what St. Germanus calls *Laudes*. This with the *Lauda* forms the equivalent of the Roman *Offertorium*, here divided in the books by the ceremonies of the Oblation, though in practice there is very little division. (g) When there are offerings, the priest is directed to receive them and say to the offerer: "Centuplum accipias et vitam possideas in Regno Dei." This is the remains of the Offering by the people. (See AMBROSIAN RITE.) The words are retained, but the offering is no longer made. This is followed in the books by the *Benedictio Panis* (cf. the

Pain Bénit still used in France, and formerly in England). The form of this is nearly identical with the first of those given in the Roman and Sarum Missals. But it is now no longer used. (h) The *Lavabo*, with only the first three verses of the psalm. It is followed by a final blessing "super oblationem cum tribus digitis".

(12) *The Prayer of Humble Access*, said with bowed head by the priest.

St. Isidore in his "Etymologies" (vi, 19) mentions a dismissal of catechumens with a deacon's Proclamation as occurring at this point.

Here begins the *Missæ Fidelium*, which contains the Seven Prayers spoken of by St. Isidore. These seven prayers are:—

(13) *Ad Missam Oratio, Oratio Missæ*, or simply *Missæ*.—This is often, but not always, a Bidding Prayer. The Gallican name is *Præfatio*. It is followed in the Mozarabic by "Agius, Agios, Agios, Domine Rex æterne, tibi laudes et gratias" sung by the choir, preceded by *Oremus* (one of the only two instances of this word), and followed by a short invitation to intercessory prayer, a very much compressed form of the *Prex* (see *CELTIC RITE; GALRICAN RITE*), sung by the priest.

(14) *Alia Oratio*.—This, in the Gallican books, is generally headed "Collectio sequitur". The Reichenau fragments (see *GALLICAN RITE*) are not always quite clear as to whether there are one or two prayers here, and whether this is to be identified with the *Collectio* or the *Ante Nomina* of those leaves, but neither of these have reference to the *Nomina* which follow, nor has the Mozarabic *Alia Oratio*, except in the unvarying ending "Per misericordiam tuam, Deus noster, in cuius conspectu sanctorum Apostolorum et Martyrum, Confessorum atque Virginum nomina recitantur." This is followed by another fixed passage reciting how "Sacerdotes nostri [here, according to Leslie, the Deacon recited the names of the Archbishop of Toledo and other metropolitans of Spain] Papa Romensis [here the name of the reigning pope was inserted] et reliqui [i. e. according to Leslie's conjecture, the Bishops of Carthage, Milan, Lyons etc.], and all priests, deacons, clerks, and surrounding peoples offer the oblation for themselves and for all the brotherhood with a response: "Offerunt pro se et pro universa fraternitate". Then follow the Diptychs or lists of names commemorated, which are in two parts, Apostles and Martyrs, a list consisting of Our Lady, St. Zachary, St. John (Baptist), the Innocents, the Apostles and St. Mark and St. Luke. To this there is a response "et omnium Martyrum". The second list is "Item pro spiritibus pausantium", with forty-seven names, beginning with Sts. Hilary, Athanasius, Martin, Ambrose, and Augustine, and going on with a list of Spanish persons, many of them archbishops of Toledo, both before and after the Conquest. To this the response, as in the Stowe Missal (see *CELTIC RITE*), is "et omnium pausantium".

(15) *The Oratio Post Nomina* continues the intercession. This, the third prayer of St. Isidore's list, is variable with the day, except for the ending, "Quia tu es vita vivorum, sanitas infirmorum et requies omnium fidelium defunctorum in æterna sæcula sæculorum."

(16) *The Pax*, with the prayer *Ad Pacem*, St. Isidore's fourth prayer. The prayer is variable, with a fixed ending, "Quia tu es vera pax nostra etc." After the prayer the priest pronounces the benediction, "Gratia Dei Patris omnipotentis, pax et dilectio D. N. J. C. et communicatio Spiritus Sancti sit semper cum omnibus nobis." In all the principal Eastern liturgies except that of St. Mark, this passage from II Cor., xiii, is separated from the *Pax* and comes immediately before the *Sursum corda* dialogue, its place before the *Pax* being taken by

elohim rānū or its equivalent. In St. Mark and in the Roman it does not occur, but in the latter ever since the late fourth, or early fifth century at least, the *Pax* has been associated with the Communion, not with the beginning of the *Missæ Fidelium*. In the Gallican the *Pax* came as in the Mozarabic. The Ambrosian now follows the Roman, but probably did not always do so. (See *AMBROSIAN RITE; CELTIC RITE; GALRICAN RITE*.) In the Mozarabic Mass, the priest says "Quomodo adstatu pacem facite," and the choir sing a responsory, "Pacem meam do vobis etc.", "Novum mandatum do vobis, etc.", during which "accipiat Sacerdos pacem de patena", saying "Habete osculum dilectionis et pacis ut apti sitis sacrosanctis mysteriis Dei", and gives the kiss of peace to the deacon (*vel puero*), who passes it on to the people.

(17) *The Illatio or Inlatio*.—This is called *Præfatio* in the Roman and *Contestatio* or *Immolation* in the Gallican. With the Post-Sanctus it forms St. Isidore's fifth prayer. There are proper *Illationes* to every Mass. The form is similar to the Roman Preface, but generally longer and more diffuse, as in the Gallican. It is preceded by a longer dialogue than the usual one: "Introibo ad altare Dei mei. R. Ad Deum qui lætificat juventutem meam. V. Aures ad Dominum. R. Habemus ad Dominum. V. Sursum Corda. R. Levemus ad Dominum. V. Deo ac D. N. J. C. qui est in cælis dignas laudes, dignasque gratias referamus. R. Dignum et iustum est. V. Dignum et iustum est, etc." The *Illatio* ends in all manner of ways, but always leading by way of the angels to the Sanctus. This is "Sanctus, Sanctus, Sanctus, Dominus Deus Sabaoth. Pleni sunt cæli et terra gloria maiestatis tue. Osanna filio David. Benedictus etc. Agyos, Agyos, Agyos, Kyrie o Theos."

(18) *The Post-Sanctus*, part of St. Isidore's fifth prayer, is variable according to the day, but almost always begins "Vere sanctus, vere benedictus D. N. J. C.", and generally ends "Ipse Dominus ac Redemptor æternus". All liturgies except the Roman and the Romanized Celtic have some form of a very similar Post-Sanctus, which leads up to the Recital of the Institution. Even the Ambrosian has one for Easter Eve. The occurrence of a part of the Intercession after the Sanctus in the Roman makes a great difference here. The last words of the Mozarabic Post-Sanctus ought to anticipate "Qui pridie etc.", as in the Gallican, but there is an interpolation—"more suo adeo imperite ut interpolatio manifesta est", as Leslie says—as follows: "Adesto, adesto, Jesu bone Pontifex in medio nostri sicut fuisti in medio discipulorum tuorum, et sancti fici hanc oblationem ut sanctificata sumamus per manus sancti Angeli tui [cf. the clause "Supplices te rogamus" of the Roman Canon] sancte Domine et Redemptor æterne." The age of the interpolation is unknown, but it is probably much older than the Ximénian Missal, though it does not occur in the *Missæ Omnimoda* in the *Silos Liber Ordinum* of 1052. It may have originated as a sort of parenthetical ejaculation (influenced by the Roman Canon) said secretly by the priest with bowed head before beginning the Recital of the Institution, which, like the Post-Sanctus, was possibly then said aloud. The present printed form of the Recital is that of I Cor., xi, 23-6: "D. N. J. C. in qua nocte tradebatur etc." This agrees with the principal Eastern liturgies, but the Gallican had "Qui pridie quam pateretur" or some variant thereof, and the Mozarabic must once have had the same, possibly (as Leslie suggests) combining both datings with "Qui pridie quam pateretur" and "in ipsa nocte qua tradebatur etc." The form in the *Silos Liber Ordinum* of 1052 begins as at present, and in Toledo 35.6 it begins "Quoniam Dominus Jesu in qua nocte." It is certain that the Roman form of the

Words of Institution was not used by the Spanish Church before the mission of Zannello (see above) in 924. It was then that the practice arose of saying the Roman form, instead of what was written, and that is what is done now. In the Ximénian edition the Roman Words were not printed at first, but later were printed on separate slips and gummed on to the margin. In the later editions they appear as footnotes. Elevation is ordered in the printed Missal after the Consecration of each species.

(19) *The Post-Pridie*.—St. Isidore calls it *confirmatio sacramenti*, "ut oblatio quas Deo offertur sanctificata per Sanctum Spiritum corpori Christi et sanguine confirmetur", which seems as if he took it to be an *Epiklesis* (q. v.), needed to complete the consecration, but (in Ep. vii ad Redemptorem, sect. 2) he speaks also of "verba Dei . . . scilicet, Hoc est corpus meum", being the "substantia sacramenti". In the Gallican books there are several of these prayers with some sort of Invocation of the Holy Spirit, some quite unmistakable, others quite vague. The majority have no sign of any *Epiklesis*, and this is the case with the Mozarabic, perhaps fourteen or fifteen Masses have either a definite *Epiklesis* or what with some ingenuity and emendation can be made to look like one, while in the rest it is generally the Great Oblation, often with allusions to the day. It is followed by a fixed prayer resembling the clause *Per quem hac omnia* in the Roman Canon, and a second elevation preceded by "Dominus sit semper vobiscum etc." and "Fidem quam corde credimus ore autem dicamus". On Sundays and most feasts *sex capparum* and *quatuor capparum* the Creed is recited; this has several verbal differences from the Roman form, among others, *credimus, confitemur et expectamus, vivificatorem, adorandum et conglorificandum, Omnium Patri, hoc est ejusdem cum Patre substantia* etc. St. Isidore (De Eccl. Off., I, xvi) mentions the recitation of the Creed "tempore sacrificii", but with him *sacrificium* sometimes means the offertory, sometimes the whole Mass. On certain days, chiefly in Lent and in votive Masses, there is an *Antiphona ad Confractionem Panis* (cf. the *Confractorium* of the Ambrosian Rite), said instead of the "Fidem quam corde credimus etc." During it or the Creed the Fraction takes place. The Host is first divided into two halves, then one half is divided into five and the other into four parts. Seven of these particles are arranged in the form of a cross, five, named *Corporatio* (Incarnation), *Nativitas*, *Circumcisio*, *Apparitio* (Epiphany), and *Passio* forming the upright part, and two, named *Mors* and *Resurrectio*, the arms. These last are arranged on either side of the Particle *Nativitas* with the *Gloria* and *Regnum*, placed together on one side. (For instances of complicated Fractions, see CELTIC RITE; GALRICAN RITE.) Then the priest washes his fingers, "purget bene digitos", and, the chalice being covered, says aloud "Memento pro vivis".

(20) *The Ad Orationem Dominicam*, St. Isidore's seventh and last prayer, varies with the day, and, like the *Agyos* after the *Ad Missam Orationem* is preceded by *Oremus*. It ends introducing the Pater Noster, sung by the priest, the choir responding Amen to each clause except "Panem nostrum quotidianum da nobis hodie" when the response is "Quia Deus es". The invariable *Embolismus* is a long intercessory prayer followed by the Commixture. The particle *Regnum* is held over the chalice, during Paschal time and on Corpus Christi, with the words "Vicit Leo ex tribu Juda, radix David, Alleluia. Qui sedes super cherubim, radix David, Alleluia", and then dropped into the chalice, with the words "Sancta Sanctis et conjunctio Corporis D. N. J. C. sit summentibus et potantibus nobis ad veniam et defunctis fidelibus prestatetur ad requiem."

(21) *The Benediction*.—The deacon proclaims "Humiliate vos ad Benedictionem", and the priest pronounces a Blessing in three, four, or five clauses, vari-

able according to the day, with a response of Amen to each clause. In the Gallican Rite the long Benediction was reserved for bishops only, a short form (*Pax et caritas D. N. J. C. et communicatio sanctorum omnium sit semper nobiscum*) being said by priests. The Benedictions continued in France long after the extinction of the Gallican Rite (see GALRICAN RITE) and in England. In the Sarum Manual of 1554 directions are given for Episcopal Benedictions, with the same preliminary proclamation as in the Mozarabic.

(22) *The Communion*.—The choir sing a fixed responsory called *Ad Accidentes*, beginning "Gustate et videte", composed of Ps. xxxiii, 8, 1, 22, with Alleluia after each verse. There are variants in Lent and Eastertide (cf. CELTIC RITE; GALRICAN RITE). The same verses are mentioned by St. Cyril of Jerusalem and occur in some Eastern liturgies. Then follows the antiphon which answers to the Roman *Communio* which is usually "Refecti Christi Corpore et Sanguine, te laudamus, Domine. Alleluia (3)", with a variant in Lent "Repletum est gaudium os nostrum, etc." This is followed by the Post-Communion, a prayer or a Bidding Prayer variable with the day, but with a rather small selection, only a few days having separate proper Post-Communions of their own, four or five being used over and over again, one for Feasts of our Lord and another for saints' days, varied only in the name of the feast. During the singing of the *Ad Accidentes* and *Communio* the priest makes his communion, with private devotions not unlike those of the Roman Rite, but including the two "Ave in ævum, etc.", passages which are found also in the Sarum and other local Missals. Just before his communion the priest holds the particle *Regnum* over the chalice saying aloud "Memento pro mortuis" (or "pro defunctis", for both forms are found).

(23) *The Dismissal*.—Of this there are two forms, that for ordinary days being "Missa acta est in nomine D. N. J. C. perficiamus cum pace. R. Deo gratias", and that for greater feasts, "Solemnia completa sunt in nomine D. N. J. C. votum nostrum sit acceptum cum pace. R. Deo gratias". Then follows "Salve Regina" with versicle and responses and the collect, "Concede nos famulos tuos etc.", which of course is not Mozarabic, and after that the Blessing "In unitate Sancti Spiritus benedicat vos Pater et Filius".

It will be seen that the fixed elements of this Mass are very few. These are: the Preparations; generally the *Gloria*; the Prayers etc. of the Offertory; the *Nomina*; the *Pax*, but not its prayer; the *Surresum Corda*; the *Sanctus*; the Recital of the Institution with its preliminary prayer; a prayer following the Post-Pridie; the Creed; the priest's part of the Fraction, Commixture, and Communion; the Lord's Prayer and *Embolismus*, but not its introduction; and the *Salve Regina* and Blessing. The variables, which in point of time and written space take up by far the larger proportion of the Mass, are: The *Officium* (Introit); the *Oratio* after the *Gloria*, the Prophecy, the *Psallendo*; the Epistle; the Gospel; the *Lauda*; the *Sacrificium*; *Ad Missam Orationem*; *Alia Orationem*; *Post Nomina*; *Ad Pacem*; *Illatio*; *Post-Sanctus*; *Post-Pridie*; *Antiphona ad Confractionem Panis*; *Ad Orationem Dominicam*; the Benediction; *Ad Accidentes*; *Communio*; Post-Communion; the Dismissal. To these may be added the additional Canticles on certain days.

VI. THE OCCASIONAL SERVICES.—At the present day those who belong to the Mozarabic Rite use the Roman Ritual, and, as their bishop is the Archbishop of Toledo, who is of the Roman Rite, the Roman Pontifical is also used for them. The date at which the old Spanish Ritual and Pontifical services ceased to be used is not known. The four existing MSS. of the *Liber Ordinum*, which contains these services, are all of the eleventh century, and belonged either to Silos or to San Millán de la Cogolla. There are none at or from Toledo, and, when Cardinal

Ximenes had the Missal and Breviary printed, there was evidently no need to print a Ritual and Pontifical, as they were probably no longer used. Of the eleventh century MSS. of the *Liber Ordinum* published by Dom Férotin, one (the Silos MSS. of 1052) contains a very complete set of occasional services. They consist of: (1) The Blessing of Oil, Salt, and Water; (2) Baptism; (3) Ordinations; (4) The Unction and Visitation of the Sick; (5) The Blessing of Virgins, Abbesses, Widows, and *Conversi*; (6) The Order of Penance and Reconciliation of heretics and schismatics and for the conversion of Jews; (7) The Order of Death and Burial; (8) *Ritus pro Rege observandus*; (9) Various Blessings; (10) Orders for Holy Week and Easter; (11) The Order of Matrimony. These are followed by a large number of Masses, chiefly votive. Of these services the following may be noted:—

(1) *Baptism*.—The order is:—(a) Insufflation. The priest breathes thrice, with the words "Exorcizo te immunde spiritus hostis humani generis". (b) Insignation. The sign of the Cross on the forehead, and exorcism towards the west. (c) Unction with oil on mouth and ears, with "Effeta, effeta cum sancto spiritu in odorem suavitatis. Bene omnia fecit et surdos fecit audire et mutos loqui". (d) Imposition of hands. (e) *Traditio symboli*. (f) Blessing of the font preceded by exorcism. (g) Interrogations and Renunciations. (h) Baptism, with "Ego te baptizo in Nomine etc., ut habeas vitam æternam." (i) Chrismation on forehead, with "Signum vitæ æternæ quod dedit Deus Pater Omnipotens per Jesum Christum Filium suum credentibus in salutem." (k) Imposition of hands, with prayer. (l) "Post hæc velantur a sacerdote infantes ipsi qui baptizati sunt caput: quo peracto communicant eos" (i. e. the Vesting and Communion). On the third day the children are brought to the priest, who says over them the "Benedictio de Albis". Except in the case of converts from Arianism, no separate order of Confirmation is given. The Chrismation and Imposition of hands after Baptism, followed as it was by Communion, was evidently the only normal form of Confirmation. In the case of Arian converts the words are: "Et ego te chrismo in Nomine etc., in remissionem omnium peccatorum ut habeas vitam æternam", followed by the imposition of hands and a prayer. The ceremony of feet-washing, retained in the Celtic and Gallican Baptisms, does not appear in the Spanish *Liber Ordinum*, though mentioned by the Council of Elvira in 305 (see GALICAN RITE).

(2) *Ordinations*.—The minor ordinations are those of *clericus*, *sacrista*, and *custos librorum*. These orders are preceded by "Oratio super eum qui capillos in sola fronte tondere vult"—which looks like a relic of the Celtic tonsure (see CELTIC RITE), but, as Dom Férotin conjectures, is probably of the nature of an offering "des prémisses de la chevelure" (cf. the *Τριτοκροπία*, seven days after Baptism, in the Byzantine Rite)—by "Oratio super parvulum quem parentes ad doctrinam offerunt" and "Benedictio super parvulum qui in ecclesia ad ministerium Dei detonditur". The "clericus" of the next section is evidently also "parvulus". The *sacrista* has a ring given to him with the words: "Esto ianitor adituum et præpositus ostiariorum". The *custos librorum* receives "anulum de seriniis", and is also appointed "senior scribarum". Then follows a curious "Ordo super eum qui barbam tangere cupit". The priest takes wax from a taper and puts a crumb of it on the right, left, and middle of the chin. Prayers are said alluding to the anointing of Aaron's beard. Then "Ista explicita intromittit in anulo barbam cum cera et in anulo barbam et ceram capulat qui barbam tangit dicens, In Nomine etc. et accipit in linteo nitido. Peracta ista omnia absolvit diaconus dicens, Missa acta est. Et post hæc si est monachus radit barbam". The ordinations of subdeacon, deacon, archdeacon, priest, archpriest, and abbot are very simple. To the subdeacon is given by

the archdeacon the "ministerium ad manus lavandos" and a chalice and paten. The bishop gives him the book of St. Paul's Epistles. The bishop puts the stole (*orarium*) on the left shoulder of a deacon, and delivers a "ferula" to an archdeacon and archpriest, a "manuale" (book of sacraments) to a priest, and a staff and book of the Rule to an abbot. In each case these are accompanied by prayers, and a *confirmatio* addressed to the newly ordained, which is more or less an explanation of his duties and status. In the case of a priest the assistant priests are directed to lay their hands on him as, vested in stole and chasuble, he kneels before the altar, and, though there is no direction for the bishop to do so, it is evident from the wording of his "Benedictio" that he lays his hands on him also. There is no order given for the consecration of a bishop. The blessings of nuns and other religious are quite simple, veiling with prayer and benediction, and for an abbot the delivery of a staff and the putting on of a mitre.

(3) *The Unction of the Sick* is given together with an order for the blessing of the unguent. This was done on the Feast of Sts. Cosmas and Damian, the physician-martyrs (27 Sept.), not, as elsewhere in the West, on Maundy Thursday. The bishop makes a cross (a cross *pallée* with a pendant and the A and Ω is figured in the book) with a *graphium* (style), saying an antiphon "Sicut unguentum in capite etc.", and a prayer and benediction, both referring to the healing of the sick. The Unction of the sick was on the head only, with the sign of the Cross and the words "In Nomine Patris etc." Antiphons referring to sickness and its healing are then said. There is provision for anointing many sick persons at the same time.

The rest of the occasional services do not call for much remark. They are for the most part very simple blessings and prayers, not unlike those found in the Roman Ritual. They include, however, a few of a type found also in the Greek Euchologion for the cleansing of any polluted person, place, or thing, e. g. "super his qui morticinium comedunt vel suffocatum", "super vas in quo (sic) aliquid immundum ceciderit", etc., and the Orders when the king goes out to battle with his army, and when he returns, have a considerable historical interest.

HENRY JENNER.

Mozart, JOHANN CHRYSOSTOMUS WOLFGANG AMADEUS, one of the greatest musical geniuses in history, b. at Salzburg, Austria, 27 Jan., 1756; d. at Vienna, 5 Dec., 1791. His father, Leopold Mozart, assistant choir-master and court musician to the Prince-Archbishop of Salzburg, was one of the most distinguished musicians of his time. He was the author of the best method for violin-playing written up to that period, and was a man of thorough education and sterling character. Realizing his son's extraordinary endowments, and also the great musical gifts of his daughter Maria Anna, five years Wolfgang's senior, he devoted all his energy and knowledge to their education. Wolfgang at the age of three was wont to spend whole hours at the piano, discovering, to his great joy, consonant intervals, and was not yet four when he began to receive from his father systematic training in piano-playing and in the theory of music, improvising even before he could write notes. Violin-playing came to him practically by intuition, a fact which he demonstrated to the astonishment of his father and a company of artists, by performing at first sight the second violin part in a trio for stringed instruments. He was not yet five when his father wrote for him a theme for the piano with variations, which he had himself composed. So correct was the child's ear that he would remember the tone pitch of a violin which he had heard even weeks before. His sensitiveness was such that harsh sounds were distressing to him, a blast of a trumpet almost causing him to faint away.

Wolfgang was not yet eight years old when his father undertook a concert tour with his two children, visiting Munich, Vienna, and Presburg. Everywhere their performances, especially the boy's, created great astonishment. In 1763 Leopold Mozart visited Paris with his prodigies, and the following April London, where they remained until July, 1764. Received and fêted by royalty and people of high station, the Mozart children, but particularly Wolfgang, were considered the musical wonders of the world. On their way back to Salzburg they visited The Hague and the principal cities of France and Switzerland. During all these travels, and the distraction and excitement incident thereto, Wolfgang made progress in all branches of musical and other knowledge. He composed constantly and in almost every known instrumental form. Returned home, he devoted himself to the mastery of counterpoint, and the perfecting of his technique in piano, violin, and organ-playing. His patron, Archbishop von Schlatterbach, sceptical regarding the boy's reported achievements as a composer, invited Wolfgang to his palace, forbidding communication of any kind with him, and giving him the text of the first part of an oratorio, prepared by the archbishop, to set to music. The second and third parts of this work were composed by Michael

Haydn and Anton Cajetan Adlgasser respectively. It was published at Salzburg in 1767, and performed during Lent of the same year. A year later, at the age of twelve, Wolfgang visited Vienna anew, and was commissioned to write an *opera buffa*, "La Finta Semplice", for which Marco Coltellini furnished the libretto. Intrigues of all kinds, especially on the part of the members of the theatre orchestra, who objected to playing under the direction of a twelve-year-old boy, prevented its performance.

Returning to Salzburg, Wolfgang was appointed concert-master, at first without compensation, but later was allowed a monthly stipend of twelve florins. Leopold Mozart, chafing under Wolfgang's lack of recognition, made every effort to secure for him a suitable appointment in the larger field of Munich and Vienna, and also Florence, but not succeeding, he finally decided to visit Italy, with a view to gaining there the prestige which success in that country then carried with

it. In Bologna they became acquainted with Padre Giambattista Martini (1706-1784), the most learned musician of his time. This master put Wolfgang through tests in contrapuntal writing, which the latter withstood with ease and consummate skill. In Rome young Mozart performed his famous feat of scoring Allegri's "Miserere" for double chorus, after listening to its performance on Wednesday of Holy Week. Hearing the work repeated on the following Friday, he had but a few minor corrections to make in his manuscript. After being created Knight of the Golden Spur, fêted, and acclaimed throughout Italy by the artistic and aristocratic world as the greatest living musical genius, Wolfgang returned to his modest position in Salzburg. Again and again he tried to find a more congenial atmosphere in Munich, Mannheim, Paris, and elsewhere, but without success.

He continued, except for occasional visits to other cities for the purpose of conducting new works, to reside in Salzburg until his twenty-first year, when he took up his permanent abode in Vienna.

An offer from Frederick William II of Prussia to become court conductor at Berlin at a salary of three thousand thalers he refused on patriotic grounds. Mozart was now in the full maturity of his powers, creating with astonishing rapidity works which will remain classic for all time: operas, symphonies, quartets, concertos, etc., all of which increased his fame, but did not ameliorate his material condition. Not only was due recognition denied him, but his life was one continuous battle for existence. His application for the assistant conductorship of the imperial opera house failed. He applied for a similar position at the cathedral of St. Stephen, in the hope of ultimate promotion to the post of choir-master. Only on his deathbed did he receive the news of his appointment. The great master died at the age of thirty-four and was buried, with the least possible expense because of extreme poverty, in a pauper's grave, his exact resting-place being now unknown. Only a few persons followed his remains to the cemetery.

Mozart's individuality was of an exquisitely delicate, tender, and noble character. His operas, "Don Juan", "The Magic Flute", "The Marriage of Figaro", "Così fan tutte", "La Clemenza di Tito", on ac-

WOLFGANG AMADEUS MOZART

count of their melodic beauty and truth of expression, have as strong a hold upon the affections of the musical public to-day as they did at the end of the eighteenth century. His instrumental works continue to delight musicians the world over. As a composer for the Church, however, he does not, even artistically, reach the high level he maintained in other fields. In his day the music of the Church, Gregorian chant, was practically ignored in Germany, and sadly neglected in other countries. Mozart had but little knowledge of the masters of the sixteenth century, and consequently his style of writing for the Church could not have been influenced by them. The proper of the Mass, which brings singers and congregation in intimate touch with the liturgy of the particular day, was rarely sung. The fifteen masses, litanies, offertories, his great "Requiem", as well as many smaller settings, most of them written for *soli*, chorus, and orchestra, in the identical style of his secular works, do not reflect the spirit of the universal Church, but rather the subjective conception and mood of the composer and the Josephinist spirit of the age. What Mozart, with his Raphaellesque imagination and temperament, would have been for church music had he lived at a different time and in different surroundings, or risen above his own, can easily be imagined.

JAMES MOONEY.

Mozzetta, a short, cape-shaped garment, covering the shoulders and reaching only to the elbow, with an open front, which may be fastened by means of a row of small buttons; at the neck it has a very small and purely ornamental hood. The privilege of wearing the mozzetta belongs properly to no one but the pope, cardinals, exempt abbots, abbots general, and the four prelates *di fiocchetti*; only through a special privilege may it be worn by other ecclesiastics, abbots, canons, etc. Cardinals wear the mozzetta over the mantelletta, but bishops wear it without the mantelletta; the latter, however, may wear the mozzetta only within their own jurisdiction, outside of which the mantelletta must be worn instead of the mozzetta. Canons who have the privilege of wearing the mozzetta may not use it outside of the church, save when the chapter appears *in corpore* (as a corporate body). The pope's mozzetta is always red, except that, in Easter week, he wears a white one. As regards material, his mozzetta during the winter half-year, that is, from the feast of St. Catherine to Ascension Day, is made of velvet or of cloth according to the character of the day or ceremony; in the summer half-year it is made of satin or fine woollen material (merino). It is edged with ermine only in the winter half-year. A cardinal's mozzetta is generally red; the colour is pink on *Gaudete* and *Letare* Sundays, and violet in penitential seasons and for mourning. According to the time of year, it is made of silk or wool. When worn by bishops, prelates, canons, etc., the mozzetta is violet or black

in colour; the material for these dignitaries is properly not silk but wool (camel). Cardinals and bishops who belong to an order wearing a distinctive religious habit (e. g. the Benedictines, Dominicans, etc.) retain for the mozzetta the colour of the outer garment of the habit of the respective order. This also applies to abbots and Reformed Augustinian canons who have the privilege of wearing the mozzetta. The mozzetta is not a liturgical vestment, consequently, for example, it cannot be worn at the administration of the sacraments. Sometimes it is traced back to the cappa, this making it merely a shortened cappa; sometimes to the almutia. From which of the two it is derived, is uncertain. The name mozzetta permits both derivations. In all probability the garment did not come into use until the latter Middle Ages. It was certainly worn in the latter half of the fifteenth century, as is proved by the fresco of Melozzo da Forlì painted in 1477: "Sixtus IV giving the Custody of the Vatican Library to Platina". From the beginning the mozzetta has been a garment distinctive of the higher ecclesiastical dignitaries, the pope, cardinals, and bishops. (See HOON.)

JOSEPH BRAUN.

MOZZI, LUIGI, controversialist, b. at Bergamo, 26 May, 1746; d. near Milan, 24 June, 1813. He entered the Society of Jesus in 1763, and on its suppression was received into the Diocese of Bergamo, where he was shortly made a canon, and appointed archpriest and examiner of candidates for the priesthood. The zeal and ability with which he opposed the progress of Jansenism in Italy gained him a well-merited reputation, and Pius VI called him to Rome, where he became an Apostolic missionary. He was elected a member of the Accademia degli Arcadi (see *ACADEMIES*, ROMAN). In 1804 he hastened to rejoin the Society, which had been restored in Naples. Worn out at length by his charitable labours and penitential practices, he retired to the residence of Marquis Scotti near Milan, where he died. Among his important writings are: "Vera idea del Giansenismo" (1781); "Storia compendiosa della scisma della nuova chiesa d'Utrecht" (Ferrara, 1785); "Storia delle rivoluzioni della Chiesa d'Utrecht" (Venice, 1787); "Compendio storico-cronologico . . . sopra il Baianismo, Giansenismo e Quesnellismo" (Foligno, 1792), all against Jansenism; "Il falso discepolo di S. Agostino e di S. Tommaso" (Venice, 1779), a defence of Molinism. He translated from the English the Duke of Brunswick's "Fifty Reasons for preferring the Roman Catholic Religion" (Bassano, 1789); and from the French, "Les projets des incrédules pour la ruine de la religion, dévoilés dans les œuvres de Frédéric, roi de Prusse" (Assisi, 1791).

HUNTER, *Nomenclator*, III, 540; *Vita del P. L. Mozzi* (Novara, 1823).

A. A. MACERLEAN.

MRak, IGNATIUS, second Bishop of Marquette, U. S. A., b. 16 October, 1818, in Hotovle, in the Diocese of Laibach (Carinthia), Austria; d. at Marquette, 2 Jan., 1901. He made his classical studies in the gymnasium of Laibach and his theology in the local diocesan seminary. On 13 August, 1837, Prince-Bishop Anton Aloys Wolf raised him to the priesthood. To qualify for a tutorship in the house of Field-Marshal Baron Peter Pirquet, the young priest passed a rigorous state examination, and sojourned two years at Legnago near Verona, Italy, then an Austrian possession. In 1840 he returned to his native diocese, and occupied several positions as assistant before emigrating to the United States five years later. Bishop Lefebvre of Detroit received him cordially, and sent him immediately to Arbre Croche to assist the celebrated Indian missionary, Father Francis Piers. For two years the missionaries

worked fruitfully together, and, when in 1851 Piers removed to Minnesota, Mrak retained charge of the Indian mission. For his devotion to the red race Baraga appointed him his vicar-general, and upon the death of Baraga he was created second Bishop of Marquette. For a long time he refused to accept, but, finally yielding to the urgency of Archbishop Purcell, he was consecrated at Cincinnati on 9 February, 1869. After ten years' devotion to the administration of the diocese, although he was not unaccustomed to hardships, his health began to fail, and he was permitted to resign in 1879, and was made titular Bishop of Antinoe. For some years he remained with his successor, Bishop Vertin, and, when necessity required, performed the duties of an ordinary pastor. With the return of his health, his love for the Indians awoke, and he returned to the Indian missions, which he had left so reluctantly to accept the episcopate. Bishop Richter of Grand Rapids most cordially welcomed him, and at his own request gave him the Indian mission at Eagle Town, Leeland County.

IGNATIUS MRAK

Here he lived a simple life sharing his small annuity of eight hundred dollars with the two Dominican Sisters whom he had induced to open a school for his charges. In his eighty-first year he retired to Marquette, and filled thenceforth a chaplaincy at St. Mary's Hospital to the last day of his life. His charity was as proverbial as his humility. He outlived his successor in the episcopate, and saw the election of the fourth bishop, whom he himself had raised to the priesthood. His body rests in the vault under the cathedral beside those of his predecessors, Baraga and Vertin.

ANTOINE IVAN REZEK.

Muchar, ALBERT ANTON VON, historian, b. at Linez, Tyrol, 22 Nov., 1781; d. at Graz, Styria, 6 June, 1849. He was descended from the noble and ancient family of the Muchars of Bied and Rangfeld, studied at the lyceum in Graz, entered the Benedictine Order, and made his vows on 16 Oct., 1808, at Admont. Ordained a priest shortly afterwards, he devoted himself entirely to the study of the oriental languages, became librarian and keeper of the archives in 1813, and later on professor of Greek and Oriental languages at the theological school of his monastery. From 1823 to 1825 he was supplementary professor of Biblical science, becoming afterwards professor of aesthetics and classical philology at the University of Graz. Pure philological studies, however, did not suit his taste, and in this branch we possess from him only a somewhat mediocre edition of Horace with German translation, which appeared in 1835 at Graz. His researches dealt chiefly with the history of Austria, for which purpose he made extensive visits to the libraries of Austria, Bavaria, and Upper

Italy; thus, nearly all his historical works are based upon careful examination of the original sources. In 1829 the Academy of Sciences in Vienna elected him a member in recognition of his important contributions to national history, and he was one of the founders of the Historical Society for Inner Austria. Of his more important works may be mentioned: "Das römische Norikum" (2 vols., Graz, 1825-6); "Geschichte des Herzogthums Steiermark" (Graz, 1845-74) in nine volumes, of which the first four were edited by himself, the following two by his colleagues, Prangner and von Gräfenstein, and the last three by the Historical Society of Styria. Beside this he wrote numerous excellent essays for historical periodicals, e. g. Hormayr's "Archiv", the "Steiermärkische Zeitschrift", and the "Archiv für Kunde österreichischer Geschichtsquellen" (in which he published his valuable "Urkundenregesten für die Geschichte Innerösterreichs vom Jahre 1312-1500" (Vienna, 1849). The library of Admont possesses in manuscripts some still more extensive works, which show Muchar's great diligence as a compiler.

PATRICIUS SCHLAGER.

Mühlbacher, ENGELBERT, historian, b. at Gresten, Austria, 4 Oct., 1843; d. at Vienna, 17 July, 1903. He received his classical education at Vienna, his father's native city. In 1862 he became a novice among the Austin Canons at St. Florian. After completing his theological studies there, he was ordained priest in 1867. As Arneth relates in his memoirs, historical studies had been successfully cultivated at St. Florian's since Provost Arneth's time, and Mühlbacher was soon active in this domain. Among his writings are articles on St. Florian's Gerhoh von Reichersberg, and the literary productions of St. Florian's. In 1872 we find Mühlbacher studying under Julius Ficker at Innsbruck, where after two years he received the degree of Doctor of Theology. He then hastened to Vienna to finish his historical training under Sickel's guidance. When Ficker entrusted the youthful scholar with the revision of the Carolingian period of Böhmer's "Regesta", he was directing him to a domain in which he was to do imperishable work. In 1878 he was formally received as academical lecturer into the philosophical faculty of the University of Innsbruck, and between 1880 and 1889 published his masterly edition of the imperial "Regesta" of the Carolingian period. As Redlich says, "the technique of compiling *regesta* received exemplary development at Mühlbacher's hands, and his work served as a model for the entire new edition of the imperial "Regesta". In 1892 Mühlbacher was entrusted with the editing of the Carolingian documents for the "Monumenta Germaniae Historica". At the same time it became necessary to bring out a new edition of his Carolingian "Regesta". The two works proved of mutual assistance, and Mühlbacher devoted the greatest care and diligence to his tasks. He was able to see only the first part of each work through the press, but left considerable material for the use of his successors. No other German scholar was so well qualified to write the "Deutsche Geschichte unter den Karolingern", which appeared in 1896. Since 1879 Mühlbacher edited the "Mittheilungen des Instituts für österreichische Geschichtsforschung". In 1881 he was appointed extraordinary, and in 1896 ordinary professor at Vienna. In 1895 Ficker turned over to him the management of the "Regesta Imperii". With the utmost energy he took in hand the arrangement of the Austrian State Archives, and the preparation of the more recent history of Austria. His learning and efforts did not fail to receive due recognition. He was chosen an active member of the

Imperial Academy of Sciences in Vienna. Mühlbacher's unwearying labours continued until his all too early death.

REDLICH, *Obituary in Mitteil. des Institutes für österr. Geschichtsforschung*, XXV (Innsbruck, 1904), 201-7, with portrait. C. WOLFSGRUBER.

Muldoon, PETER JAMES. See ROCKFORD, DIOCESE OF.

Mulhall, MICHAEL GEORGE, statistician, b. in Dublin, 29 September, 1829; d. there 13 Dec., 1900. He was educated at the Irish College, Rome. Going to Buenos Aires he established there in 1861 the "Standard", the first paper in English published in South America. In 1869 he brought out "The Handbook of the River Plate", the first English book printed in Argentina. This was followed by his "Progress of the World" (1880); "Balance Sheet of the World, 1873-1880" (1881); "Dictionary of Statistics" (1883), a standard work of reference, few modern compilations having been more extensively used; "History of Prices since 1850" (1885). In 1896 he travelled extensively in Europe collecting material for the Committee of the English Parliament reporting on a proposed department of agriculture for Ireland. The pope decorated him in recognition of his literary work, in which his wife, Marion McMurrough Mulhall, who has also written extensively, was his active and practical assistant.

Tablet (London, 22 Dec., 1900).

THOMAS F. MEEHAN.

Mulholland, ST. CLAIR AUGUSTINE, soldier, b. at Lisburn, Co. Antrim, Ireland, 1 April, 1839; d. at Philadelphia, 17 Feb., 1910. Emigrating to Philadelphia with his parents while a boy, his youthful tastes inclined him to military affairs and he became active in the ranks of the militia. At the breaking out of the Civil War he was commissioned Lieutenant-Colonel of the 116th Pennsylvania Volunteers which was attached to Meagher's Irish Brigade, and later was made its colonel. He was wounded during the famous charge of the Irish Brigade up Marye's Heights, at the battle of Fredericksburg, 13 Dec., 1862. At the battle of Chancellorsville, 3, 4 May, 1863, he led his regiment and distinguished himself by saving the guns of the Fifth Maine Battery that had been abandoned to the enemy. For this he was complimented in general orders and received the Medal of Honor from Congress. In this campaign he was given the command of the picket-line by General Hancock and covered the retreat of the Army of the Potomac across the Rappahannock. At Gettysburg his own regiment was so badly cut up in the first day's fight, that he changed to the 140th Penn. Volunteers and led it into action. He was wounded a second time at the battle of the Wilderness, 5 May, 1864, and for his gallant conduct was brevetted brigadier-general. At Po River he was wounded a third time but remained in hospital only ten days, and resuming his command was dangerously wounded again at Tolpotomoy. He recovered rapidly and commanded his brigade in all the actions around Petersburg, particularly distinguishing himself by storming a fort for which he was brevetted major-general 27 October, 1864. Returning to civil life after the war he was appointed Chief of Police in Philadelphia in 1868, and signalized his administration by the good order in which he kept both the force and the city. President Cleveland appointed him United States Pension Agent, in which office he was continued by Presidents McKinley and Roosevelt. He was considered an authority on the science of penology, and also devoted much of his leisure time to art studies, and as a lecturer and writer on the Civil War and its records. He compiled a history of the 116th Regiment of Pennsylvania Volunteers, and another of those to whom Congress voted the Medal

of Honor. In the Catholic affairs of Philadelphia he was always active and a leader among the best known and most respected laymen.

THOMAS F. MEEHAN.

Mullanphy, JOHN, merchant, philanthropist, b. near Enniskillen, Co. Fermanagh, Ireland, 1758; d. at St. Louis, Missouri, U. S. A., 29 August, 1833. At twenty he went to France where he served in the Irish Brigade until the Revolution drove him back to Ireland. In 1792 with his wife and child he emigrated to Philadelphia, thence going to Baltimore where he remained until 1799. He next went to Kentucky where he opened a store at Frankfort, but left there in 1804, and settled finally in St. Louis, then a French settlement. His enterprise in business brought him large returns which he invested in real estate. He was in Baltimore during the War of 1812 with England, and took part in its defence, and later was with Jackson in 1815 at the battle of New Orleans. His business instinct prompted him to then buy a large quantity of cotton at low rates, which the ending of the war enabled him to sell at an immense profit. He had fifteen children, and spent his last years in dispensing much of his great fortune in charity. In 1827 he established the St. Louis Convent of the Religious of the Sacred Heart, the second in the United States. The following year he gave a hospital to the Sisters of Charity. A church, the Jesuit novitiate, and a convent for the Sisters of Loretto at Florissant, were also his gifts, and when he died 25,000 dollars was left in his will for education and charity. His children continued his benefactions. His only son Bryan, who died in 1851, a bachelor, lived an eccentric life. He was mayor of St. Louis in 1847, and for four years judge of the County Court. His will left one third of his estate (about 200,000 dollars) as a trust fund "to furnish relief to all poor emigrants passing through St. Louis to settle in the West". Changed conditions have frustrated that intention, and it is now devoted to charity. John Mullanphy's name is perpetuated in St. Louis by the hospital and orphan asylum so designated; and the name of his daughter, Mrs. Ann Biddle, is preserved in the Biddle House and St. Ann's Foundling Asylum which she founded.

THOMAS F. MEEHAN.

Müller, ADAM HEINRICH, publicist and political economist, convert, b. at Berlin, 30 June, 1779; d. at Vienna, 17 Jan., 1829. It was intended that he should study Protestant theology, but from 1798 he devoted himself in Göttingen to the study of law, philosophy, and natural science. Returning to Berlin, he was persuaded by his friend Gentz to take up political science. After working for some time as referendary in the *Kurmärkische Kammer* in Berlin, he travelled in Sweden and Denmark, spent about two years in Poland, and then went to Vienna, where he was converted to the Catholic Faith on 30 April, 1805. From 1806 to 1809 he lived at Dresden as tutor of a prince of the Saxe-Weimar family and lecturer on German literature, dramatic art, and political science. In 1808 he edited with Heinrich von Kleist the periodical "Phœbus". In 1809 he returned to Berlin, and in 1811 to Vienna, where he lived in the house of Archduke Maximilian of Austria-Este and became the friend of Clement Maria Hoffbauer. In 1813 he was appointed imperial commissioner and major of the rifle-corps in Tyrol, and took part in the wars for liberty and later on, as counsellor of the government, in the reorganization of the country. In 1815 he was

called to Vienna, and went to Paris with the imperial staff. On the conclusion of peace, he became Austrian consul-general for Saxony at Leipzig, and agent for Anhalt and Schwarzburg. He edited here the periodicals: "Deutscher Staatsanzeiger" (1816-18) and "Unparteiischer Literatur- und Kirchenkorrespondent", and attended the ministerial conferences at Carlsbad and Vienna (1819-20). In 1826, at the instance of Prince von Metternich, he was ennobled as Ritter von Nittersdorf, was recalled to Vienna (1827), appointed imperial counsellor, and employed in the service of the chancery.

Müller was a man of great and versatile talents, an excellent orator, and a suggestive writer. Several of his works were based upon his own lectures; the most important (besides the above-mentioned periodicals) are: "Die Lehre von Gegensatz" (Berlin, 1804); "Vorlesungen über die deutsche Wissenschaft u. Literatur" (Dresden, 1806; 2nd ed., 1807); "Von der Idee der Schönheit" (lectures; Berlin, 1809); "Die Elemente der Staatskunst" (lectures; 3 parts, Berlin, 1809); "Ueber König Friedrich II. u. die Natur, Würde u. Bestimmung der preussischen Monarchie" (lectures; Berlin, 1810); "Die Theorie der Staatshaushaltung u. ihre Fortschritte in Deutschland u. England seit Adam Smith" (2 vols., Vienna, 1812); "Vermischte Schriften über Staat, Philosophie u. Kunst" (2 vols., Vienna, 1812; 2nd ed., 1817); "Versuch einer neuen Theorie des Geldes, mit besonderer Rücksicht auf Grossbritannien" (Leipzig, 1816); "Zwölf Reden über die Beredsamkeit u. deren Verfall in Deutschland" (Leipzig, 1817); "Die Fortschritte der nationalökonomischen Wissenschaft in England" (Leipzig, 1817); "Von der Notwendigkeit einer theologischen Grundlage der gesamten Staatswissenschaften u. der Staatswirtschaft insbesondere" (Leipzig, 1820; new ed., Vienna, 1898); "Die Gewerbe-Polizei in Beziehung auf den Landbau" (Leipzig, 1824); "Vorschlag zu einem historischen Ferien-Cursus" (Vienna, 1829). A critical pamphlet, which was written in 1817 on the occasion of the Protestant jubilee of the Reformation and entitled, "Etwas das Goethe gesagt hat. Beleuchtet von Adam Müller. Leipzig den 31 Oktober, 1817", was printed but not published (reprinted in Vienna, 1910). Nevertheless, Traugott Krug's reply, entitled "Etwas, das Herr Adam Müller gesagt hat über etwas, das Goethe gesagt hat, und noch etwas, das Luther gesagt hat" (Leipzig, 1817), appeared in two editions.

In the field of literature and aesthetics, Müller belongs to the Romantic school. He is a Romanticist even in his specialty, politics and political economy. As Eichendorff says in his "Geschichte der poetischen Literatur Deutschlands" (new ed., by W. Kosch, Kempten, 1906, p. 352), Müller "mapped out a domain of his own, the application of Romanticism to the social and political conditions of life." Müller himself declares: "The reconciliation of science and art and of their noblest ideas with serious political life was the purpose of my larger works" (Vermischte Schriften, I, p. iii). His chief work is the "Elemente der Staatskunst", originating in lectures delivered before Prince Bernhard of Saxe-Weimar and an assembly of politicians and diplomats at Dresden in the winter 1808-09. It treats in six books of the state, of right, of the spirit of legislation in antiquity and in the Middle Ages, of money and national wealth, of the economical factors of the state and trade, of the relation between the state and religion. Müller endeavoured to comprehend the connexion between political and social science, and, while using the historical method, to base them upon philosophy and religion. (Cf. the preface to the first volume of the "Elemente", where he treats exhaustively of the differences between his work and Montesquieu's "Esprit des lois"; cf. also the sixth book of this work, and the above-mentioned work of 1820.) With Edmund

Burke, Friedrich von Gentz, Joseph de Maistre, and Karl Ludwig von Haller, he must be reckoned among the chief opponents of revolutionary ideas in politics. In his work, "Von der Notwendigkeit einer theologischen Grundlage der gesammten Staatswissenschaften" (1820), Müller rejects, like Haller (Restauration der Staatswissenschaften, 1816), the distinction between constitutional and civil law, which rests entirely on the false idea of the state's omnipotence. His ideal is medieval feudalism, on which the reorganization of modern political institutions should be modelled. His position in political economy is defined by his strong opposition to Adam Smith's system of materialistic-liberal (so-called classical) political economy, or the so-called industry system. He is thus also an adversary of free trade. In contrast with the economical individualism of Adam Smith, he emphasizes the ethical element in national economy, the duty of the state toward the individual, and the religious basis which is also necessary in this field. Müller's importance in the history of political economy is acknowledged even by the opponents of his religious and political point of view. His reaction against Adam Smith, says Roemer (Geschichte der National-Oekonomie, p. 763), "is not blind or hostile, but is important, and often truly helpful." The reactionary and feudalistic thought in his writings, which agreed so little with the spirit of the times, prevented his political ideas from exerting a more notable and lasting influence on his age, while their religious character prevented them from being justly appreciated.

FRIEDRICH LAUCHERT.

Müller, JOHANN, physiologist and comparative anatomist, b. at Coblenz, 14 July, 1801; d. at Berlin, 28 April, 1858. He was the son of a shoemaker, but his mother succeeded in obtaining for him a good education. During his college course at Coblenz, he devoted himself to the classics and made his own translations of Aristotle. His first intention was to be a priest, but at eighteen his love for natural science turned him to medicine and he entered the University of Bonn in 1819. While a student he won a prize for original work on "Respiration of the Foetus", a thesis that has been declared the best scientific work ever presented by a student in a prize competition. He received his degree of doctor for a thesis on animal movement. In 1824 he became *Privatdozent* at Bonn, and in 1830 ordinary professor of medicine. Before teaching at Bonn he had studied for two years with Rudolphi at Berlin, and in 1832 was appointed his successor in the professorship of anatomy there. In 1847 he was elected Rector of the University.

Müller is justly regarded as the founder of modern physiology. His claim to this title rests not only upon his personal contributions to the science, but also upon his power of co-ordinating the results of

JOHANN MÜLLER

tained by his predecessors, and of directing into new fields of investigation the disciples who profited by his suggestive teaching. To accuracy of observation he added such a grasp of principles and so clear a comprehension of the bearing of other sciences upon physiology that his reasoning, based throughout upon facts, is philosophical in breadth and penetration.

His first monograph, an elaboration of his prize essay, "De respiratione fœtus", was published in 1823, and was followed (1826) by two others on optical illusions and on the comparative physiology of vision. The last-named abounds in observations upon the structure and functions of the eye in lower animals, especially in insects. Among the other subjects to which Müller devoted careful and successful research may be mentioned: reflex action, the chemical composition of blood plasma, the presence of chondrin in cartilage, hermaphroditism in human beings, the minute structure and origin of glands in man and animals, the lymph hearts of amphibia, and those ducts of the preliminary kidney in the fœtus which have since been called by his name. His study of the lower animals resulted in the discovery of alternate generations and in a satisfactory account of the metamorphoses of echinodermata.

From 1834 to 1840 he edited the "Archives of Anatomy and Physiology" (Müller's Archives) and contributed articles to various scientific reviews. His own contributions to medical literature number over two hundred, most of them of great significance. His principal work is the "Handbuch der Physiologie des Menschen", which was published in 1833 and has appeared in numerous editions and translations. But the benefit which he rendered to science as an original investigator and medical editor is surpassed by his work as a teacher. Among his pupils were most of the men who made Germany the Mecca for scientific students in the latter half of the nineteenth century. They included Virchow, Helmholtz, Schwann, Du Bois-Reymond, Lieberkühn, Max Schultze, Brücke, Claparède, Haeckel, Henle, Guido Wägener, Reichert, Ludwig, Vierordt, and Kölliker. All of these men agreed in proclaiming him the foremost physiologist of his time. Most of the important scientific societies of the world honoured him. Throughout his life he was loyal in his adherence to the Catholic Church, and his fellow-Catholics of the Rhine land have erected a noble monument to his memory at Coblenz.

VIRCHOW, *Johann Müller* (Berlin, 1858); BRÜCKE, *Medical Times and Gazette* (London, 17 July, 1858); DU BOIS-REYMOND, *Gedächtnisrede auf Johannes Müller* (Berlin, 1860); WALSH, *Makers of Modern Medicine* (New York, 1910).

JAMES J. WALSH.

MÜLLER (REGIOMONTANUS), JOHANN, German astronomer, b. in or near Königsberg, a small town in lower Franconia (Dukedom of Coburg), 6 June, 1436; d. in Rome, 6 July, 1476. The name of the family agreed with the trade of the father who operated a mill. Regiomontanus signed himself Johannes de Monteregio, while in foreign countries he was known as Joannes Germanus or Francus. His calendars were published under various names, like Meister Hans von Kungsberg. About the age of twelve he was sent to Leipzig to study dialectics. In the university matriculations (published by Erler, 1895) his name is not registered. Hearing of the celebrated astronomer Peurbach (George of Peurbach in Upper Austria, 1423-61), Müller left Leipzig for Vienna, where he was matriculated in 1450 as Johannes Molitoris de Kunigsperg. In 1452 he received the baccalaureate and in 1457 the title *Magister*. Lectures of his at the university are recorded as follows: in 1458 on perspective, in 1460 on Euclid, in 1461 on Virgil's *Bucolics*. His master and friend Peurbach showed him how incorrect were the Alphonsine Tables and how false the Latin translations of the Greek astronomers from intermediate Arabic translations. To-

gether they observed the planet Mars two degrees off the place assigned to it and a lunar eclipse over an hour late on the Tables. A new field opened to the two astronomers with the arrival in Vienna of the Greek scholar Cardinal Bessarion of Trebisonde, then papal legate to the emperor, and his brother Sigismund, for the purpose of adjusting differences and uniting them against the Turks. Having changed to the Latin Rite, Bessarion mastered the Latin language like his own, and commenced translating Ptolemy directly from the Greek. On the other hand Peurbach was engaged in composing an epitome on Ptolemy's "Almagest". The double circumstance that neither of them was able to accomplish his task, the one for want of time, the other for not knowing Greek, brought about an agreement that Peurbach should accompany Bessarion to Italy together with Regiomontanus. Peurbach died 8 April, 1461, not yet thirty-eight years old, and left the "Epitome" to his pupil to be finished and published as a sacred legacy.

In company with his new patron, Müller reached Rome in the Fall of 1461. Under George of Trebisonde and other teachers he acquired so much knowledge of Greek that he understood all of the obscure points of the "Epitome" of his late master. During his stay in Italy Müller continually observed the sun, the moon, and the planets, and searched the libraries for Greek manuscripts. He found another lunar eclipse over an hour in advance of the Tables. What manuscripts he could not acquire he had copied. A new Testament, written in Greek by his own hand, was his companion. The summer of 1462 was spent at Viterbo, and when Bessarion left for Greece in the Fall of the same year, Müller accompanied him as far as Venice. On the recommendation of his patron, Müller was well received in various Italian cities. In Ferrara he became acquainted with an old friend of Peurbach, Bianchini, then ninety years of age, with Theodore of Gaza, and with Guarini. He profited so well in the knowledge of Greek that he understood the whole of Ptolemy, and was able to complete the "Epitome" of Peurbach by adding seven books to the six already written by his master. In Padua he was at once enrolled among the Academicians and was invited to lecture. While awaiting the return of his patron in Venice, he discovered a portion of the Greek Arithmetic of Diophantus, continued his observations, refuted the quadrature of the circle given by Cuse, and computed a calendar with the places of sun and moon, the eclipses and the dates of Easter for the next thirty years. After two years' absence from Rome, Müller returned there alone in October, 1464, to spend four more years in studying and copying. His rich collection of manuscripts comprised at that time Bessarion's own copy of the Greek "Almagest". Müller was now able to point out grave errors in the commentaries on Ptolemy and Theon by George of Trebisonde. The consequent enmity of the latter, and the absence of his patron, may have induced him to leave Italy in 1468.

The university registers in Vienna contain no record of Müller ever resuming his lectures after his return. The next three years, or part of them, he seems to have spent in Buda, being recommended by the Archbishop of Gran to King Matthias Corvinus of Hungary as custodian of the library, so rich in spoils from Athens and Constantinople. The ensuing wars of the king in Bohemia led Müller to look for a place where he could carry out his life's plan: the determination of the astronomical constants by observation and the publication of the literary treasures in print. Nuremberg, then the centre of industry and commerce in southern Germany, was his choice, and in the Fall of 1471 he was admitted to the city and even invited to lecture. A wealthy citizen, Bernhard Walther, furnished the means for an instrument shop, an observatory, and a printing office and joined Müller in the

work. The fruits soon appeared. The latitude of the place ($49^{\circ} 24'$) and the obliquity of the ecliptic ($23^{\circ} 28'$) were determined free from the effects of refraction; the planet Venus was made the link between the fixed stars and the sun, instead of the moon; the great comet of 1472 was observed during January and February in such a way that its orbit could be calculated. Halley writes: "This comet is the very first of which any proper observations have been handed down to us" (Phil. Trans., XXIV, 1706, p. 1883). The earlier observations of the comet of 1456 by Toscanelli, were unknown to Halley, although the comet happened to be the one that bears his name. The printing office of Walther, with the improved methods and types of Müller, turned out Peurbach's New Theory of the Comets and an astronomical poem of Manilius (1472-73); then Müller's own "Calendarium Novum" and his astronomical "Ephemerides" 1473-74) with the positions of the sun, moon, and planets, and the eclipses from 1475 to 1506. The latter guided Columbus to America and enabled him to predict the lunar eclipse of 29 February, 1504.

Müller's scientific activity in Nuremberg was brought to a close by a letter of Sixtus IV calling him to Rome for the purpose of finally settling the reform of the calendar. Gassendi relates, on the authority of Peter Ramus (1515-72) and of Paul Jovius (Giovio; 1483-1552), both humanists, that Müller was created Bishop of Ratisbon. Jovius writes in his "Eulogies appended to the true pictures of celebrated men" in the museum of Como (p. 75): "Ab hac commendatione eruditi nominis creatus est a Xysto Quarto Ratisponensis Episcopus" etc. This testimony of a man contemporary of Regiomontanus is not improbable, since by this dignitary title the pope could give more force to his invitation. Yet it seems certain that Müller never occupied the episcopal chair. Whether a papal command was needed, or whether the world's problem of adjusting the calendar had in itself sufficient attraction, Müller was again in Rome towards the end of 1475. Death overtook him in less than a year at the age of forty, and the Pantheon is said to be his resting-place, although his tomb is unknown. The cause of his death was, according to Jovius, a pestilence then raging in Rome; but according to Ramus, poison administered to him by the sons of his enemy, George of Trebizond. The historical exactness of Ramus, however, is very doubtful from his poetical stories of the iron fly and the wooden eagle, said to have been constructed in the laboratories of Nuremberg. In consequence of the untimely death of Müller, many of his works and manuscripts were lost, in particular everything on the reform of the calendar. Some works were published posthumously, like the five books on triangles and the quadrature of the circle (Nuremberg, 1533); his trigonometry (1541); the "Scripta Cl. Math. fo. Regiomontani" (1544); the "Epitome" on Ptolemy's Almagest (Venice, 1496); and part of his correspondence with Bessarion, Roder, Bianchini, and other scientists. The principal works are reviewed by Gassendi; the astronomical books are described by Delambre; and the mathematical treatises are discussed by Cantor. Bibliographies on Regiomontanus are enumerated by Stern and Ziegler. A statue of Müller was erected in the market-place of Königsberg in 1873.

Müller, KARL, professor at Düsseldorf, b. at Darmstadt, 29 Oct., 1818; d. at Neuenahr, 15 Aug., 1893, belongs to the more recent members of a school of German religious painters known as the "Nazarenes", who succeeded felicitously in popular but beautiful representation of religious devotion, and gave new renown to the Düsseldorf school even in foreign lands. His style, delicate even to softness, exhibits, however, as much naturalness, fresh, simple piety and spiritual peace as the subjects demand. Schadow, director of the Düsseldorf academy, had selected in 1837 the nineteen year old student, along with his brother Andreas, and Deger (who were later joined by Ittenbach), for the contemplated fresco paintings in the Fürstenburg church on the Apollinarisberg at Remagen. They had first to study carefully in Italy the technique of fresco painting, then little known. Karl Müller arrived in Rome at the end of 1839. The study and imitation of the art treasures of the Eternal City, as later of those of Florence, Pisa, Assisi, and other places, brought to maturity his great natural talent. His taste for landscape, which he brought with him from Düsseldorf, now found the greatest encouragement; he regarded more over the study of models as indispensable in the practical exercise of his art. A large circle of German and Italian friends mutually helped each other by artistic excursions. His evenings he spent in composition and the like. At the end of four years the master brought home his characteristic German religious style, lightly mingled with some southern elements. In his principal paintings of the "Crowning" and the "Birth of Mary" (entirely finished in 1850) he showed himself, according to the judgment of connoisseurs, the equal of the elder Deger. The former painting unfortunately is in a bad light the greater part of the year. The lower part, the Apostles by the grave, out of which spring lilies and roses, is widely known. The leading scene in the upper part presents the Virgin Mother bowed before the Saviour in a Raphaelite beauty of colour. The painter worked so long over the "Birth of Mary" that he hoped to succeed in some degree in satisfying the spirit at once of Raphael and of Dürer. In this work the eight typical women especially deserve to be noticed. Besides these there belong to Müller in the same church the "Annunciation", the "Visitation", the "Wedding of the Virgin", and the "Lamb of God", adored by angels in the midst of the symbols of the Evangelists on a triumphant arch. In 1859 a contract was made with the authorities of the church of Notre-Dame de La Garde at Marseilles in regard to a great pictorial scheme, unfortunately never carried out. The upper part of the cartoon of a new "Coronation of Mary", wonderful in execution, is in the Berlin National Gallery. For the cathedral church at Bonn, undertaken in 1866, eighteen paintings were contemplated. The objections of the ecclesiastical authorities also caused this monumental work, to the master's unutterable sorrow, to fail. His easel pictures, however, are all the better known: "The Magnificat", "Wonder of Roses", "Immaculate Conception", "Joseph with the Boy Jesus", "The Disciples in Emmaus"; the popular round pictures: "Mary and Elizabeth", the "Holy Family at Work", also "The Holy Family", "The Holy Night", and so on. Of the highest value in art are the altar painting, "Christ with the Disciples at Emmaus", which he undertook for the church of St. Remigius at Bonn, and his last cartoon for the same church, completed by his nephew Franz Müller.

Mullock, JOHN T., Bishop of St. John's, Newfoundland, b. in 1807 at Limerick, Ireland; d. at St. John's, Newfoundland, 26 March, 1869. He became

a Franciscan and was educated at St. Bonaventure's College, Seville, and at St. Isidore's, Rome, where in 1830 he was ordained priest. After long service in Ireland, particularly at Ennis, he was appointed in 1847 coadjutor to Bishop Fleming of St. John's, Newfoundland, with the right of succession, and was consecrated by Cardinal Fransoni on 27 December, 1847, at St. Isidore's, Rome. In July, 1850, he succeeded Bishop Fleming. The church made great progress in Newfoundland during the episcopate of Dr. Mullock, a new diocese—Harbour Grace—being erected. The splendid cathedral of St. John's, begun in 1841, was consecrated on 9 September, 1855. Dr. Mullock always took a keen interest in the commercial development of Newfoundland, and was most enthusiastic about its natural resources. He was frequently consulted by the governor on matters relating to the welfare of the colony, and many of his suggestions relating to the fisheries and other matters were adopted. Before leaving Ireland he was a frequent contributor to the periodical literature of the day, and took an active part in the Irish literary movement of the forties. Long before the first attempts to lay a submarine cable across the Atlantic was made (1857), Dr. Mullock had on several occasions publicly propounded the feasibility of connecting Europe with America by means of submarine telegraph. He was the first to bring before the English-speaking world the life and works of the great Saint Alphonsus Maria Liguori, publishing his "Life" at Dublin in 1846, and in the following year a translation of the saint's "History of Heresies and their Refutation". In 1847 appeared at Dublin his "Short History of the Irish Franciscan Province", translated from the Latin work of Francis Ward; he also wrote "The Cathedral of St. John's, Newfoundland and its consecration" (Dublin, 1856).

GREGORY CLEARY.

Münch-Bellinghausen, BARON ELIGIUS FRANZ JOSEPH VON (pseudonym: FRIEDRICH HALM), an Austrian dramatist, b. at Cracow, 2 April, 1806; d. at Vienna, 22 May, 1871. He was educated at the seminary of Melk and later at Vienna, where he studied philosophy and jurisprudence, and where he began his official career in 1826. Even as a boy he took a keen interest in the theatre and since 1833 enjoyed the friendship of his former teacher, the Benedictine Michael Leopold Enk von der Burg, who himself had a strong bent for the drama and encouraged the poet to offer his drama "Griseldis" to the Hofburg theatre. Its successful production in 1835 established Halm's reputation as a playwright and henceforth he continued to write for the stage with varying success. In the meantime he advanced in his official career, becoming Government councillor in 1840 and *Kustos* (chief keeper) of the Court Library in 1844, a position that Grillparzer had sought in vain. He was elected member of the Academy of Sciences in 1852 and life member of the Upper House of Parliament in 1861. In 1867 he was appointed superintendent of the two court-theatres, but three years later resigned this position which disputes had made distasteful to him. His health also had been failing.

Of his many dramatic works the best known are "Griseldis" (1837); "Der Sohn der Wildnis" (1842); and "Der Fechter von Ravenna" (1857). "Griseldis" is based on the well-known story of the faithful wife whose loyalty and devotion are put to the severest tests but who triumphs in the end. "Der Sohn der Wildnis" (The Son of the Wilderness) is a romantic drama depicting the power of womanly love and virtue over rude barbarian strength. It was presented on the English stage under the title of "Ingo-

mar the Barbarian". "Der Fechter von Ravenna" (The Gladiator of Ravenna), regarded as Halm's best work, is a tragedy having for its hero Thumelicus the son of Arminius, the liberator of Germany from Roman rule. Theatricality these plays are very effective, but the characters are improbable and the situations are often strained. Their popularity, which they owe largely to their smooth, polished diction and skilfully interspersed lyrics, has not been lasting. Of Halm's numerous other dramas we may mention "Iphigenie in Delphi" (1856); "Begum Somru" (1863); "Wildfeuer" (1864); and a German version of Shakespeare's "Cymbeline" that appeared on the stage in 1842. Halm is also the author of lyrics, short stories, and of a narrative poem "Charfreitag" (Good Friday) (1864). A complete edition of his works, arranged in chronological order, appeared at Vienna (1856-64) in 8 vols.; four additional volumes were edited posthumously by Faust Pachler and Emil Kuh (Vienna, 1872); selections were edited by Anton Schlossar (Leipzig, —).

See the introduction to SCHLOSSAR's edition; SEIDL in *Album österreich. Dichter* (Vienna, 1850), 139 sq.; RUDOLF GOTTSCHALL, *Porträts und Studien*, V (Leipzig, 1876), 83-129; HANS HOFFEN, *Streitfragen und Erinnerungen* (Stuttgart, 1876).

ARTHUR F. J. REMY.

Munden, JOHN, VENERABLE. See HAYDOCK, GEORGE, VENERABLE.

Mundwiler, FINTAN, abbot of the Benedictine monastery of St. Meinrad, Indiana, b. at Dietikon in Switzerland, 12 July, 1835; d. at St. Meinrad's Abbey, 14 February, 1898. He studied at the monastic school of Einsiedeln in Switzerland, where he took the Benedictine habit in 1854, made profession on 14 Oct., 1855, and was raised to the priesthood on 11 Sept., 1859. A year later he accompanied his confrère, Martin Marty, afterwards Bishop of St. Cloud, to the newly founded monastery of St. Meinrad in Indiana. Having arrived there in September, 1860, he taught in the seminary and attended a few neighbouring missions. While stationed at Terre Haute, Indiana (1864), he organized the German Catholic Congregation of St. Benedict, for which he built a church in 1865. In 1869, when St. Meinrad was raised to an abbey and Father Marty became its first abbot, Father Fintan was appointed prior and master of novices. While Abbot Marty worked among the Indians in Dakota (1876-80), Prior Fintan was administrator of the abbey, and, upon the resignation of the former, who had meanwhile been appointed Vicar Apostolic of Dakota, Fintan was elected Abbot of St. Meinrad on 3 February, 1880, and received abbatial benediction from Bishop Chatard of Vincennes on 16 May, 1880. Though above all intent upon the observance of monastic discipline, he in no way neglected the secular interests of his abbey. He enlarged the college, founded the Priory (now Abbey) of Subiaco in Arkansas and the Priory (now Abbey) of St. Joseph in Louisiana, and obtained from Rome the permission to erect the Helvetico-American Congregation of Benedictines, of which he became the first president. When St. Meinrad's Abbey was destroyed by fire on 2 Sept., 1887, the undaunted abbot rebuilt the monastery on even a greater scale, founded a commercial college at Jasper, Indiana, and assisted in the foundation of the Priory of St. Gall in North Dakota. But, in the midst of temporal cares, he remained a man of prayer. He laboured most zealously for the spread of the adoration of the Blessed Sacrament and was a fervent promoter of the Priest's Eucharistic League. In 1893 he took part in the Eucharistic Congress held at Jerusalem.

Necrologies in Paradiesesfrüchte, III (St. Meinrad, Indiana, 1898), 65-8; *St. John's University Record*, IX (Collegeville, Minnesota, 1898), 31-2; *Revue Benedictine*, XV (Maredsous, 1898), 188-90.

MICHAEL OTT.

Mungret, SCHOOL OF. See LIMERICK, DIOCESE OF.

Munich-Freising, ARCHDIOCESE OF (MONACENSIS ET FRISINGENSIS), in Bavaria.—This archdiocese originated in the ancient Diocese of Freising. The Church of Freising dates back to St. Corbinian, who, after his consecration, came in 716 to organize the Church in Bavaria. On a mountain near Freising the saint erected a Benedictine monastery and a school. He was succeeded in the government of the abbey by his brother Erembert. When St. Boniface in 738 regulated ecclesiastical affairs in Bavaria by the creation of four dioceses, Erembert was chosen first Bishop of Freising, which see was made suffragan to Mainz. The sanctuary of Our Lady, which existed on the mountain near Freising before the coming of St. Corbinian, became the cathedral, and was served by the Benedictine monks. At the time the diocese embraced the country of the Upper Isar as far east as the Inn and south to the watershed of the Inn and the Isar. The third bishop, Joseph of Verona (747–64), established a collegiate church in Isen, and shared in the founding of the convents of Schäftlarn and Scharnitz, placing the government of the latter in the hands of Abbot Atto. The last-named foundation was particularly significant, in view of the later acquisitions of the diocese in the Pustertal.

Other important convents of the diocese were Tegernsee, Moosburg, Ilmmünster, Altomünster, Schliersee, and Rot-on-the-Inn. The learned Aribio, or Arbeo (764–84), the biographer of St. Corbinian, translated the remains of this saint from Mais to Freising and interred them in the *Sepulchrum Corbiniani* which he had built (765–68) in the church of Our Lady. During his episcopate, Duke Tassilo II presented Innichen to the Abbot of Scharnitz. With the newly acquired territory, Freising gained a port of entry into Carinthia, and the diocese soon acquired possessions also in Styria and Carniola. Atto, Abbot of Scharnitz, also Archbishop of Freising (784–810), zealously undertook the task of Christianizing the Slavs of the Pustertal. On the summit of the mountain upon which Freising cathedral stood he erected a second Benedictine monastery under the same government as the first. During his time the diocese was made suffragan to Salzburg. Hitto (811–34) made a visitation of his diocese; he installed a provost and six secular canons in the church on the mountain Weihestephan near Freising.

During the episcopate of his successor Erchambert (835–54), a deed of gift for the first time mentions cathedral canons, who were not monks (842 and 845), the cathedral chapter being thereafter composed of monks and canons. Under Bishops Anno (855–75), Arnold (875–83), and Waldo (883–903), brother of Bishop Salomo of Constance, the monastic element in the cathedral chapter gradually withdrew; the Benedictines of the cathedral mountain seem to have abandoned it and to have established themselves at the foot of the Weihestephan. Waldo rebuilt the cathedral, which had been burned down; he was given jurisdiction over the neighbouring Abbey of Moosburg, and received from Louis the Child in 906 the right of free choice of bishops for the cathedral chapter.

The Hungarians gained an entry into Bavaria and destroyed almost entirely the spiritual life of the country. Bishop Utto fell in a battle against them in 908. Under St. Lantpert (938–57), Freising was set on fire by the Hungarians and almost entirely destroyed. After the victory of Otto I at Lechfeld, peace came again to the city, and the Church of Freising, under the guidance of competent rulers, rose from its ruins, and acquired new possessions. Abraham, of the race of the counts of Görz (956–94), obtained for his diocese from the Emperor Otto II (973) extensive possessions in Carniola. Gottschalk, Knight of Hagenau (994–1006), obtained for Freising a coinage, the privilege of holding fairs, and civic rights; and Egilbert of Moosburg (1006–39), the founder of the Benedictine

Abbey of Weihestephan, which replaced the old convent of the canons, was the recipient of additional lands in Upper Carniola. In Austria and in the Tyrol the colonies founded from the diocese were remarkably successful in development and stability. During the disturbances resulting from the conflict of investitures, Ellenhard, Count of Meran (1052–78), was ever to be found on the side of Henry IV, who repeatedly visited the bishop in Freising; Meginhard, Count of Scheyern (1078–98), who distinguished himself by spreading the Christian doctrine in Bohemia, was more favourable to the pope; Heinrich I, of Ebersdorf (1098–1137), was in his turn an adherent of the emperor. Heinrich I lived to see the destruction of Freising by Duke Welf, and, when dying, bequeathed his possessions to the diocese.

He was succeeded by the most distinguished bishop, Otto I (1137–58), the historian and philosopher. He saved the see from the ruin which threatened it, re-established many monasteries, and delivered the diocese from the oppressive jurisdiction of the counts of Scheyern. A Cistercian himself, he once more established monastic discipline and austerity. In the last years of his administration occurred the destruction of the episcopal bridge, custom houses, mint, and salt works near Oberföhring by Duke Henry the Lion, who transferred the custom houses and bridge site to the upper part of Oberföhring, placing them in the village of Munich on the Isar. Albert I (1158–84) brought the diocese safely through the conflicts of Barbarossa with the pope; he rebuilt the cathedral, which had been burned down in 1169, making it larger and more magnificent; his successor Otto II (1184–1220) completed the work, the cathedral being consecrated in 1205. The troubled period of the thirteenth century was generally unfavourable to the spiritual life of the diocese; in addition, the acquisition of property through donation ceased altogether, and the bishops, in particular Konrad of Wittelsbach (1258–1278) and Emicho of Wittelsbach (1283–1311), organized and brought together their scattered possessions by purchase, sale, and exchange. By inheriting Werdenfels (1294), the diocese became an immediate principality of the empire.

The schism which occurred under Louis the Bavarian also divided the Church of Freising. In opposition to the bishops chosen by the cathedral chapter, which was favourable to the emperor, three others were named in succession by the pope, and for more than a century afterwards the popes appointed the bishops of this diocese, ignoring the privilege of free choice possessed by the chapter. Under the rule of Bishop Albert of Hohenberg (1349–59), chancellor of Charles IV, the diocese recovered from the evil effects produced by the schism. His successors were in great part lords from Austrian territory. In opposition to Bishop Nicodemus of Scala (1421–43), named by Martin V, who proved himself an excellent regent and promoter of ecclesiastical reform, the cathedral chapter chose the vicar-general, Johann Grünwalder, recognized by the antipope, Felix V, and by Duke Albert of Bavaria; but after the resignation of Heinrich II of Schlick (1443–48), appointed by the pope, he obtained general recognition as bishop, and showed himself to be eminently fitted for the office (1448–52). His successor, Johann IV of Tuelbeck (1453–73), was the first bishop in many years to owe his election to the cathedral chapter. He resigned in favour of his chancellor, the pious Sixtus of Tannberg, who worked zealously for reform and for the maintenance of ecclesiastical discipline. During his time, Veit Arnpeck wrote his history of Bavaria and of Freising.

After the death of Sixtus, the chapter elected in succession three brothers of the house of Wittelsbach: Ruprecht (1495–98), Philipp (1499–1541), and Heinrich (1541–1551); of these, however, only Philipp received consecration. Given up to field sports, Philipp

nevertheless steadfastly opposed the ecclesiastical innovations which seemed about to gain a footing in his diocese. Philipp was also administrator of the Diocese of Naumburg. Under Bishop Leo (1552-59), a visitation of the bishopric took place. Moritz of Sandzsell (1599-66), an admirable administrator, resigned in favour of Duke Ernest of Bavaria (1556-1612). The latter was at the same time Bishop of Hildesheim, of Liège, Elector of Cologne, and Bishop of Münster. On account of his zealous activity in the North German sees, he was unable to remain long at Freising. Nevertheless he introduced many reforms, established a ducal and ecclesiastical town council in Munich, and promulgated the first Bavarian concordat (1583). Under the pious Vitus Adam von Gebeck (1618-51), the bishopric was shockingly devastated by the Thirty Years War. Emperor Ferdinand II conferred upon him and his successors the dignity of Prince-bishops.

Once more two princes of the house of Bavaria were elected to the See of Freising: Albert Sigismund (1652-85), at the same time Bishop of Ratisbon and Provost of Ellwangen, an art-loving prince, who adorned the cathedral with a magnificent portal; and Joseph Klemens (1685-94), brother of the Elector Max Emanuel, an ostentatious and extravagant prince, also Bishop of Ratisbon, Elector of Cologne, and Bishop of Liège. Papal confirmation of his appointment to the last-named see was given only in the event that he should resign from the Sees of Freising and Ratisbon. In Freising he was succeeded by Johann von Kapfing (1695-1727), who caused the cathedral to be decorated by the Asam brothers, erected a number of schools and charitable institutions, made numerous visitations, and founded a lyceum at Freising, one of the professors being the learned Benedictine Meichelbeck, who wrote the history of the bishops of Freising. Johann Theodor, Duke of Bavaria (1727-63), in whose hands were united the Dioceses of Ratisbon, Liège, and Freising, built an ecclesiastical seminary at Munich (1735). Klemens Wenceslaus of Saxony (1763-68), who from 1764 was also Bishop of Ratisbon and coadjutor of Augsburg, resigned the See of Freising when, in 1768, he was chosen Elector of Trier. Ludwig Joseph von Welden (1769-88) was specially distinguished for his erection of schools for the people. During his episcopate, a papal nunciature for the lands of Elector Karl Theodor was established in Munich (1786), which was the immediate cause of the convoking of the Congress of Ems. Maximilian Prokop, Count of Törring-Jettenbach (1788-89), was succeeded by the last Prince-Bishop of Freising, Joseph Konrad von Schroffenberg (1780-1803), the dissolution of the diocese taking place during his lifetime (d. 4 April, 1803, at Berchtesgaden).

At the time of the secularization of church property, the prince-bishopric fell to Bavaria, the parts lying in Austria and the Tyrol being turned over to Salzburg. The reformers undertook the destruction of monasteries and diocese, numerous churches were sold for the material they contained, graves were desecrated, the sacred vessels were sold at auction or melted down, and the most valuable libraries were despoiled of their treasures. Owing to the dissolution of the cathedral chapter by the Bavarian Government, the election of a vicar capitular was impossible, and the spiritual guidance of the diocese was entrusted to the vicar-general, Heckenstaller, appointed from Salzburg, who, in 1819, was named vicar Apostolic of the abandoned diocese. The most important episcopal functions were performed by the coadjutor Bishop of Ratisbon, Johann Nepomuk von Wolf. After the concordat between Pius VII and King Max Joseph I (5 June, 1817), an orderly condition of affairs was again finally inaugurated. From the territory of the dissolved Sees of Freising and Chiemsee, and the former Provostship of Berchtesgaden was created the Archdiocese of Munich-Freising, with the seat of the

archbishop and the cathedral chapter in Munich. The new archdiocese was also to comprise those portions of the former Prince-Bishopric of Salzburg which lay on the left bank of the Inn. On the other hand, those parishes in the Tyrol, Carinthia, Carniola, etc., which were formerly under the bishops of Freising and Chiemsee, were subjected to the Ordinaries of Salzburg and Brixen. The church of Our Lady in Munich was made the cathedral. The Bishops of Augsburg, Passau, and Ratisbon became the suffragans of the new ecclesiastical province. The papal Bull of circumscription, "*Dei ac Domini nostri*", bears the date of 1 April, 1818.

Lothar Anselm, Freiherr von Gebattel, dean of the cathedral of Würzburg and a personal friend of the king, was named the first archbishop (1817). As, at the same time as the publication of the concordat, a religious edict had been promulgated as part of the constitution, which again unfairly abrogated many of the stipulations of the concordat, Gebattel refused to take the oath to abide by the constitution; and it was only after the Tegnsee proclamation of the king, 15 Sept., 1821, that he was consecrated in the cathedral of Munich (1821). He attained great distinction by his regulation of ecclesiastical affairs. Under his rule, a large number of monasteries were re-established or newly founded, and many churches and charitable institutions were erected. In Freising, on the site of the old episcopal residence, which Louis had restored to the bishop in 1826, an ecclesiastical seminary was established, to which were added later a lesser seminary, a gymnasium, and a lyceum.

His successor was Karl August, Count of Reischach, previously Bishop of Eichstätt, and coadjutor of Munich. He became unpopular under Maximilian II because of his efforts to uphold the rights of the Church. The king finally used his influence to have him withdrawn, and Pius IX in 1855 raised him to the cardinalate and called him to Rome. Gregor von Scherr (1856-77), former Abbot of Metten, endeavoured to preserve the Catholic character of the schools. For the maintenance of the lesser seminaries of the diocese which had been obliged to receive an exceptionally large number of candidates to the priesthood, he founded St. Corbinian's Association, and erected a lesser seminary in Freising. He introduced into his diocese the devotion of the Perpetual Adoration of the Blessed Sacrament, and instituted pastoral conferences of the clergy. At the Vatican Council, he voted with the minority, but submitted at once to the decision of the council. The last years of his episcopate were embittered by the support which the Bavarian Government, under the leadership of Lutz, minister of worship, gave to the Old Catholic movement, whose founder (Döllinger) and most zealous champions were resident in Munich.

His successor, Anton von Steichele (1878-89), the learned church historian and historiographer of the Diocese of Augsburg, by the foundation of Church Building Associations kept pace with the ever-growing City of Munich by the erection of new churches and parishes, and enlarged the seminary at Freising. In January, 1887, he summoned the bishops of Bavaria to a conference at Freising, which resulted in a resolution to send to the Government a joint memorandum in regard to the status of the Catholic Church in Bavaria, which when carried into effect brought about a better arrangement of the relations between Church and State and guaranteed to the Church a greater influence upon the intermediate and higher schools. Under Archbishop Antonius von Thoma (1889-97), the Old Catholic question was finally settled in a manner favourable to the Catholic Church and to justice. Franz Joseph von Stein (1897-1909) fearlessly espoused in the Bavarian Chamber of the Council of the Empire the cause of the Catholic Church regarding instruction, upholding Catholic

MAXIMILIAN I, ELECTOR OF BAVARIA

knowledge as opposed to the unchecked freedom of university teaching. In accordance with the requirements of the times, he bestowed special care upon the encouragement of Catholic orders and associations, the fostering of Christian charity, the education of the clergy, and the awakening and conservation of the spirit of the Church in the hearts of the people. The present archbishop is Frans Bettinger, appointed on 23 May, 1909, and consecrated, 15 Aug.

STATISTICS.—The archdiocese comprises the Bavarian district of Upper Bavaria, excepting those portions lying west and north of the Danube, 48 communes in the domains of Landshut, and Vilsbiburg in the district of Lower Bavaria. The suffragan dioceses are Augsburg, Passau, and Ratisbon. The diocese is divided into 36 deaneries, 3 town commissariats (Munich, Landshut, and Freising), 417 parishes, 20 *exposituren* (parishes in all but the name) and vicariates. The diocese has 460 benefices and manual benefices (i. e., benefices the incumbents of which may be removed at the will of a superior), 400 curacies, and 100 other places where church services are held. The clergy numbers (1910) 412 pastors, 162 invested beneficiaries, 677 other priests, 210 regular priests (in all 1461 priests). The number of Catholics is 1,069,300. In addition to the cathedral chapter, there are three collegiate churches: in Munich (St. Cajetan's), Laufen, and Tittmoning.

For the education of the clergy there are lesser seminaries in Scheyern (conducted by the Benedictines) and in Freising, having respectively 175 and 215 students, as well as two ecclesiastical seminaries, viz., the archiepiscopal seminary in Freising, with 171 students, and the Georgianum, founded in 1494 by Duke Georg the Rich at Ingolstadt, now transferred to Munich and administered by the State, with 103 students, of which, however, only 23 belong to the Diocese of Munich-Freising. The students attend the philosophical and theological lectures at the University of Munich and at the state lycœums at Freising.

The following orders are represented in the archdiocese:—The Benedictines possess the two Abbeys of Scheyern and St. Boniface in Munich, founded by King Louis I, as well as the Abbeys of Ettal and Schäftlarn, and 2 colleges for students in Munich,—in all (1910) 91 fathers, 27 scholastics, and 162 brothers. The Franciscans have 5 convents, with 49 fathers, 23 scholastics, and 58 lay brothers; the Capuchins, 5 convents, with 43 fathers, 9 novices, and 53 lay brothers; the Brothers of Mercy, 2 convents, with 3 fathers, and 47 brothers; the Minorites, 1 hospital, with 3 fathers, and 3 lay brothers; the Redemptorists, 2 colleges, with 28 fathers, 29 scholastics, and 46 lay brothers; the Augustinians, 1 convent, with 4 fathers, and 6 lay brothers.

Numerous female orders and congregations are to be found in the archdiocese. Of the ancient convents of women only a few are still in existence, notably the Benedictines of the Island of Frauenchiemsee, with an educational establishment and 72 sisters, and the convent of the Servites, near the pilgrimage church of the ducal hospital in Munich, with 55 sisters. The recent congregations are occupied entirely with the instruction of girls, with the care of the sick and the orphans, with the management of Catholic institutions, and so on, while the Brigittines and the Carmelites give themselves up to contemplation.

Besides the two establishments already named, there exist (1910) in the archdiocese: Sisters of Charity of St. Vincent de Paul, from the mother-house in Munich, 61 convents, 842 sisters; Sisters of Charity of St. Vincent de Paul, from the mother-house in Augsburg, 5 establishments, 35 sisters; English Ladies (Institute of Mary), 1 mother-house and 15 filial institutes, 609 sisters; 1 establishment of the Missionary

Sisters of St. Benedict, 7 sisters; Brigittines, 1 house, 41 sisters; Dominicans, 1 establishment, 16 sisters; Franciscans, 5 houses, 139 sisters; Franciscans from the mother-house of Maria-Stern, in Augsburg, 12 establishments, 83 sisters; Poor Franciscans of the Third Order, from Maltersdorf, 65 houses, 429 sisters; Sisters of the Congregation of St. Joseph of Ursberg, 2 houses, 31 sisters; Sisters of the Good Shepherd, 1 house in Munich, 94 sisters; Carmelites, 1 house, 9 sisters; Salesians, 3 establishments, 179 sisters; Poor School Sisters, with a general mother-house, Sankt Jacob am Anger, in Munich, and 49 filial convents, in all, 764 sisters; Ursulines in Landshut, 55 sisters; Sisters of the Most Holy Redeemer from the mother-house at Niederbronn (Alsace), 23 establishments, 203 sisters.

Of the associations in the archdiocese, the following, more or less widespread, may be named: Ludwigsmissionsverein (Louis missionary union), the Association of the Holy Childhood of Jesus, the Society of St. Vincent de Paul, St. Elizabeth's Guild, the Archconfraternity of the Perpetual Adoration of the Blessed Sacrament, Catholic *Gesellenvereine* (Journeyman's Unions) and *Arbeitervereine* (Unions of Labourers), Catholic Students' Unions, Catholic Associations for the Young, Unions of Clerks and Employees, Servants' Unions, Associations for the Education of Neglected Children, and so forth.

Of the churches of the archdiocese, those of the city of Munich are especially noteworthy; this is so in particular of the Cathedral of Our Lady, a brick building in the Gothic style, which dates from 1468–88, with two towers 324 ft. in height, whose copper cupolas, the so-called "wälschen Kappen" (Romanesque caps), are the town's most famous landmarks. Other churches are St. Peter's, the oldest parish church of the city, dating from the year 1180, built in the Gothic and later restored in the Baroque style; Sankt Jacob am Anger, the oldest church in Munich, still retaining its original form and dating from the thirteenth century; the court church of St. Michael, built for the Jesuits, 1583–97, the most distinguished ecclesiastical production of the German Renaissance; the court church of St. Cajetan, built (1663–75) for the Theatines, in the Baroque style; the church of St. Louis, built (1830–44), mainly through the generosity of King Louis I, in mediæval Italian style, containing the famous fresco of the "Last Judgment" by Cornelius; the court of All Saints, built in 1827–37 in the Romanesque-Byzantine style; and the Basilica of St. Boniface, built (1835–50) for the Benedictines, in the form of an early Christian basilica, containing frescoes taken from the life of St. Boniface. The numerous churches of the most varied styles which have been erected in Munich during the last ten years, and constitute one of the beauties of the city, e. g., those of St. Anna, St. Paul, St. Joseph, St. Rupert, bear witness to the people's devotion.

Of the other churches of the archdiocese, the following are worthy of mention: the cathedral of Freising, built 1161–1205, often restored and altered, in which is to be found the shrine containing the relics of St. Corbinian; the Gothic church of St. Martin, in the city of Landshut, dating from the fourteenth and fifteenth centuries, surmounted by the highest tower in Bavaria; in the same city the church of St. Jodock, also in the Gothic style, built in 1338–68; the Romanesque church of Moosburg, erected 1160; the collegiate churches of Tegernsee, Isen, Berchtesgaden, Immünster, Dietramszell, and others. The places of pilgrimage include the church of the Ducal Hospital in Munich, Maria-Eich, Maria-Rammersdorf, Maria-Blutenburg in Munich, Maria-Eich at Traunstein, Tutenhausen, Ettal, Scheyern, Mariadorfen, Birkenstein, Heiligblut at Erding.

UNIVERSITY OF MUNICH.—It was first established (1472) at Ingolstadt (q. v. for its history up to 1800).

In 1800 it was transferred to Landshut, and, later, by decree of Ludwig I (3 Oct., 1826) to Munich, where it has developed in peace. Its earliest location was the former college of the Jesuits, but in 1840 it removed to a new building which has recently (1908) been considerably enlarged. Through the munificence of the Wittelsbach dynasty, abundant provision has been made for its organization and equipment, and it now ranks as the second largest among the German universities. The revised statutes were published in 1835, and new regulations for the student body in 1849. The fourth centenary of the university was celebrated in August, 1872. The faculty of theology at Munich has a long list of distinguished names: Alloli, Döllinger, Haneberg, Hergenröther, Klee, Möhler, Phillips, Permaneder, Reischl, Schegg, Thalhofer. The Collegium Georgianum, founded in 1494 by George the Rich for the special benefit of theological students, was transferred to Munich with the rest of the university, and still serves its original purpose. The faculty numbers (1910) twelve professors and nine *Dozenten*; there are 150 theological students. Among illustrious representatives of the other sciences may be mentioned: in philosophy, Schelling (1827-41); in chemistry, Liebig (1852-73); in surgery, Thiersch (1848-95), and Nussbaum (1860-90); in medicine, Ringseis (1817-80); in history, Giesbrecht (1862-89); in Germanic philology, Schmeller (1827-29); in Celtic philology, Zeuss (1847-56). In 1910 the total number of instructors was 252; of students, 6890.

JOSEPH LINS.

Munkács, DIOCESE OF, in Hungary, of Greek Catholic Rite, suffragan of Gran. It dates from the fifteenth century. Until then the Greek Ruthenians who had emigrated to Hungary a generation before, 1254, were subject to the See of Przemyśl. In 1458 the Diocese of Munkács is mentioned for the first time in a document of King Matthias as a parish with episcopal jurisdiction. It was probably established between 1439 and 1458, as the document mentions that Lucas, the occupant of the see, had already exercised the usual jurisdiction for a considerable period. Its history is connected with that of the Basilian monastery at Csernekhegy near Munkács, established supposedly in 1360 by Duke Theodore Koriatovics, but demonstrably as late as 1418. The history of the diocese falls naturally into three periods. Until 1641, when union with Rome took place, Munkács endeavoured to extend its episcopal jurisdiction over the thirteen districts (Komitate) of Hungary, later its territory. The second period lasts from 1641 to 1771, when the see was canonically established. A third period brings its history down to the present. Of its history during the fifteenth and sixteenth centuries we know very little, especially in regard to the mode of episcopal appointment, although it was probably by election until 1561, with the exception of the nomi-

nation in 1458. In King Wladislaw II's documents a certain John is mentioned as bishop in 1491 and 1498; thence until 1551 we hear nothing more about the bishops, nor are we even sure that the see was occupied. The first document recording the actual appointment of a bishop dates from 1623. In 1641, under Bishop Theodore Tharassovics (1639-48), union with Rome was facilitated by the wish to have done with dependence on the lords of Munkács, but George Rákóczi I of Transylvania, Lord of Munkács, being unfavourably disposed towards union, took Tharassovics prisoner, and, although the latter obtained his freedom in 1642, he did not regain possession of the see. In 1649 the union with Rome was again proclaimed by the clergy of Munkács influenced by Bishop George Jakusich of Eger; henceforth, especially from 1689, date the efforts of the bishops of Eger to bring Munkács into close subjection.

After the union of 1649, Peter Parthenius was appointed Bishop of Munkács, and was confirmed both by King Leopold and the pope. His death was followed by a period of decadence: the diocese was divided into several parts, administered more or less independently of one another, and conflicts arose between the emperor, the pope, and the Rákóczi family, concerning the right of nomination to the see. Appointed bishop in 1689 through the efforts of Archbishop Kolonics, Joseph de Camellis, a Greek, devoted his chief energy towards fostering the religious life of the people and extirpating incontinence among the clergy. To promote these objects he held twelve synods within three years, that of Szatmár being of special importance. After Camellis's death the right of appointment was again disputed. King Joseph I appointed Joseph Hodermarszky bishop in 1705; Francis Rákóczi II, as Lord of Munkács, filled the episcopal office independently; the Holy See, on its part, appointed an administrator, not regarding the see legally established for lack of canonical creation. Hodermarszky had to resign the see in 1715, and the endeavours of the bishops of Eger to treat Munkács as a suffragan thus triumphed. Hodermarszky's successor, Gennadius Bizanczi (1716-33), had already acted as vicar Apostolic. Both he and still more his successor, Michael Olsavszky, contested the authority of the Bishop of Eger; Olsavszky's successor, John Bradács, continued the conflict, and finally triumphed. In 1771 the See of Munkács was established canonically by Clement XIV, Bradács becoming first canonical bishop. Under him the chapter, with seven canons, was also established. In 1816 the See of Eperjes was separated from Munkács, and in 1856 ninety-four parishes were incorporated in the new See of Szamosújvár. Basil Popovics (1837-64) made a lasting impression on the religious life of the diocese; Stephen Pankovics (1866-74) displayed great activity in the domain of diocesan administration, and John Pásztélyi-Kovács (1870-94) performed especially prominent service in the cause of public education. Since 1894 Julius Firczák has been bishop. The residence is at Ungvár. The see is divided into two vicariates (Mármaros and Hajdu-Dorog), seven archdeaneries, and forty-eight vice-archdeaneries. The parishes number 387, the right of patronage being exercised by ninety patrons, the parochial clergy over 500. There are five monasteries, and the chapter consists of six canons.

A. ALDÁSY.

Münster, DIOCESE OF (MONASTERIENSIS), in the Prussian Province of Westphalia, suffragan of Cologne.

I. SECULAR HISTORY.—The earliest name of Münster was Mimegerneford, the later form being Mimi-gardeford; while from 1076 it was called by the Latin

name *Monasterium*. It is first mentioned in 795, when St. Ludger founded a monastery here, and the place became his see when he was consecrated bishop. Even at this early date it must have been a place of some importance. Among the earliest possessions of the Church at Münster were three large landed estates, apparently the gift of Charlemagne. These lands, at least in part, lay within the area of the later city. They were called the Brockhof, the Kampwordeshof, and the Bispinghof. The last-named belonged to the bishop and, probably for this reason, bore his name. The Brockhof was owned by the cathedral chapter, the Kampwordeshof belonged later to the collegiate church of St. Moritz, to which it was apparently assigned when the church was founded. The fourth great estate, and one that is mentioned from the earliest days, the Judefelderhof, appears to have belonged originally to the Church, by which it was given in fief to a family called Jüdefeld. In 1386 the cathedral chapter obtained it by purchase. Near these four estates were quite a number of farms owned independently by free peasants; many of these in the course of time came into the possession of the Church. The monastery of St. Ludger was placed in the centre of these properties on the ground now surrounding the cathedral. From the beginning the monastery was independent of the jurisdiction of the count. How large a district enjoyed this immunity cannot now be ascertained. Neither, for lack of original authorities, can the extent of the guild in which the free peasants were united be positively settled, nor the earliest state of the community and the legal jurisdiction exercised in it. In regard to the public administration of justice, Münster was from the earliest times under the authority of the Counts of Dreingau until, on account of the privileges granted by Otto I, the rights of the count were transferred to the bishop, who exercised them, especially the higher jurisdiction, through governors. The relation of the bishop to the commune in the early period is not entirely clear, though it is evident that he exercised a certain influence over the affairs of the community.

At first the population was very small: there appears to have been a large increase in the eleventh century, when, in addition to the cathedral, the churches of Ueberwasser (1040), St. Moritz (about 1070), and St. Lambert (after 1085) were built. Münster at this time offered great advantages to merchants and mechanics, besides being the see of a bishop, with a chapter and cathedral school. Thus, close to the episcopal castle, that had been built near the minster, there arose an outlying city in which commerce and trade were fairly prosperous, as early as the twelfth century. In 1115 the castle was provided with walls, gateways, and a moat. In the twelfth century three more parish churches were built, those of St. Ludger, mentioned in 1173, St. Egidius (1181), and St. Martin (before 1199). By the end of the twelfth century the place was virtually a city, although it cannot now be ascertained when the distinctive municipal privileges were secured by it. From not later than 1168 the city formed a separate judicial district, and with this the development into a municipality was essentially complete. Yet Münster was not a free imperial city; it was always dependent on the bishop. In 1173 the right of administering the city passed to the bishop and the cathedral chapter. From the thirteenth century these two powers entrusted the exercise of legal jurisdiction to officials (*ministerialen*) of the bishop. From the thirteenth century, in addition to the judge appointed by the bishop, there were city judges, who are first mentioned in 1255. They were appointed by the burgomasters from the members of the city council. When court was held they sat by the judge, who was the bishop's appointee in order to guard the interests of the city, but outside of this had not much influence. The city

council acted as a board of assessors in the city court. The extensive commerce of the city rapidly increased its importance. As early as 1253 it formed a defensive alliance with the neighbouring cities of Osnabrück, Dortmund, Soest, and Lippstadt, and one with the cathedral chapter in 1257. At a later date it joined the confederation of the cities of the Rhine, and about 1368 entered the Hanseatic League. In this period the commercial relations of Münster extended as far as England and Flanders, and eastwards to Livonia and Novgorod.

During the fourteenth and fifteenth centuries important changes appeared in the government of the city. In medieval times the population consisted of citizens and non-citizens. The citizen body was divided into the ruling patricians, who from the sixteenth century were also called "hereditary proprietors", and the commonalty. A body of city patricians can be proved to have existed at Münster from the thirteenth century. At least the burgomasters and the members of the city council were chosen from a limited number of families. From the fourteenth century the patricians had control of the court of the city; they maintained themselves in the sole ownership of the city government up into the fifteenth century. The representatives of the city were the burgomasters, first mentioned in 1253, and the assessors, mentioned in 1221. Besides its judicial authority, the body of assessors performed the duties of a city council. It was presided over by the burgomasters, who, from 1268, were not appointed by the bishop, but by those citizens (*guden luden*) who had the right of voting. Taking advantage of the bishop's pecuniary needs, the municipality gradually obtained large rights and privileges. Thus, besides its own autonomy, it acquired the military authority, the administration of a number of church prebends, and supreme jurisdiction in certain courts in the neighbouring towns and villages. In the fourteenth century it had a court formed from its own council. After 1309 it was represented in the diet of the diocese along with the cathedral chapter and the lower nobility.

Nevertheless, the bishop always appointed the judges and reserved to himself the confirmation of sentence in important cases. He levied the town-taxes which, however, he generally mortgaged; he owned the mint, and claimed certain rights at the death of every citizen. The guilds formed by the leading trades in the fourteenth century (in the sixteenth century seventeen guilds are mentioned) originally exercised no control over the city government; in the second half of that century they formed a confederation. Thus confederated, the guilds were able to influence both the internal and external affairs of the city, working apparently in amicable agreement with the Council. In 1447 the confederated guilds were regarded as a ruling corporation co-ordinate and acting in union with the Council. Their veto could stop any proceedings of the Council, which was still chosen from the patrician body. On the other hand, the Council retained a certain right of supervision over the internal affairs of the guilds. A good understanding between Council and guilds was, therefore, the primary condition for a prosperous development of the city. As a matter of fact the two bodies worked harmoniously together until the outbreak of the diocesan feud which split the city into two armed camps (see below, under II). In 1454, after the close of this feud, it was decided to choose the burgomasters and members of the Council thenceforward from both the patricians and mass of the citizens. This arrangement was maintained until the Anabaptist outbreak. Internal peace promoted prosperity and schools and learning flourished greatly. Münster was regarded as the leading commercial city between the Rhine and the Weser, and the school conducted by the Canon Rudolf of Langen had a great reputation.

In 1533-35, however, Münster was the scene of the wild excesses of the Anabaptists. During the episcopate of Bishop Frederick III, brother of Hermann of Wied, Archbishop of Cologne, the doctrines of Luther spread widely in the Diocese of Münster. In his agreement with the city (14 February, 1533) Bishop Franz of Waldeck ceded to it full religious liberty and granted the six parish churches to the adherents of the new doctrine, in return for which the city promised him obedience and support against the cathedral chapter. From 1533 the city undertook the preparation of new church ordinances. The drawing up of a form of worship was assigned to Bernt Rothmann, a preacher of Anabaptist proclivities. Supported by some preachers from Wassenberg in Jülich and by the Melchiorites (followers of Melchior Hoffmann), he began to spread his views. The strength of the Anabaptist party was steadily increased by accessions from Holland, until, in February, 1534, their leaders, John of Leyden, a tailor, and Jan Matthiesen, a baker, came to Münster from Haarlem, when the sect gained complete control of the city, and the peaceable minority either left the city voluntarily or were expelled. The Anabaptists now indulged in the wildest orgies in "the New Jerusalem", as they called Münster, introducing polygamy and communism, plundering and selling churches and monasteries.

Notwithstanding his inclination to Protestantism, the bishop was now obliged to go to war with the city in order to maintain his secular authority. In alliance with Philip of Hesse, he began (28 February, 1534) a siege of the city in which John of Leyden, as king of the New Zion, had established a reign of terror. After a siege of sixteen months the city was taken in a bloody assault (25 June, 1535). The leaders of the insurrection were executed with horrible tortures and their bodies were exposed in three cages hung on the tower of St. Lambert's Church. The return of the expelled citizens and the restoration of the Catholic Church proceeded slowly. A small Protestant community was still maintained. In 1553 the city regained its old privileges and rights. Trade, commerce, and learning once more flourished. Although disputes now arose between the guilds and the town council, and these two combined against the growing importance of the bishop, Münster enjoyed general peace and prosperity until the Thirty Years' War. Several times during that war the city was obliged to pay heavy contributions, but it was not utterly impoverished like so many other cities.

The peace negotiations carried on at Münster by the Catholic Powers, beginning in 1643, led to the neutralization of the city and its substantial benefit. Thus encouraged, the Council, a few years after the Peace of Westphalia, persuaded the citizens to make a bold attempt to throw off the sovereignty of the bishop and raise Münster to the rank of a free city of the empire. In the struggle with the Prince-Bishop Christopher Bernhard of Galen, Münster was defeated in March, 1661. It lost its privileges, and an episcopal citadel, the Paulsburg, was erected in the western part of the city. Never, while the prince-bishops remained rulers, did Münster regain its full civic liberty. After the Seven Years' War, during which Münster was not able to hold out against a second siege, in 1759, the fortifications were turned into promenades, and the citadel razed. In place of the latter a castle was built in 1768 as a residence for the prince-bishop. In 1780 a university was founded with the property of the suppressed Jesuits and of the Abbey of Ueberwasser. A circle of learned men gathered at Münster around the Princess Galitzin, amongst them being Frederick Leopold Count zu Stolberg and Overbeck.

By the Imperial delegate's enactment, the city of Münster and a part of the diocese fell to Prussia, which had already (23 May, 1802) made an agreement concerning it with the Consul Bonaparte. The Prussian

troops under Blücher entered the city, 3 August. A commission accompanied the army to shape the constitution and administration of the newly-acquired district conformably with the Prussian model. Although the president of the commission, Freiherr von Stein, showed a very friendly spirit towards the city, yet the suppression of its independence and the overbearing behaviour of the Prussian officers disgusted the citizens with Prussian supremacy. Münster joyfully welcomed the French, who entered it in 1806, after the defeat of Prussia at Jena and Auerstädt. In 1808 the city was assigned to the Grand Duchy of Berg, in 1810 to Holland, and in 1811 to France, as capital of the Department of Lippe. The old city-government was dissolved and replaced by the French municipal organization. Many good measures of administration were introduced, but the enthusiasm for them was rapidly chilled by the extensive billeting of soldiers upon the citizens, and by arbitrary action, especially in ecclesiastical matters. When, therefore, after the overthrow of the Napoleonic power at the battle of Leipzig, the Prussians again entered Münster, they, in turn, were greeted with great joy. The Prussian Government was wise enough to retain many improvements made by the French, which they further developed, so that the city quickly reached an unprecedented prosperity. In 1836 the Prussian municipal ordinance was applied to Münster. The population, 13,000 at the beginning of the nineteenth century, rapidly increased with the growth of commerce and traffic, and, as capital of the Province of Westphalia, the quiet cathedral city developed into an important centre of traffic for North-Western Germany.

According to the census taken at the close of 1905, Münster had 81,468 inhabitants, of whom 67,221 were Catholics, 13,612 Protestants, and 555 Jews; in 1910 the population was about 87,000, including 72,800 Catholics. The city has 25 Catholic churches and chapels, including 12 parish churches. Catholic institutions of learning are: the theological faculty of the university with (in the summer of 1910) 316 students; the seminary for priests; 2 preparatory seminaries, namely, the Collegium Borromæum and the Collegium Ludgerianum; a Catholic state gymnasium; a seminary for teachers; a high school for girls.

II. DIOCESAN HISTORY.—Towards the end of the Saxon War, Charlemagne founded, about 795, several Saxon dioceses, all suffragans of Cologne, among them Münster, or Mimigernford. The first bishop was Ludger, who, since the year 787, had been a zealous missionary in five Frisian "hundreds", or districts. The territory of the Diocese of Münster was bounded on the west, south, and north-west by the Dioceses of Cologne and Utrecht, on the east and north-east by Osnabrück. The diocese also included districts remote from the bulk of its territory, namely, the five Frisian hundreds on the lower Ems (Hugmerki, Hunsgau, Fivelgau, Federitgau, and Emsgau), also the island of Bant, which has disappeared, leaving behind it the islands of Borkum, Juist, and Norderney. Mention has already been made above (see I) of the earliest landed estates of the see. Most of the territory over which the bishop eventually exercised sovereign rights lay north of the River Lippe, extending as far as the upper Ems and the Teutoburg Forest. The most important accession was in 1252, when the see purchased the Countship of Vechta and the district of the Ems with the town of Meppen. The country between these new districts was acquired later: in 1403 the district about Cloppenburg and Oyte was gained, in 1406 the manorial domain of Ahaus and the castle of Stromberg with its jurisdiction; and in 1429 Wideshausen in pledge from the Archdiocese of Bremen. This last addition made the new territory, which was entirely separate from the southern part of the diocese, a compact body subsequently known as "the lower diocese"; it remained an integral part of the Diocese of

Münster until the Reformation, which somewhat reduced its size; what was left was retained until the secularization.

St. Ludger established his see as Mimegerneford and founded there a monastery, following the rule of Bishop Chrodegang of Metz, bishop and clergy living in community. But the most important monastery founded by St. Ludger was the Benedictine Abbey of Werden, which became a nursery for the clergy of the diocese. He also assisted in founding the convent of Nottuln, under his sister Heriburg. He was succeeded in the administration of the diocese by two nephews, Gerfrid (809-39) and Altfred (839-49), both of whom also presided over the monastery of Werden. The special connexion of Werden with the diocese ceased on the appointment of the next bishop, Luitbert (849-71), who was not related to the family of the founder. There were even disputes between the bishop and the monastery, which the Synod of Mainz settled in favour of the latter, awarding it the right of freely electing its abbot. Bishop Wulfhelm (875-95) changed the collegiate body founded by Ludger into a cathedral chapter, with which he divided the property till then held in common, the bishop having thenceforth his special residence. Among the religious foundations of the diocese in the ninth century should be mentioned the monasteries for women at Liesborn (814), Vreden (about 839), Freckenhorst (before 857), and Metelen (before 889). The development of religious and intellectual life was checked in the first part of the tenth century by political disquiet. Better days did not begin until the reign of Emperor Otto I (936-73). Under Bishop Duodo (867-93), in 968, the abbey of Borghorst was founded for women; the same bishop built a stone cathedral near the old wooden one. Hermann I (1032-42) founded the Abbey of Our Lady of Ueberwasser; Bishop Frederick I, Count of Wettin (1064-84), established the collegiate church of St. Moritz at Münster; Bishop Erpho (1085-97) built the church of St. Lambert. Both the two just named and Bishop Burchard of Holte (1098-1118) were partisans of the emperor in the investiture conflict. During the episcopate of Dietrich II, Count of Zutphen (1118-27), several Præmonstratensian and Cistercian abbeys arose. Hermann II (1174-1203) founded collegiate churches for the canons of St. Ludger and St. Martin.

The twelfth century was marked by a considerable growth of the bishops' secular power. Bishop Ludwig I, Count of Tecklenburg (1169-73), restored to the see the temporal jurisdiction over its domains previously exercised by the Counts of Tecklenburg. Hermann II, like his immediate predecessors, Frederick II, Count of Are (1152-68), and Ludwig I, was a partisan of Frederick Barbarossa. With the overthrow of Henry the Lion, Duke of Saxony, the last obstacle in the way of the complete sovereignty of the bishops was removed, and Hermann appears as a great feudatory of the empire. During the episcopate of his second successor, Dietrich III of Isenburg (1218-26), the position of the bishop as a prince of the empire was formally acknowledged in 1220 by Frederick II. Hermann II was the last bishop directly appointed by the emperor. Dissensions arose about the election of his successor, Otto I, Count of Oldenburg (1204-18), and Emperor Otto IV decreed that thenceforward the cathedral chapter alone should elect the bishop. The See of Cologne retained the right of confirmation, and the emperor that of investiture. The bishop's temporal authority was limited in important matters, particularly in taxation, the consent of representative bodies of his subjects was necessary. Among these, the cathedral chapter appears early in the thirteenth century; later, the lower nobility, and, lastly, the city of Münster. In course of time the cathedral chapter extended its rights by agreements made with bishops before election.

The temporal power of the see increased greatly during the episcopate of Bishop Otto II, Count of Lippe (1247-59). The city, at the same time, struggled to become independent of the bishop, not, however, with complete success, notwithstanding its alliance with the cathedral chapter. Even as early as the eleventh century the bishops all belonged to noble families, generally to those possessing lands in the neighbourhood; only too often the diocese was administered for the benefit rather of the bishop's family than of the Church. The bishops were, in consequence, frequently involved in the quarrels of the nobility; ecclesiastical affairs were neglected and the prosperity of the inhabitants of the prince-bishopric suffered. Conditions were at their worst during what is known as the Münster Diocesan Feud (1450-57). The arbitrary conduct of Bishop Henry II of Mörs (1424-50) had aroused a very bitter feeling in the city. After his death the majority of the cathedral chapter elected Walram of Mörs, brother of Henry and also of the Archbishop of Cologne, while the city and a minority of the chapter demanded the election of Eric of Hoya, brother of Count John of Hoya. Although the election of Walram was confirmed by the pope, open war for the possession of the see broke out, and Walram was unable to gain possession of the city of Münster. In 1457, after his death, a compact was made by which Eric of Hoya received a life income, and the privileges of the city were confirmed, while both parties recognized the new bishop appointed by the pope, John II, Count Palatine of Simmern (1457-66). After order had been re-established, the ecclesiastical reform of the diocese was taken seriously in hand. Bishop Henry III of Schwarzburg (1466-96), Conrad of Rietberg (1497-1508), and Eric of Saxe-Lauenburg (1508-22) produced excellent results by holding synods and reforming religious foundations. Rudolf of Langen and John Mummellius made the cathedral school a nursery of humanism.

Under the indolent and thoroughly worldly Frederick III (1522-32), brother of the Archbishop of Cologne, Hermann of Wied, Lutheranism spread rapidly after 1524, especially in the city. Scarcely any opposition to the innovation was made by the next bishop, Franz of Waldeck (1532-53), who from the first planned to aid the Reformation in his three dioceses of Münster, Minden, and Osnabrück, in order to form out of these three a secular principality for himself. He was obliged, indeed, for the sake of his endangered authority, to proceed against the Anabaptists in the city of Münster; but he did little for the restoration of the Faith, and at last joined the Smalkaldic League. William of Ketteler (1553-57) was more Protestant than Catholic; although he regarded himself as an administrator of the old Church, and took the Tridentine oath, he refused to comply with the demands of Rome, and resigned in 1557. Bernhard of Raesfeld (1557-66) was genuinely devoted to the Catholic Faith, but he, too, finding himself unequal to the difficulties of his position, resigned. John of Hoya (1566-74), a faithful Catholic, in order to reorganize ecclesiastical affairs, undertook a general visitation of the diocese in the years 1571-73. The visitation revealed shocking conditions among clergy and people, and showed to what extent the Reformation had spread in the diocese under previous bishops. Not only were Protestant ideas predominant in the northern part of the country, or "lower diocese", but the western part as well had been almost entirely lost to the Church. In the cities in other parts of the diocese, too, the Faith had suffered greatly.

The good this bishop accomplished was almost undone after his death. His successor, John William of Cleves (1574-85), inherited the Duchy of Cleves in 1575, married, and gave up the administration of the diocese. A long diplomatic battle as to his successor arose between the Catholic and Protestant powers,

during which the diocese was administered by Cleves. The maintenance of Catholicism in the diocese was assured by the victory of Ernst of Bavaria (1585-1612), who was also Bishop of Freising, Hildesheim, and Liège, and Archbishop of Cologne. He zealously undertook the Counter-Reformation, invited the Jesuits to aid him, and encouraged the founding of monasteries of the old orders, although he could not repair all the losses. The western part of the Frisian district under the ecclesiastical jurisdiction of Münster was transferred, in 1569, to the newly-founded bishoprics of Groningen and Deventer, and with them fell into Protestantism. In the same way the possessions of the Counts of Bentheim-Steinfurt and some other fortified towns passed from the ecclesiastical jurisdiction of the bishop. The two immediate successors of Bishop Ernst laboured in the same spirit. Ferdinand of Bavaria (1612-50) was at the same time Elector of Cologne and Bishop of Paderborn, Hildesheim, and Liège. He founded a seminary, which he placed under the direction of Jesuits. Christopher Bernhard of Galen (1650-78) was equally efficient both as bishop and as secular ruler: he forced the refractory city of Münster, after a long siege, to acknowledge his sovereign rights, succeeded in freeing his territory from foreign troops, gained parts of the Archdiocese of Bremen and of the Diocese of Werden in a war with Sweden, restored church discipline, and established a school system for his territory.

The immediate successors of the three distinguished rulers just mentioned were Ferdinand II of Fürstenberg (1678-83), Maximilian Henry of Bavaria (1683-88), Frederick Christian of Plettenberg (1688-1712), and Francis Arnold of Wolf-Metternich (1708-18). Unfortunately, under these men church discipline declined, and much that was excellent decayed for lack of proper care, or, like the seminary for priests, ceased to exist. The next bishop was the frivolous, vain, and pomp-loving Clement Augustus of Bavaria (1719-61), who was also Elector of Cologne, and Bishop of Paderborn, Hildesheim, and Osnabrück. During his episcopate the diocese suffered terribly, in 1734-35 and during the Seven Years War, being almost ruined financially. The succeeding bishop, Maximilian Frederick of Königsegg-Rottenfels (1761-84), who was also Elector of Cologne, was a weak, though well-meaning, man. Happily, he left the administration of the Diocese of Münster to a young cathedral canon, Franz Friedrich Wilhelm von Fürstenberg (q. v.), during whose administration the diocese attained unexampled prosperity. At the election of an auxiliary bishop, von Fürstenberg was defeated by Maximilian Franz of Austria, who became the last Prince-Bishop of Münster and Elector of Cologne (1774-1801). Upon the death of Maximilian Franz, his nephew, the Archduke Anthony Victor, was elected, but could not enter upon the administration on account of the opposition of Prussia, which had long coveted the domains of the Church in Northern Germany.

In 1803 the diocese was secularized by the Imperial Delegates Enactment and broken up into numerous parts. The larger share was assigned to Prussia, which took possession in March, 1803. The rich treasury of the cathedral was transferred to Magdeburg and has never been returned. Freiherr von Fürstenberg administered as vicar-general the ecclesiastical affairs of the diocese even during the short supremacy of the French (1806-13). After his death, in 1810, the administrator was his former coadjutor, Clement Augustus von Droste-Vischering, later Archbishop of Cologne. In the years 1813-15 the diocese was administered, without the authorization of the pope, by Count Ferdinand Augustus von Spiegel, arbitrarily appointed by Napoleon, and to whom von Droste-Vischering had given his faculties by subdelegation. In 1813 the principality was again ceded to Prussia. Upon the ecclesiastical reorganization of Prussia, com-

pleted by the Bull of 16 July, 1821, "*De salute animarum*", the diocese was given its present boundaries (see below). The see had been vacant for twenty years when Ferdinand von Lunninck (1821-25), formerly Prince-Bishop of Corvey, was appointed. On account of illness, he left the administration to Jodok Hermann von Zurmühlen, already an old man, whom he made pro-vicar. The succeeding bishop was Caspar Max, Freiherr von Droste-Vischering (1824-46), who, having been auxiliary bishop of the diocese since 1795, had confirmed many hundreds of thousands and ordained over 2200 priests. His administration was greatly hampered by the petty and far-reaching supervision of the Government. In place of the university, suppressed in 1818, he was able to open, in 1832, an academy with philosophical and theological faculties; in 1902 this academy became a university. Ecclesiastical life in the diocese was in a somewhat unsatisfactory condition, the clergy being largely inclined to Rationalistic and Hermesian opinions.

An intellectual and religious revival throughout Germany followed the events at Cologne in 1837 (see COLOGNE). This revival and the larger freedom granted the Catholic Church of Prussia under King Frederick William IV produced excellent results in the diocese. During the episcopate of John Gregory Müller (1847-70), fruitful popular missions were held in many places, many churches were rebuilt, and a large number of religious houses and benevolent institutions were founded with the active assistance of the laity. His successor, John Bernhard Brinkmann (1870-89), laboured in the same apostolic spirit. During the *Kulturkampf* he suffered fines, imprisonment, and, from 1875 to 1884, banishment. He was obliged to witness the destruction of much that had been established by his predecessors and by himself. The present bishop is Hermann Dingelstad, born 2 March, 1835, elected 15 August, 1889, consecrated 24 February, 1890.

Statistics.—The Diocese of Münster includes: the Prussian Department of Münster in Westphalia; the parish of Lette, in the Department of Minden; three enclaves in the Department of Arensburg; the city district of Duisberg; the districts of Dinslaken, Rees, Cleves, Gildern, Kempen, and Mörs in Rhenish Prussia; the city of Wilhelmshaven in the Province of Hanover; the Duchy of Oldenburg. The 408 parishes of the diocese are distributed in 22 deaneries, of which 12 are in Westphalia, 8 in Rhenish Prussia, and 2 in Oldenburg. In 1910 there were in the diocese 1,427,203 Catholics, 664,737 Protestants, 8758 Jews. The diocesan priests numbered 1333, of whom 1259 were engaged in parochial work, teaching, or ecclesiastical administration; 74 were absent on leave or were retired; there were 133 regulars. In addition, 38 ecclesiastics not belonging to the diocese were domiciled in it. There has been an unbroken succession of auxiliary bishops since 1218. The cathedral chapter consists of a provost, dean, 8 canons, and 6 honorary canons. The vicariate-general is composed of the vicar-general, 6 ecclesiastical councillors, a notary Apostolic for the diocese, a justiciary, 3 secretaries, and 7 other officials. Besides the *officialité* at Münster, there is also one at Vechta for the Oldenburg section of the diocese. The diocesan institutions are: the seminary for priests (36 students who were already deacons in 1910), the Collegium Borromæum for theological students (182 students), the Collegium Ludgerianum (111 pupils), the institute for Church music—all at Münster; at Gaesdonck, near Goch, an episcopal seminary for assistant priests, and the Collegium Augustinianum; 4 episcopal institutions for poor children, and the Maria-Hilf institute at Tilbeck for epileptic women and girls. There are 13 ecclesiastical professors in the theological faculty and one in the philosophical faculty at Münster. Among the state-aided Catholic higher schools are 11 *Gymnasien*, one

Realschule, 6 seminaries for male and 2 for female teachers. There are also a large number of high schools for girls, generally carried on by nuns.

The city of Münster contains 27 houses of religious orders and congregations. The members conduct most of the 25 Catholic institutions for public benefit and charity in the municipality. The male orders and congregations represented in the diocese are: Franciscans, 5 monasteries, 40 fathers, 13 clerical novices, 11 lay brothers; Capuchins, 4 monasteries, 34 fathers, 9 clerics, 23 brothers; Trappists in the colony for men out of work at Maria-Venn, 8 fathers, 12 brothers; Benedictines, an abbey and a priory, 15 fathers, 28 brothers; Dominicans, 2 monasteries, 12 fathers, 7 lay brothers; Society of Missionaries of the Sacred Heart of Jesus, 1 house, 19 missionaries; Alexian Brothers, 1 institution for the care of insane men, 46 brothers; Brothers of Mercy, 2 houses, 41 brothers; Brothers of St. Francis, 3 houses, 19 brothers. Female religious orders and congregations: Benedictine nuns of the Perpetual Adoration, 3 houses, 151 sisters; Sisters of the Visitation of Mary, 1 house, 35 sisters; Poor Clares, 3 houses, 92 sisters; Ursulines at Dorsten, where they have a higher school for girls, a boarding-school, a seminary for female teachers etc., 60 sisters; Sisters of Mercy, mother-house at Münster, 81 branches in the diocese, 240 sisters; Sisters of Our Lady of Charity of the Good Shepherd, mother-house and branch house, 125 sisters; Sisters of the Divine Providence, a mother-house, 63 filial houses, and 640 sisters who conduct a large number of schools for girls, homes for girls, houses for the needy and helpless, etc.; Nursing Sisters of the Third Order of St. Francis, a mother-house, 83 branch houses, 894 sisters; Sisters of Our Lady, a mother-house, 41 branch-houses, which carry on boarding schools, day-schools, homes for girls etc., 590 sisters; Sisters of the Christian Schools of Mercy, who conduct higher schools for girls, day-nurseries, sewing-schools, take care of the sick, etc., 24 houses, 146 sisters; Poor Serving Maids of Jesus Christ, 4 houses, 47 sisters; Poor Franciscans of the Sacred Heart of Jesus and Mary, a hospital with 7 sisters; Sisters of Penitence and Christian Charity of the Third Order of St. Francis, 3 houses, 152 sisters; Sisters of St. Charles Borromeo at Cleves, 13 sisters; Grey Sisters of St. Elizabeth, 1 house, 8 sisters; Daughters of the Holy Cross, 4 houses, 99 sisters; Missionary Sisters of the Sacred Heart of Jesus, a mother-house, 78 sisters; Dominican Nuns from the mother-house at Arenberg in the Diocese of Trier, 3 houses, 10 sisters. Among the religious associations are: the association of priests, young men's associations (84), Marian sodalities for young men (262), journeymen's unions in 81 towns, merchants' associations (36), workmen's unions (134), miners' unions (47), sodalities for men (77), congregations of Catholic young women (250), societies of Christian mothers (325), the Bonifaciusverein, the Societies of St. Vincent, of Blessed Albertus Magnus, etc.

The principal churches are: the cathedral (built for the most part between 1225 and 1265, in the transition period from Romanesque to Gothic architecture, while the great doorway, built in 1516, is late Gothic in style); the Gothic church of St. Lambert, built, on the site of an old parish church, in the second half of the fourteenth century, with a new Gothic tower, about 312 feet high, added in 1887-90, to replace the old one on which had hung the iron cages that held the bodies of the executed Anabaptists; the church of Our Lady, a fine fourteenth-century Gothic building erected on the site of the chapel of the Virgin, built by St. Ludger; the church of St. Ludger, built about 1170, enlarged 1383; the collegiate church of St. Moritz, founded 1070, and enlarged, 1862, in Romanesque style. Besides these, the following deserve particular mention: the Romanesque churches of Freckenhorst and Emmerich; the Gothic churches

at Xanten (Cathedral of St. Victor), Lüdinghausen, Cleves, Kalten, Kempen, and Nottuln.

Works on the City of Münster: WILCKENS, *Versuch einer allgemeinen Geschichte der Stadt Münster* (Münster and Hamm, 1824); NIERERT, *Beiträge zu einem münsterischen Urkundenbuch* (2 vols., Münster, 1823); IDEM, *Münsterische Urkundensammlung* (7 vols., Coesfeld, 1826-37); ENHARD, *Geschichte Münsters* (Münster, 1837); TIBBS, *Die Stadt Münster* (Münster, 1882); VON DETTEN, *Münster in Westfalen, seine Entstehung und das Kulturbild seiner tausendjährigen Entwicklung* (Münster, 1887); *Quellen und Forschungen zur Geschichte der Stadt Münster*, I (Münster, 1889); PIEPER, *Die alte Universität Münster* (Münster, 1902); SAYELS, *Der Dom zu Münster* (Münster, 1904); BÖMER, *Das literarische Leben in Münster bis zur endgültigen Rezeption des Humanismus* (Münster, 1906); HUPPERTZ, *Münster im 7-jährigen Krieg* (Münster, 1908).

On the Diocese: *Westfälisches Urkundenbuch*, I-VIII (Münster, 1847-1908) (especially II and VIII); *Die Geschichtsquellen des Bistums Münster*, I-VI (Münster, 1851-1900); *Codex Traditionum Westfalicarum* (6 vols., Münster, 1872-1907); TIBBS, *Gründungsgeschichte der Stifter, Pfarrkirchen, Klöster und Kapellen im Bereich des alten Bistums Münster* (Münster, 1893); BAHLMANN, *Der Regierungsbezirk Münster* (Münster, 1893); STAFFER, *Die älteste Agenda des Bistums Münster* (Münster, 1906); *Schematismus der Diözese Münster* (Münster, 1910).—On the Diocesan Feud and the Period of the Counter-Reformation: HANSEN in *Publikationen aus den k. preussischen Staatsarchiven*, XLII (Leipzig, 1890); KELLER, *ibid.*, IX, XXXIII (Leipzig, 1881 and 1887).—On the Episcopate of Bishop Galen: TÖCKING, *Geschichte des Stifts Münster unter Ch. B. von Galen* (Münster, 1865); HÜSING, *Fürstbischof Ch. B. von Galen* (Münster, 1887).—On the Secularization of the Diocese: VON OLFERS, *Beiträge zur Geschichte der Verfassung und der Zerstückelung des Oberstifts Münster* (Münster, 1848).—Numerous contributions to the history of the city and diocese of Münster are to be found in the following: *Zeitschrift für vaterländische Geschichte und Altertumskunde* (Münster) (67 vols. up to 1910); *Beiträge zur Geschichte Niedersachsens und Westfalens* (Hildesheim) (22 parts up to 1910); *Münsterische Beiträge zur Geschichtsforschung* (Münster) (26 parts up to 1910). See also ANABAPTISTS; WESTPHALIA.

JOSEPH LINS.

UNIVERSITY OF MÜNSTER.—The town of Münster in Westphalia obtained its university in 1771 through the initiative of the prince-bishop's vicar-general, Freiherr von Fürstenberg.

The foundation for the university was the cathedral school at Münster, which dated from the Middle Ages. This school, about the end of the fifteenth century, had reached a flourishing condition through the efforts of the famous humanist Rudolph von Langen (1438-1519). The disturbances caused by the Anabaptists (1533-35) had a depressing influence, but Dean Gottfried von Raesfeld succeeded in restoring it to its former position by turning its supervision over to the Jesuits in 1588. The school, now called *Gymnasium Pauhinum*, was enlarged by the addition of courses in philosophy and theology for the scientific education of priests, and was raised by Pope Urban VIII to the rank of an academy, 9 Sept., 1629. The latter action was taken at the urgent request of Prince-Bishop Ferdinand I (1612-31), who also obtained from the Emperor Ferdinand II the document of 21 May, 1631, in which the latter granted permission to found a complete university with four faculties. The death of the bishop, the disturbances of the Thirty Years' War and the want of funds prevented the execution of this plan during the next century and a half. The clever work of Vicar-General Frans Friedrich von Fürstenberg finally accomplished the desired end: on 4 August, 1771, Prince-Bishop Maximilian Friedrich von Königseck-Rotenfels signed the document making Münster a university. Pope Clement XIV granted to the university, in a bull dated 28 May, 1773, all the privileges, indulgences and liberties which other universities enjoyed. The charter, signed by Emperor Joseph II in Vienna, is dated 8 Oct. of the same year. For more than thirty years Fürstenberg, as curator, laboured earnestly for the development of the university. He filled it with the spirit of positive Christianity, so that it had a beneficent influence at a time when rationalistic philosophy and false enlightenment appeared everywhere. In 1803 Münster was ceded to Prussia by the imperial deputation assembled at Ratisbon. The Prussian administrator of Münster, Baron von Stein, showed great interest in the university, but endeavoured to do away with its Catholic character. His successor,

President von Vincke, accomplished this purpose and dismissed Fürstenberg, the founder of the university, in 1805. In the autumn of 1806 the French took possession of the town. During the seven years' sway of the foreigners no remarkable progress was made in the university. After Münster had again become Prussian in 1813, the Protestant government raised the question whether the university should be reorganized or removed to another town. No decision was reached until King Frederick William III in 1815 promised his new subjects on the left bank of the Rhine that a university would be established on the Rhine. The founding of the university at Bonn carried with it the abolition of that of Münster, which took place in the summer of 1818. Only one theological course, and, by way of preparation for the same, a philological and scientific course, remained, under the name of an academy. While this academy possessed the character of a university and the right of conferring degrees, it was conducted on a rather modest scale. A department of medicine, which had been started in 1821, was discontinued in 1848. It was not until 1870 that the increasing importance of Germany as a nation infused new life into the endeavour to uplift the academy. In 1880 the modelling of the present magnificent main edifice of the university was completed, and in 1886 there was added to the academy a pharmaceutical institute. The continued efforts of the town and of the province of Westphalia finally led to the issue of a royal decree, dated 1 July, 1902, restoring to the academy a faculty of law and the title "University" (since 1907 "Westphälische Wilhelms-Universität", in honour of the Emperor William II). In 1906 there followed the establishment of the chairs and institutions required for the first half of the course in medicine, the further extension of which may be expected in the next few years.

Noteworthy among the teachers of the old episcopal university were: Clemens Becker, S.J., professor of canon law and moral theology (d. 1790); Joh. Hyac. Kistemaker, philologist and theologian, who taught the classical languages from 1786 to 1834, and, later on, exegesis. A. M. Sprickmann laboured as a jurist in Münster from 1778 to 1814, when he was called to the University of Breslau and later, in 1817, to Berlin. Anton Bruchhausen, S.J., professor of physics (1773-82), gained a great reputation among German scientists through his "Institutiones physicae" (1775); and the philosopher Havichhorst (1773-83) through his "Institutiones logicae". George Hermes was professor of dogmatic theology in Münster from 1807-20; he founded the so-called Hermesianism, a rationalistic tendency in theology, and d. in 1831 at Bonn, where he taught from 1820; his teachings were condemned at Rome in 1836. J. Th. H. Katerkamp, who was counted among the friends of Prince Galitzin, was professor of theology. Of the teachers in the academy there deserve to be mentioned the neo-scholastic Stöckl, professor of philosophy (1862-71); furthermore, Wilhelm Storck, interpreter of Portuguese poems (Camões) and professor of German literature (1859-1905); and especially Johann Wilhelm Hittorf, since 1852 professor of physics and chemistry, who discovered the cathode rays, and made valuable investigations concerning electric phenomena in vacuum tubes and contributions to the theory of ions. Mention should also be made of Professors Berlage (dogmatics), Reinke (Old Testament exegesis), and Bisping (New Test. exegesis), Schwane (dogmatics).

The number of matriculated students is at present: summer of 1910, 2008 (including 68 women); there are besides 115 auditors. Teachers: in the theological faculty, 9 ordinary and 2 extraordinary professors, 2 dozenten and 1 lecturer; in the law faculty, 7 ordinary and 3 extraordinary professors, 4 dozenten; in the philosophical faculty, 28 ordinary and 6 extraor-

dinary professors, 14 dozenten, and 4 lecturers; in the medical faculty, 1 extraordinary and 2 ordinary professors, 2 lecturers, 1 dozent.

PISPER, *Die alte Universität Münster* (Münster, 1902); RASMANN, *Münsterländische Schriftsteller* (Münster, 1866); ANON., *Erinnerungen aus alter und neuer Zeit von einem alten Münsteraner* (Münster, 1890); see also the official annual reports, two senate memorials (1901, 1910), on the development of the university and another on the same subject by the Magistrate of the City of Münster (1910).

W. ENGELKEMPER.

Müntz, EUGÈNE.—French savant and historian; b. at Souls-sous-Forêts, near Mülhausen, Alsace, 11 June, 1845; d. at Paris, 2 November, 1902. He took up the study of law, but turned aside from the legal profession to contribute to the "Revue Alsacienne" certain articles which caused much comment. Just at that time—following upon the great efflorescence of learned criticism in Germany—attention was being directed in France to the organized study of history. Albert Dumont founded at Rome the École Française, in the Farnese Palace, and Eugène Müntz became one of its first pupils. Among his fellow-students was Louis Duchesne, who afterwards became director of the school. Müntz explored the Vatican Archives and Library, and began to amass that vast fund of erudition which he revealed in later years. From that time he devoted himself to the task of unravelling the history of art in Italy. About the year 1880, he, together with such men as Morelli and Milanesi, contributed immensely to this branch of study, and applied to it the positive method of inquiry. Müntz's work is based on an exact acquaintance with original documents—papers preserved in archives, memoranda, bills, inventories, contracts—supported by an extensive and profound knowledge of monuments. He never loses sight of the bond between the arts, that close relationship by which all the art industries of a period—its engraving, its tapestry-weaving, its pottery, its cabinet-making—contribute, as so many expressions of contemporary thought, to form the genius of its painters, sculptors, and architects. Captivated by that Rome where the fairest years of his life had been spent in studious research, he never ceased to regard the Rome of Julius II and Leo X., of Bramante, Michelangelo, and Raphael, as the highest expression of human civilization. This attitude of mind at times hindered his doing justice to other schools—for instance, to those of Venice and Siena.

The earliest works of Müntz at once won for him a high place among the historians of art. In "Les Arts à la cour des papes pendant le XV^e et XVI^e siècles" (4 vols., 1875-98) he has collected evidence to show the splendid part played by the papacy as leader of the Renaissance. When two volumes of this work had appeared, its author issued "Précurseurs de la Renaissance" (1881), and followed this with "Raphaël", to which it is a sort of introduction. The "Précurseurs" and "Raphaël" are still classics (1st ed. 1881; 2nd ed. 1896); to them must be added a small but important volume "Les Historiens et les critiques de Raphaël" (1884), in which Müntz defends traditional against modern criticism, especially against Morelli. He afterwards developed his cherished ideas in a work which became the most popular manual in France on Italian art, "Histoire de l'art en Italie pendant la Renaissance" (I, "Les Primitifs", 1888; II, "L'Age d'Or", 1891; III, "La Fin de la Renaissance", 1895). His views are not very original, his taste is somewhat academic, with a bourgeois tinge; but this history is nevertheless a most valuable popular treatment of that glorious period. His picture of the Renaissance is completed by an excellent study, "Léonard de Vinci", which appeared in 1898. These books form a group by themselves; Müntz published many others, some of them works of sheer erudite research, but most of them bearing on the main work of his life, and forming supplements or additions to it. Among the former are: "Notes sur les mosaïques d'Italie" (1874-

91); "Etudes sur l'histoire de la peinture et de l'iconographie chrétiennes" (1882); "Etudes iconographiques et archéologiques sur le Moyen-Age" (1888). Among the latter we may mention: "Donatello" (1885); "Le Palais des papes à Avignon" (1886-92); "La Bibliothèque du Vatican au xvi^e siècle" (written in collaboration with P. Fabre—1887); "Collections des Médicis au xv^e siècle" (1887); "Antiquités de Rome au xiv^e, xv^e, et xvi^e siècles" (1887); "Florence et la Toscane" (1897); "La Tiare Pontificale du viii^e siècle au xvi^e siècle" (1897). In a third series of works he took up the study of the influence of the Italian Renaissance in other European countries, especially France: "La Renaissance en Italie et en France à l'époque de Charles VIII" (1885); "Le Château de Fontainebleau au xvi^e siècle" (1886), in which he collaborated with Molinier. He contemplated extending these studies to the whole of Europe when death interrupted them.

In Müntz's writings we should look in vain for a personal view, or for any such system or philosophy as gives a work a loftier scope than the merely historical. His cannot compare with the great histories of the Renaissance given us by Taine, Burckhardt, or John Addington Symonds. Still it is a treasury of information. It presents in an easy agreeable form a résumé of what research has discovered and criticism accepted. The complete edition of this History was the first model for that class of *de luxe* books which, thanks to modern processes of reproduction, have done so much in the last thirty years to spread information on art and to improve the public taste. After 1878 Müntz was connected with the Ecole des Beaux-Arts, where he took Taine's place in the chair of aesthetics from 1885 to 1892. He entered the Institute in 1893.

LOUIS GILLET.

Mura, SAINT, b. in Co. Donegal, Ireland, about 560. He was appointed Abbot of Fahan by St. Columba. The monastery was anciently known as Othan Mor, but after the death of our saint was called Fahan Mura. He was highly esteemed by Hugh, Head King of Ireland, whose obit is chronicled in 607. Numerous legends are told of Mura; he wrote many works, including chronicles and a rhymed life of St. Columba, which is quoted in the Martyrology of Donegal. He is regarded as the special patron saint of the O'Neill clan, being sixth in descent from the founder, whose name survives in Innishowen (Inis Eoghan). His death occurred about 645, and his feast is observed on 12 March. Among his relics still preserved are his crozier (*Bachall Mura*), now in the National Museum, Dublin, and his bell-shrine, now in the Wallace Collection, London. In the ruined church of St. Mura at Fahan is a beautiful Irish cross, and not far off is St. Mura's Well.

W. H. GRATTAN-FLOOD.

Muratori, LUIGI ANTONIO, librarian in Modena, one of the greatest scholars of his time, b. 21 Oct., 1672; d. 23 Jan., 1750. Though he came from a poor family of Vignola in the district of Modena, he received opportunities to devote himself to the higher studies. Having first been instructed by the Jesuits, he studied law, philosophy, and theology at the University of Modena, where he plainly showed his extraordinary talents, especially in literature and history. In 1694 he was ordained priest. In 1695 Count Charles Borromeo called him to the college of "Dottori" at the Ambrosian library in Milan, where he immediately started collecting unedited ancient writings of various kinds. His first publication was the "Anecdota latina ex Ambrosianæ Bibliothecæ codicibus" (2 vols., Milan, 1697-98), followed by two other volumes (Padua, 1713). Duke Rinaldo I (1700)

appointed him archivist and librarian in Modena, which position he held until his death. In 1716 Muratori became, in addition, provost of St. Maria della Pomposa, and conducted this parish with great zeal until 1733. He continued publishing unedited writings, first among which was a volume, "Anecdota græca" (Padua, 1709). At the same time he cultivated literature, as is shown by his works, "Della perfetta poesia italiana" (Modena, 1706) and "Riflessioni sopra il buon gusto nelle scienze e nelle arti" (Venice, 1708). He even intended to establish something like a general society of Italian literature, and as early as 1703 published for this purpose, under the pseudonym "Lamindo Pritanio", a plan "Primi disegni della repubblica letteraria d'Italia". In 1708 a quarrel broke out between the Holy See (aided by the emperor) and the Dukes of Este, over the possession of Comacchio, which involved the sovereignty of the district of Ferrara. Muratori supported the claims of his sovereign and of the house of Este against the pope by means of numerous historical researches, which he later on utilized in the preparation of a great historical work, "Antichità Estensi ed Italiane" (2 vols., Modena: 1st vol., 1717; 2nd vol., 1740). He continued studying the sources for a history of Italy, and as a fruit of his untiring researches there appeared the monumental work, "Rerum italicarum Scriptores ab anno æræ christianæ 500 ad annum 1500". It was published in twenty-eight folio volumes with the assistance of the "Società Palatina" of Milan (Milan, 1723-51). A new critical edition is now (since 1900) appearing in serial form under the direction of Giosuè Carducci and Vittorio Fiorini in "Città di Castello". J. Calligaris, J. Filippi, and C. Merkel published "Indices chronologici" (Turin, 1885) for the same. At the same time Muratori edited a collection of seventy-five essays on different historical themes, entitled "Antiquitates italicæ mediæ ævi" (6 vols. fols., Milan, 1738-42), as an elucidation and supplement to his work on the sources. In the third volume of this collection there is found the Muratorian canon (q. v.) which is of the greatest importance for the history of the New Testament canon. In order to render these researches accessible to greater masses of his countrymen, he himself published a new edition in Italian, "Dissertazioni sopra le Antichità italiane" (3 vols., Milan, 1751). Other important publications of sources are his collections of ancient inscriptions ("Novus thesaurus veterum inscriptionum", 4 vols., Milan, 1739-42), the fourth volume containing also the ancient Christian inscriptions; and the edition of the Roman Sacramentaries ("Liturgia romana vetus", 2 vols., Venice, 1748), of value to this day. He wrote a great chronological representation of Italian history ("Annali d'Italia", 12 vols. quarto, Milan, 1744-49), based upon the numerous sources which he published or which otherwise were known. After his death this work was re-edited and continued (Milan, 1753-56 in 17 vols.; new edition in 18 vols., 1818-21).

The great mind of this learned man was not limited to the wide province of history; he was also interested in religious questions, and he published

LODOVICO ANTONIO MURATORI

a work, which attracted considerable attention, on the question as to how far freedom of thinking might go in religious matters, "De ingeniorum moderatione in religionis negotio" (Paris, 1714). Many of his views and opinions were openly challenged; for instance those concerning the Immaculate Conception of the Blessed Virgin and the manner of worshipping the saints. Another work, which touches upon religious questions, "Della regolata divozione de' Cristiani" (Venice, 1723), also called out attacks. He defended himself in his work, "De superstitione vitanda" (Milan, 1742). In the quarrel about Hermesianism, his book, "De ingeniorum moderatione", was translated into German by Biunde and Braun (Coblenz, 1837) in the interest of the followers of the Hermesian doctrines. Charity is discussed by Muratori in his "Della carità cristiana" (Modena, 1723). He still continued his literary studies, as is shown by his works on Petrarch ("Vita e rime di F. Petrarca", Modena, 1711) and Castelvetro ("Vita ed opere di L. Castelvetro", Milan, 1727). On philosophy he wrote, "Filosofia morale esposta" (Venice, 1735), "Delle forze dell' intendimento umano" (Venice, 1735), and "Delle forze della fantasia" (Venice, 1745). Law and politics are treated in "Governo della Peste politico, medico ed ecclesiastico" (Modena, 1714; frequently reprinted), "Defetti della Giurisprudenza" (1741), "Della pubblica felicità" (1749). Muratori really proved himself to be a universal genius of rare calibre, at home in all fields of human knowledge. He showed extraordinary qualities as priest and man; he was zealous in the ministry, charitable to the poor, and diligent in visiting the abandoned and imprisoned. He corresponded with a large circle of acquaintances. A collection of his letters by Selmi appeared in Venice (2 vols., 1789); another by Ceruti in Modena (1885). A complete edition is being published by M. Campori ("Epistolario di L. A. Muratori", Modena, 1901 sq.). In spite of many attacks which he had to suffer for his religious views, and notwithstanding many of his opinions regarding ecclesiastical politics were not approved of in Rome, he was highly esteemed in the most exalted ecclesiastical circles, as is shown in the letter which Benedict XIV., on 15 Sept., 1748, wrote to him with the intention of easing his troubled mind. Cardinal Ganganelli, later on Clement XIV, also sent him a letter in 1748, in which he assured him of his highest esteem and respect.

J. P. KIRSCH.

Muratorian Canon, or **MURATORIAN FRAGMENT**, after the name of the discoverer and first editor, L. A. MURATORI (in the "Antiquitates italicæ", III, Milan, 1740, 851 sq.), the oldest known canon or list of books of the New Testament. The MS. containing the canon originally belonged to Bobbio and is now in the Bibliotheca Ambrosiana at Milan (Cod. J 101 sup.). Written in the eighth century, it plainly shows the uncultured Latin of that time. The fragment is of the highest importance for the history of the Biblical canon. It was written in Rome itself or in its environs about 180-200; probably the original was in Greek, from which it was translated into Latin. This Latin text is preserved solely in the MS. of the Ambrosiana. A few sentences of the Muratorian Canon are preserved in some other MSS., especially in codices of St. Paul's Epistles in Monte Cassino. The canon consists of no mere list of the Scriptures, but of a survey, which supplies at the same time historical and other information regarding each book. The beginning is missing; the preserved text begins with the last line concerning the second Gospel and the notices, pre-

served entire, concerning the third and fourth Gospels. Then there are mentioned: The Acts, St. Paul's Epistles (including those to Philemon, Titus, and Timothy; the spurious ones to the Laodiceans and Alexandrians are rejected); furthermore, the Epistle of St. Jude and two Epistles of St. John; among the Scriptures which "in catholica habentur", are cited the "Sapientia ab amicis Salomonis in honorem ipsius scripta", as well as the Apocalypses of St. John and St. Peter, but with the remark that some will not allow the latter to be read in the church. Then mention is made of the Pastor of Hermas, which may be read anywhere but not in the divine service; and, finally, there are rejected false Scriptures, which were used by heretics. In consequence of the barbarous Latin there is no complete understanding of the correct meaning of some of the sentences. As to the author, many conjectures were made (Papias, Hegeippus, Caius of Rome, Hippolytus of Rome, Rhodon, Melito of Sardis were proposed); but no well founded hypothesis has been adduced up to the present. The Muratorian Canon was newly edited by Tregelles, "Canon Muratorianus" (Oxford, 1867); Westcott, "A general survey of the history of the canon" (6th ed., 1889); Buchanan, in "Journal of Theol. Stud.", VIII (1907), 540-42; Harnack in "Zeitschr. f. Kirchengesch.", III, 595-99; Preuschen in "Analecta, kürzere Texte zur Geschichte der alten Kirche und des Kanons" (2nd ed., Tübingen, 1910), 27-35; Rauschen, "Florilegium patristicum", III (Bonn, 1905).

Muret, MARC-ANTOINE, French humanist, b. at Muret, near Limoges, in 1526; d. at Rome, in 1585. He studied at Poitiers and was greatly influenced by Scaliger, whom he twice visited at Agen. He taught successively at Poitiers (1546), Bordeaux (1547), and Paris. Becoming intimate with Dorat, Joachim du Bellay, and the poets of the Pleiad, he published in French a commentary on the "Amours" of Ronsard (1553) and a collection of Latin verses, the "Juvenilia". His prosperity seemed unclouded, when accusations of heresy and immorality drove him from Paris to Toulouse, and thence to Lombardy. At last he settled at Venice, where he taught for four years (1555-58).

To the Venetian period of Muret's life belong his editions for Paulus Manutius, of Horace, Terence (1555), Catullus, Tibullus, and Propertius (1558), to which must be added the three orations "De studiis litterarum" (1555). It was at Venice that he became connected with Lambinus. In 1559 Muret published the first eight books of his "Variæ lectiones", which occasioned Lambinus to accuse him of plagiarism and brought their friendship to an end. With the year 1559 began the insecure period of Muret's life, when he devoted himself to private tuition. He next entered the service of Ippolito d'Este, Cardinal of Ferrara, in whose suite he went to Paris, and thence to Rome, where he spent the remainder of his life (1563-85) expounding Aristotle, Cicero, Plato, Juvenal, and Tacitus, and teaching jurisprudence. In 1576 he received Holy orders.

Muret's editions of Latin authors and translations of Plato and Aristotle, while they hardly entitled him to rank with the great philologists of his time, show good taste, acumen, and care. As a stylist, he was long esteemed one of the modern masters of Latinity. He succeeded in imitating Cicero rather by a felicitous resemblance between his own temperament and that of his model than by any painfully laborious

search for Ciceronian locutions, and he felt compelled to protest against the exaggerations of contemporary Ciceronians. He himself tells of an amusing incident, when he purposely employed, in speaking Latin, a word not to be found in Nizolius's Ciceronian Lexicon: some of his hearers exclaimed in horror at the apparent slip, and then, when he showed them the word in Cicero's own text, were equally enthusiastic in their plaudits. His most interesting work, "*Variae lectiones*" (1559, 1580, 1585), contains not only observations on ancient authors, but notes of real value in relation to the history of his own times. Such, for instance, is his account of a conversation with his patron, the Cardinal of Ferrara, about St. Pius V, whose election had put an end to the cardinal's ambitions (XVI, 4). Muret's works were edited by Ruhnken (Leyden, 4 vols., 1789), and another edition appeared at Verona (5 vols., 1727-30). Besides the editions of authors above mentioned, we are indebted to him for Cicero's *Catalinian Orations* (Paris, 1581), the first book of his *Tusculan Disputations*, his *Philippics* (Paris, 1562), Seneca's "*De providentia*", and some notes on Sallust and Tacitus. DEJON, Marc-Antoine Muret (Paris, 1881); SANDYS, A History of Classical Scholarship, II (Cambridge, 1903), 148.

PAUL LEJAY.

Muri (MURI-GRIES), an abbey of monks of the Order of S. Benedict, which flourished for over eight centuries at Muri near Basle in Switzerland, and which is now established under Austrian rule at Gries near Bozen in Tyrol.

The monastery of St. Martin at Muri in the Canton of Aargau, in the Diocese of Basle (but originally in that of Constance), was founded in 1027 by the illustrious house of Hapsburg. Rha, a daughter of Frederick, Duke of Lorraine, who married Rabets, Count of Hapsburg, and Werner, Bishop of Strasburg, with one accord gave the lands, which each possessed at Muri, to a monastery which they established in that place. To people the new foundation a colony of monks was drawn from the Abbey of St. Meinrad at Einsiedeln, under the leadership of Prior Reginbold, on whose death in 1055 the first abbot was chosen in the person of Burchard. During his rule the abbey church was consecrated in 1064; it was for many years the burial place of the Hapsburg dynasty. About this time the community was reinforced by the accession of a new colony of monks from the Abbey of St. Blaise in the Black Forest, one of whom, the blessed Luitfrid, continued the government of both communities till his holy death 31 December, 1096. During the Middle Ages the monastery, like so many hundreds of similar institutions of the Benedictine Order, pursued its quiet work of religion and civilization, and enjoyed the advantage of being governed by a remarkable succession of able men. Among the names of its more distinguished abbots are those of Ranzelin; Cuno, founder of its school, and a generous benefactor to the library of the monastery; Henry Scheuk who greatly increased its landed property; and Henry de Schoenwerd. The history of the last named presents a curious instance, almost without parallel, of a whole family embracing the religious life. The father with his sons entered the abbey of the monks, whilst his wife and daughters betook themselves to the adjoining convent of nuns, a community which later on was transferred to Hermetschwil, a mile or two distant from Muri. The good reputation enjoyed by the Abbey of Muri procured it many friends. In 1114 the Emperor Henry V took it under his special protection; and the popes on their side were not less solicitous for its welfare; it would seem, however, that the use of *pontificalia* was not granted to the abbots of Muri until the time of Pope Julius II (1503-1513).

Like all other institutions the place had its vicissitudes of good and bad fortune. It was laid low by two

disastrous conflagrations, in 1300 and in 1363; wars and risings checked for a time its prosperity. It recovered somewhat of its old life under Abbot Conrad II, only to suffer again under his successor George Russinger in the war between Austria and Switzerland. Russinger had taken part in the Council of Constance and had caught something of the reforming spirit of that assembly. He was the means of aggregating his community to the newly formed Congregation of Bursfeld, the first serious attempt to bring about among the continental monasteries of northern Europe a sane and much needed reform of the Black Monks of St. Benedict. It was owing to him too that the Helvetic Confederation took over, as it were, the old Hapsburg friendliness towards his abbey which, thus strengthened both in its inner life and observance, and safe under the protection of the new political powers, was enabled to withstand the shock of the religious wars and ecclesiastical upheavals which marked the advent of the Protestant Reformation. When the first fury of that movement had abated Muri was fortunate in having as abbot a man of remarkable ability. Dom John Jodoc Singisen elected in 1596 proved himself a second founder of his monastery, and extending his care to the other Benedictine houses of Switzerland is rightly revered as one of the founders of the Swiss Congregation established in 1602. Largely through his efforts discipline was everywhere restored; monks of piety and letters went forth from Muri to repeople the half ruined cloisters; by his wisdom suitable constitutions were drawn up for such communities of nuns as had survived so many revolutions. His successor Dom Dominic Tschudi was a man of like mould, and a scholar whose works were held in great repute. He was born at Baden in 1595 and died there in 1654. His "*Origo et genealogia comitum de Hapsburg*" is his best known work. With the eighteenth century fresh honours came to Muri. The Emperor Leopold I created Abbot Placid Zurlauben and his successors Princes of the Holy Roman Empire, and spent a vast sum of money in rebuilding and embellishing the monastery and church, the ancient mausoleum of the imperial family. The abbey continued to prosper in every way; good discipline was kept up and many distinguished ecclesiastics and learned men were educated within its walls.

With the spread of revolutionary ideas, however, a great and disastrous change was impending. Some of the Swiss Cantons, Aargau among them, following the melancholy example of the revolutionary party which had wrecked religion in France, turned all their energies to the overthrow of the monasteries, the confiscation of their estates, and the elimination of Catholic influence from civil life. They were only too successful. Muri after a long series of attacks was obliged to succumb. Its abbot, an old man, had withdrawn to the monastery of Engelberg, more favourably situated, and there died on 5 November, 1838, leaving to his successor, D. Adalbert Regli, the brunt of the final conflict. The crisis came when on a winter's day in 1841 an armed force drove the monks into exile and the cantonal authorities seized the abbey and its estates. Despite this violent expulsion the community never wholly disbanded; the abbot and some of the monks held together and soon found a welcome from the Catholic Canton of Unterwalden, which invited them to undertake the management of the cantonal college at Sarnen. The kindly offer was accepted, and there the main body of the monks resided, the Lord Abbot himself taking his share in the school work, until the Austrian Emperor, Ferdinand I., offered them a residence at Gries near Bozen in Tyrol; in an old priory of Augustinian Canons of the Lateran which had been unoccupied since 1807. The Holy See concurred in the grant, and confirmed the transfer of the community of Muri to Gries by a Brief of Gregory XVI, dated 16 September, 1844. In order

to avoid complications the house of Gries was continued in its former status as a priory and incorporated with the Swiss Abbey of Muri, which is regarded as temporarily located in its Austrian dependency, the Abbot of Muri being at the same time Prior of Gries. The persecution which drove the community from its stately home at Muri seems in no way to have lessened the numbers and good works of the monks; indeed there has been a notable increase in the personnel of the convent in recent years and fresh demands are ever being made on their manifold activities. At Gries itself, the centre of this fraternity of nearly a hundred monks (over seventy priests and clerics, the rest lay-brothers), who constitute the monastic family of St. Martin of Muri, the monks conduct a college of 158 boys, and also a training college for schoolmasters attended by nearly sixty students; while at Sarnen in Switzerland their college educates about two hundred and forty boys, and at the technical school in the same place, carried on by the monks, the classes number usually between seventy and eighty scholars. The Abbot of Muri has under his care five "incorporated" parishes with two chapels of ease serving for the spiritual needs of about nine thousand souls; another parish, not incorporated with the abbey, ministers to about 418 people; and the oversight of the convent long established at Hermetschwil-Habsthal near Muri is also included in the work of the monks of Muri-Gries.

Album Benedictinum (St. Vincent's, Pennsylvania, 1880); *SS. Patriarcha Benedicti familie confederata* (Rome, Vatican Press, 1905).

JOHN GILBERT DOLAN.

Murillo, Bartolomé Esteban, Spanish painter; b. at Seville, 31 December, 1617; d. there 5 April, 1682. His family surname was Esteban; that of Murillo, which he assumed in accordance with an Andalusian custom, was his mother's. His father was an artisan. An orphan at the age of ten, Bartolomé was brought up by his uncle, J. A. Lagarès, a barber. He became the pupil, probably while still very young, of Juan del Castillo, a mediocre painter, but good teacher, whose atelier was at that time much frequented. It is said that, to gain a living, the young man in those days made *sargas*—cheap paintings on rough canvas sold at country *ferias* (fairs), and shipped to America by traders. The Museum of Cadiz claims, but without proof, that one of these Murillo *sargas* is in its possession. In 1640 Castillo went to live at Cadiz. In the meantime, Moya, having just arrived from England, where he had been Van Dyck's pupil, showed Murillo, who was an old friend of his, the cartoons, drawings, copies, and engravings he had brought with him. Murillo set out on a journey to study the great masters, but went no farther than Madrid. Velasquez, the king's painter and the friend of Olivares, was himself a native of Seville; he welcomed his young compatriot and gave him the *entrée* to all the royal galleries, where Murillo saw the masterpieces of Titian, Veronese, Tintoretto, and Rubens, not to mention Velasquez himself. He spent three years here, and this was all his travel. He returned to Seville in 1644. After this he left Seville but once, in 1681, when he went to Cadiz to paint an altar for the Capuchins which he never had the time to finish. A fall from his scaffolding or else a serious illness—accounts differ—forced him to let himself be taken back, hurriedly, to Seville, where he died after a brief period of suffering.

His was a very pure life, and perfectly happy, all spent within that one Sevillian horizon which the artist never wished to change for any other. His paintings in the *portería* of the Minims made a celebrity of him at the age of twenty-eight (1646). From that time he devoted himself to work on a large scale for the convents of his native Seville, work which, in some respects, recalls the Giottesque paintings of the four-

teenth century. In contrast with Velasquez and the Madrid school, Murillo is wholly a religious painter. With the exception of a few portraits and some genre pieces, not one profane picture of his is known to exist. The product of his life's work is summed up in the great cycles of Santa Maria la Blanca (1665), of the Caridad Hospital (1670-74), of the Capuchins (1676), of the Venerables Sacerdotes (1678), of the Augustinians (1680), and, lastly, of the Cadiz Capuchins, together with a large number of pictures made at different times for the cathedral of Seville or other churches and many devotional works for private individuals. Murillo was the national painter of a country where all sentiment was still merged in the one sentiment of religion. The critics have distinguished three periods, or manners, in his work: the cold, the hot, and the "vaporous". The classification is foolish and pedantic. It is enough to look at his "Angels' Kitchen" (1646), his "Birth of the Virgin" (1655), and his "Holy Family" (1670), all in the Louvre: here we can see nothing but the natural evolution of a talent which from first to last pursued but one ideal—the poetical transfiguration of facts and ideas.

This ideal is already fully perceptible in the first of the examples cited, or in the "Death of St. Clare" (Dresden Museum), which also belongs to the *portería* series. In the "Angels' Kitchen", as in many others of his paintings, the artist's problem is to combine the supernatural with the real and familiar. Here we have a holy Franciscan in ecstasy, lifted from the ground, while angels with shining wings attend to the service of the refectory and wash the pans; and lastly, some spectators are peeping through a half-open door. The whole scene is displayed with admirable clearness, without a suggestion of hiatus between the three parts which are so diverse in character.

From this period date those few genre paintings which may be regarded as exceptional works of Murillo, the most famous example being the "Pouilleux" of the Louvre. Like every great Spanish painter, Murillo is a realist, and goes as far as anyone in the pathetic painting of suffering. But he refuses to paint these horrors with the frightful dilettantism, the cold, cruel detachment, of other Spanish artists. For him, pain and misery are objects of pity, not of curiosity or pleasure. Alone of the great painters of his race, his genius is tender, affectionate. Murillo's realism, however exact and sound, is never altogether impersonal or objective. In spite of himself, he communicates, together with the record of the reality, the emotions which it produces in himself; he does not alter its form, but he adds to it something of his own. In Spain, the classic land of brutal observation, of the "slice taken from life" served up raw and bleeding, Murillo invents, combines, achieves compositions. He has an imagination, and he does not make a point of honour of ignoring it. With more than average gifts for portraiture—as witness his portrait of Padre Cabanillas, at Madrid, or the admirable figure in the Museum of the Hispanic Society in New York—he made very few portraits. On the other hand, he has the gift and the instinct for story-telling. The Italian

MURILLO
Painting by himself—Engraving by Calamatta

sense of fine arrangement, of a happy symmetry and harmonious balance of grouping, as in his Holy Families, in the Louvre, is a quality which he alone seems to have possessed in his age.

Murillo was a great painter of sentiment. Like Rembrandt, he understood that the true language of the Gospel was the language of the people. Like him, he especially delighted in the merciful and tender aspects of the Gospel. Nothing can be more touching than the "Prodigal Son" of the Hermitage—not even Rembrandt's treatment of that subject—or his sketches on the same parable in the Prado. Like Rembrandt, he loves to bring the sacred truths near to us, to make us see them as intimate and familiar realities, to show us the Divine all about us in our lives. Murillo, no doubt, has the defects of these qualities. He never suffered enough. His optimism, his bonhomie, his grace, lack the seriousness that trials should have imparted. His serene smile lacks that intangible quality of having been through sorrow. Failing this experience, the soul tends somewhat to levity and to preciosity.

His pre-eminence as, superlatively, the painter of the Immaculate Conception seems to have been foreshadowed in the circumstances of his birth. At Seville, in 1617, the dogma of the Immaculate Conception was solemnly promulgated for Spain; and this splendid celebration took place in Murillo's native city only a few months before his birth. The pictorial treatment of the subject had long been determined, in its main outlines, by a vision said to have been vouchsafed to a Franciscan of the sixteenth century, and a hundred examples of it are found among earlier painters. The mere theological dogma of the Immaculate Conception—exemption from the original taint—necessarily eluded all material representation: the equivalent chosen was the theme of the Assumption. The body is seen exempt from all the laws of gravitation. Murillo has treated this theme more than twenty times, without repeating himself or ever wearying: six versions at Madrid, six others at Seville, the famous Louvre picture (dated 1678), and still others scattered over Europe—all these did not exhaust the painter's enthusiasm or his power of expressing apotheosis.

It is a remarkable fact that these pictures, which represent the most transcendently spiritual action, are the most thoroughly feminine paintings in Spain. But for religious representations of the Blessed Virgin and the saints, indeed, woman is almost absent from Spanish painting. The most famous portraits of women, the *infantas* or *meninas* of Velasquez, retain nothing of feminine charm: they are *simulacra* and phantoms without verisimilitude. Side by side with these apparitions, Murillo's Virgins produce a comforting effect of relief. Here are women, true and vital, with the most thoroughly external charms of their sex. In them the impulse of love rises to ecstasy, and without Murillo Spanish painting would be deprived of its most beautiful love poems. Many persons, it is true, see in this style of painting the symptoms of decadence in Spanish religious sentiment. This question of the soundness or unsoundness of his devotional tendencies cannot be treated here, but it may at least be claimed for Murillo that his art—notably in these Immaculate Conceptions—is no less genuinely religious than the dry productions of, say, a Philippe de Champaigne.

LOUIS GILLET.

Murner, THOMAS, greatest German satirist of the sixteenth century, b. at Oberehphheim, Alsace, 24 Dec.,

1475; d. there, 1537. During the epoch immediately preceding and during the early years of the Reformation, three figures are especially prominent among the loyal champions of the Church in Germany, namely Johann Geiler von Kaysersberg, his friend Sebastian, the well-known satirist, and Thomas Murner, the ablest and most formidable of Luther's opponents. In 1481 Murner's parents, pious people in comfortable circumstances, settled in Strasburg, where his father practised as an advocate. Thomas, who was of delicate health, entered the Franciscan Order at the age of sixteen. After his ordination, he began his restless and unsettled life, visiting the most celebrated universities either as a student or as a teacher. He studied theology at Paris, philosophy and mathematics at Cracow, and law at Freiburg, where he was awarded the degree of Bachelor of Theology in 1500. Six years later, when again at Freiburg, he was made Doctor of Theology. In 1518 he graduated Doctor of Laws at Basle. His impulse towards a roving life was due, not only to his love of learning, but also to his mission as a preacher and his zeal for the interests of his order. From 1519 he took part in the controversies which began with the appearance of Luther as a reformer. In 1523 he went to England and was cordially received by Henry VIII, whose book on the sacraments he had translated into German the previous year. On his return to Strasburg, he found himself compelled to fly before the rebellious peasants and seek refuge at Lucerne. Here he became the most determined adversary of Zwingli. Together with Dr. Eck, he took part in the religious discussion at Baden in 1526. When Lucerne was taken in the first War of Kappel (1529), Murner was to have been given up. He managed, however, to escape, and, after many wanderings, was appointed pastor in his birth-place, where he spent the rest of his days.

As an author, Murner was at first an enthusiastic friend of Humanism. In Cracow he lectured on literary aesthetics, and in Freiburg on Vergil, whose "Eneid" he had translated. In token of gratitude for his appointment as poet-laureate in 1505, he dedicated this translation to Emperor Maximilian. In his "Ludus studentum Friburgensium" (1511), Murner explains the rules of prosody and quantity after the fashion of a game of chess and backgammon. This method he had already employed four years before at Cracow in his "Chartiludium logice", but his application of it to jurisprudence provoked the derision of the lawyers. His sympathy with Humanism did not save him from the resentment of the Alsatian Humanists, when he attacked Wimpfeling's "Germania", which aimed at proving that Alsace had never belonged to France. Murner's defence of his position, the "Germania nova" was suppressed by the Strasburg authorities: a further attempt at justifying himself against the attacks of the partisans of Wimpfeling also proved unsuccessful, and did not prevent his opponents from distorting his name into *Murnar* (growling fool). Even, in this early controversy, Murner had shown a sharp eye for his opponents' weaknesses, and a marked gift for exposing them to ridicule: in his subsequent writings, he is revealed as a master of satire. Just as Geiler illustrated his popular sermons with comparisons drawn from everyday life, Murner compares, in his "Andächtige geistliche Badefahrt" (1511), the forgiveness of sins to a hydropathic treatment. In "Narrenbeschwörung" and "Schelmenzunft" he deals with the same subject as Brant's "Narrenschiff", but his work is entirely original in treatment and far surpasses the earlier work in its popular appeal, its wit, and its vigour—degenerating, indeed, at times into coarseness. His subsequent satires, "Gäuchmatt" (Fools' Meadow) and "Die Mühle von Schwindelsheim und Gretmüllerin Jahrzeit", in which he severely criticizes a special kind of fools, the "fools of love", form a kind of sequel to the "Schelmenzunft". There is no

station, either clerical or lay, that is spared from his castigation.

The appearance of Luther diverted Murner's satire into a new course. Regarding the Wittenberg monk at first as a well-intentioned ally in the battle against the evils afflicting the Church, Murner addressed to him in 1520 an appeal entitled "Christliche und brüderliche Ermahnung an den hochgelehrten Doctor Martin Luther", which was followed by other pamphlets refuting and warning him and beseeching him to abandon his ruinous undertaking. In his "Neues Lied vom Untergang des christlichen Glaubens" (1521), Murner gives feeling expression to his sorrow over the destructive tendencies of the religious innovation. But, when the sole effect of his attempts at conciliation was to bring upon him a shower of lies and calumnies, Murner dealt Luther a crushing blow in his work, "Von dem grossen Lutherischen Narren wie ihn Doctor Murner beschworen hat". Here Murner rises to heights of satire elsewhere unattained during this whole epoch. All the reformatory endeavours are embodied in the "Great Fool", and the newly-founded church is treated allegorically as Luther's daughter Adelheid, who "has a shocking scald-head." Murner wrote many other satires against the reformers, but none which in energy and wit equals this work. This work, so full of fight and honest zeal for the old Faith, was subjected to much calumny and derision during his lifetime, but was never vanquished in controversy. Later generations did him justice. Lessing intended to write a "defence" of Murner, and literary historiographers (especially Kurtz, Vilmar, and Gödeke) have recognized his great importance in the history of literature. Critics have pointed out in his works a peculiar and original metrical and rhythmical system, which distinguished him from all poets of his time. His writings show that he possessed in a conspicuous degree the culture of his age. No doubt is entertained to-day of the purity of his intentions and the probity of his character.

GÖDEKE, *Grundriss* (2nd ed., 1884-1904), II, 215-20, mentions all Murner's (59) works. Recently edited are: *Schelmensunft* by MATTHIAS, *Güschmätt* by UHL, *Narrenbeschwörung* by SPANIER, Consult POPP, *Die Metrik u. Rhythmik M.'s* (1898); ORT, *Ueber M.'s Verhältnis zu Geiler (Allemania, 23)*. Murner is, of course, not forgotten in the numerous Protestant writings on the Reformation, which generally criticize him severely. Among recent Catholic writings of JANSEN-FASTON, *Gesch. des deutschen Volkes*, VI (15th ed., 1901); SALZER, *Illustrirte Gesch. der deutschen Lit.* (in course of publication), pp. 520-24.

N. SCHEID.

Muro-Lucano, DIOCESE OF (MURANENSIS), in the province of Potenza, in Basilicata, southern Italy. The town is situated on the site of the ancient Numistri, at the foot of the Apennines, the scene of a battle between Hannibal and Marcellus in the second Punic war. The town has a beautiful cathedral; and it was in its castle that Queen Joan of Naples was killed by order of her adopted son Carlo of Durazzo. The first Bishop of Muro of whom there is mention was Leo (1049). Its bishop Antonio (1376) became a partisan of the antipope Clement VII; he was therefore driven by Carlo of Durazzo to seek refuge at Polsino, whereupon Clement VII suppressed the Diocese of Muro. In 1418, however, Guiduccio de Porta was appointed to this see; he was a virtuous man, and learned in civil, as well as in canon law; among his successors were Flavio Orsini (1560), who became a cardinal; the poet Gian Carlo Coppola (1643), who later became Bishop of Gallipoli, his native town; Alfonso Pacello (1674), founder of a congregation of priests for the care of the sick of the diocese. The see is suffragan of Conza; it has 12 parishes, with 40,280 inhabitants, 100 secular priests, 2 religious houses of women, and an educational establishment for girls.

CAFFELLETTI, *Le Chiese d'Italia*, XX (Venice, 1857).

U. BENIGNI.

Murray, DANIEL, Archbishop of Dublin, b. 1768, at Sheepwalk, near Arklow, Ireland; d. 1852 at Dub-

lin. He was educated at Dr. Betagh's school in Dublin and at Salamanca and ordained priest in 1790. After some years as curate in Dublin he was transferred to Arklow, and was there in 1798 when the rebellion broke out. The soldiers shot the parish priest in bed, and Murray, to escape a similar fate, fled to the city, where for several years after he ministered as curate. In 1809 at the request of Archbishop Troy he was appointed coadjutor-bishop, and in 1823, on Dr. Troy's death, he became Archbishop of Dublin. While coadjutor he had filled for one year the position of president of Maynooth College. Dr. Murray was an uncompromising opponent of the "veto" and a strong supporter of the Catholic Association. On other questions he was less advanced, and was in such favour at Dublin Castle that he was once offered a seat on the Privy Council, which he declined. He supported Stanley's National Education scheme and was among the first Education Commissioners; he also wished to tolerate the Queen's Colleges, in opposition to the views of Archbishop MacHale. He had no hesitation, however, in accepting the adverse decision of Rome, and was present at the Synod of Thurles where the Queen's Colleges were formally condemned. He was a charitable, kindly man, respected even by his opponents.

E. A. D'ALTON.

Murray, JAMES D. See COOKTOWN, VICARIATE APOSTOLIC OF.

Murray, PATRICK, theologian, b. in Clones, County Monaghan, Ireland, 18 November, 1811; d. 15 Nov., 1882, in Maynooth College. He received his early education in his native town of Clones, entered Maynooth College 25 August, 1829, the year of Catholic emancipation, among the first class of emancipated entrants, went through the ordinary course with great distinction and was elected a Dunboyne, or senior student in June, 1835. Towards the end of the Dunboyne course he accepted a curacy in Francis Street, Dublin, where in a short time he acquired the reputation of a zealous worker and an eloquent preacher. He was appointed professor of English and French in Maynooth, on 7 Sept., 1838, after the usual concursus, or examination, and after three years in this position he was appointed professor of theology, after another brilliant concursus, on 27 August, 1841. The remainder of his life he devoted mainly to theological science. In 1879 he was appointed prefect of the Dunboyne Establishment, which position he retained until his death in 1882. His principal works are: "Essays, Chiefly Theological" (4 vols., Dublin, 1850-53); "De Ecclesia Christi" (3 vols., Dublin, 1860-62-66); "De Ecclesia Christi", compendium (Dublin, 1874); "De Gratia" (Dublin, 1877); "De Veneratione et Invocatione Sanctorum", etc.; "De Impedimentis Matrimonii Dirimentibus" (Dublin, 1881); "Prose and Verse" (Dublin, 1867); "Lectures (on Moore's poetry) before Cork Young Men's Society" (Cork, 1856).

Dr. Murray was a man of high intellectual power, of big projects, and of great activity and perseverance. He would certainly have risen to great eminence in the world of literature, had he remained professor of English, as he was possessed of literary and poetic gifts of a high order. But he chose the domain of theology. He wrote for the Dublin Review and for magazines. In 1850 he announced his intention of publishing a series of volumes on subjects chiefly theological, to supply the Catholic laity with exact and reliable information on the debated religious questions of the day. He published four volumes under the title: "Essays, Chiefly Theological". But though he intended at the beginning to extend the work to seven or

eight volumes, he discontinued the *Essays* after the fourth volume, to devote himself to the great work of his life, his "De Ecclesia Christi". This work involved immense labour. It is a work of great learning, a masterpiece in positive and controversial theology, which at once placed its author in the front rank of dogmatic theologians. While not neglecting the views of the continental reformers, the author made a special study of the works of all the leading Anglican divines; and hence his work became the standard authority for the exposition and refutation of the then current Anglican views about the Church. Though writing in 1860, ten years before the Vatican definition, the author with great power establishes the doctrine of papal infallibility. The treatise, "De Gratia", excellent in itself, was intended as a textbook for students; as was also the less perfect work, "De Veneratione et Invocatione Sanctorum". Dr. Murray was ever kind and considerate for his students, by whom he was always respected and loved. He was of a retiring disposition, of a deeply religious nature, and of great saintliness of life.

HEALT, *Maynooth College; Its Centenary History, 1795-1906* (Dublin, 1895).

DANIEL COGHLAN.

Museums, CHRISTIAN.—Though applicable to collections composed of Christian objects representative of all epochs, this term is usually reserved to those museums which abound chiefly in Christian objects antedating the Middle Ages, namely, sarcophagi, inscriptions and products of the minor arts. These objects, as also those peculiar to the Middle Ages, are found in a large number of museums, but not many of these institutions are exclusively or even primarily devoted to them. The first collections that were formed (by humanists, by the Medici in Florence, etc.) occasionally included the earlier types or works of medieval art, but more on account of their artistic merit than because of their Christian character. Collections of inscriptions had been made from the time of the Renaissance, but Christian inscriptions found no place among them. It was not until after the discovery of the Roman catacombs by Antonio Bosio that these inscriptions were visited by collectors from Rome and other cities. The first Christian museum, properly so called, was that of the Vatican, and its origin dates from Benedict XIV, who founded it under the name of "Museum Christianum". Thanks to Marchi and de Rossi, a part of the Vatican collections was taken to form the Lateran Museum, founded by a decree of Pius IX in 1854. For Christian antiquities no other museums equal the latter in point of importance. During the pontificate of Benedict XIV (1740-50) a taste for Christian antiquities was developed by other distinguished men, e. g., Cardinal Passionei and Cardinal Quirini, Bishop of Brescia, whose diligent searches were prolific of important results.

Italy is particularly rich in valuable collections of antique Christian relics. In Rome, besides the Christian Museums of the Vatican and the Lateran, the Museo Kircheriano and the San Paolo, Propaganda, and Campo Santo collections are all noteworthy. The atria of certain churches, e. g., St. Mark, Santa Maria in Trastevere, and St. Agnes, also the Grotte Vaticane, have Christian inscriptions or sculptures, and collections of inscriptions have been made in the vicinity of several Roman catacombs, e. g., St. Domitilla and St. Agnes; mention should be made also of private collections. Moreover, almost all the large museums of Italy and the treasures of some churches have objects belonging to the early Christian era, e. g., the Museum and Library of Brescia and those of the Uffizi at Florence, the municipal Museum of Florence, the Trivulsi collection, the treasures of the cathedrals of Milan and Monza, the Museo Nazionale at Palermo, the Museum of the Villa Cassia at Syracuse, etc. Outside of Italy, im-

portant collections of Christian antiquities are less numerous, although those of Cairo, Alexandria, Athens, of St. Louis of Carthage (the Lavagerie Museum), of Arles, Autun, Trier, etc. deserve mention. The museums of the great capitals, London, Paris, Berlin, etc., and the treasures of some churches, e. g., the cathedral of Sens, have ivories and various woven stuffs dating from the early Christian epoch. Such woven stuffs, principally of Coptic origin, and very ancient, have lately been introduced into many collections.

Church treasures, especially the richer ones of some German churches (cathedrals of Cologne, Trier, Hildesheim, Bamberg and the abbatial church of Essen, etc.), are noted for their medieval relics and may pass for the oldest Christian museums.

In addition to the large museums of all countries, many museums of industrial art, provincial museums, private collections and archaeological societies, also episcopal museums, e. g., the rich ones of Cologne and Utrecht, contain many valuable and ancient Christian relics of an artistic kind. As a Christian museum of the Middle Ages, the Schnütgen collection at Cologne deserves special notice. It contains many religious objects, chalices, crosses, ecclesiastical vestments, etc., and offers a better opportunity than any other collection for studying the changing forms of these objects from age to age. A word is due to the museums of copies or reproductions annexed to certain institutions of higher education. The most remarkable Christian museum of this kind is that of the University of Berlin, founded 1849-1855 by Ferdinand Piper. Although largely representative of the Middle Ages, it is unparalleled for its facsimiles of Christian antiquities. More recently M. G. Millet founded at the Ecole des Hautes Etudes, in Paris, a Byzantine museum, rich in copies and stereotypes gathered during the explorations and study tours made by French scholars. (See LATERAN, CHRISTIAN MUSEUM OF; VATICAN.)

R. MAERE.

Mush, an Armenian Catholic see, comprising the sanjaks of Mush and Seert, in the vilayet of Bitlis. It was created by Leo XIII in 1883, and numbers about 5000 faithful, 7 secular priests, 7 churches or chapels, 5 schools, and an establishment of the Venetian Mechitarists. The chief stations outside of Mush are some neighbouring villages such as Bitlis or Van. The town is built on a hill, at the foot of a ruined citadel and in the midst of vineyards; below stretches a well-cultivated plain, about fifty miles long by eighteen miles wide. The climate is healthy and the country tolerably rich, but exposed to constant incursions of the Kurds and other nomads, who terrorize the inhabitants, especially the Christians. Built by an Armenian prince named Muchigh, the town of Mush has about 27,000 inhabitants, of whom 3,000 are Armenian Catholics, 10,000 Armenian schismatics, and 700 Protestants, the rest being Mussulmans. Besides the Catholic bishop there is an Armenian Gregorian bishop; also a Protestant missionary. The celebrated Moses of Chorene was born in the neighbouring village of Chorene.

S. VAILLÉ.

Mush (alias RATCLIFFE), JOHN, priest, b. in Yorkshire, 1551 or 1552; d. at Wenge, Co. Bucks, 1612 or 1613, not as Bishop Challoner thought, in 1617. Having spent six months in the English College at Douai he went to Rome (1576) where he studied for seven years. Ordained priest, he returned to England (1583) and laboured at York, being confessor

to Venerable Margaret Clitherow who suffered for harbouring him, and Venerable Francis Ingleby. Arrested 28 Oct., 1586, and condemned to die, he escaped with two other priests. For many years he laboured in the North becoming a recognized leader among his brother priests. When the dissensions among the imprisoned priests at Wisbech broke out in 1595, he with Dr. Dudley went there to arbitrate. Failing in this, together with John Colleton he set himself to devise some organization of a voluntary character among the clergy which might supply the want of episcopal government much felt after the death of Cardinal Allen in 1594. Opposed by Persons, it was rendered superfluous by the appointment of an archpriest (1599). In the ensuing controversy Mush was one of the appellant clergy who appealed to Rome against the archpriest. In connexion with this he wrote "*Declaratio Motuum*" and in 1602, with Champney Bluet and Cecil, went as a deputation to Rome where for eight months they fought for their petition. Their petition, first for six bishops and then for six archpriests, was refused; but though the archpriest succeeded in maintaining his position, the appellants were acquitted of the charges of rebellion and schism. On his return to England, Mush was one of the thirteen priests who signed the protestation of allegiance to Queen Elizabeth (1603). In his later years he acted as assistant to two successive archpriests, Blackwell and Birkhead, in Yorkshire, but he seems to have been acting as chaplain to Lady Dormer in Buckinghamshire at the time of his death. His works are "*The Life and Death of Mistress Margaret Clitherow*" (written 1586, first printed 1849); "*An account of the sufferings of Catholics in the Northern Parts of England*" (probably the same as the MS. account printed by Father Morris, S.J., in "*Troubles of our Catholic Forefathers*", series iii); "*Declaratio Motuum*" (Rouen, 1601). His diary of the deputation to Rome in 1602 is preserved in MS. in the Inner Temple, London. Dodd also says he wrote against the apostate priest Thomas Bell, and Pitts quotes his English translation of "*Lectiones Panagorali Turini*", but these latter works are not now known to exist.

Nat. Biog.* s.v.; GILLOW, *Bibl. Dict. Eng. Cath.* EDWIN BURTON.

MUSIC, ECCLESIASTICAL.—By this term is meant the music which, by order or with the approbation of ecclesiastical authority, is employed in connexion with Divine service to promote the glorification of God and the edification of the faithful.

NATURE AND SIGNIFICANCE.—Just as St. Philip Neri spontaneously sang the prayers of the last Mass which he celebrated, so is all true religious music but an exalted prayer—an exultant expression of religious feeling. Prayer, song, the playing upon instruments, and action, when arranged by authority, constitute the elements of public worship, especially of an official liturgy. This was the case with the pagans, the Jews, and also in the Church from time immemorial. These elements constitute, when combined, an organic unity, in which, however, music forms a part only on solemn occasions, and then only in accordance with the regulations of proper authority. As man owes to God that which is highest and most beautiful, music may employ on these occasions her noblest and most effective means. Church music has in common with secular music the combination of tones in melody and harmony, the division of time in rhythm, measure, and *tempo*, dynamics, or distribution of power, tone-colour in voice and instruments, the simpler and more complicated styles of composition. All these, however, must be adapted to the liturgical action, if there

be such, to the words uttered in prayer, to the devotion of the heart; they must be calculated to edify the faithful, and in short must serve the purpose for which Divine service is held. Whenever music, instead of assuming a character of independence and mere ornament, acts as an auxiliary to the other means of promoting the worship of God and as an incentive to good, it not only does not interfere with the religious ceremony, but, on the contrary, imparts to it the greatest splendour and effectiveness. Only those who are not responsive to its influence, or stubbornly cultivate other ways of devotion, can imagine that they are distracted in their worship by music. Appropriate music, on the contrary, raises man above commonplace everyday thoughts into an ideal and joyous mood, rivets mind and heart on the sacred words and actions, and introduces him into the proper devotional and festive atmosphere. This appropriateness takes into account persons and circumstances, variations being introduced according to the nature and use of the texts, according to the character of the liturgical action, according to the ecclesiastical season, and even according to the various needs of the contemplative orders and the rest of the faithful.

Natural religious instinct urges man to honour God by means of music as well as by the other arts, and to heighten his religious exaltation by joyous singing. This significance of singing in connexion with Divine service has never been lost sight of. Under the Old Law the music of the Temple filled, in compliance with the commands of God Himself, a very elaborate rôle. Songs of victory of a religious nature are mentioned in Ex., xv, and in Judges, v. Often the prophets are elated by sacred music. David beautified religious ceremonies by hymns and the use of instruments (Amos, vi, 5; II Esd., xii, 35; II Par., xxix, 25 sqq.). With him appears Asaph in the rôle of poet and singer, and the "Sons of Asaph" with other families were, from the days of David, organized into classes (I Par., xxv). The primitive Christian Church was, on account of external circumstances, very much restrained in its religious manifestations, and the adoption of the music of the Temple, in so far as it had survived, would have been difficult on account of the converts from paganism. Furthermore, the practice of religion on the part of the early Christians was of such a purely spiritual nature that any sensuous assistance, such as that of music, could be for the time easily dispensed with. Nevertheless, the words of St. Paul, even if only taken in a spiritual sense, remind one forcibly of the conception of music in the Old Testament: "Speaking to yourselves in psalms, and hymns, and spiritual canticles, singing and making melody in your hearts to the Lord" (Eph., v, 19). Tertullian relates that during Divine service Holy Scripture was read and psalms sung, and that even Pliny had ascertained that the Christians honoured their Lord before dawn by singing a hymn (Apol., ii). Eusebius, in confirmation "of the regulations heretofore followed by the Church", quotes the testimony of Philo, who relates that the Therapeutæ, during their festive repasts, sang psalms from Holy Writ and other hymns of various kinds in solemn rhythm in monodic style with choral responsories (Hist. eccl., I, xvii). Whatever may have been the nature of the singing of the Therapeutæ, Eusebius bears testimony to the traditional custom of the Church. While St. Athanasius restricted the singing of the psalms to a kind of recitation, St. Ambrose introduced in Milan (and the greater part of the Western world) with great success antiphonal singing of the psalms "after the manner of the East". St. Augustine asks himself whether it would not be more perfect to deny himself the delight derived from singing, but concludes his reflection by concurring with existing practices, and frequently testifies to the customs of his time (cf. Conf., ix, 7; x, 33; In Ps. xxi and xlvi; Retr., ii, 11). St. Jerome, refer-

ring to Eph , v, 19, exhorts as follows the young whose duty it is to sing in Church: "Let the servant of God sing in such a manner that the words of the text rather than the voice of the singer cause delight, and that Saul's evil spirit may depart from those who are under its dominion, and may not enter into those who make a theatre out of the house of the Lord". A certain class of liturgical singers are also mentioned in the "Canones apostolorum". The above-mentioned antiphonal and responsorial chant intended for the people shows that the singing was not confined to the choir. St. Augustine wrote a long hymn to be sung by the people in the form of Psalm cxviii—not in classic metre, but in popular accented verses with sixteen unaccented syllables and rhyming on the final vowel. Hymnology in classic form goes back to Ambrose and Hilarius. But sufficient has been said to indicate the practice and nature of chant in the early Church, under whose fostering protection it developed so wonderfully later on. History bears the most convincing testimony to the importance which the Church has always attached to music in connexion with her worship.

CHURCH REGULATIONS.—The interest taken by the Church in music is also shown by her numerous enactments and regulations calculated to foster music worthy of Divine service. The right of the Church to determine the matter and manner of what shall be sung in connexion with her liturgy is incontestable. Narrow-minded musical partisans seem disposed to fear that music as an art does not receive due consideration, if it be not permitted to go its own way uncontrolled. These fears generally have for their basis the theory that art is an end in itself, and should not serve, except indirectly, any end outside of and other than itself. This principle could only have a certain justification, if the external dependency were to hinder the full development of music. But this is not the case. In point of fact, the history of its development shows that ecclesiastical music need fear no comparison between its achievements and those of secular music. Many competent musicians have frankly admitted this in the case of the simple Gregorian chant—not only men like Witt and Gevaert, but also Halévy, Mozart, and Berlioz. Halévy considers the chant "the most beautiful religious melody that exists on earth". Mozart's statement, "that he would gladly exchange all his music for the fame of having composed the Gregorian Preface", sounds almost hyperbolic. Berlioz, who himself wrote a grandiose Requiem, declared that "nothing in music could be compared with the effect of the Gregorian *Dies iræ*" (cf. Krutschek, "Kirchenmusik"). Ambros says: "The fundamental power, animating all music which is not made but which grew (as is the case with the folk-music), belongs pre-eminently to Gregorian chant." For this reason Gevaert considers the most characteristic quality of the chant to be the fact that it never grows stale, "as though time had no power over it". Not the most conspicuous, but the most simple artistic means produce the deepest and most lasting impression, when skilfully employed. The first requisite is that the sentiments contained in the text be given true expression, and be not obscured by obtrusive external forms. It must be acknowledged that pieces like the *Te Deum*, *Lauda Sion*, the *Lamentations*, the *Requiem Mass*, as well as many an *introduction*, *gradual*, and *tract*, afford a never-failing pleasure, that they employ only the simplest means to express the desired mood, that they are admirably adapted to promote devotion.

The Church, however, does not despise artistic means of a more elaborate nature, as is shown by the long *jubili* of the traditional chant (as contained in the Vatican edition) and still more by ecclesiastical polyphonic music (Palestrina style). Upon this style modern musicians of the first rank have pronounced

favourable judgment. Wagner was an enthusiastic admirer of Palestrina; Mendelssohn made every effort to collect masses, *improperia*, psalms, motets of the old masters, which he preferred to all ecclesiastical music by modern writers. There are, indeed, many works by Orlandus de Lassus, Allegri, Vittoria, wherein the most elaborate means of expression are used, but which, nevertheless, conform to every liturgical requirement and are, as it were, spontaneous outpourings of adoring hearts (cf. contrapuntal or polyphonic music). Besides plain chant and the polyphonic style, the Church also admits to her service homophonic or figured compositions with or without instrumental accompaniment, written, not in the old ecclesiastical modes, but in one of the modern major or minor keys. Gregorian chant the Church most warmly recommends, the polyphonic style she expressly praises, and the modern she at least tolerates. According to the "Motu proprio" of Pius X (22 Nov., 1903), the following are the general guiding principles of the Church: "Sacred music should possess, in the highest degree, the qualities proper to the liturgy, or more precisely, sanctity and purity of form from which its other character of universality spontaneously springs. It must be holy, and must therefore exclude all profanity, not only from itself but also from the manner in which it is presented by those who execute it. It must be true art, for otherwise it cannot exercise on the minds of the hearers that influence which the Church meditates when she welcomes into her liturgy the art of music. But it must also be universal, in the sense that, while every nation is permitted to admit into its ecclesiastical compositions those special forms which may be said to constitute its native music, still these forms must be subordinated in such a manner to the general characteristics of sacred music, that no one of any nation may receive an impression other than good on hearing them."

Regarding modern music, the "Motu proprio" says: "The Church has always recognized and honoured progress in the arts, admitting to the service of religion everything good and beautiful discovered by genius in the course of ages—always, however, with due regard to the liturgical laws. Consequently, modern music is also admitted in the Church, since it, too, furnishes compositions of such excellence, sobriety, and gravity, that they are in no way unworthy of the liturgical functions. Still, since modern music has risen mainly to serve profane uses, care must be taken that musical compositions in this style admitted to the Church may contain nothing profane, be free from reminiscences of theatrical motives, and be not fashioned, even in their external forms, after the manner of profane pieces." It is very much to be regretted that the greatest masters of modern times, Mozart, Joseph Haydn, and Beethoven, devoted their wonderful gifts mainly to secular uses, and that their masses are entirely unsuitable for liturgical purposes—an unsuitability freely acknowledged by Mendelssohn, Liszt, and Wagner. The reason for their inadmissibility lies in their treatment of the sacred text, the instrumentation, in the fact that they do not conform to the liturgical action, and often in an undue elaboration of form which seriously interferes with the devotion of the faithful. A few compositions by these masters (such as Mozart's *Ave verum*) do not deserve this reproach. The mere fact that a *Gloria* or *Credo* by Haydn, for instance, delays the progress of the service twenty minutes, while the other parts of these masses are of equally excessive length, is sufficient to render them unsuitable for liturgical use. The following words from the "Motu proprio" are applicable to numberless compositions: "Among the different kinds of modern music, that which appears least suitable for accompanying the functions of public worship is the theatrical style, which was in the greatest vogue, especially in Italy, during the last century. This, of

its very nature, is diametrically opposed to the Gregorian chant and classic polyphony, and therefore to the most important law of all good music. Besides the intrinsic structure, the rhythm and what is known as the conventionalism of this style adapt themselves but ill to the requirements of true liturgical music."

This wish of the Church, so frequently reiterated, should never be ignored by composer or performer. As the sacredness of the liturgy has caused the Church to dictate to the priest, to the smallest detail, what vestments, words, vessels, and actions he should employ in the fulfilment of his duties—which regulations he may not disregard without sinning—so also the regulations concerning church music are binding on the singers, whether the reasons for these regulations be understood by the individuals or not. It is indeed true that unimportant deviations from the rules are, owing to special circumstances, sometimes excusable. The regulations are contained in the Missal, the "*Cæremoniale episcoporum*", and the decrees of councils and of the popes. The universally binding decrees of the Congregation of Rites are collected in "*Decreta authentica*", and have been, since 1909, published in the "*Acta Apostolicæ Sedis*". Purely local directions need no special publication for those immediately concerned. It is in some cases legitimate to assume that, in unessential matters, a given rule has rather a directive than a prescriptive character, provided the wording does not declare the contrary. Decrees called forth by plainly local conditions are binding only in the place to which they have been directed. In some cases it is legitimate to inquire about and remonstrate against a regulation before it becomes binding. Whenever exceptionally serious difficulties stand in the way, positive laws are not binding, unless the lawgiver explicitly insists on their fulfilment. Owing to the difference in local conditions bishops may, in the application of a given law, sometimes use their own discretion. Customs of long standing are to be treated with some leniency, unless ecclesiastical authority explicitly determines the contrary. Answers to inquiries contained in the "*Decreta Authentica*" or "*Acta Apostolicæ Sedis*" are usually considered as binding, if they are for general and not merely for local application. The degree of binding force depends on the importance of the matter in question, and it may be gathered from the degree of firmness or emphasis with which the lawgiver inculcates a given law. The verbal and musical texts are equally subject to ecclesiastical control. The use of the Vatican edition of the Gregorian chant has been generally binding since 25 Sept., 1905. However, bishops may, owing to local difficulties, defer the execution of the law. (The command is given in mild form: "It is our most keen desire that bishops", etc.) The "*Motu proprio*" directs that all other musical performances be watched over by a commission appointed by the ordinary, so that in all places compositions of the proper character and within the capacity of the singers may be performed.

Regulations, so wise as these, compel our obedience. Consequently, the Holy Father has a right to expect that "we obey from the conviction that by so doing we act from reasons which are clear, plain and beyond dispute." Consideration of the purpose for which music is employed in church, of its close connexion with the liturgy, and of the inspiration of the Holy Ghost, is sufficient basis for this conviction. No one is bound to admire, as in every particular unsurpassed and unsurpassable, the prescribed chant. It is sufficient to accept the Gregorian chant as the norm and supreme model for all Catholic church music and approve its use. We are not asked to abandon every personal scientific and æsthetic view, or to eschew research and theoretic discussion. If, however, the lawgiver does not urge the immediate execution of a law wherever, on account of the difficulties to be over-

come, it is more likely to do more harm than good, it must not be understood that by these are meant the ordinary difficulties which had been foreseen, nor may the difference in our own taste be considered an obstacle. The regulations concerning church music are generally binding under pain of sin, and subtle distinctions to escape this responsibility are useless. For the composer of genius these prescriptions are not fetters, but rather serve to show him how to make his work a source at once of artistic delight and of edification. All these remarks apply equally to the singer.

QUALITIES.—The first and most urgent condition which the Church imposes in regard to her music is that it be in conformity with the place, time, and purpose of Divine worship; that it be sacred and not profane, in other words that it be church, and not theatrical, music. Theatrical music is just as much out of place in church, as the performance of a secular drama, the exposition of a battle scene, or even a statue representing a pagan deity. The performance of such music directs the attention not to the altar but to the organ loft. Musicians themselves have frequently failed to recognize clearly the difference between concert and church music. Mozart used parts of his religious compositions in secular cantatas and extracts from his operas for church purposes. A mass has also been compiled from some of Haydn's profane compositions. The "wassail of notes", the complete absorption of our consciousness by artistic melodic or harmonic combinations and sensuous melodies, the display of instrumental virtuosity, the joyous rush of tonal masses put to flight all devout recollection of the sacrificial act and all heartfelt prayer. March, dance, and other jerky rhythms, bravura arias, and the crash of instruments affect the senses and nerves, but do not touch the heart. Even a reminiscence of the concert hall is a distraction to those who wish to pray.

Not the least element in the effectiveness of church music is the sacred texts, which inspire composer, singer, and hearer, although in different ways. In the "*Motu proprio*" we read: "The liturgical text must be sung as it is in the books, without alteration or inversion of the words, without undue repetition, without breaking syllables and always in a manner intelligible to the faithful who listen." Only in this way are the sacredness of the text and the needs of the hearer safeguarded. For all official chants (Mass, Vespers, etc.) the texts are prescribed, and are in the Latin language. On this point the "*Motu proprio*" says: "It is not lawful to confuse the order or to change the prescribed texts for others selected at will or to omit them either entirely or in part. However, it is permissible according to the custom of the Roman Church, to sing a motet to the Blessed Sacrament after the Benedictus in a solemn mass. It is also permitted, after the Offertory of the mass has been sung, to execute during the time that remains a brief motet to words approved by the Church." On account of the diversity and changeableness of modern languages, the Church retains for her liturgical functions (even for the simple *missa cantata*) the Latin language, hallowed by ages of service. Nor does she permit that individual prayers and chants be translated into the vernacular for liturgical purposes. (The most important decision on this point will be found in the "*Decreta authentica*" under "*Cantilena*" and "*Cantus*".) The "*Motu proprio*" says: "It is forbidden to sing anything whatever in the vernacular in solemn liturgical functions; much more to sing in the vernacular the variable or common parts in the Mass and Office."

To the traditional language of her liturgy the Church joins her own traditional musical form, which characterizes her chant and distinguishes it from the music of concert and opera. The "*Motu proprio*" says: "The different parts of the Mass and of the Office must retain, even musically, that particular concept and form which ecclesiastical tradition assigned to

them, and which is admirably expressed in the Gregorian chant." By retaining her musical form for her various chants (e. g. for the Sanctus, the hymns, the psalms), or admitting of its modification only within certain limits, the Church protects her own music against the destruction of that character which is proper to it. The relation of church music to the text on the one hand and to instrumental music on the other is what distinguishes it essentially from secular music. The attitude of reserve maintained by the Church on this point is expressed in the "*Motu proprio*" as follows: "Although the music proper to the Church is purely vocal music, music with the accompaniment of the organ is also permitted. In some special cases, within due limits and within the proper regards, other instruments may be allowed, but never without the special licence of the ordinary, according to the *Ceremoniale episcoporum*. As the chant should always have the principal place, the organ or instruments should merely sustain and never suppress it. It is not permitted to have the chant preceded by long preludes or to interrupt it with intermezzo pieces." The pianoforte and noisy and frivolous instruments (e. g. drums, cymbals, and bells) are absolutely excluded. Wind instruments, by their nature more turbulent and obtrusive, are admissible only as an accompaniment to the singing in processions outside of the church. Within the edifice "it will be permissible only in special cases and with the consent of the ordinary to admit a number of wind instruments, limited, judicious, and proportioned to the size of the place, provided the composition and accompaniment to be executed be written in a grave and suitable style and similar in all respects to that proper to the organ." The restrictions imposed by the Church in this regard were formerly still greater. Although Josephus tells of the wonderful effects produced in the Temple by the use of instruments, the first Christians were of too spiritual a fibre to substitute lifeless instruments for or to use them to accompany the human voice. Clement of Alexandria severely condemns the use of instruments even at Christian banquets (P. G., VIII, 440). St. Chrysostom sharply contrasts the customs of the Christians at the time when they had full freedom with those of the Jews of the Old Testament (ibid., LV, 494-7). Similarly write a series of early ecclesiastical writers down to St. Thomas (Summa, II-II, Q. xci, a. 2).

In Carolingian times, however, the organ came into use, and was, until the sixteenth century, used solely for the accompaniment of the chant, its independent use developing only gradually (Scarlatti, Couperin, Bach). Perfected organ-playing found increasing favour in the eyes of the church authorities, and only occasionally was it found necessary to correct an abuse. The Council of Trent (Sess. XXII) says: "All musical forms, whether for the organ or for voices, which are of a frivolous or sensuous character, should be excluded from the Church." The nature of the organ is, to a great extent, a protection against its misuse; its power and fullness lend themselves admirably to the majesty of the Divine service, while other instruments more readily serve profane purposes. After the sixteenth century, orchestral instruments found admittance into some churches and court chapels, but restrictive regulations soon followed. While Lasso in Munich, Monteverde in Venice, and Scarlatti in Naples had at their disposal large orchestras, smaller churches with more modest resources satisfied themselves with the use of the trumpet or trombone in addition to the organ. The cultivation of both sacred and profane music by the same musicians proved detrimental to church music, and finally the Church had to wage open war on modern theatrical music in church services. Mozart's insinuating sweetness, Haydn's pious hilarity, Beethoven's violent passionateness, and Cherubini's dramatic intensity stand

in too strong contrast to the lofty religious dignity and gravity of Palestrina. Maurice Brosig, although rather unrestrained and subjective in his own compositions, always excluded their works from church. Concert instruments may, under certain circumstances, produce in church a very brilliant effect and an exalted mood. In general, however, they are rather obtrusive than devotional. Their tendency is to predominate, and they are apt to obscure the declamation of the text.

Richard Wagner says a vigorous word in favour of purely vocal music in church: "To the human voice, the immediate vehicle of the sacred word, belongs the first place in the churches, and not to instrumental additions or the trivial scraping found in most of the churches pieces to-day. Catholic Church music can regain its former purity only by a return to the purely vocal style. If an accompaniment is considered absolutely necessary, the genius of Christianity has provided the instrument worthy of such function, the organ" (Gesammelte Werke, II, 337). There is no doubt but that those qualities absolutely necessary to church music, namely modesty, dignity, and soulfulness, are more inherent in the purely vocal style than in any other. Reserve and humble restraint befits the house of God. Sentimental and effeminate melodies are incompatible with the dignified seriousness of the polyphonic a capella style, and a composer's temptation to indulge in them is more easily counteracted by this style than any other. Like the external attitude of the worshipper in church, the vocally interpreted liturgical word and the organ-playing must be respectful and decorous. That vocal music is in general more expressive than the mechanically produced tone of instruments is undeniable. Religious feeling finds its most natural expression in vocal utterance, for the human heart is the source of both devotion and song.

From these considerations it follows that the tone quality, *tempo*, and rhythm of vocal music accompanied by the organ are more in conformity with the religious mood than is the character of orchestral instruments. The organ can indeed be sweeping and powerful, but its tone volume is always more even, and is not so subject to the arbitrary will of the player as is the orchestra. Orchestral instruments permit of a wide range in the division and subdivision, retarding, and acceleration of time—subtleties which are not conducive to the calm necessary for prayer. The same holds good with regard to rhythm. Just as the great flexibility, the frivolous or passionate character of irregular rhythm in general are expressive of a worldly, superficial, and restless mood, so is reposeful and symmetrical rhythm expressive of and conducive to a prayerful mood. A slow and orderly movement is more in keeping with the nature of the organ. It was not by accident that the measured rhythm of Gregorian chant was early abandoned, nor is it desirable to interpret in too mechanical a rhythm even the polyphonic works of the old masters. The more the purely mechanical element yields to the expression of the religious mood, the more suitable the performance becomes for church. On the other hand, a delicately defined measure is aesthetically preferable to excessive freedom. Another element of the highest importance in church music, which is indeed generally suggested by the text, is the interrelation between the melodic phrases, the rhythmical proportion or symmetry between the various parts of the composition: these seem to conform externally to the breathing of the singers and internally to the emotions of the pious heart, while the measure is solely a means to regulate time.

Finally must be considered, as one of the distinctive attributes of church music, the character of the Gregorian modes. The modes, which have most in common with our modern minor key and contain the interval of the minor third, the symbol of moderation and restraint, greatly predominate in Gregorian chant.

Harmonic music has gradually narrowed down to the two modes or keys, major and minor: the major key has freer motion, greater brightness and decision, while the minor scale in its lower portion has a hesitating and mysterious character, and resembles the major only in its upper section. This hesitation and mysteriousness happily express in church music the modesty and humility of the worshipper. Even those Gregorian modes (F and G) which have most resemblance to our major scale lose that character in their upper portion. The major character, as we have it in our C major scale, occurs very seldom in Gregorian chant. The self-restraint so delicately conveyed in the church modes completely disappears in the apparently boundless freedom and stormy movement of concert music. The latter makes use of the chromatic element, modulation from one key into another, tone colour, the various forms of composition (sonata, etc.), and every other artistic means to carry the hearer from one mood to another and finally to heighten the impression to the degree of passion. As such purposes are foreign to church music, it makes of these means, whenever it employs them, a different use. It will be remembered that the contrapuntal vocal school, at one period in its history, also degenerated into artificiality and the cultivation of form for its own sake, but this abuse was not only reprov'd by the Church, but also remedied by repeated reforms since the Council of Trent.

VARIOUS PARTS OF THE DIVINE SERVICE.—The Church has frequently legislated concerning even the smallest details of the liturgy. In connexion with the Mass, the centre of Catholic worship, the service of various arts are utilized—architecture, with its decorative and plastic elaborations, symbolic action at the altar with the accompanying vestments and sacred vessels, the significant liturgical prayers, and finally the chant carried on the waves of the organ. All these, including the music, are regulated by ecclesiastical precepts. The intonations of the celebrant and his ministers, the Orations, Epistle, Gospel, Preface, Pater Noster, Dominus vobiscum, *Ite missa est*, must be unaccompanied—at most the pitch may be given. The responses of the choir or the people may be accompanied on the organ. The choir sings the Kyrie, Gloria, and Credo. In these as in all liturgical texts, the omission, transposition, alteration, substitution, or awkward combination of the words (even in inserted pieces, e. g. the Ave Maria at the Offertory, after the proper offertory has been recited) is forbidden. On the other hand, the occasional repetition of words, as an artistic necessity, is permitted. It is allowed in most cases for sufficient reason (e. g. fatigue or inability of the singers) to recite in an audible voice certain texts with subdued organ accompaniment, or to alternate recitation with singing. The Credo, however, must be sung always in its entirety, and that in a particularly distinct manner, and the celebrant may not continue the liturgical action during its performance. (Furthermore must be sung the first and last verse of the hymns and everything wherein genuflection is prescribed or which contains an intercession, as is the case with the *Dies irae*.) The intonations of the priest should never be repeated by the choir. The Kyrie, a cry for mercy, must never degenerate into a brilliant operatic performance, nor should the Credo, an open profession of faith, become an occasion for artistic display; besides being utterly inappropriate, this style tends towards excessive length. In general the Credo, sung to one of the Gregorian melodies, with possibly a harmonized setting of the *Et incarnatus est* and finale, is decidedly preferable to an exclusively figured composition. In the Gloria the music may show brilliancy, but it must be noted that not only joy, but also deep devotion and humble petition (*Qui tollis . . .*) are contained in the text. A very great abuse consists in the endless repetitions, which in some in-

stances consume as much as ten minutes. Of the other invariable parts of the mass, the Sanctus should be of reasonable length, so that the celebrant may have to wait as little as possible. If the organ be played during the Elevation, it must be done softly and in a reverent manner. The Benedictus must breathe the spirit of adoration, while the following Hosanna gives moderate expression to jubilation. In the Agnus Dei the tenderest pleading of the heart must find subdued expression.

The Proper, or variable parts of the Mass, must never be changed by the choir. The recitation of the Introit has never been explicitly allowed: in any event, the Gloria Patri must be sung, on account of the enjoined inclination on the part of the celebrant and people. As in the Gradual with the adjoined parts, the organ prelude and alternation between chanters and choir create an agreeable contrast. In the Tract and Sequence, on account of their great length, the reciting of certain parts is desirable. To omit parts of the text, even in the lengthy *Lauda Sion* or *Dies irae*, is forbidden. If the Gradual, Tract, and Sequence be set to figured music, it must be done in accordance with the spirit of the text. The Gregorian melodies to these texts offer to the composer the best possible models for imitation. After the proper offertory text has been sung or recited, a motet to approved words may be sung, provided the celebrant be not too long detained thereby. The same applies to any antiphon or motet in honour of the Blessed Sacrament, which may be sung with the Benedictus after the Elevation. Silence on the part of the organ between the Pater Noster and the following *Per omnia* is desirable. If Holy Communion be given, a short motet with approved Latin text may be inserted. The chants of the Requiem Mass may be accompanied on the organ in an unobtrusive manner. (The use of the organ is also permitted during Advent and Lent, but only for the accompaniment of the chant. On feast days and on Gaudete and Lætare Sundays, it may be used as usual.)

Passing over various other liturgical functions, we shall say a word about Solemn Vespers and Compline. Nothing may be abbreviated or omitted in the Vespers of the day (or the Votive Vespers, when allowed), and no psalm may be sung otherwise than antiphonally. *Falsi-bordoni*, alternating with a Gregorian melody, are successfully used in many places. The repetitions of the antiphons and certain verses of the hymn and Magnificat may be recited. The hymn may also be performed in figured settings, but musical forms, differing widely from the general character of the Gregorian chant, are to be avoided in all parts of the liturgy. On these points the "Motu proprio" of Pius X says: "The different parts of the Mass and Office must retain, even musically, that particular concept and form which ecclesiastical tradition has assigned to them, and which is admirably expressed in Gregorian chant. Different, therefore, must be the method of composing an introit, a gradual, an antiphon, a psalm, a hymn, a Gloria in excelsis.

"In particular the following rules are to be observed:

"(a) The Kyrie, Gloria, Credo, etc. of the Mass must preserve the unity of composition proper to their text. It is not lawful, therefore, to compose them in separate pieces in such a way that each of such pieces may form a complete composition in itself, and be capable of being detached from the rest and substituted by another.

"(b) In the office of Vespers it should be the rule to follow the 'Cæremoniale Episcoporum', which prescribes the Gregorian chant for the psalmody, and permits figured music for the versicles of the Gloria Patri and the hymn.

"It will, nevertheless, be lawful on the greater solemnities to alternate the Gregorian chant of the

choir with the so-called *falsi-bordoni* or with verses similarly composed in a proper manner.

"It may also be allowed sometimes to render the single psalms in their entirety in music, provided the form proper to psalmody be preserved in such composition, that is to say, provided the singers seem to be psalmodising among themselves, either with new motifs or with those taken from the Gregorian chant based upon it.

"The psalms known, as *di concerto*, are therefore for ever excluded and prohibited.

"(c) In the hymns of the Church the traditional form of the hymn is preserved. Thus, it is not lawful to compose, for instance, a 'Tantum ergo' in such wise that the first strophe presents a *romanza*, a *cavatina*, an *adagio*, and the 'Genitori' an *allegro*.

"(d) The antiphons of the Vespers must be, as a rule, rendered with the Gregorian melody proper to each. Should they, however, in some special case, be sung in figured music they must never have either the form of a concert melody or the fulness of a motet or a *cantata*."

All this shows not only the great solicitude of the Church to foster worthy ecclesiastical music, but also the reasonableness of her regulations on the matter. Greater latitude is given at benediction services. It is lawful to sing hymns in the vernacular before the Blessed Sacrament exposed, but, immediately before the Benediction, the "Tantum ergo" and "Genitori" must be sung in Latin, either to a Gregorian melody or to a devotional figured setting, as a liturgical close. During and after the removal of the Blessed Sacrament, it is permitted to sing in the vernacular. An antiphon or hymn in honour of the Blessed Virgin may also be sung, but only after the reposition. If litanies (sanctioned by the Church or the ordinary) be sung, there must be no omissions, although the invocations may be taken in groups of three, followed by one *Ora pro nobis*. As in the case of the "Tantum ergo", all prescribed liturgical chants, like the "Te Deum", must be sung in Latin: any text chosen on the choir's own initiative, however, may be sung in the vernacular.

SINGING BY THE PEOPLE.—Singing by the people, so widely customary at different devotions (Benediction of the Blessed Sacrament, low Mass, etc.), requires special mention. The participation of the people in the singing of the Gregorian chant has been discussed under CONGREGATIONAL SINGING. Singing in the vernacular may not be substituted for the latter. This abuse crept in after the Reformation, and flourished in the eighteenth century, particularly in Germany and adjacent countries. The wish of the Church is that this abuse should be everywhere extirpated, while violence to local customs be avoided. But Pius X has expressed himself warmly in favour of singing by the people within proper limits (e.g., in his endorsement of the endeavours of the *Società italiana per la musica popolare*), and is far from being opposed to such in extra-liturgical services. Naturally, it would be undesirable to accustom the people to sing rather than pray, but well-ordered singing by the congregation is always edifying and devotional. In his psalm against the Donatists, which he intentionally couched in popular form, St. Augustine had an absolutely practical object. Greek and Latin hymnody is to a certain extent even more specially intended to be sung by the people than the Gregorian chant. Hymns in the vernacular were widely employed (e.g., by the early apostles of Germany) to wean the people from the pagan songs to which they were accustomed, and to initiate them in an agreeable manner into the mysteries of the Faith. The oldest of these hymns are lost to us, but we possess a Latin translation of a ninth-century hymn written in honour of St. Gall by the monk Ratpert and sung in church by the people. Of the "Wessobrunner Gebet" the German text has been preserved; of the "Petruslied" (also ninth-century)

we possess the melody, the notation of which, however, is difficult to determine exactly. The frequent pilgrimages and the religious plays subsequently fostered singing among the people, while the invention of printing afforded a means for the universal propagation of popular hymns. Even Luther and Melancthon testify to the general use of German hymns before their time. The Protestant custom of singing hymns in the vernacular, instead of the liturgical chant, reacted upon Catholics, and found its way even into the *missa cantata*.

The development of congregational singing is of early origin. St. Augustine tells us (Conf. vii, 9) that St. Ambrose introduced it in his own diocese from the Orient, and that it soon spread throughout the Western Church. Ambrose modified the still classic Latin metre to meet the popular requirements, while Augustine abandoned it altogether, to get, as he said, nearer to the people. So far we have been concerned only with the antiphonal singing of Latin psalms and hymns, although the people sang in addition the short responses to the liturgical intonations of the celebrant in solemn services. From this latter practice it is likely that the congregational song developed, at first by applying to the long neumes of the "Kyrie" and the jubilations of the "Alleluia" first Latin texts, then texts in the vernacular, and finally by original compositions in imitation of the hymns and litanies. The later hymns in the vernacular may be defined (cf. Bäumker) as strophically arranged sacred songs in the vulgar tongue, which, because of their ecclesiastical character, are suitable to be sung by the whole congregation, and have been either expressly approved for this purpose by ecclesiastical authority, or at least tacitly admitted. The sacred song meditates on truths of religion, gives expression to a lyric religious mood, or rehearses, in the form of a litany, praises or petitions (e.g., pilgrimage of songs). According to Kornmüller, the requisites for a good sacred song are a genuinely ecclesiastical character and doctrine, lyric musical expression, and popular, but at the same time poetic, language. Before the advent of Luther about one hundred church hymns were in general use in Germany. These early hymns are simple, greatly resemble the Gregorian chant in melody, and are grave and noble in expression. The later development (seventeenth and eighteenth centuries) was on the whole unpropitious, but in recent years the reform initiated by Meister, Bäumker, and Dreves, has been attended with gratifying success.

WOMEN IN CHURCH CHOIRS.—In connexion with singing in the vernacular it is necessary to advert briefly to the question of women's participation in choirs. As the injunction of the Apostle that woman keep silence in church was never made applicable in the matter of her participation in the singing of the congregation, and as in religious communities of women the liturgical chant has to be performed by women, we may take it for granted that in our ordinary lay choirs, representing the congregation, the participation of women is not forbidden. The following words from the "Motu proprio" have, however, caused a great deal of uncertainty: "With the exception of the melodies proper to the celebrant at the altar and to his ministers, which must always be sung only in Gregorian chant and without the accompaniment of the organ, all the rest of the liturgical chant belongs to the choir of levites; therefore, singers in church, even when they are laymen, are really taking the place of the ecclesiastical choir." "On the same principle it follows that singers in church have a real liturgical office, and that, therefore, women, as being incapable of exercising such office, cannot be admitted to form part of the choir or of the musical chapel. Whenever, then, it is desired to employ the acute voices of sopranos and contraltos, these parts must be taken by boys, according to the most ancient usage of the

Church." But the Holy Father speaks here (as in the beginning) of the choir of levites, among whom laymen may be included, and declares soon after these quoted words that it is becoming for them to wear the ecclesiastical habit and surplice. But our ordinary lay choir represents not only the congregation, but also the official choir, without wishing to play the rôle of "levites"; for this reason it is not stationed in the sanctuary, and no one would think of proposing that its members, like acolytes, should wear the ecclesiastical habit. The lay choir is simply a substitute for the absent *chorus cantorum*, in the liturgical sense, as is the nun for the absent acolyte when she supplies from a distance the responses to the celebrant during the celebration of Mass.

Consequently, the presence of women in choirs is excusable under certain circumstances, although choirs composed of men and boys are for many reasons preferable. It is true that an inquiry about this point received an apparently negative answer on 18 Dec., 1908, but this was in regard to the conditions described in the inquiry (*prout exponitur*), and it is added that the Decree is to be understood in the sense that the women must be kept entirely separate from the men, and every precaution taken to render impossible all conduct unbecoming to the sacred edifice. From these clauses it appears that, in principle, choirs composed of men and women are not inadmissible; however, the desirability of banishing every possible occasion of indecorousness from the church renders it preferable to employ boys, rather than women, in choirs. The employment of women as soloists is all the more questionable, since solos in church are admissible only within certain limits (*Motu proprio*). A choir composed of women only is not forbidden (Decree of 17 Jan., 1908). To employ non-Catholics in church as singers and organists is only tolerated in case of urgent necessity, because they neither believe nor feel the words which they sing.

REFORM IN PRACTICE.—The decadence of the Gregorian chant is to be ascribed primarily to the development of and preference given to polyphony. To this cause is due the disappearance from the chant of its original rhythm and the serious neglect of its simpler form. Even before the Council of Trent, ecclesiastical authority had repeatedly raised its voice against the abuses which had crept into polyphonic music. The Gregorian melodies, however, even in the hands of the contrapuntists, retained their character in a wonderful manner. Nevertheless, the contrast between the two kinds of music led, at the beginning of the seventeenth century, to an abbreviation of the long melismatic passages, to a different application of the text, and to many less important modifications (*Graduale Medicæum*). Many other editions, edited according to the same principle, followed until the revised "*Medicæa*" (printed in Ratisbon) became in 1878 the official chant book of the Church (cf. *Decreta* auth., n. 3830). Meanwhile, the liturgical researches of the Benedictines of Solesmes had led (since 1903-4) to the general restoration, in the Vatican edition, of the chant from the manuscripts of the twelfth century. Endeavours to restore the earlier neumed texts (tenth-century), mainly on account of the primitive rhythm, have so far met with little success.

The "*Motu proprio*" of Pius X had for its main purpose the reform of church music in general, and covers about the same ground as the "*Regolamento per la musica sacra*", which the Congregation of Sacred Rites issued under Leo XIII, but which applied more particularly to Italy (*Decr. auth., loc. cit.*). On the basis of these regulations, with which the earlier precepts and the modern decrees are in entire agreement, composers, singers, critics, and theorists are to carry on their work of reform. They constitute the principle which the Cæcilienverein (Cecilian Society) has long endeavoured to put into practice in Germany,

Italy, North America, and elsewhere. Dr. F. X. Witt, burning with zeal for the cause of reform, founded this society in 1868, and, shortly after its papal approbation, became its first president. The object of the society is to cultivate the chant, polyphony, hymns in the vernacular, organ-playing, and orchestral music in conformity with the regulations of the Church. The reform endeavours were by no means confined to Germany, but extended to Holland, Italy, the United States, etc. The introduction of the Vatican edition of the chant has been, since the decree of Pius X, the main object of the society's activity. In the restoration and worthy performance of the traditional chant, the Benedictines have, even before the publication of Dom Pothier's work (*Les mélodies grégoriennes*, 1880), displayed the greatest zeal. Thus, the fathers of Solesmes in France, Beuron in Germany, St. Anselm in Rome, Maredsous in Belgium, Prague and Seckau in Austria, co-operate with the Cecilians of every part of the world in carrying out the wishes of the Holy Father and the bishops in regard to the reform of church music. Every one is under obligation to do what he can in his own particular field.

It is well to state briefly in didactic form what the Church really means by progressive reform. A first requisite is the recognition that the chant, as the true music of the Church, must be studied and performed with the greatest care. Whenever difficulties stand in the way of the introduction of the Vatican edition, the bishops will take such measures as are in conformity with the will of the pope. Schools for church music are to be founded and fostered. The "*Motu proprio*" (viii, 27, 28) says: "Let care be taken to restore, at least in the principal churches, the ancient *schola cantorum*, as has been done with excellent fruit in many places. It is not difficult for a zealous clergy to institute such *scholæ*, even in the minor and country churches—nay, in them they will find a very easy means for gathering around them both the children and the adults to their own profit and the edification of the people. Let efforts be made to support and promote in the best way possible the higher schools of sacred music where these already exist, and to help in founding them where they do not. It is of the utmost importance for the Church herself to provide for the instruction of its masters, organists, and singers according to the true principles of sacred art." In a similar sense it is the will of the Holy Father that in the study of liturgy attention should be directed to the principles governing liturgical music, and that æsthetic appreciation should be fostered. Singers must ever be humbly submissive to their pastor, and especially to the episcopal commission, and may never entertain the notion that the chant can be sung without due preparation, as though it were a question of merely singing the notes. Courses in the chant are given in various centres, and excellent books of instruction exist in great numbers (e. g., Singenberger's "*Guide to Church Music*"). To mention only one point, it is important to master, in accordance with the instructions of the Benedictines, the proper rhythmic divisions of periods and phrases as well as the *legato* delivery of the long jubilation.

In general, it is now-a-days impossible to do entirely without polyphonic music. It constitutes a welcome means of giving splendour to feast-days, but is a source of danger if over-indulged in. The works of some of the best masters of polyphony have been made accessible for study and execution by excellent editions (e. g., the works of Palestrina in Haber's edition). There is certainly no dearth of compositions in the modern homophonic style; we have but to consult the catalogue of the Cecilian Society or the above-named "*Guide*". It is better to produce repeatedly a few compositions within the capacity of the choir than to introduce new works frequently, without completely mastering them. Critics who write on church music,

composers, and choir-directors, should familiarize themselves with the spirit and regulations of the Church in regard to music by means of the numerous theoretical manuals. It is the spirit which vivifies; the form serves merely to give it expression. Without studying the liturgy (at least, that part of it directly connected with the music) and the texts in the original or an easily procured translation, it is impossible to penetrate into this spirit. The Church may claim our ready allegiance and respect for the laws and regulations which she, for grave reasons and to deal with existing conditions, has enacted.

In theoretical and artistic questions, however, everyone enjoys freedom. Thus the Congregation of Rites has declared in regard to the official chant (and this declaration is of course still in force): "While students of the chant always have enjoyed full freedom, a privilege which they will not be deprived of in the future, to ascertain by scientific research what was the primitive form of the chant, and what modifications it has undergone in subsequent periods (a very laudable inquiry analogous to that being prosecuted by learned scholars into the primitive rites and other departments of the liturgy), only that form of the chant which His Holiness has proposed to us, and which has been approved by the Congregation of Sacred Rites, may to-day be considered as authoritative and legitimate" (Decr. auth., n. 3830). As for composers, they should never try to foist upon the faithful productions which do not conform to the intentions of the Church, even if the music in itself be beautiful, nor should they aim at a mere display of their own powers thereby to gain fame and merely delight their hearers. They should, on the contrary, endeavour to imitate in their compositions the simplicity and objectivity of the chant, and learn from it to accommodate themselves to the capacity of ordinary choirs. With these considerations before him, the choir-director has to choose his music, penetrate into its spirit so that he may be able to impart the same to his singers, who must sing not only correctly but also with devotion. Order and discipline among the performers are important factors in obtaining the desired results. According to the "*Motu proprio*", "only those are to be admitted to form part of the musical chapel of a church who are men of known purity and probity of life, and these should by their modest and devout bearing during the liturgical functions show that they are worthy of the holy office they exercise." Inasmuch as the impression produced by a performance depends greatly on the interpretation, it is incumbent upon the choir-master to insist upon distinct pronunciation of the words, a noble tone quality, and a simple expression of the mood. Church music should be free from exaggerated and extravagant expression of joy or sorrow, sentimental yearning, and theatrical effects of every kind; it should be the utterance of fervent prayer springing from faith and charity. The good intention of the singers will not only find its eternal reward, it will also evoke gratitude and respect.

The twofold aspect of the principle laid down by the Sacred Congregation for our guidance in the matter of singing in the vernacular is expressed as follows: "The Congregation urgently admonishes that hymns in the vernacular no matter of what character, should gradually and unostentatiously be eliminated from liturgical functions. On the other hand, pious hymns to approved texts, which are extensively employed, particularly in Germany, during different devotions and before the Blessed Sacrament exposed, are by no means prohibited" (3 April, 1883; Krutschek, 3rd ed., pp. 151, 177). Songs in the vernacular, alternating with prayer, are suitable during low Mass (within narrow limits, however), benediction, but especially during processions outside of the church. An excellent means for fostering this desirable practice is the care-

ful training of the school children, whose singing need not, however, be confined to hymns in unison, and who also may be allowed to perform occasionally more elaborate compositions in two or more parts. The singing, however, should not be permitted to gain precedence over prayer. The hymn-book should at the same time be a prayer-book, and praying aloud should alternate with the singing. It is important that the sense and spirit of the hymns be carefully explained to the children. The performance should be free from dragging and slurring, faults which should be strongly discouraged by the organist. Arbitrary, unindicated pauses should be avoided. The children, especially, should be taught to respond to the celebrant at the altar; this is the only way to educate the congregation gradually to do the same thing. No one exercises a greater influence in the reform of church music than the organist, provided he be animated by the spirit of the Church. His playing should be, like the chant of the Church, simple and grave, devotional and objective. Song preludes and intermezzi during liturgical functions are forbidden. The organ must be subordinate to the singing, must support and not drown it. The purely vocal style is the ideal of the Church. The papal choir, the Sistine, has always excluded instrumental music. The more humble and subordinate the rôle of the organist, the more faithful and conscientious he should be in filling it. He should never occupy the front of the stage, scandalize the faithful by trashy improvisations, or keep the celebrant waiting. In extra-liturgical functions, however, he may move somewhat freely. It is decidedly preferable to play the works of good masters than to improvise. In preparing for a great liturgical function, he should aim at giving suitable and full expression to the spirit of the day, the feast, and circumstance. Unceasing practice is indispensable, especially to the musician of mediocre talent, even though he always keep the text before him. He must be able to perform this with absolute sureness, mastery, and freedom. He must know how to modulate from one key into another, how to proceed from one number to another, what key to choose for the hymns sung by the congregation, how to transpose the chant from one key into another, how to combine the organ stops, and (to a certain extent at least) how to improvise and to harmonize at sight. Under no circumstances must he permit himself to carry reminiscences of the concert and opera into the church.

As to the use of instruments, other than the organ, we should remember that the special permission of the ordinary is necessary, and that their nature must always be in keeping with the occasion and the place. The employment of a full orchestra forms an exception (cf. *Motu proprio*, cited above). The wisdom of these restrictions has been cheerfully recognized by such unprejudiced authorities as Wagner and Beethoven—a fact which cannot be too often stated. The former maintained that "genuine church music should be produced only by voices, except a 'Gloria' or similar text." As early in his career as 1848 this master ascribed the decadence of church music to the use of instruments. "The first step toward the decadence of genuine Catholic church music was the introduction of orchestra instruments. Their character and independent use have imparted to religious expression a sensuous charm, which has proved very detrimental, and has affected unfavourably the art of singing itself. The virtuosity of instrumentalists provoked imitation on the part of singers, and soon a worldly and operatic taste held full sway in church. Certain parts of the sacred text, e. g. the 'Kyrie Eleison', became a vehicle for operatic arias, and singers trained for Italian opera were engaged as church singers" (*Gesammelte Werke*, II, 335). Every reform has, in accordance with the will of the Church, to be carried out in such a manner that a greater evil may not result—that is, gradually and without causing unnecessary friction (*sensim sine*

sensu), but yet with firmness, regardless of one's personal views. Moral necessity alone dispenses from a command of the Church. It must be considered as progress when features either forbidden or discouraged by the Church (e. g., hymns in the vernacular during liturgical functions, the use of orchestral instruments, women in choirs) are no longer fostered, and when one abuse after another is gradually reduced to a minimum. Those in charge should not cater to the false ideas of the people, but should make every effort by the performance of better compositions to ennoble popular taste. Offence is perhaps most easily given, when old and favourite hymns, though of an inferior quality, are withdrawn: modern hymn-books, however, contain such an abundance of excellent melodies that many an undesirable hymn is discarded without difficulty. The fundamental conditions for success are a good choir of men and boys, a capable organist, and a judicious choice of masses and other compositions by the choir-director.

The Vatican chant, however, presents difficulties of a special nature. It is true that mere recitation on a straight tone may in some cases be resorted to. It has also been customary from time immemorial to assign to a few chosen singers the more difficult passages. In regard to the rhythm, accent, and other points we now know the precise intentions of the Holy See. The "Acta Apostolicæ Sedis" (1910, pp. 145 sq.) contains a letter from the Prefect of the Congregation of Rites to the president of the German Cäcilienverein, in which by this publication becomes binding on all. In this letter the direction is given that the rhythmical interpretation of the Vatican edition is to be in accordance with the rules laid down in the preface to the Graduale. The wish is also expressed that no contrary methods should be advocated in the press, as they would only cause confusion and retard the progress of music reform. Theoretic discussions seem not to have been prohibited, except in so far as they might interfere with the introduction of the Vatican edition (cf. the decree of the Congregation of Rites quoted above, which was issued under similar conditions—Decr. auth., n. 3830). A considerable latitude is allowed in the interpretation of the document. The attempts, disapproved of by the Holy Father, are characterized in a rather mild manner; critics are asked to abstain from attempting that which, in the present state of archaeological studies, can have no other result than to spread confusion and divert attention from the real work of restoring the Gregorian chant to its rightful place. In spite of the many differences of opinion, we should make every effort to introduce the Vatican edition in conformity with the will of the pope. By studying the symmetrical construction of the melodies in the light of the explanations of the Benedictines, which are undoubtedly of high æsthetic value, the execution becomes not only much easier but the profound beauty of the chant is revealed to us.

RELIGIOUS MUSIC.—Finally that class of religious music which may not be placed in the same category with real church music, must be mentioned. The masses by Mozart, Haydn, and Beethoven have already been spoken of. The musical interpretation of the text and their operatic form render them little suited to the church. We must also name the older Protestant masters, John Sebastian Bach and G. F. Handel, whose works for Protestant services undoubtedly deserve to be studied by the church musician. The greater latitude accorded to organ playing in the Protestant cult has given occasion to the highest productions of contrapuntal and harmonic art. We must not lose sight of the fact, however, that the predominance in their works of the instrumental element, with its obtrusive arias, duets, and choruses, is in opposition to the spirit of the Catholic liturgy, which finds a more suitable medium of expression in the purely vocal style. John Sebastian Bach (b. at

Eisenach, 1685; d. at Leipzig, 1750) has also set Catholic liturgical texts to music. His mass in B minor is considered one of his greatest works, among which his oratorio, the "Passion according to St. Matthew", must be also included. Among his other compositions for Sundays and festivals, preludes and fugues hold a prominent place. He was also distinguished in the field of chamber music. George Frederick Handel (b. at Halle, 1685; d. at London, 1759) devoted his powers first to the opera and later to the oratorio. He also wrote "Te Deums", psalms, fugues, and concerti for the organ, which, like Bach's sacred works, suggest the lofty purpose of the older masters, but do not fulfil the requirements of the Church. The musical fame of these masters is thereby in nowise diminished. The church hymn or chorale, which, with the cantata and oratorio, is essential to the Protestant cult, is a development in popular form of the singing of the Gregorian chant by the congregation.

The oratorio, which Handel brought to the highest degree of perfection (Messiah, Judas Maccabeus, Israel in Egypt, etc.), stands midway between secular and liturgical music. Originally intended as an ethical-religious reaction against the Florentine opera, it treats Biblical and legendary themes in a lyric-dramatic form, but without dramatic action. It consists of recitations, arias (duets, trios, quartets), and choruses with a brilliant orchestral accompaniment. On account of its semi-operatic form the oratorio is not available for church purposes, although it was customary in former times to perform settings of the Passion in church on Good Friday. The cantata (perfected by Bach) is more lyric and less epic in style with a somewhat more modest instrumentation. The cantata and oratorio are both developments from the antiphonal sacred chants and the mystery plays of the Middle Ages. Side by side with polyphony existed the folk-song in the vernacular and also more pretentious compositions, such as the lays of the troubadours, minnesingers, and mastersingers, and the madrigal. The folk-song of olden times, springing directly from and resembling the music of the Church, was often employed as *motif* or *cantus firmus* in masses and other liturgical compositions, a proceeding which would not be allowed now-a-days. Christian pilgrims were wont to sing antiphonally hymns having for their burthen the life and death of our Saviour and similar subjects. The dramatic element inherent in these subjects was contained in the liturgy itself. It had only to be brought into conjunction with epical recitation or narrative and song in order to develop into the mystery plays, which had their secular counterparts. As far back as the eleventh century these mystery plays on feast-days served to present to the people in dramatic form the Passion, Resurrection, and Last Judgment. Their original home was the church and the monastery, from which they had later to be banished. The secular and semi-ecclesiastical or simply religious music of the Middle Ages had a decisive influence in the transformation of polyphonic music into the harmonic or homophonic, and a comparison between the various styles is a great aid in determining the character of genuine church music.

It is as important to-day as ever that we carefully distinguish between simply religious music—be it never so beautiful, artistic, and conducive to private devotion—and that kind of music which the Church requires for her services. Outside of the Church each one may sing such melodies to religious texts as best satisfy his own pious mood; he may even indulge his æsthetic predilections in choosing his hymns. The house of God, however, demands an entirely different attitude; we must realize that we are there to pray, that we may not force our personal mood on our fellow Christians, but that, on the contrary, we must follow with devout attention and pious song, according to the

will and in the spirit of the Church, the liturgical action at the altar. And, in according to the Church our filial obedience, we need entertain no fear that she, the venerable mother and protector of the arts, will assign to music a function unworthy of its powers.

KRUTSCHER, *Die Kirchenmusik nach dem Willen der Kirche* (5th ed., Ratisbon, 1901); SINGENBERGER, *Guide to Catholic Church Music* (2nd ed., Milwaukee, 1905), published by order of the Provincial Council of Milwaukee; KORNHÜLLER, *Lex. der kirchl. Tonkunst* (2 parts, 2nd ed., Ratisbon, 1891-5); BÄUMKER, *Das kath. Kirchenlied in seinen Singweisen* (3 vols., Freiburg, 1883-91); JUNGEMANN, *Aesthetik* (Freiburg, 1886); GIETMANN, *Musik-Aesthetik* (Freiburg, 1900). Special mention must be made of the periodicals on Church music in German and French and to the American periodicals *Church Music* and *Cecilia* (the organ of the American Cecilian Society), from which a great deal of theoretic and practical value may be gathered.

G. GIETMANN.

Musical Instruments in Church Services.—For almost a thousand years Gregorian chant, without any instrumental or harmonic addition, was the only music used in connexion with the liturgy. The organ, in its primitive and rude form, was the first, and for a long time the sole, instrument used to accompany the chant. It gave the pitch to the singers and added brilliancy and sonority. In secular music, however, instruments played an important rôle at an early date. It may be said that instrumental music developed simultaneously with secular music itself. The troubadours, trouveres, and jongleurs (who flourished in France, Italy, and Spain from the eleventh to the fourteenth centuries inclusive), and their English contemporaries, the minstrels or wayfarers, as well as the minnesingers in Germany during the twelfth and thirteenth centuries, accompanied their chants and lyric improvisations on instruments. Among these were a diminutive harp, which was laid on the table while being played, the fiddle, also called *vielle* or *viola* (prototypes of our violin), the very ancient *crwth*, *croud ar chroila* (an instrument having originally three, but later five strings, now obsolete), and the hurdy-gurdy. The last two were more especially in use in Great Britain. Wind instruments, such as the flute in several forms, the trumpet, horn, sackbut (forerunner of our trombone), and others now obsolete were common with the wayfaring musicians. Instrumental music as an art, however, failed for a long time to gain the recognition of the educated and upper classes, chiefly because it served the purposes of the dance and mere entertainment almost exclusively, and also on account of the more or less vagabond character of most of its votaries. There was, nevertheless, constant progress both in the construction of the instruments and in a more and more widely-extended and skilful use of them. Princes maintained bands of musicians at their courts for their entertainments, and for giving zest and splendour to public festivities. Some of these early orchestras numbered as many as thirty or forty musicians. While it is certain that as early as the fifteenth century instruments besides the organ were used in connexion with polyphonic liturgical compositions, it has not been definitely ascertained to what extent such was the case, what passages were played by the instruments alone, and where they simply reinforced the voices. The difficulty in determining the precise nature of instrumental co-operation with the voices is increased by the fact that in those days the text was applied by the composer to only one voice—generally the *cantus*, or upper voice. In accordance with this model, the singers themselves applied the text to the other voices as they proceeded. At all events the instruments served at best only as a reinforcement or as substitute for the human voices and had no independent function in our modern sense. Furthermore, they were employed with sole reference to their pitch and not to their timbre, or tone-quality. Thus, instruments of the violin family and flutes would play with the high voices, sopranos and altos, whereas horns and trombones were assigned to the tenor and bass parts.

X.—42

It was with the advent of monody (see HARMONY) that the use of instruments in connexion with the voices received a great impetus. The closely-knit, compact polyphonic structure which had predominated up to this time, needed no extraneous aid for its effectiveness and sonority. This was not the case with the new style of composition rapidly superseding the old school. It depended to a great extent for its tonal body and artistic existence on the aid of instruments. The great perfection reached in the construction of stringed instruments in the sixteenth century was both a manifestation of, and an aid to the growing tendency; virtuosity, not only on stringed, but also on wind instruments was a common accomplishment. The character and individuality of the instruments, so to speak, were being made available as means of expression for the subjective moods, dramatic feelings, and conceptions of the composer.

While all this development had, up to the first half of the sixteenth century, served mainly secular purposes, it was through Ludovico Grossi da Viadana (1564-1627) that the use of instruments became more common in churches. While choirmaster in Mantua and in Venice, this master published his "Cento concerti ecclesiastici", compositions to sacred texts, for one or more voices and *basso continuo*, or figured bass played on the organ and supplemented by violins, bass viols, and wind instruments, a species of composition in vogue before his time. A contemporary of Viadana, Giovanni Gabrieli (1557-1612), choirmaster of St. Mark's, Venice, went a considerable step farther than any one before him. He wrote not only numerous works for voices and instruments, but created works for instruments alone, and discovered the principle of modern orchestration by doubling the voices in octaves and applying the same process to the organ and other instruments. Another event which was destined to exercise a momentous influence, not only on the growth of the use of instruments but also on the future development of liturgical music itself, was the birth of opera with the first performance (1594) of Jacopo Peri's "Dafne" in Florence. This new art form, originating as it did with the humanistic spirit of the time and being a return to the musical and literary ideals of antiquity which enthralled the cultivated classes of the day, soon gained an enormous popularity and completely overshadowed all previously accepted ideals in popular favour. It was but a short time before the spirit and forms of the theatre, instruments and all, found their way into the Church. While formerly the spirit and form of church music dominated secular music (most early secular melodies which have come down to us belonging to one or the other of the Gregorian modes) it was now the spirit, taste, and passions of the world as expressed in opera which were in the ascendancy and began to dominate the compositions to liturgical texts. It was natural that the people should like to hear in church the forms of composition which delighted them so much in the theatre. The severe simplicity of liturgical chant was set aside; polyphony was considered too formal and artificial. The spirit of universality animating them had to yield to the new style expressions of individual feeling enhanced by the sensuous charm of the instruments. That which was in accordance with the prevailing and growing taste of the generality was, if not desired, at least tolerated by those in authority, and there was no hindrance to the triumphal conquest by instrumental music which we have witnessed since.

New purely instrumental forms were developed and cultivated in the course of the seventeenth and eighteenth centuries in Italy, France, and especially in Germany, the most fruitful soil of all, until the symphony was evolved, through which the composer gives utterance to all the conflicting emotions which sway him. Peri, for the accompaniment of his first opera, "Dafne", used but a few instruments, namely, a

harpsichord (one of the predecessors of our modern pianoforte), a lute, a *viola da gamba* (forerunner of our violoncello), an archlute, or lute of a larger size, and a triple flute, while Claudio Monteverdi (1567-1643) employed in his opera "Orfeo" the formidable number of thirty-six instruments, as follows: two *clavicembali* (another primitive form of the pianoforte), two *contrabassi*, ten *viola da brazza* (violins), one double harp, two *violini piccolini alla Francese* (violins), two *organi di legno* (a sort of violin played or struck with the wood of the bow), three *bassi da gamba* (celli) four trombones, one *regale* (a portable organ with only one or two stops or registers), two *cornetti*, one *flautino* (small flute), one *clarino* (trumpet) and three *trombe sordine* (muted trumpets). While this was a formidable sonorous body, orchestration in our present day sense, that is, the utilization of the various instruments in accordance with their nature, tone quality, and compass, and their combination, with a view to the greatest variety of tone colour and sonority, was yet to be evolved. While Giovanni Carissimi (1604-74) in his oratorios, employs the instruments with more appreciation of their individuality than was manifested before him, it remained for his gifted pupil Alessandro Scarlatti (1657-1725), founder of the Neapolitan school, to establish the norm for the use of instruments, which remained unchanged for more than a hundred years. Scarlatti's orchestra for his oratorios and operas consisted of first and second violins, violas, violoncellos, basses, two oboes (from *hautbois*, "high wood" developed from the ancient *calamus*, "reed"; French, *chalumeau*; German, *schalmey*), two bassoons (corresponding to the oboes in the lower octaves), and two horns. This combination of instruments was still in vogue in the time of Haydn and Mozart, and was used in most of their works for the Church except that they sometimes added two flutes, two clarinets (woodwind instrument of ancient origin, so called on account of the resemblance of its tones to the high tones of the *clarino*, or trumpet), and two trumpets. In their operas and oratorios these and contemporary masters added *tympani* (kettle-drums) and three trombones.

The instrumental idea gained such a firm hold that a very large proportion of all the music written for the Church was with orchestral accompaniment. At cathedral and other churches large orchestras were permanently endowed, many of which survive today, notably in Dresden, Breslau, Freiburg-in-Baden, Munich, and Vienna. In innumerable other places, the world over, the orchestra, without being always present, would be called into service on festival occasions. Up to the middle of the nineteenth century it was considered by composers practically impossible to interpret musically the text of the Mass or requiem without calling to their aid all the resources and means of expression afforded by a complete orchestra. While Beethoven, in his "Mass in C" and "Missa solemnis", as well as Cherubini in his numerous works to liturgical texts, does not go beyond the so-called classical orchestra, that is, first and second violins, violas, cellos, flutes, basses, oboes, clarinets, bassoons, horns, trumpets, trombones, and kettle-drums, Liszt and Gounod in addition to these also employ the *piccolo* (small flute), *contrafagotto*, or bassoon bass, the harp, cymbals, and *tuba* (a brass instrument serving as a bass to the trombone family). The extreme limit in instrumental tone display in modern times was reached, however, in Hector Berlioz's "Requiem Mass", performed (1837) for the first time in Notre Dame, Paris. In this work all previous efforts in the way of tonal manifestation are far surpassed. Besides an orchestra of one hundred and thirty instruments, including sixteen kettle-drums, the author employs in the "Tuba mirum" four separate groups of brass instruments, typifying the trumpets calling from the four corners of the earth on the day of the Last

Judgment. With this work, the last word of a mind and age which still believe but no longer adore, subjectivism finds its supreme manifestation, and the orchestra its most potent means of expression. The Church has never encouraged, and at most only tolerated, the use of instruments. She enjoins in the "Cæremoniale Episcoporum" that permission for their use should first be obtained from the ordinary. She holds up as her ideal the unaccompanied chant and polyphonic, a *capella*, style. The Sistine Chapel has not even an organ.

From time to time regulations have been issued governing the use of instruments and condemning existing abuses. In 1728 Benedict XIII rebuked a community of Benedictine nuns in Milan for using other instruments than the organ during high Mass and Vespers. He also forbade the Franciscans to use any other instrument than the organ in their conventual churches. Benedict XIV in his encyclical "Annus qui nunc vertentem" (19 February, 1749) tolerates only the organ, stringed instruments, and bassoons. Kettle-drums, horns, trombones, oboes, flutes, pianos, and mandolins are prohibited. In the "Regolamento" of 1884, flutes, trombones, and kettle-drums are permitted on account of the improved manner in which they are now used as compared with former times. In the name of Gregory XVI, the Cardinal-Vicar of Rome, Patrizi, prohibited (1842) the use of instruments in the Roman churches, with the exception of a few to be used in a becoming manner in accompanying the singing, and then only after permission had been secured from the proper authority. This order was renewed in 1856 by the same cardinal in the name of Pius IX. Pius X, in his "Motu proprio" on church music (22 November, 1903) in paragraph IV, says, "Although the music proper to the Church is purely vocal music, music with the accompaniment of the organ is also permitted. In some special cases, within due limits and with the proper regards other instruments may be allowed, but never without the special license of the ordinary, according to the prescription of the 'Cæremoniale Episcoporum'. As the chant should always have the first place, the organ or instruments should merely sustain and never suppress it. It is not permitted to have the chant preceded by long preludes, or to have it interrupted with intermezzo pieces", etc. Among those who have recently written, within the prescribed limits, works for voices and instruments for liturgical use, are, I. Mitterer, G. J. E. Stehle, M. Brosig, Max Filke, George Zeller, L. Bonvin, S.J., C. Greith, F. X. Witt, P. Griesbacher, J. G. Mueuerer, and J. Rheinberger. The present trend is, however, decidedly away from the instrumental idea and back to the purely vocal style. And it is recognized, and in many places acted upon, that the new version of the liturgical chant, proposed to the Catholic world by Pius X, gains its full beauty and effectiveness only when sung without instrumental accompaniment of any kind.

JOSEPH OTTEN.

Musti, a titular see of Proconsular Africa, suffragan of Carthage. This town, which was a Roman *municipium* at an early date, is mentioned by Ptolemy, IV, 3, 33, the "Itinerarium Antonini", the Peutinger Table, and the Ravenna geographer, Vibius Sequester, who narrates the killing at this place of an enormous serpent by Regulus. Its ruins, called Meest Henshir, are seen in the vicinity of the *koubba* of the marabout Sidi Abd-er-Rehou, between Teboursouk and Keff (Tunis). Worthy of mention are two fine gates, and a triumphal arch. The inscriptions call

the inhabitants Musticenses or Mustitani; the latter name is also used by St. Augustine. In 411, at the time of the Carthage conference, Musti had besides two Donatist bishops (Felicianus and Cresconius) two Catholic bishops (Victorianus and Leontius). Antonianus was one of the bishops exiled by Huneric in 482. Musti was then included in Proconsular Numidia. In 646 Bishop Januarius signed the letter of the bishops of Proconsular Africa to Paul, Patriarch of Constantinople, against the Monothelites.

MUSUROS, MARKOS, learned Greek humanist, b. 1470 at Retimo, Crete; d. 1517 at Rome. The son of a rich merchant, he went, when quite young, to Italy, where he studied Greek at Florence, under the celebrated John Lascaris, whom he afterwards almost equalled in classical scholarship. In 1503 he became professor of Greek at Padua, where he taught with great success. Later at Venice, he lectured on Greek, at the expense of the republic, and became a member of the Aldine Academy of Hellenists. Musuros rendered valuable assistance to Aldus Manutius in the preparation of the earliest printed editions of the Greek authors, and his handwriting formed the model of Aldus's Greek type. He contributed greatly in giving to the Aldine editions the accuracy that made them famous, while his reputation as a teacher was such that pupils came from all countries to hear him lecture. Erasmus, who had attended his lectures at Padua, testifies to his wonderful knowledge of Latin. To his profound scholarship the editions of Aristophanes, Plato, Pindar, Hesychius, Athenaeus, and Pausanias owed their critical correctness. In 1499 he edited the first Latin and Greek lexicon, "*Etymologicum Magnum*", printed by Zacharias Callierges of Crete. In 1516 he was invited by Leo X. to Rome, where he lectured in the pope's gymnasium and established a Greek printing-press. In recognition of the beautiful Greek poem prefixed to the *editio princeps* of Plato, Pope Leo appointed him Bishop of Malvasia (Monemvasia) in the Morea, but Musuros died before starting for his distant diocese. Besides numerous editions of different authors he wrote several Greek epigrams which with the elegy on Plato published in the Aldine edition (Venice, 1513) are about his only extant writings.

EDMUND BURKE.

Mutis, José CELESTINO, eminent naturalist and scientist in South America, b. at Cadiz, Spain, 6 April, 1732; d. at Bogotá, Colombia, 2 Sept., 1808. Mutis studied medicine at Seville and Madrid and, from 1757, practised as a physician at Madrid, where he applied himself to botany. Soon afterwards he went to South America as physician-in-ordinary to the newly-appointed Viceroy of New Granada, Mesa de la Cerda (Marqués de la Vega). In November, 1760, he landed in Cartagena, and remained in New Granada for five decades. By his great zeal for science and his untiring and versatile activity, he became more and more the soul of all scientific undertakings in Spanish South America. Although he at first taught mathematics and, about the end of his life, founded an observatory in Bogotá and directed the same as astronomer, he devoted his energies almost wholly to researches in the natural history of New Granada, even continuing this work, when, in 1772, he became a cleric (priest?) and canon at the cathedral of Bogotá. During the first years of his life at Bogotá he had planned the botanical exploration of the whole country, intending to write a book on the flora of New Granada. For his researches he

maintained substations at Cácuta and La Montuosa, which Linné supposed to be situated in Mexico. He settled in Mariquita after he had been appointed in 1783 by Charles III, under the viceroy and Archbishop Gongora, leader of the "*Expedición botánica del Nuevo Reino de Granada*", which was founded by the State. Here, as Alexander von Humboldt, an eyewitness, relates, Mutis laid out a plantation of cinchona. Mutis was obliged to train his whole staff of assistants (collectors, painters, engravers, etc.); he also taught several native botanists, e. g., Zea, Caldas, and Restrepo, furthermore his nephew and successor, Sinforoso Mutis. At that time, Mutis was widely known; Linné, who received from him South American plants and corresponded frequently with him, calls him "*phytologorum americanorum princeps*". Linné's son defined the *genus Mutisia* in 1781. The Spanish botanist Cavanilles lauded him in 1791 as "*botanicorum facile princeps*". At Bogotá, where he spent the last ten years of his life, the famous explorers Humboldt and Bonpland stayed with him for two months in 1801, filled with admiration for his rich collections. Their famous work, "*Plantas equinoctiales*" (1818), is adorned with a beautiful portrait of Mutis, and Humboldt erected a glorious monument to the American investigator by writing his biography ("*Biographie universelle*", XXX, Paris, 1821).

Subsequent generations were perhaps justified in judging Mutis less favourably, but it is unjust on the part of some critics to seek to degrade Mutis to the position of an unimportant amateur or to abuse him. Mutis committed the fault that he never ended his researches, and thus published almost nothing during his life-time. He, furthermore, had the misfortune to have his scientific legacy at first remain totally unnoticed in consequence of the political disorders of that time. His museum consisted of 24,000 dried plants, 5000 drawings of plants by his pupils, and a collection of woods, shells, resins, minerals, and skins. These treasures arrived safely at Madrid in 105 boxes, and the plants, manuscripts, and drawings were sent to the botanical gardens, where they were buried in a tool-house. Mutis's cinchona investigations render his work of lasting importance. While he was not the first to discover the genuine cinchona for New Granada—as became known with certainty only after his death—he rendered important services by his study of the cinchonas, their geographical distribution in Colombia, their species and varieties, and their utilization for medicine. This is shown by the trade, which developed in such a manner that (e. g.) the seaport of Cartagena alone exported from New Granada 1,200,000 pounds of cinchona bark in 1806, while previous to 1776 this country produced no quinquina at all. This is furthermore shown by Mutis's writings, which, however, were not printed in full until 1870. Mutis himself published in 1793 and 1794 a short monograph on cinchonas in "*Diario de Santa Fe de Bogotá*". A year later appeared "*Observaciones y conocimientos de la quina*" (in 4 numbers, 608-11, of "*Mercurio Peruano de Lima*", 1795). The above-mentioned Zea published sometime later "*Memoria sobre la quina segun los principios del Señor Mutis*" ("*Anales de Historia Natural*", Madrid, 1800). Mutis sent his chief work "*El arcano de la quina*" in manuscript to Madrid, but the war with France prevented its publication; in 1828 the Spanish physician Hernández de Gregorio edited the first three parts of this work with Mutis's portrait ("*El arcano de la quina. Discurso que contiene la parte médica de las cuatro especies de quinas oficinarias*", Madrid, 1828, 263 pages). The manuscript of the botanical-scientific part was discovered by Clements R. Markham in a shed in the botanical gardens of Madrid; he published it under the title: "*Tabula synoptica ad specierum generis Chin-*"

chona determinationem. *Quinilogia pars quarta*" (edited in Markham, "The Cinchona species of New Granada", London, 1867). The tables, which Mutis selected for this work, were published in 1870 in facsimile by Triana ("Nouvelles études sur les Quinquina", Paris). Through these writings it became evident, as some special investigators confessed, that Mutis had penetrated deeply into the study of the cinchonas of Central Colombia. It may be mentioned that Mutis distinguished four species of cinchonas with an official bark, and headed to them twenty-four varieties. For other manuscripts of Mutis see Colmeiro; a part of Mutis's correspondence is to be found in the work: "A selection of the correspondence of Linnæus and other naturalists" (London, 1881).

M. ROMPEL.

Muzzarelli, ALFONSO, a learned Italian Jesuit, b. 22 August, 1749, at Ferrara; d. 25 May, 1813, at Paris. He entered the Jesuit novitiate on 20 October, 1768, and taught grammar at Bologna and Imola. After the suppression of the order in 1773 he received a benefice at Ferrara and, somewhat later, was made director of the Collegio dei Nobili at Parma. Pius VII summoned him to Rome, and appointed him theologian of the Penitentiaria. When Pius VII was exiled in 1809, Muzzarelli was also obliged to leave Rome and was transported to Paris, where he spent his remaining life at the convent of the Dames de Saint-Michel. He wrote numerous theological, philosophical, and ascetical works. His chief production is a collection of philosophico-theological treatises published repeatedly under the title "Il buon uso della Logica in materia di Religione" (6 vols., Foligno, 1787-9), with additions by the author (10 vols., Rome, 1807; 11 vols., Florence, 1821-3). The collection contains sketches on the theological questions of the day such as—abuses in the Church, the temporal power of the pope, religious toleration, ecclesiastical immunity, riches of the Church and its clergy, primacy and infallibility of the pope, auricular confession, religious orders, indulgences, Gregory VII, moral liberty, etc. This collection of treatises, with the exception of the last five, was translated into Latin by Zeldmayer de Buzitha ("Bonus usus logicæ in materia religionis", Kaschau, 1815-7). A French translation, containing 42 treatises, was published at Brussels in 1837. Two other important productions of Muzzarelli are: "L'Emilio disingannato" (4 vols., Siena, 1782-3) and "Confutazione del contratto sociale di Gian Jacopo Rousseau" (2 vols., Foligno, 1794)—the former is a refutation of Rousseau's "Emile", the latter of his "Contrat social". The most popular of Muzzarelli's many ascetical works is "Il mese di Maria o sia di Maggio" (Ferrara, 1785) of which about 100 editions have been issued (new ed., Bologna, 1901). It has been translated into English "The Month of Mary or the Month of May", London, 1848, 187. . .); Spanish ("Las Vegas", New Mexico, 1887, 1888); Portuguese (Oporto, 1890); French (Paris, 1881, and often previously); Arabian (4 ed., Beyrouth, 1872); and adapted to the German (Mainz, 1883). Another little work that has been translated into English is: "Il buon uso delle vacanze" (Parma, 1798). Its English title is: "A Method of spending the Vacation profitably. Addressed to the Youth who frequent the Schools of the Society of Jesus" (London and Dublin, 1848).

Mykonos. See TINOS, DIOCESE OF.

Mylapur. See SAINT THOMAS OF MYLAPUR, DIOCESE OF.

Mylasa, a titular see of Asia Minor, suffragan of Aphrodisias, or Stauropolis, in Caria. This city, the ancient capital of Caria, was the home of the kings of the province before that honour passed to Halicarnassus. It was situated on a fertile plain at the foot of a mountain on which there are great quarries of the beautiful white marble which was used for the construction or decoration of the city's temples and other buildings. Mylase was taken by Labienus in the civil wars. In the Græco-Roman period it enjoyed a season of brilliant prosperity, and the three neighbouring towns of Olymos, Labranda, and Euresmos were included within its limits. Its finest temples were that dedicated to Zeus Osogoa, which recalled to Pausanias (VIII, x, 3) the Acropolis of Athens, and those of Zeus Karios and of Zeus Labrandenos, or Stratios (Strabo, XIV, ii, 23). Mylase is frequently mentioned by the ancient writers. At the time of Strabo the city boasted two remarkable orators, Euthydemos and Hybreas. Various inscriptions tell us that the Phrygian cults were represented here by the worship of Sabazios; the Egyptian, by that of Isis and Osiris. There was also a temple of Nemesis.

Among the ancient bishops of Mylase, was St. Ephrem (fifth century), whose feast was kept on 23 January, and whose relics were venerated in the neighbouring city of Leuke. Cyril and his successor, Paul, are mentioned by Nicephorus Callistus (Hist. eccl., XIV, 52) and in the Life of St. Xene. Le Quien mentions the names of three other bishops (Oriens christianus, I, 921), and since his time the inscriptions discovered refer to two others, one anonymous (C. I. G., 9271), the other named Basil, who built a church in honour of St. Stephen (Bulletin de correspondance hellénique, XIV, 616). The St. Xene referred to above was a noble virgin of Rome who, to escape the marriage which her parents wished to force upon her, donned male attire, left her country, changed her name of Eusebia to that of Xene (stranger), and lived first on the island of Cos, then at Mylase. The site of the city is now occupied by a little village called Milas, in Mylase, inhabited by a few hundred schismatic Greeks, and containing some fine ruins. The Cyclopean walls surrounding the sacred enclosure of the temple of Zeus Osogoa are still visible, as well as a row of fourteen columns. Pococke (Travels, II, 2), in the eighteenth century, saw the temple of Augustus and of Rome, the materials of which have since been taken by the Turks to build a mosque. There is also a two-storied tomb, called *Distega*, believed to be a simplified copy of the famous tomb of Mausolus, who was a native of Mylase.

S. SALAVILLE.

Myndus, a titular see of Caria, suffragan of Stauropolis. This city, known through its coins and the quite frequent mention made of it by ancient historians and geographers, was inhabited by a Greek colony from Troezen. It was situated on the coast of Caria, lying a little northwest of Halicarnassus on the most northerly of the three Dorian peninsulas. Although a seaport and fortified town, its rôle was an unimportant one, the chief event in its history being that, aided by Halicarnassus, it repulsed an attack by Alexander the Great. The "Notitiæ episcopatum" allude to it as late as the twelfth or thirteenth century as one of the suffragan sees of Stauropolis. However, only four of its bishops are known: Archelaus, who attended the Council of Ephesus in 431; Alphiuss, who assisted at the Council of Chalcedon in 451; John who was pres-

ent at the Council of Constantinople in 680; and another John who went to the Second Council of Nicæa in 787. Myndus is now the little port of Gümüşlü Liman (Liman-port) in the vilayet of Smyrna where the remains of a pier and some other ruins are to be seen.

LE QUIEN, *Oriens christ.*, I, 918; SMITH, *Dictionary of Greek and Roman Geography*, s. v.; LEAKE, *Asia Minor*, 228.

S. PÉTRIDÈS.

Myra, a titular see of Lycia in Asia Minor. The city was from time immemorial one of the chief places in the province. It was situated on the banks of the River Andriacos, twenty stadia from the sea (Appian, "Bell. civil.", IV, 82; Strabo, XIV, iii, 7; Pliny, XXXII, 8; Ptolemy, V, vi, 3; Stephen of Byzantium, s. v.). The hamlet of Andriaca served as its port. On his way from Cæsarea to Rome St. Paul stayed at Myra (Acts, xxvii, 5); at least the "textus receptus" reads thus, but the Vulgate has substituted Lystra. The Codex Bezae, the Gigas Bible, and the ancient Egyptian version also mention Myra after Patara of Lycia (Acts, xxi, 1). The "Acta Pauli" probably testify as to the existence of a Christian community at Myra in the second century (Harnack, "Mission und Ausbreitung des Christentums", 465, 487). Le Quien (I, 965-70) opens his list of the bishops of this city with St. Nicander, martyred under Domitian about A. D. 95, and whose feast is celebrated 4 November (Acts SS., Nov., II, 225). As to St. Nicholas Thaumaturgus, venerated on 6 December, the "Index" of Theodorus Lector (sixth century) is the first document which inscribes his name among the fathers of Nicæa in 325 (Gelzer, "Patrum Nicænorum nomina", 67, n. 151). Theodosius II made the flourishing city of Myra the capital of Lycia and, it is said, erected there a church to St. Nicholas. Peter, Bishop of Myra composed in defence of the Council of Chalcedon writings quoted by St. Sophronius and by Photius (Bibliotheca, Codex 23). At the Sixth Ecumenical Council (787) two bishops of Myra, Theodore and Nicholas, assisted, one representing the orthodox party, the other the Iconoclasts.

Eubel ("Hierarchia catholica medii ævi" II, 1370) mentions five Latin titulars of the fifteenth century. At present Myra is only a village called Dembré in the sanjak of Adalia and the vilayet of Koniah. Its ruins are numbered among the most beautiful of Asia Minor. Among them are the remains of a temple of Apollo, mentioned by Pliny, those of a magnificent theatre, several burial-places hewn in the rock, with tombs inscribed in Lycian and Greek, some of them ornamented with bas-reliefs. Numerous Christian ruins are also found, among them those of the Church of St. Nicholas, around which Russians have recently erected a monastery.

FELLOWS, *Discoveries in Lycia*, I (London, 1857), 169; SPRATT AND FORBES, *Travels in Lycia*, I (London, 1847), 131; TEXIER, *Asie Mineure*, 691-94; RAMSAY, *St. Paul, the Traveller and the Roman citizen*, 297, 300, 319; CUNNET, *La Turquie d'Asie* (Paris, 1892), 875-77.

S. SALAVILLE.

Myrina, a titular see of Asia Minor, suffragan of Ephesus. Herodotus (I, 149) mentions it as one of the eleven cities of Æolia; Strabo, who says it was built by the Amazon Myrina, also assigned to it an Æolian origin (Geographia, XII, iii, 21; viii, 6; XIII, iii, 6); Xenophon (Hellenica, III, i, 6) relates that Artaxerxes gave it to a chieftain named Gorgion. According to Pliny (Hist. nat., V, 30; XXXII, 6) it was famous for its oysters, and must have borne the name of Sebastopolis, of which no trace is found elsewhere. An inscription (Bulletin de correspondance hellénique, V, 283) tells us that Myrina formed part of the Kingdom of Pergamus in the third century B. C. Destroyed by an earthquake under Tiberius (Tacitus, "Annales", II, 47) and again under the Emperor Trajan (Orosius, VII, 12), it was each time rebuilt. It was the birth-place of Agathias, a Byzantine poet and historian of the

sixth century. The names are known of some of the bishops of this diocese, which still existed in the fourteenth century: Dorotheus, 431; Proterius, 451; John, 553; Cosmas, 787 (Le Quien, "Oriens Christ.", I, 705). The site of Myrina was discovered at a place called Kalabassary in the caza of Menemen and the vilayet of Smyrna, at the mouth of the Hodja-Tchai, the ancient Pythicos. The remains of the harbour and the arsenal have disappeared under the alluvia of the river. Excavations (1880-1882) brought to light about four thousand tombs, dating from the two centuries immediately preceding the Christian Era, in which were found numerous objects representing the divinities of the Greek pantheon; children's toys, reproductions of famous works, etc.: most of these may be seen to-day in the Museum of the Louvre.

POTTIER AND REINACH, *La nécropole de Myrina* (Paris, 1887); Bulletin de correspondance hellénique, VI, 197-209, 388-433, 557-580; VII, 81-95, 204-50, 440-47, 493-501; VIII, 509-14; IX, 165-207, 359-74, 485-93.

S. VAILHÉ.

Myriophytum, titular see of Thracia Prima and suffragan of Heraclea. The early history of this city is not known. We find it mentioned for the first time in connexion with an earthquake which destroyed it in the year 1063 of our era (Murali, "Essai de chronologie byzantine", II, 8). It was visited by John Cantacuzene about 1350 (Hist., III, 76). As a suffragan of Heraclea we find it, under the title of Peristasis and Myriophytum, mentioned first in a "Notitia episcopatum" of the end of the fifteenth century (Gelzer, "Ungedruckte . . . Texte der Notitia episcopatum", 633). The title of Peristasis existed already in 1170 (Parthey, "Hieroclis Synecdemus", 103). In the sixteenth century Myriophytum displaced Peristasis, and the diocese took the name of Myriophytum and Peristasis (Le Quien, "Oriens christianus", I, 1151). No change has since taken place, except that among the Greeks in 1908 it was elevated to an autocephalous metropolitan see. To-day Myriophytum is a rather busy port on the Sea of Marmora; the city numbers 5000 Greeks and 400 Turks. The schismatic archdiocese includes only ten parishes with about 22,000 souls, of whom Peristasis alone includes about 6000.

DRAKOS, *Thrakika* (in Greek, Athens, 1892), 72-93.

S. VAILHÉ.

Mysore (MAISOUR), DIOCESE OF (MYSURIENSIS), in India, suffragan to Pondicherry, comprises the territory of the Mysore native state, the British Provinces of Coorg and Collegal, part of Wynaad and the taluk of Ossoor, Salem district; surrounded by the Dioceses of Madras, Poona, Goa, Mangalore, Coimbatore, and Pondicherry. The Catholic population is about 48,202. The diocese, like the rest of the Pondicherry province, is under the Paris Society of Foreign Missions. The clergy are 65 in number (53 European and 12 native priests), having the care of 123 churches and chapels. They are assisted by the Brothers of the Immaculate Conception, the Brothers of St. Gabriel, the Nuns of the Good Shepherd Order, the Little Sisters of the Poor, the Sisters of St. Joseph of Tarbes, and Native Sisters of St. Anne and also of the Immaculate Conception. The cathedral and the bishop's residence are at Bangalore.

HISTORY.—Originally Mysore belonged to the Archdiocese of Goa, but what early mission work was done there is a matter of obscurity. In the Canarese or western portions a mission seems to have been established about the middle of the seventeenth century; in the eastern or Telugu portion another mission was brought into existence about the year 1703 by two French Jesuits who came from Vellore and founded churches at Bangalore, Devanahalli, Chikka, Ballapoor, and elsewhere. But their work was stopped and partly destroyed by the fanaticism of the sultan, Tipu (1782-99). The district came under the Foreign

Mission Society of Paris in 1776, which at that date began work at Pondicherry. The celebrated Abbé Dubois (b. 1765, d. 1848), himself a member of the Foreign Missions, spent most of his life among the Canarese Christians of Ganjam, Palhally, and Sattihully (see DUBOIS). Mysore was included in the Vicariate of the Coromandel Coast (Pondicherry), erected in 1836, but was separated in 1845, and erected into a distinct vicariate-Apostolic in 1850, at the same time as the district of Coimbatore. On the establishment of the hierarchy in 1886 it was made into a diocese suffragan to Pondicherry with the same boundaries as now.

SUCCESSION OF PRELATES.—*Vicars-Apostolic*: Stephen Louis Charbonaux, 1850-73; Joseph Augustine Chevalier, 1874-1880; Jean-Yves-Marie Coadou, 1880-90 (became first bishop in 1886); second bishop, Eugène-Louis Kleiner, 1890 (absent in Europe since 1903); Augustine Francis Basle, coadjutor with right of succession, 1906, now ruling the diocese.

INSTITUTIONS.—St. Joseph's College, Bangalore, teaching up to F. A. Standard, with 600 pupils; Bangalore Convent School under the Nuns of the Good Shepherd, with 494 pupils; St. Patrick's School, Shoolay, with 156 pupils; St. Francis Xavier's School for girls, Cleveland Town, with 138 day-scholars; St. Aloysius's School, with 210 boys; native ecclesiastical seminary, with 26 students; St. Louis' Boarding School, with 58 boarders; the Brothers of the Immaculate Conception, trainingschool for teachers, with 10 European students; convent school at Mysore, under the Good Shepherd Nuns, with 185 pupils; St. Joseph's School, Mysore, with 142 pupils; native Sisters of St. Anne, in charge of five native girls' schools; native Nuns of the Immaculate Conception, girls' school at Sattihally, also a dispensary; Majanma Thumbu Chetty School for caste girls, under the Sisters of St. Joseph of Tarbes, Bangalore, with 136 pupils. *Charitable Institutions.*—St. Patrick's Orphanage, Bangalore, with 100 inmates; St. Martha's public Hospital and Dispensary, Bangalore, in charge of the Good Shepherd Nuns, 70 beds; eye infirmary under the same; Little Sisters of the Poor, Bangalore, with 101 inmates; two orphanages at Bangalore and Mysore under the Good Shepherd Nuns with total of 263 inmates; also 2 Magdalene Asylums with 129 inmates. Four agricultural farms for orphans, round which Christian villages have been formed at four places in the diocese; several small orphanages in country parishes.

Madras Catholic Directory (1909); LAUNAY, *Histoire Générale de la Société des Missions Étrangères*; *Atlas des Missions*.
ERNEST R. HULL.

Mysteries, PAGAN. See PAGANISM.

Mystery (Greek *μυστήριον*, from *μύειν*, "to shut", "to close").—This term signifies in general that which is unknowable, or valuable knowledge that is kept secret. In pagan antiquity the word mystery was used to designate certain esoteric doctrines, such as Pythagoreanism, or certain ceremonies that were performed in private or whose meaning was known only to the initiated, e. g., the Eleusinian rites, Phallic worship. In the language of the early Christians the mysteries were those religious teachings that were carefully guarded from the knowledge of the profane (see DISCIPLINE OF THE SECRET).

NOTION OF MYSTERY IN SCRIPTURE AND IN THEOLOGY.—The Old-Testament versions use the word *μυστήριον* as an equivalent for the Hebrew word *sdh*, "secret" (Prov., xx, 19; Judith, ii, 2; Ecclus., xxii, 27; II Mach., xiii, 21). In the New Testament the word mystery is applied ordinarily to the sublime revelation of the Gospel (Matt., xiii, 11; Col., ii, 2; I Tim., iii, 9; I Cor., xv, 51), and to the Incarnation and life of the Saviour and His manifestation by the preaching of the Apostles (Rom., xvi, 25; Eph., iii, 4; vi, 19; Col., i, 26; iv, 3). In conformity with the usage of the inspired writers of the New Testament,

theologians give the name mystery to revealed truths that surpass the powers of natural reason. Mystery, therefore, in its strict theological sense is not synonymous with the incomprehensible, since all that we know is incomprehensible, i. e., not adequately comprehensible as to its inner being; nor with the unknowable, since many things merely natural are accidentally unknowable, on account of their inaccessibility, e. g., things that are future, remote, or hidden. In its strict sense a mystery is a supernatural truth, one that of its very nature lies above the finite intelligence. Theologians distinguish two classes of supernatural mysteries, the absolute or theological and the relative. An absolute mystery is a truth whose existence or possibility could not be discovered by a creature, and whose essence (inner substantial being) can be expressed by the finite mind only in terms of analogy, e. g., the Trinity. A relative mystery is a truth whose innermost nature alone (e. g., many of the Divine attributes), or whose existence alone (e. g., the positive ceremonial precepts of the Old Law), exceeds the natural knowing power of the creature.

CATHOLIC DOCTRINE.—The existence of theological mysteries is a doctrine of Catholic faith defined by the Vatican Council, which declares: "If any one say that in Divine Revelation there are contained no mysteries properly so called (*vera et proprie dicta mysteria*), but that through reason rightly developed (*per rationem rite excultam*) all the dogmas of faith can be understood and demonstrated from natural principles: let him be anathema" (Sess. III, De fide et ratione, can. i). This teaching is clearly explained in Scripture. The principal proof text, which was cited in part by the Vatican Council, is I Cor., ii. Shorter passages are especially Eph., iii, 4-9; Col., i, 26-27; Matt., xi, 25-27; John, i, 17-18. These texts speak of a mystery of God, which only infinite wisdom can understand, namely, the designs of Divine Providence and the inner life of the Godhead (see also Wisdom, ix, 16-17; Rom., xi, 33-36). Tradition abounds with testimonies that support this teaching. In the Brief "Gravissimas Inter" (Denzinger, "Enchiridion", ed. Bannwart, nn. 1666-74), Pius IX defends the doctrine of supernatural mystery by many citations from the works of the Fathers. Numerous other patristic texts that bear on the same question are quoted and explained in Kleutgen's "Die Theologie der Vorzeit", II, 75 sq.; V, 220 sq.; and in Schüzler's "Neue Untersuchungen über das Dogma von der Gnade" (Mainz, 1867), 466 sq. The manifold excellence of Christian revelation offers many theological arguments for the existence of supernatural mysteries (cf. Scheeben, "Dogmatik", I, 24).

REASON AND SUPERNATURAL MYSTERY.—(1) **Errors.**—The existence of supernatural mysteries is denied by Rationalists and semi-Rationalists. Rationalists object that mysteries are degrading to reason. Their favourite argument is based on the principle that no medium exists between the reasonable and the unreasonable, from which they conclude that the mysterious is opposed to reason (Bayle, Pfléiderer). This argumentation is fallacious, since it confounds incomprehensibility with inconceivableness, superiority to reason with contradiction. The mind of a creature cannot, indeed, grasp the inner nature of the mysterious truth, but it can express that truth by analogies; it cannot fully understand the coherence and agreement of all that is contained in a mystery of faith, but it can refute successfully the objections which would make a mystery consist of mutually repugnant elements. Rationalists further object that the revelation of mysteries would be useless, since it is the nature of reason to accept only the evident (Toland), and since the knowledge of the incomprehensible can have no influence on the moral life of mankind (Kant). To

answer the first objection we have only to recall that there is a twofold evidence: the internal evidence of a thing in itself, and the external evidence of trustworthy authority. The mysteries of revelation, like the facts of history, are supported by external evidence and therefore they are evidently credible. The second difficulty rests on a false assumption. The religious life of the Christian is rooted in his faith in the supernatural, which is an anticipation of the beatific vision (St. Thomas, "Comp. Theol. ad fratrem Reg.," cap. ii), a profound act of religious homage (Contra. Gent., I, vi), and the measure by which he judges the world and the ways of God. The history of civilization bears witness to the beneficial influence that Christian faith has exerted on the general life of mankind (cf. Gutberlet, "Apologetik," II, 2 ed., Münster, 1895, 23). Some Rationalists, trusting to far-fetched similarities, pretend that the Christian mysteries were borrowed from the religious and philosophical systems of Paganism. A study of the origin of Christianity suffices to show the absurdity of such an explanation. Semi-Rationalism explains mysteries either as purely natural truths expressed in symbolic language (Schelling, Baader, Sabatier), or as soluble problems of philosophy (Günther, Frohschammer). The errors of Günther were condemned in a pontifical letter to the Archbishop of Cologne in 1857, and in another to the Bishop of Breslau in 1860 (Denzinger, "Enchiridion", ed. Bannwart, nn. 1655-1658); those of Frohschammer, in the Brief "Gravissimas Inter", 11 Dec., 1862.

(2) *Relations of Natural and Supernatural Truth.*—(a) *Superiority of the Supernatural.*—The mysteries contained in supernatural revelation are not simply disconnected truths lying beyond the realm of natural things, but a higher, heavenly world, a mystical *cosmos* whose parts are united in a living bond. (Scheeben, "Dogmatik", I, 25.) Even in those parts of this vast system that have been revealed to us there is a wonderful harmony. In his great work "Die Mysterien des Christenthums", Scheeben has sought to show the logical connexion in the supernatural order by considering its supreme mystery, the internal communication of Divine life in the Trinity, as the model and ideal of the external communication to the creature of the Divine life of grace and glory. The knowledge of the supernatural is more excellent than any human wisdom, because, although incomplete, it has a nobler object, and through its dependence on the unfailling word of God possesses a greater degree of certitude. The obscurity which surrounds the mysteries of faith results from the weakness of the human intellect, which, like the eye that gazes on the sun, is blinded by the fulness of light. (b) *Harmony of Natural and Supernatural Truth.*—Since all truth is from God, there can be no real warfare between reason and revelation. Supernatural mysteries as such cannot be demonstrated by reason, but the Christian apologist can always show that the arguments against their possibility are not conclusive (St. Thos., "Suppl. Boeth. de trinitate", Q. ii, a. 3). The nature of God, which is infinite and eternal, must be incomprehensible to an intelligence that is not capable of perfect knowledge (cf. Zigliara, "Propædæutica", I, ix). The powerlessness of science to solve the mysteries of nature, a fact that Rationalists admit, shows how limited are the resources of the human intellect (cf. Daumer, "Das Reich des Wundersamen und Geheimnissvollen," Ratisbon, 1872). On the other hand reason is able not only to recognize wherein consists the special mysteriousness of a supernatural truth, but also to dispel to some extent the obscurity by means of natural analogies and to show the fittingness of the mystery by reasons of congruity (Council of Cologne, 1860). This was done with great success by the Fathers and the Scholastic theologians. A famous example is St. Thomas'

argument *ex convenientia* for the Divine processions in the Trinity (Summa Theol., I, QQ. xxvii-xxx). (See FAITE, REASON, REVELATION.)

Mystery Plays. See MIRACLE PLAYS.

Mystical Body of the Church.—The analogy borne by any society of men to an organism is sufficiently manifest. In every society the constituent individuals are united, as are also the members of a body, to effect a common end: while the parts they severally play correspond to the functions of the bodily organs. They form a moral unity. This, of course, is true of the Church, but the Church has also a unity of a higher order: it is not merely a *moral* but a *mystical* body. This truth, that the Church is the mystical body of Christ, all its members being guided and directed by Christ the head, is set forth by St. Paul in various passages, more especially in Ephesians, iv, 4-13 (cf. John, xv, 5-8). The doctrine may be summarized as follows: (1) The members of the Church are bound together by a supernatural life communicated to them by Christ through the sacraments (*ibid.*, 5). Christ is the centre and source of life to Whom all are united, and Who endows each one with gifts fitting him for his position in the body (*ibid.*, 7-12). These graces, through which each is equipped for his work, form it into an organized whole, whose parts are knit together as though by a system of ligaments and joints (*ibid.*, 16; Col., ii, 19). Through them, too, (2) the Church has its growth and increase, growing in extension as it spreads through the world, and intensively as the individual Christian develops in himself the likeness of Christ (*ibid.*, 13-15). (3) In virtue of this union the Church is the fulness or complement (*πλήρωμα*) of Christ (Eph., i, 23). It forms one whole with Him; and the Apostle even speaks of the Church as "Christ" (I Cor., xii, 12). (4) This union between head and members is conserved and nourished by the Holy Eucharist. Through this sacrament our incorporation into the Body of Christ is alike outwardly symbolized and inwardly actualized; "We being many are one bread, one body; for we all partake of the one bread" (I Cor., x, 17).

Mystical Theology. See THEOLOGY, MYSTICAL.

Mysticism (from *μύειν*, to initiate), according to its etymology, implies a relation to mystery. In philosophy, Mysticism is either a religious tendency and desire of the human soul towards an intimate union with the Divinity, or a system growing out of such a tendency and desire. As a philosophical system, Mysticism considers as the end of philosophy the direct union of the human soul with the Divinity through contemplation and love, and attempts to determine the processes and the means of realizing this end. This contemplation, according to Mysticism, is not based on a merely analogical knowledge of the Infinite, but on a direct and immediate intuition of the Infinite. According to its tendency, it may be either speculative or practical, as it limits itself to mere knowledge or traces duties for action and life; contemplative or affective, according as it emphasizes the part of intelligence or the part of the will; orthodox or heterodox, according as it agrees with or opposes the Catholic teaching. We shall give a brief historical sketch of

Mysticism and its influence on philosophy, and present a criticism of it.

HISTORICAL SKETCH.—In his "History of Philosophy", Cousin mentions four systems, between which, he says, philosophical thought has continually wavered, viz., Sensism, Idealism, Scepticism, and Mysticism. Whatever may be thought of this classification, it is true that Mysticism has exercised a large influence on philosophy, becoming at times the basis of whole systems, but more often entering as an element into their constitution. Mysticism dominated in the symbolic philosophy of ancient Egypt. The Taoism of the Chinese philosopher Lao-tze is a system of metaphysics and ethics in which Mysticism is a fundamental element (cf. De Harlez, "Laotze, le premier philosophe chinois", in "Mémoires couronnés et autres de l'Académie", Brussels, January, 1886). The same may be said of Indian philosophy; the end of human reflection and effort in Brahmanism and Vedantism is to deliver the soul from its transmutations and absorb it into Brahma forever. There is little of Mysticism in the first schools of Greek philosophy, but it already takes a large place in the system of Plato, e. g., in his theory of the world of ideas, of the origin of the world soul and the human soul, in his doctrine of recollection and intuition. The Alexandrian Jew Philo (30 B. C.—A. D. 50) combined these Platonic elements with the data of the Old Testament, and taught that every man, by freeing himself from matter and receiving illumination from God, may reach the mystical, ecstatic, or prophetic state, where he is absorbed into the Divinity. The most systematic attempt at a philosophical system of a mystical character was that of the Neoplatonic School of Alexandria, especially of Plotinus (A. D. 205–70) in his "Enneads". His system is a syncretism of the previous philosophies on the basis of Mysticism—an emanative and pantheistic Monism. Above all being, there is the One absolutely indetermined, the absolutely Good. From it come forth through successive emanations intelligence (*νοῦς*) with its ideas, the world-soul with its plastic forces (*λόγος σπερματικός*), matter inactive, and the principle of imperfection. The human soul had its existence in the world-soul until it was united with matter. The end of human life and of philosophy is to realize the mystical return of the soul to God. Freeing itself from the sensuous world by purification (*κάθαρσις*), the human soul ascends by successive steps through the various degrees of the metaphysical order, until it unites itself in a confused and unconscious contemplation to the One, and sinks into it: it is the state of ecstasis.

With Christianity, the history of Mysticism enters into a new period. The Fathers recognized indeed the partial truth of the pagan system, but they pointed out also its fundamental errors. They made a distinction between reason and faith, philosophy and theology; they acknowledged the aspirations of the soul, but, at the same time, they emphasized its essential inability to penetrate the mysteries of Divine life. They taught that the vision of God is the work of grace and the reward of eternal life; in the present life only a few souls, by a special grace, can reach it. On these principles, the Christian school of Alexandria opposed the true gnosis based on grace and faith to the Gnostic heresies. St. Augustine teaches indeed that we know the essences of things in *rationibus æternis*, but this knowledge has its starting point in the data of sense (cf. *Questiones*, LXXXIII, c. xlv). Pseudo-Dionysius, in his various works, gave a systematic treatment of Christian Mysticism, carefully distinguishing between rational and mystical knowledge. By the former, he says, we know God, not in His nature, but through the wonderful order of the universe, which is a participation of the Divine ideas ("De Divinis Nominibus", c. vii, §§ 2–3, in P. G., III, 867 sq.). There is, however, he adds, a more perfect knowledge of God possible in this life, beyond the attainments of

reason even enlightened by faith, through which the soul contemplates directly the mysteries of Divine light. The contemplation in the present life is possible only to a few privileged souls, through a very special grace of God: it is the *θεωσις, θεωρητική θεωσις*.

The works of Pseudo-Dionysius exercised a great influence on the following ages. John Scotus Eriugena (ninth century), in his "De Divisione Naturæ", took them as his guide, but he neglected the distinction of his master, identifying philosophy and theology, God and creatures, and, instead of developing the doctrine of Dionysius, reproduced the pantheistic theories of Plotinus (see ERIUGENA, JOHN SCOTUS). In the twelfth century, orthodox Mysticism was presented under a systematic form by the Victorines, Hugh, Walter, and Richard (cf. Mignon, "Les Origines de la Scolastique et Hugues de St. Victor", Paris, 1895), and there was also a restatement of Eriugena's principles with Amaury de Bène, Joachim de Floris, and David of Dinant. A legitimate element of Mysticism, more or less emphasized, is found in the works of the Schoolmen of the thirteenth century. In the fourteenth and fifteenth centuries there was, as a protest against a sterile dialecticism, a revival of mystical systems, some orthodox—J. Ruysbroek, Gerson, Peter d'Ailly, Denys the Carthusian—and others heterodox—John of Ghent, John of Mirecourt, the Beguines and Beghards, and various brotherhoods influenced by Averroism, and especially Meister Eckhart (1260–1327), who in his "Opus Tripartitum" teaches a deification of man and an assimilation of the creature into the Creator through contemplation (cf. Denifle in "Archiv für Literatur und Kirchengeschichte des Mittelalters", 1886), the "Theologia Germanica", and, to a certain extent, Nicholas of Cusa (1401–64) with his theory of the *coincidentia oppositorum*. Protestantism, by its negation of all ecclesiastical authority and by advocating a direct union of the soul with God, had its logical outcome in a Mysticism mostly pantheistic.

Protestant Mysticism is represented by Sebastian Frank (1499–1542), by Valentine Weller (1533–88), and especially by J. Böhme (1575–1624), who, in his "Aurora", conceived the nature of God as containing in itself the energies of good and evil, and identified the Divine nature with the human soul whose operation is to kindle, according to its free will, the fire of good or the fire of evil (cf. Deussen, "J. Böhme ueber sein Leben und seine Philosophie", Kiel, 1897). Reuchlin (1455–1522) developed a system of cabalistic Mysticism in his "De arte cabalistica" and his "De verbo mirifico". We may also assign to the influence of Mysticism the ontological systems of Malebranche and of the Ontologists of the eighteenth and nineteenth centuries. The romantic Mysticism of Fichte (1762–1814), Novalis (1772–1801), and Schelling (1775–1854) was a reaction against the Rationalism of the eighteenth century. A pseudo-Mysticism is also the logical outcome of the Fideism and evolutionistic Subjectivism of modern Protestants, inaugurated by Lessing (1728–81), developed by Schleiermacher (1768–1834), A. Ritschl (1822–89; cf. Goyau, "L'Allemagne Religieuse, Le Protestantisme", 6th ed., Paris, 1906), Sabatier, etc., and accepted by the Modernists in their theories of vital immanence and religious experience (cf. Encyclical "Pascendi"). (See MODERNISM.)

CRITICISM.—A tendency so universal and so persistent as that of Mysticism, which appears among all peoples and influences philosophical thought more or less throughout all centuries, must have some real foundation in human nature. There is indeed in the human soul a natural desire for, an aspiration towards the highest truth, the absolute truth, and the highest, the infinite good. We know by experience and reason that the knowledge and enjoyment of created things cannot give the fulness of truth and the perfection of beatitude which will completely satisfy our desires and aspirations. There is in our soul a capacity for

more truth and perfection than we can ever acquire through the knowledge of created things. We realize that God alone is the end of man, that in the possession of God alone we can reach the satisfaction of our aspirations. Cf. S. Thom., Theol., I, Q. ii, a. 1, ad 1^{um}; Q. xii, a. 1; Q. xliiv, a. 4, ad 3^{um}; I-II, Q. iii, a. 8; "Contra Gentes", III, cc. i, xxv, 1; "De Veritate", Q. xxii, a. 2; "Compend. Theologiæ", 104, etc. Cf. Sestili, "De naturali intelligentis animæ appetitu intuendi divinam essentiam", Rome, 1896. But the rational effort of our intelligence and positive aspirations of our will find here their limits. Is there truly possible a union of our reason and will with God more intimate than that which we possess through created things? Can we expect more than a knowledge of God by analogical concepts and more than the beatitude proportionate to that knowledge? Here human reason cannot answer. But where reason was powerless, philosophers gave way to feeling and imagination. They dreamt of an intuition of the Divinity, of a direct contemplation and immediate possession of God. They imagined a notion of the universe and of human nature that would make possible such a union. They built systems in which the world and the human soul were considered as an emanation or part of the Divinity, or at least as containing something of the Divine essence and Divine ideas. The logical outcome was Pantheism.

This result was a clear evidence of error at the starting-point. The Catholic Church, as guardian of Christian doctrine, through her teaching and theologians, gave the solution of the problem. She asserted the limits of human reason: the human soul has a natural capacity (*potentia obedientialis*), but no exigency and no positive ability to reach God otherwise than by analogical knowledge. She condemned the immediate vision of the Beghards and Beguines (cf. Denzinger-

Bannwart, "Enchiridion", nn. 474-5), the pseudo-Mysticism of Eckhart (ibid., nn. 501-29), and Molinos (ibid., nn. 2121-88), the theories of the Ontologists (ibid., nn. 1659-65, 1891-1930), and Pantheism under all its forms (ibid., nn. 1801-5), as well as the vital Immanence and religious experience of the Modernists (ibid., nn. 2071-109). But she teaches that, what man cannot know by natural reason, he can know through revelation and faith; that what he cannot attain to by his natural power he can reach by the grace of God. God has gratuitously elevated human nature to a supernatural state. He has assigned as its ultimate end the direct vision of Himself, the Beatific Vision. But this end can be reached only in the next life; in the present life we can but prepare ourselves for it with the aid of revelation and grace. To some souls, however, even in the present life, God gives a very special grace by which they are enabled to feel His sensible presence: this is true mystical contemplation. In this act, there is no annihilation or absorption of the creature into God, but God becomes intimately present to the created mind and this, enlightened by special illuminations, contemplates with ineffable joy the Divine essence.

Nabo or Nebo (122; Sept., *Naḥaḥ*), a town mentioned in several passages of the Old Testament, v. g., Num., xxxii, 3; Jer., xlviii, 1, 22; I Par., v, 8; Is., xv, 2, etc. In Numbers, xxxii, 3, it is mentioned between Saban and Beon, the latter being an abbreviation of Baalmeon. In the same chapter, verse 38, it is again mentioned between Cariathaim and Baalmeon, and it is found associated with the same names on the Mesa Stone (line 14). These and other indications go to show that the town was situated in the vicinity of Mt. Nebo, but the precise location cannot be determined. It belonged to the rich pasture lands which the tribes of Ruben and Gad asked of Moses in the distribution of the territory (Num., xxxii). The town had reverted to the Moabites at the time when Isaiah prophesied against it (Is., xv, 2; cf. Jer., xlviii, 1, 22). Mesa (lines 14–18) boasts of having taken it from the Israelites. According to St. Jerome (Comment. in Is., xv, 2, in P. L., XXIV, 168), the sanctuary of the idol Chemosh was in Nabo.

Nabor and Felix, SAINTS, martyrs during the persecution of Diocletian (303). The relics of these holy witnesses to the faith rest in Milan, where a church has been erected over their tomb. St. Ambrose extolled the virtues of these two martyrs. In later times, legendary Acts of these saints have appeared, which are imitated from Acts of other martyrs (Victor, Firmus, and Rusticus). According to these legends, which are without historical value, Nabor and Felix were soldiers in the army of Maximian Hercules, and were condemned to death in Milan and beheaded in Lodi. Their feast is celebrated on 12 July.

Nabuchodonosor.—The Babylonian form of the name is Nabu-kudurri-usur, the second part of which is variously interpreted ("O Nebo, defend my crown", or "tiara", "empire", "landmark", "work"). The original has been more or less defaced in the Hebrew, Greek, and Latin transliterations, from which are derived the modern English forms, Nabuchodonosor, Nebuchadnezzar, and Nebuchadrezzar. On the whole, Nabuchodonosor appears to be nearer to the original Babylonian pronunciation than Nebuchadrezzar and especially Nebuchadnezzar (A. V., *Ezra*, ii, 1) taken from the Massoretic transliteration, and would be still nearer if the "r" were restored to the second element where "n" has crept in. Two kings of this name are known to have ruled over Babylon.

NABUCHODONOSOR I (c. 1152–1124), is the most famous monarch of the dynasty of Pashi or Isin. A prince of untiring energy, he led to victory the Chaldean armies east and west, against the Lulubi, Elam, and Syria, and although twice defeated by the Assyrian king, Ashshur-resh-ishi, succeeded in arresting for a time the decay of the first Babylonian Empire (see *BABYLONIA*, II, 183).

NABUCHODONOSOR II is often mentioned in various parts of Holy Writ, and will claim our especial atten-

tion here. He was the oldest son of Nabopolassar, the Chaldean restorer of Babylonian independence. His long reign of forty-three years (c. 605–562 B. C.) marks the zenith of the grandeur reached by the short-lived second Babylonian Empire (625–638). Although we possess long inscriptions of Nabuchodonosor, yet as these deal chiefly with the account of his architectural undertakings, our knowledge of his history is incomplete, and we have to rely for information mostly on the Bible, Berosus, and Greek historians. Of the wars he waged either before or after his coming to his father's throne, nothing need be said here: their recital can be read in this *Encyclopædia*, II, 183–84; only let it be remarked that after the Cimmerians and Scythians were definitively crushed, all his expeditions were directed westwards, although a powerful neighbour lay to the North; the cause of this was that a wise political marriage with Amuhia, the daughter of the Median king, had insured a lasting peace between the two empires.

Nabuchodonosor seems to have prided himself on his constructions more than on his victories. During the last century of Ninive's existence Babylon had been greatly devastated, not only at the hands of Sennacherib and Assurbanipal, but also as a result of her ever renewed rebellions. Nabuchodonosor, continuing his father's work of reconstruction, aimed at making his capital one of the world's wonders. Old temples were restored; new edifices of incredible magnificence (Diodor. of Sicily, II, 95; Herodot., I, 183) were erected to the many gods of the Babylonian pantheon; to complete the royal palace begun by Nabopolassar, nothing was spared, neither "cedar-wood, nor bronze, gold, silver, rare and precious stones"; an underground passage and a stone bridge connected the two parts of the city separated by the Euphrates; the city itself was rendered impregnable by the construction of a triple line of walls. Nor was Nabuchodonosor's activity confined to the capital; he is credited with the restoration of the Lake of Sippar, the opening of a port on the Persian Gulf, and the building of the famous Median wall between the Tigris and the Euphrates to protect the country against incursions from the North: in fact, there is scarcely a place around Babylon where his name does not appear and where traces of his activity are not found. These gigantic undertakings required an innumerable host of workmen: from the inscription of the great temple of Marduk (Meissner, "Assyr. Studien", II, in "Mitteil. der Vorderas. Ges.", 1904, III), we may infer that most probably captives brought from various parts of Western Asia made up a large part of the labouring force used in all his public works.

From Nabuchodonosor's inscriptions and from the number of temples erected or restored by this prince we gather that he was a very devout man. What we know of his history shows him to have been of a humane disposition, in striking contrast with the wanton cruelty of most of the iron-souled Assyrian rulers. It was owing to this moderation that Jerusalem was spared repeatedly, and finally destroyed only when its destruction became a political necessity; rebel princes easily obtained pardon, and Sedecias himself, whose ungratefulness to the Babylonian king was particularly odious, would, had he manifested less stubbornness, have been treated with greater indulgence (Jer., xxxviii, 17, 18); Nabuchodonosor showed much consideration to Jeremias, leaving him free to accompany

the exiles to Babylon or to remain in Jerusalem, and appointing one of the Prophet's friends, Godolias, to the governorship of Jerusalem; he granted likewise such a share of freedom to the exiled Jews that some rose to a position of prominence at Court and Baruch thought it a duty to exhort his fellow-countrymen to have the welfare of Babylon at heart and to pray for her king. Babylonian tradition has it that towards the end of his life, Nabuchodonosor, inspired from on high, prophesied the impending ruin to the Chaldean Empire (Berosus and Abydenus in Eusebius, "Præp. Evang.", IX, xli). The Book of Daniel (iv) records how God punished the pride of the great monarch. On this mysterious chastisement, which some think consisted in an attack of the madness called lycanthropy, as well as on the interregnum which it must have caused, Babylonian annals are silent: clever hypotheses have been devised either to explain this silence, or in scanning documents in order to find in them traces of the wanted interregnum (see Oppert, "Expédition en Mésopot.", I, 186-187; Vigouroux, "La Bible et les découvertes modernes", IV, 337). Nabuchodonosor died in Babylon between the second and sixth months of the forty-third year of his reign.

CHARLES L. SOUVAY.

Nacchiante (NACLANTUS), GIACOMO, Dominican theologian, b. at Florence; d. at Chioggia, 6 May, 1569; he studied at Bologna, where Michael Ghislieri, afterwards Pius V, was his fellow-student. He subsequently taught philosophy and theology for a number of years, in the college of St. Thomas of Minerva, Rome. Paul III, struck with his talents, made him Bishop of Chioggia (3 June, 1544). At the Council of Trent his vigorous protest against the words of the decree of the IV Session (8 April, 1546), which asserts that the traditions of the Church are to be received with the same reverence and piety as the Scriptures, cast some suspicions on his orthodoxy; but he gave a reverent assent to the decree, when he saw it confirmed by the authority of so great an assembly. Other serious suspicions of his orthodoxy seem afterwards to have arisen, but as Pallavicini remarks, his memory is vindicated from such charges by the grave affairs of trust which were assigned him under Pius IV. His works were published by Pietro Fratino at Venice in 1567. Among the more important are "Enarrationes . . . in ep. D. Pauli ad Ephesios"; "In ep. ad Romanos"; "S. Scriptura medulla"; "Tractationes XVIII theologales"; "Theoremata metaphysica"; "Theoremata theologica".

Nachtgall (NACHTIGALL). See LUSCINIUS, OTTMAR.

Nacolia (NACOLEIA).—A titular metropolitan see in Phrygia Salutaris. This town, which took its name from the nymph Nacola, had no history in antiquity. It was there that Valens defied the usurper Procopius; under Arcadius it was occupied by a garrison of Goths who revolted against the emperor. At first dependent on Synnada, the see became autocephalous between 787 and 862, and metropolitan between 1035 and 1066. Seven of its bishops are known, among them being Constantine, one of the chief supporters of Iconoclasm under Leo the Isaurian, who feigned to

abjure his error before the patriarch, St. Germanus, and was condemned as an heresiarch at the Second Council of Nicæa (787). Nacolia is the modern village of Seyyid el-Ghâsi, chief town of Nahié, in the Villayet of Brusa, about twenty-two miles southeast of Eski Sheir. The name of the village is derived from Seyyid (Sidi) el-Battal, an Arab sheikh who was slain in 739 by the troops of Leo the Isaurian, and buried in a *tekke* of Bektashi dervishes founded by the mother of the Seljukian sultan, Aladdin the Great. Seyyid el Ghâsi contains some unimportant ruins.

S. PÉTRIDÈS.

Nagasaki, DIOCESE OF (NAGASAKIENSIS).—Nagasaki, capital of the prefecture (*ken*) of the same name, is situated on a small peninsula on the south-eastern coast of the Island of Kiushiu, Japan. Its harbour, enclosed on three sides by mountains sloping down to the sea-shore and sheltered on the fourth (the entrance) by numerous islands, is one of the safest and most important in Japan. Being the first port of entry for vessels coming from the south and west, it is also one of the leading coaling-stations of the Far East. The principal industries of the town are the manufacture of engines and ship-building. It imports mainly cotton, coal, sugar, and petroleum; among its chief exports are coal, rice, flour, camphor, and tobacco. In the first ten centuries of our era we find references to the town under no less than seven distinct names, of which *Fukaye no Ura* (Fukaye Bay) is the best known. Its present name is probably derived from a certain Nagasaki Kotaro, who, about 1185-90, received Fukaye no Ura as his fief. Prior to the arrival of the Christian missionaries, however, Nagasaki was an insignificant village.

Although St. Francis Xavier's missionary labours in Japan were confined to the territory now included in the Diocese of Nagasaki, and the ecclesiastical history of this territory is practically identical with the early Christian history of Japan, the town of Nagasaki appears not to have been visited by the missionaries until 1569. In this year Father Vilela, S.J., erected a church on the site of a pagoda which had been given him by the Christian lord of the district, and in 1571 had already made 1500 converts. In 1570 the Portuguese began trading with Nagasaki. Yinzeyemon, the imperial governor of the province, received them kindly, and, perhaps to induce them to trade with him alone, and thus to prevent others from obtaining firearms, affected to favour the Christian religion. When, however, the traders and missionaries, as a safeguard against future oppression, insisted on his recognizing the ecclesiastical authority over the territory of Nagasaki, he showed great hesitation and yielded to their wishes only when they threatened to withdraw and choose some other headquarters if their request were refused. From the arrival of the foreigners dates the rapid growth of Nagasaki, numbers of the native merchants settling in the town in the hope of enriching themselves by foreign commerce. By 1587 the last traces of the Buddhist and Shinto religions had vanished from the district, which already contained three principal churches (called by the Japanese *Ki-kuwan* "strange sight") and numerous chapels. To 1587 must also be referred Hideyoshi's sudden change of attitude towards Christianity (see JAPAN). Influenced by the boneses' insinuations concerning the ultimate aim of the missionaries, he issued, during a night of orgy (24 July), a decree proscribing the Christian religion and ordering the Jesuits to leave Japan within twenty days. Subsequently, however, the taiko grew calmer and consented to ten fathers remaining at Nagasaki, nor did he adopt any active measures to suppress Christianity as long as outward respect was shown for his decrees.

The San Felipe incident, however (see JAPAN), led to a new persecution in 1596, and twenty-six missionaries (6 Franciscans, 3 Jesuits, and 17 Japanese Christians) were crucified at Nagasaki in 1597. Persistent rumors that the taiko was about to revisit Kiushiu in person led the Governor of Nagasaki, who had previously shown himself not unfavourable towards the Christians, to send a force to destroy the churches and residences of the missionaries in 1598. In the territory of the present Diocese of Nagasaki 137 churches of the Jesuits were demolished, as well as their college in Amakusa and their seminary in Arima. The death of Hideyoshi on 16 Sept., 1598, put an end to this persecution. Iyeyasu, anxious to promote commerce with the Philippines, allowed free ingress to the missionaries, and, beyond enforcing the law that no daimio should receive baptism, showed at first no hostility to Christianity. In 1603 Nagasaki, the population of which had grown from about 2500 to 24,500 in fifty years, possessed eleven churches. About 1612 or 1613 the bonzes—assisted, it is to be feared, by some English and Dutch captains—succeeded in thoroughly alarming Iyeyasu as to some imaginary intrigue between certain of his officers and the representatives of Philip III of Spain and Portugal. On 27 January, 1614, orders were issued for the expulsion of the missionaries and the destruction of the churches. In 1622, Nagasaki was the scene of the "Great Martyrdom". (See MARTYRS, JAPANESE.) In 1629 the custom of *Fumi-ye*, or trampling on the crucifix, was introduced; paper pictures were at first used, but later more durable images were utilized—at first wood, and still later (1669) 20 bronze images cast by an engraver of Nagasaki from metal obtained from the altars of the demolished churches. Between the 4th and 9th day of the first month of each year all suspect Christians were called upon to trample on these images: those who refused were banished from their homes, and when again caught, if still recalcitrant, were taken to the boiling springs of Shimabara and thrown in, or subjected to crucifixion and various kinds of refined torture. Goaded into action by such persecution and by the miseries consequent on the suppression of the religious houses, which had been the only source of alleviation for the needs of the impoverished peasantry, the people rose in revolt, in 1637, but, after some fierce fighting, were crushed by the shogun's forces, assisted by Dutch artillery. In 1640 four Portuguese envoys from Macao were seized at Nagasaki, and, on refusing to apostatize, were put to death.

For more than two centuries after 1640, Japan was practically closed to the outside world. The persistent attempts of missionaries to penetrate into the country during the sixteenth and seventeenth centuries had no other success than that of winning them the martyr's crown. The discovery of a large body of Christians by Father Petitjean on 17 March, 1865, when he was establishing the first Catholic church in Nagasaki, after the reopening of Japan to the missionaries, has been referred to in the article JAPAN. In 1866 this zealous missionary was created Bishop of Myriophyte and Vicar Apostolic of Japan, and in 1876, on the division of the territory into two vicariates, he retained the administration of Southern Japan (1879-85). On the cessation of persecution (see JAPAN), Mgr Petitjean devoted his whole energy to winning back into the Fold the descendants of the old Christians, organizing the first Christian districts, and founding a seminary for the formation of a native clergy. He was succeeded as vicar Apostolic by Mgr Julius Alphonsus Cousin (b. April, 1842), now Bishop of Nagasaki. Father Cousin landed in Japan in 1866, and was the first missionary to penetrate into the Goto Islands. In 1869 he founded the first Catholic station at Osaka, where he laboured for eighteen years. Created Bishop of Acmonia in 1885, on succeeding

Mgr Petitjean, he fixed his residence at Nagasaki, when Southern Japan was divided into two vicariates, in 1887. In 1890 the First Synod of Japan was held at Nagasaki, of which Mgr Cousin became first bishop, on the establishment of the Japanese hierarchy, in 1891. In 1897 the third centennial of the twenty-six Japanese martyrs, canonized by Pius IX in 1867, was celebrated by the construction and solemn benediction of the church of Our Lady of Martyrs at Nagasaki. The episcopal jubilee of Bishop Cousin was celebrated in 1910. During his episcopate of twenty-five years, Bishop Cousin has laboured to increase the native clergy and to extend the work of the mission. He has ordained 40 Japanese priests, founded 35 new stations (with residences), established 38 new Christian settlements, and built 50 churches and chapels. During his administration the Catholic population has more than doubled.

The Diocese of Nagasaki includes Kiushiu and the neighbouring islands—Amakusa, Goto, Ikitsuki, Tsushima, Oshima, and the Ryukyu (Lu Chu) Archipelago. The total population is about 7,884,900; the Catholic population was 47,104 on 15 Aug., 1910 (23,000 in 1885). The personnel of the mission is: 1 bishop, 36 missionaries (French), 26 diocesan priests (Japanese), 6 tonsured clerics, 35 native (male or female) catechists labouring for the conversion of pagans, 350 catechists entrusted with the instruction of the Christian communities, 15 itinerant baptizers (female). The mission auxiliaries, engaged in works of education and charity, are: 17 Brothers of Mary (14 foreigners, including 3 priests), 21 Sisters of the Holy Child Jesus (Chauffailles—5 Japanese), 16 Franciscan Sisters (Missionaries of Mary), 8 Sisters of St. Paul of Chartres (3 Japanese), 10 communities of native women, with 177 members. The establishments include: 40 mission stations with residences; 35 sub-stations; 153 Christian communities; 67 blessed churches and chapels; 52 unblessed oratories and chapels; 1 seminary with 31 students (8 theological; 4 philosophical; 19 studying Latin); 1 Apostolic school with 18 pupils (10 postulants of the Brothers of Mary); 1 college, primary and commercial, with 325 pupils (30 boarders); 1 school for women catechists, with 15 pupils; 3 boarding-houses for girls with 224 pupils; 1 professional school, with 18 pupils; 1 primary school for girls, with 149 pupils; 2 kindergartens, with 79 pupils; 8 orphanages, with 244 children (65 boarders); 2 workrooms, with 39 workers; 1 leper asylum, with 28 lepers; 3 hospitals, with 92 patients; 6 dispensaries (4005 patients cared for); 15 conference halls for religious instruction (total number of hearers about 2730). The Brothers of Mary have the direction of the Apostolic school and the college. The Sisters of the Holy Child Jesus manage 2 boarding-houses (high-schools), the professional school, primary school, kindergartens, 2 orphan asylums, 1 hospital dispensary, 1 conference hall, and 1 work-room. The Franciscan Sisters have charge of the leper asylum, 1 hospital, 3 dispensaries, 2 conference halls, 1 orphan asylum, and 1 work-room; the Sisters of St. Paul of Chartres; 1 boarding-house (high-school), 1 hospital dispensary, 1 conference hall, and 1 orphan asylum. As the State insists on the attendance of all children between the ages of six and twelve at the secular public primary schools, parochial schools are practically impossible in Japan at present. The administrative statistics for the year ending 15 Aug., 1910, are: baptisms of adults, 592 (208 in *extremis* and 8 abjurations); baptisms of pagan children (in *extremis*), 811; baptisms of Christian children, 1645; annual confessions, 29,414; paschal communions, 25,015; Holy Viaticums, 340; extreme unctions, 476; marriages, 323; known deaths, 1087; increase, 1179.

THOMAS KENNEDY.

Nagpur, DIOCESE OF (NAGPURENSIS), in India, suffragan to Madras. Formerly the north-western portion of the Vicariate Apostolic of Visagapatam, it was erected into a diocese on 29 July, 1887, and its boundaries finally readjusted on 10 July, 1895. It comprises the greater portion of the Central Provinces, Berar, a portion of the Indore State, a strip of the Nizam's dominions as far south as the Godavery River, etc., the boundaries being in many parts independent of civil divisions. The area is about 124,000 square miles with a Catholic population of 15,000 out of a total of about 15,000,000 inhabitants. It is served by 28 priests of the Congregation of the Missionaries of St. Francis de Sales, Annecy, and 7 secular clergy, assisted by 7 brothers of the above congregation; 13 Franciscan Brothers from Paderborn in Germany; 4 Sisters of St. Joseph from St. Jean de Maurienne, Savoy; 23 Daughters of the Cross; and 28 Catechist Sisters of Mary Immaculate. The diocese has 12 churches and 33 chapels. The cathedral, bishop's residence, and diocesan seminary are at Nagpur.

HISTORY.—Although the territories comprised under Nagpur were included within the Vicariate of the Great Mogul, there is no trace of any missionary ever having set foot there till the beginning of the nineteenth century. Nagpur, Kamptee, Aurangabad, and Jaulnah were first visited by priests of the Goan jurisdiction, from Poona, about 1814. A chapel in honour of St. Anthony existed at Takli, suburb of Nagpur, where the troops of the Rajah of Nagpur were quartered. Another was built in Kamptee, and held in great veneration by native Christians. A Goan priest died at Nagpur in 1834. Simultaneously, Goan priests established themselves at Aurangabad, and built a chapel in honour of St. Francis Xavier in 1816; another chapel was built by them at Kannar, two miles from Aurangabad. Military cantonments for British troops were created at Kamptee in 1821, and at Jaulnah in 1827. The Goan priests retained their jurisdiction in these parts until 1839, when, in consequence of the Apostolic Brief "Multa præclare" of 24 April, 1838, the district fell to the jurisdiction of the Vicar Apostolic of Madras. In January, 1839, priests from Madras took possession of Kamptee and Jaulnah. They were Fathers Breen (died 1844) and Egen at Kamptee, and D. Murphy at Jaulnah. Father Murphy, whose registers are preserved in the bishop's residence at Nagpur, subsequently became Vicar Apostolic of Hyderabad and then Archbishop of Hobart Town, Tasmania, where he died in 1908. In 1845 some missionaries of St. Francis de Sales, from Annecy (Savoy, France), were appointed to the charge of the northern portion of the Vicariate of Madras, which was thus separated and made into the Vicariate of Visagapatam. They took possession of Aurangabad, Jaulnah, and Kamptee in 1846, and visited Nagpur, Ellichpur (1848), Jubbulpur (1850), and Khandwa. Jubbulpur became a military cantonment in 1857. From 1846 to 1870 Nagpur was a sub-station of Kamptee, and then became a residential station. It developed into the headquarters of the mission when the district was finally separated from Visagapatam and made into an episcopal see, suffragan to Madras, in 1887.

SUCCESSION OF BISHOPS.—Alexis Riccas, 1887–92; Charles Felix Pelvat, 1893–1900; J. M. Crochet, 1901–03; E. M. Bonaventure, 1905–07; F. E. Coppel, present bishop from 1907.

INSTITUTIONS.—*Schools for Boys:* St. Francis of Sales' College, Nagpur, Calcutta, with 350 pupils, also industrial school, printing press and Catholic young men's institute; St. Francis of Sales' Native School, Nagpur, with 220 pupils; St. Joseph's Day School,

Kamptee, with 130 pupils; St. Aloysius' School, Jubbulpur, with 120 pupils; small schools at Amraoti and Aurangabad; native training school at Ghogargaon with 15 boarders, and 26 other schools in the villages with 215 pupils; thirty schools in Khandwa under 25 catechist teachers with 396 pupils; 17 schools round Ellichpur under 17 catechists with 155 pupils.

Schools for Girls.—Under the Sisters of St. Joseph: six schools at Nagpur, Kamptee, Jubbulpur, Khandwa, Harda, Pachmari with 565 pupils, besides two smaller schools. Under the Daughters of the Cross: three schools at Amraoti, Aurangabad, and Badnera with 191 pupils. Under the Catechist Sisters: two schools in Nagpur with 105 pupils.

Charitable Institutions.—Poorhouse, Nagpur, with 156 inmates; also foundling home with 30 inmates; 14 dispensaries in various places; boys' orphanages at Nagpur, Kamptee, Thana, Jubbulpur, and Amraoti, with 249 inmates, and girls' orphanages at the same places with 229 inmates. St. Vincent de Paul Society at Nagpur; catechumenates at Ghogargaon, Khandwa, and Ellichpur; training schools for catechists at Ghogargaon and Ellichpur with 38 students. The mission centres are (1) Ghogargaon near Aurangabad, created in 1893, with 55 villages, 23,288 Catholics, and 26 schools; (2) Passan near Bilaspur, opened in 1900 with 80 Catholics; (3) Aulia in Khandwa, opened in 1902, 36 villages with 2100 Catholics and 30 schools; (4) Ellichpur in Berar, opened in 1903, 16 villages with 870 Catholics.

Madras Catholic Directory (1909 and previous years); *Diocesan Directory* (1907 and 1908); *La Mission de Visagapatam* (Annecy, 1890).

ERNEST R. HULL.

Nahanas, or "People of the Setting Sun", a tribe of the great Déné family of American Indians, whose habitat is east and west of the Rocky Mountains just north of latitude 58° N. Broadly speaking they are divided into two branches, the eastern and the western Nahanas. The latter are themselves subdivided into the Thalhtans, so called after their general rendezvous at the confluence of the river of the same name with the Stickine, and the Takus, whose territory is the basin of the Taku River, together with the upper portions of the streams which flow northward to the Lewes, as far east as the upper Liard River. The Kaskas live just west, and through the Rocky Mountains, and by speech, physique, and sociology they are eastern Nahanas, while just east of the same range another subdivision of the tribe roams over the mountains of the Mackenzie. The entire tribe cannot now number much more than 1000 souls, viz., 175 Thalhtans, 200 Kaskas, 150 Takus, and 500 eastern Nahanas proper. The latter, as well as the Kaskas, are pure nomads, without any social organisation to speak of, following patriarchal lines in their descent and laws of inheritance, while the westernmost Nahanas have adopted the matriarchal institutions of their neighbours on the Pacific Coast, the clans, with petty chiefs (some of whom are quite influential and are occasionally women), potlatches or public distributions of goods or eatables, cremation of the dead, ceremonial dances, etc. Physically they also resemble the coast Indians, with whom they have intermarried to a great extent, and from the language of whom they have borrowed not a few words.

From a religious standpoint the Nahanas have fared badly. The secluded position of the western branch and the nomadic habits of the eastern subdivision have conspired to keep them away from religious influences. Moreover contact with the miners of the Cassiar goldfields has considerably demoralized the Nahanas of the Far West and sadly thinned their ranks. The Anglican Church has for a dozen of years or so maintained a mission at Thalhtan, which has met with a limited measure of success. The only visit of a Catholic priest to the same was paid

by the writer in the summer of 1903, and it is understood that it is now to be followed up by either the establishment of a permanent post there or by periodical visits of Oblate missionaries. As to the eastern branch of the tribe, they have been more or less within reach of the priests of the Mackenzie valley. To this day, however, both east and west of the Rockies the tribe can be pointed out as one of the least civilized of the North American Indians.

See bibliography to DÉNÉ, HARE, and LOUCHEUX; MORICE, *The Nah'ane and their Language in Transactions of the Canadian Institute* (Toronto, 1903).

A. G. MORICE.

Naharro, BARTOLOMÉ DE TORRES. See TORRES NAHARRO, BARTOLOMÉ DE.

Nahum, one of the Prophets of the Old Testament, the seventh in the traditional list of the twelve Minor Prophets.

NAME.—The Hebrew name, probably in the intensive form, *Nahhum* (Gesenius-Kautzsch, "Heb. Gramm.", §84b, g), signifies primarily "full of consolation or comfort", hence "consoler" (St. Jerome, *consolator*), "comforter". The name Nahum was apparently of not rare occurrence. Indeed, not to speak of a certain Nahum listed in the Vulgate and Douay Version (II Esd., vii, 7) among the companions of Zorobabel, and whose name seems to have been rather Rehūm (I Esd., ii, 2; Heb. has Rehūm in both places), St. Luke mentions in his genealogy of Our Lord a Nahum, son of Hesli and father of Amos (iii, 25); the Mishna also occasionally refers to Nahum the Mede, a famous rabbi of the second century (*Shabb.*, ii, 1, etc.), and another Nahum who was a scribe or copyist (*Peah*, ii, 6); inscriptions show likewise the name was not uncommon among Phœnicians (Gesenius, "Monum. Phœn.", 133; Boeckh, "Corp. Inscript. Græc.", II, 25, 26; "Corp. Inscript. Semitic.", I, 123 a³ b⁴).

THE PROPHET.—The little we know touching the Prophet Nahum must be gathered from his book, for nowhere else in the canonical Scriptures does his name occur, and extracanonical Jewish writers are hardly less reticent. The scant positive information vouchsafed by these sources is in no wise supplemented by the worthless stories concerning the Prophet put into circulation by legend-mongers, and which may be found in Carpzov's "Introd. ad lib. canon. Bibliorum Vet. Test." (III, 386 sqq.). We will deal only with what may be gathered from the canonical Book of Nahum, the only available first-hand document at our disposal. From its title (i, 1), we learn that Nahum was an Elcesite (so D. V.; A. V., Elkoshite; Heb., *עלכושי*). On the true import of this statement commentators have not always been of one mind. In the prologue to his commentary of the book, St. Jerome informs us that some understood 'Elqoshite as a patronymic indication: "the son of Elqosh"; he, however, holds the commonly accepted view that the word 'Elqoshite shows that the Prophet was a native of Elqosh.

But even understood in this way, the intimation given by the title is disputed by biblical scholars. Where, indeed, should this Elqosh, nowhere else referred to in the Bible, be sought? (1) Some have tried to identify it with 'Alqūsh, 27 miles north of Mossul, where the tomb of Nahum is still shown. According to this opinion, Nahum was born in Assyria, which would explain his perfect acquaintance with the topography and customs of Ninive exhibited in the book. But such an acquaintance may have been acquired otherwise; and it is a fact that the tradition connecting the Prophet Nahum with that place cannot be traced back beyond the sixteenth century, as has been conclusively proven by Assemani. This opinion is now generally abandoned by scholars. (2) Still more recent and hardly more credible is the view advocated by Hitzig and Knobel, who hold that Elqosh was the old name of the town called Capharnaum (i. e., "the village of Nahum") in the first century: a Galilean origin, they

claim, would well account for certain slight peculiarities of the Prophet's diction that smack of provincialism. Apart from the somewhat precarious etymology, it may be objected against this identification that Capharnaum, however well known a place it was at the New Testament period, is never mentioned in earlier times, and, for all we know, may have been founded at a relatively recent date; moreover, the priests and the Pharisees would most likely have asserted less emphatically "that out of Galilee a prophet riseth not" (John, vii, 52) had Capharnaum been associated with our Prophet in the popular mind. (3) Still, it is in Galilee that St. Jerome located the birthplace of Nahum ("Comment. in Nah." in P. L., XXV, 1232), supposed to be Elkoseh, in N. Galilee; but "out of Galilee doth a prophet rise?" might we ask again. (4) The author of the "Lives of the Prophets" long attributed to St. Epiphanius tells us "Elqosh was beyond Beth-Gabre, in the tribe of Simeon" (Greek text in P. G., XLIII, 409; Syriac text in Nestle, "Syrische Grammatik, Chrestomathia", 99). He unquestionably means that Elqosh was in the neighbourhood of Beth-Gabre (*Beit Jibrin*), the ancient Eleutheropolis, on the borders of Juda and Simeon. This view has been adopted in the Roman Martyrology (1 December; "Begabar" is no doubt a corrupt spelling of Beth-Gabre), and finds more and more acceptance with modern scholars.

THE BOOK.—**Contents.**—The Book of Nahum contains only three chapters and may be divided into two distinct parts: the one, including i and ii, 2 (Heb., i-ii, 1-3), and the other consisting of ii, 1, 3-iii (Heb., ii, 2, 4-iii). The first part is more undetermined in tone and character. After the twofold title indicating the subject-matter and the author of the book (i, 1), the writer enters upon his subject by a solemn affirmation of what he calls the Lord's jealousy and revengefulness (i, 2, 3), and a most forceful description of the fright which seizes all nature at the aspect of Yahweh coming into judgment (i, 3-6). Contrasting admirably with this appalling picture is the comforting assurance of God's loving-kindness towards His true and trustful servants (7-8); then follows the announcement of the destruction of His enemies, among whom a treacherous, cruel, and god-ridden city, no doubt Ninive (although the name is not found in the text), is singled out and irretrievably doomed to everlasting ruin (8-14); the glad tidings of the oppressor's fall is the signal of a new era of glory for the people of God (i, 15; ii, 2; Heb., ii, 1, 3).

The second part of the book is more directly than the other a "burden of Ninive"; some of the features of the great Assyrian city are described so accurately as to make all doubt impossible, even if the name Ninive were not explicitly mentioned in ii, 8. In a first section (ii), the Prophet dashes off in a few bold strokes three successive sketches: we behold the approach of the besiegers, the assault on the city, and, within, the rush of its defenders to the walls (ii, 1, 3-5; Heb., ii, 2, 4-6); then the protecting dams and sluices of the Tigris being burst open, Ninive, panic-stricken, has become an easy prey to the victor: her most sacred places are profaned, her vast treasures plundered (6-9; Heb.: 7-10); and now Ninive, once the den where the lion hoarded rich spoils for his whelps and his lionesses, has been swept away forever by the mighty hand of the God of hosts (10-13; Heb., 11-13). The second section (iii) develops with new details the same theme. The bloodthirstiness, greed, and crafty and insidious policy of Ninive are the cause of her overthrow, most graphically depicted (1-4); complete and shameful will be her downfall and no one will utter a word of pity (5-7). As No-Ammon was mercilessly crushed, so Ninive likewise will empty to the dregs the bitter cup of the Divine vengeance (8-11). In vain does she trust in her strongholds, her warriors, her preparations for a siege, and her officials and scribes

(12-17). Her empire is about to crumble, and its fall will be hailed by the triumphant applause of the whole universe (18-19).

Critical Questions.—Until a recent date, both the unity and authenticity of the Book of Nahum were undisputed, even by such critics as Kuenen (*Onderzoek*, ii, § 75), Wellhausen (*Skizzen und Vorarbeiten*, 1893, p. 155), and Cornill (*Einleitung*, 1892, p. 188), and the objections alleged by a few against the genuineness of the words "The burden of Ninive" (i, 1) and the description of the overthrow of No-Ammon (iii, 8-10) were regarded as trifling cavils not worth the trouble of an answer. In the last few years, however, things have taken a new turn: facts hitherto unnoticed have added to the old problems concerning authorship, date, etc. It may be well here for us to bear in mind the twofold division of the book, and to begin with the second part (ii, 1, 3-iii) which, as has been noticed, unquestionably deals with the overthrow of Ninive. That these two chapters of the prophecy constitute a unit and should be attributed to the same author, Happel is the only one to deny; but his odd opinion, grounded on unwarranted alterations of the text, cannot seriously be entertained.

The date of this second part cannot be determined to the year; however, from the data furnished by the text, it seems that a sufficiently accurate approximation is obtainable. First, there is a higher limit which we have no right to overstep, namely, the capture of No-Ammon referred to in iii, 8-10. In the Latin Vulgate (and the Douay Bible) No-Ammon is translated by Alexandria, whereby St. Jerome meant not the great Egyptian capital founded in the fourth century B. C., but an older city occupying the site where later on stood Alexandria ("Comment. in Nah.", iii, 8: P. L., XXV, 1260; cf. "Ep. CVIII ad Eustoch.", 14: P. L., XXII, 890; "In Is.", XVIII: P. L., XXIV, 178; "In Os.", IX, 5-6: P. L., XXV, 892). He was mistaken, however, and so were Champollion and Brugsch, according to whom No-Ammon should be sought in Lower Egypt (*L'Égypte sous les Pharaons*, II, 131-33; Assyrian and Egyptian discoveries leave no doubt whatever that No-Ammon is the same as Thebes in Upper Egypt. Now Thebes was captured and destroyed by Assurbanipal in 664-663 B. C., whence it follows that the opinion of Nicephorus (in the edition of Geo. Syncell., "Chronographia", Bonn, 1829, I, 759), making Nahum a contemporary of Phacee, King of Israel, the early tradition according to which this prophecy was uttered 115 years before the fall of Ninive (about 721 B. C.; Josephus, "Ant. Jud.", IX, xi, 3), and the conclusions of those modern scholars who, as Pusey, Nägelsbach, etc., date the oracle in the reign of Ezechias or the earlier years of Manasses, ought to be discarded as impossible. The lower limit which it is allowable to assign to this part of the Book of Nahum is, of course, the fall of Ninive, which a well-known inscription of Nabonidus permits us to fix at 607 or 606 B. C., a date fatal to the view adopted by Eutychiuss, that Nahum prophesied five years after the downfall of Jerusalem (therefore about 583-581; "Annal." in P. G., CXI, 964).

Within these limits it is difficult to fix the date more precisely. It has been suggested that the freshness of the allusion to the fate of Thebes indicates an early date, about 660 B. C., according to Schrader and Orelli; but the memory of such a momentous event would long dwell in the minds of men, and we find Isaiah, for instance, in one of his utterances delivered about 702 or 701 B. C. recalling with the same vividness of expression Assyrian conquests achieved thirty to forty years earlier (Is., x, 5-34). Nothing therefore compels us to assign, within the limits set above, 664-606, an early date to the two chapters, if there are cogent reasons to conclude to a later date. One of the arguments advanced is that Ninive is spoken of as having lost a great deal of her former prestige and

sunk into a dismal state of disintegration; she is, moreover, represented as beset by mighty enemies and powerless to avert the fate threatening her. Such conditions existed when, after the death of Assurbanipal, Babylonia succeeded in regaining her independence (625), and the Medes aimed a first blow at Ninive (623; Kuenen, Van Hoonacker). Modern critics (Davidson, Kennedy, etc.) appear more and more inclined to believe that the data furnished by the Prophet lead to the admission of a still lower date, namely "the moment between the actual invasion of Assyria by a hostile force and the commencement of the attack on its capital" (Kennedy). The "mauler", indeed, is already on his way (ii, 1; Heb., 2); frontier fortresses have opened their gates (iii, 12-13); Ninive is at bay, and although the enemy has not yet invested the city, to all appearances her doom is sealed.

We may now return to the first part of the book. This first chapter, on account of the transcendent ideas it deals with, and of the lyric enthusiasm which pervades it throughout has not inappropriately been called a psalm. Its special interest lies in the fact that it is an alphabetical poem. The first to call attention to this feature was Frohnmeyer, whose observations, however, did not extend beyond vv. 3-7. Availing himself of this key, Bickell endeavoured to find out if the process of composition did not extend to the whole passage and include the twenty-two letters of the alphabet, and he attempted repeatedly but without great success (*"Zeitschr. der deutsch. morg. Gesell."*, 1880, p. 559; *"Carmina Vet. Test. metrica"*, 1882; *"Zeitschr. für kath. Theol."*, 1886), to restore the psalm to its pristine integrity. This failure did not discourage Gunkel who declared himself convinced that the poem is alphabetical throughout, although it is difficult, owing to the present condition of the text, to trace the initial letters מ to ת (*Zeitschr. für alttest. Wissensch.*, 1893, 223 sqq.). This was for Bickell an incentive to a fresh study (*Das alphab. Lied in Nah. i-ii, 3*, in "Sitzungsberichte der philos.-hist. Classe der kaiser. Akademie der Wissensch.", Vienna, 1894, 5 Abhandl.), the conclusions of which show a notable improvement on the former attempts, and suggested to Gunkel a few corrections (*Schöpfung und Chaos*, 120). Since then Nowack (*Die kleinen Propheten*, 1897), Gray (*"The Alphab. Poem in Nah."* in "The Expositor" for Sept. 1898, 207 sqq.), Arnold (*On Nah.*, i, 1-ii, 3, in *"Zeitschr. für alttest. Wissensch."*, 1901, 225 sqq.), Happel (*Das Buch des Proph. Nah.*, 1903), Marti (*Dodekaproph. erklärt*, 1904), Lohr (*Zeitschr. für alttest. Wissensch.*, 1905, I, 174), and Van Hoonacker (*Les douze petits proph.*, 1908), have more or less successfully undertaken the difficult task of extricating the original psalm from the textual medley in which it is entangled. There is among them, a sufficient agreement as to the first part of the poem (מ-ז); but the second part still remains a classical ground for scholarly tilts.

Wellhausen (*Die kleinen Proph.*, 1898) holds that the noteworthy difference between the two parts from the point of view of poetical construction is due to the fact that the writer abandoned halfway his undertaking to write acrostically. Happel believes both parts were worked out separately from an unacrostic original. The first corrector went as far as the line beginning with the letter ז, and as the last sentence closed on the word זק, he noted in the title that his revision extended from זא to זק; and so the mysterious זק-זא (later on misconstrued and misspelled זקש-זא) has neither a patronymic nor a gentile connotation. Critics are inclined to hold that the disorder and corruption which disfigure the poem are mostly due to the way it was tacked on to the prophecy of Nahum: the upper margin was first used, and then the side margin; and as, in the latter instance, the text must have been overcrowded and blurred, this later on caused in the sec-

and part of the psalm an inextricable confusion from which the first was preserved. This explanation of the textual condition of the poem implies the assumption that this chapter is not to be attributed to Nahum, but is a later addition. So much indeed was granted by Bickell, and Van Hoonacker (not to speak of non-Catholic scholars) is inclined to a like concession. On the one hand, the marked contrast between the abstract tone of the composition and the concrete character of the other two chapters, we are told, bespeaks a difference of authorship; and, on the other hand, the artificiality of the acrostic form is characteristic of a late date. These arguments, however, are not unanswerable. In any case it cannot be denied that the psalm is a most fitting preface to the prophecy.

Little will be found in the teaching of the book of Nahum that is really new and original. The originality of Nahum is that his mind is so engrossed by the iniquities and impending fate of Nineve, that he appears to lose sight of the shortcomings of his own people. The doom of Nineve was nevertheless in itself for Juda an object-lesson which the impassioned language of the Prophet was well calculated to impress deeply upon the minds of thoughtful Israelites. Despite the uncertainty of the text in several places, there is no doubt that the book of Nahum is truly "a masterpiece" (Kaulen) of literature. The vividness and picturesqueness of the Prophet's style have already been pointed out; in his few short, flashing sentences, most graphic word-pictures, apt and forceful figures, grand, energetic, and pathetic expressions rush in, thrust vehemently upon one another, yet leaving the impression of perfect naturalness. Withal the language remains ever pure and classical, with a tinge of partiality for alliteration (i, 10; ii, 3, 11) and the use of prim and rare idioms; the sentences are perfectly balanced; in a word Nahum is a consummate master of his art, and ranks among the most accomplished writers of the Old Testament.

Nails, HOLY.—The question has long been debated whether Christ was crucified with three or with four nails. The treatment of the Crucifixion in art during the earlier Middle Ages strongly supports the tradi-

tion of four nails, and the language of certain historical writers (none, however, earlier than Gregory of Tours, "De glor. mart.", vi; for the supposed sermon of St. Cyprian, "De passione", is a medieval fabrication); favours the same view. On the other hand, in the thirteenth century, Western art began to represent the feet of the Crucified as placed one over the other and pierced with a single nail. This accords with the language of Nonnus and Socrates and with the poem "Christus patiens" attributed to St. Gregory Nazianzus, which speaks of three nails. More recent archaeological criticism has pointed out not only that the two earliest representations of the crucifixion (the Palatine *graffito* does not here come into account), viz., the carved door of Santa Sabina in Rome, and the ivory panel of the British Museum, show no

NAIN

signs of nails in the feet, but that St. Ambrose ("De obitu Theodosii" in P. L., XVI, 1402) and other early writers distinctly imply that there were only two nails (see Forrer and Müller, "Kreuz u. Kreuzigung Christi"). Further, St. Ambrose informs us that St. Helen had one nail converted into a bridle for Constantine's horse (early commentators quote Zach., xiv, 20, in this connexion), and that an imperial diadem was made out of the other nail. Gregory of Tours speaks of a nail being thrown (*deponit*), or possibly dipped into the Adriatic to calm a storm. It is impossible to discuss these problems adequately in brief space, but the information derivable from the general archaeology of the punishment of crucifixion as known to the Romans does not in any way contradict the Christian tradition of four nails.

Very little reliance can be placed upon the authenticity of the thirty or more holy nails which are still venerated, or which have been venerated until recent times, in such treasuries as that of Santa Croce in Rome, or those of Venice, Aachen, the Escorial, Nuremberg, Prague, etc. Probably the majority began by professing to be facsimiles which had touched or contained filings from some other nail whose claim was more ancient. Without conscious fraud on the part of anyone, it is very easy for imitations in this way to come in a very brief space of time to be reputed originals. The bridle of Constantine is believed to be identical with a relic of this form which for several centuries has been preserved at Carpentras, but there is another claimant of the same kind at Milan. Similarly the diadem of Constantine is asserted to be at Monza, and it has long been known as "the iron crown of Lombardy".

HERBERT THURSTON.

Nain (NAIN), the city where Christ raised to life the widow's son (Luke, vii, 11-17). The Midrash (Bereshit rabba, 88) gives the significance "agree-

able" to a place called נַיִם (Naim) in the territory of Issachar, in Galilee. Eusebius and St. Jerome (Onomasticon) place Naim south of Mount Thabor, and not far from Endor. Now, opposite to Thabor, and a mile and a half north of Endôr (doubtless the Biblical Endor), lies a village called Nain ("pleasantness"). It is situated on the north-western ridge of Jebel Dahy, the Little Hermon, and commands a magnificent view. There are traces of ruins beyond its boundary to the north, but no sign of fortifications. "The gate of the city" (Luke, vii, 12) might have belonged to a wall of enclosure, built to protect the place against marauding tribes, as was often the case in the East. A steep path leads up to the village, passing by the site of an ancient church which had been converted into a mosque, "Moukâm Lidna Aisa" (Oratory of the Lord Jesus). The mosque, having fallen into ruins, was replaced by another in the vicinity. In 1880 the Franciscans bought the ruins of the first building, and erected thereon a chapel. Not far away may be seen Jewish rock-tombs. Thus the details of Naim's graphic story find an easy localization.

Namaqualand, PREFECTURE APOSTOLIC OF GREAT. See ORANGE RIVER, VICARIATE APOSTOLIC OF THE.

Name, BAPTISMAL. See BAPTISM, sub-title XV: *Names, Christian*.

Name of Jesus, RELIGIOUS COMMUNITIES OF THE.—(1) Knights of the Name of Jesus, also known as Seraphim, founded in 1334 by the Queens of Norway and Sweden to defend their respective countries from the onslaught of heathen hordes. They did not survive the Reformation. (2) Sisters of the Name of Jesus comprise six congregations founded in France during the nineteenth century in the Dioceses of Besançon, with mother-house at Grande-Fontaine, Paris; of Valence (1815 or 1825), mother-house at Lorial; of Rodez, mother-house at Ste-Radegonde; of Toulouse (1827); and of Marseilles (1852). These sisters devote themselves chiefly to the work of teaching and caring for the sick. (3) Confraternity of the Name of Jesus, formed by the amalgamation of the Portuguese Confraternity of the Most Holy Name of Jesus, founded by Andreas Díaz, O.P., in 1432, with the Spanish Confraternity of the Most Holy Name of God, established by Diego Victoria, O.P., in the sixteenth century. Approbation was granted by Popes Paul V (1606) and Innocent XI (1678), and the confraternity was enriched with indulgences and placed under the Dominican general.

FLORENCE RUDGE MCGAHAN.

Name of Mary, FEAST OF THE HOLY.—We venerate the name of Mary because it belongs to her who is the Mother of God, the holiest of creatures, the Queen of heaven and earth, the Mother of mercy. The object of the feast is the Holy Virgin bearing the name of *Mirjam* (Mary); the feast commemorates all the privileges given to Mary by God and all the graces we have received through her intercession and mediation. It was instituted in 1513 at Cuenca in Spain, and assigned with proper Office to 15 Sept., the octave day of Mary's Nativity. After the reform of the Breviary by St. Pius V, by a Decree of Sixtus V (16 Jan., 1587), it was transferred to 17 Sept. In 1622 it was extended to the Archdiocese of Toledo by Gregory XV. After 1625 the Congregation of Rites hesitated for a while before authorizing its further spread (cf. the seven decrees, "Analecta Juris Pontificii", LVIII, decr. 716 sqq.). But it was celebrated by the Spanish Trinitarians in 1640 (*Ordo Hispan.*, 1640). On 15 Nov., 1658, the feast was granted to the Oratory of

Cardinal Berulle under the title: *Solemnitas gloriosæ Virginis, dupl. cum oct., 17 Sept.* Bearing the original title, SS. *Nominis B.M.V.*, it was granted to all Spain and the Kingdom of Naples on 26 Jan., 1671. After the siege of Vienna and the glorious victory of Sobieski over the Turks (12 Sept., 1683), the feast was extended to the universal Church by Innocent XI, and assigned to the Sunday after the Nativity of Mary by a Decree of 25 Nov., 1683 (*duplex majus*); it was granted to Austria as d. 2. *classis* on 1 Aug., 1684. According to a Decree of 8 July, 1908, whenever this feast cannot be celebrated on its proper Sunday on account of the occurrence of some feast of a higher rank, it must be kept on 12 Sept., the day on which the victory of Sobieski is commemorated in the Roman Martyrology. The Calendar of the Nuns of Perpetual Adoration, O.S.B., in France, of the year 1827, has the feast with a special Office on 25 Sept. The feast of the Holy Name of Mary is the patronal feast of the Clerics Regular of the Pious Schools (Piarists) and of the Society of Mary (Marianists), in both cases with a proper office. In 1666 the Discalced Carmelites received the faculty to recite the Office of the Name of Mary four times a year (*duplex*). At Rome one of the twin churches at the Forum Trajani is dedicated to the Name of Mary. In the Ambrosian Calendar of Milan the feast of the Holy Name of Mary is assigned to 11 September.

FREDERICK G. HOLWECK.

Names, CHRISTIAN.—"Christian names", says the Elizabethan antiquary, Camden, "were imposed for the distinction of persons, surnames for the difference of families." It would seem from this that, even in the sixteenth century, the etymological and historical significance of the phrase "Christian name" was growing dim, and it is commonly quite forgotten in our own time. But, strictly speaking, the "Christian name" is not merely the forename distinctive of the individual member of a family, but the name given to him at his "christening", i. e., his baptism. It should be remembered that in pre-Reformation England the laity were taught to administer baptism in case of necessity with the words: "I christen thee in the name of the Father" etc. To "christen" is therefore to "baptize", and "Christian name" means baptismal name.

ORIGINS.—Some vague idea that *nomina sunt omina* (names are omens) seems to be a sort of primitive human instinct. Thus throughout Old-Testament times the significance of names passed as an accepted principle. They were usually given in reference either to some trait in the child, actual or prophetic, or to some feeling or hope in the parent at the time of its birth. It was only a very slight development of this idea to suppose that a change of condition appropriately demanded a change of name. Thus the conversion of Abram into Abraham (the "father of many nations", Gen., xvii, 5) was imposed upon the occasion of the covenant of circumcision and ratified a claim to God's special benediction. In view, then, of this recognized congruity and of the Hebrew practice of giving a name to the male child at the time of its circumcision on the eighth day after birth (Luke, i, 59), it has been maintained that the custom of conferring a name upon the newly baptised was of Apostolic origin. An instance in point is declared to be found in the case of the Apostle of the Gentiles who before his conversion was called Saul and afterwards Paul. But modern scholarship, and with reason, has altogether rejected this contention. The baptism of St. Paul is recorded in Acts, ix, 18, but the name Paul does not occur before Acts, xiii, 9 while Saul is found several times in the interval. We have no more reason to connect the name Paul with the Apostle's bap-

ism than we have to account in the same way for the giving of the name Cephias or Peter, which we know to be due to another cause. Moreover, it is certain, both from the inscriptions of the catacombs and from early Christian literature, that the names of Christians in the first three centuries did not distinctively differ from the names of the pagans around them. A reference to the Epistles of St. Paul makes it plain that even the names of heathen gods and goddesses were borne by his converts after their conversion as before. Hermes occurs in Rom., xvi, 14, with a number of other purely pagan names, Epaphroditus in Phil., iv, 18, Phebe, the deaconess, in Rom., xvi, 1. Not less conclusive are the names which we find in the Christian inscriptions of the earlier period or in the lists of the signatories appended to such councils as Nicæa or Ancyra (see Turner, "Eccl. Occident. Mon. Juris", I, 36-90; II, 50-53), or again in the lists of martyrs. Even at a later date the names are of a most miscellaneous character. The following classification is one that has been worked out by J. Bass Mullinger founded on Martigny.

A.—Names without Christian significance and probably derived from pagan ancestors:—(1) names derived unchanged or but slightly modified from pagan mythology, e. g., Mercurius, Bacchus, Apollos (I Cor., xvi, 12), Hermogenes (Rom., xvi, 4), etc.; (2) from religious rites or omens, e. g., Augustus, Auspicius, Augurinus, Optatus; (3) from numbers, e. g., Primus, Primigenius, Secundinus, Quartus, Octavia, etc.; (4) from colours, e. g., Albanus, Candidus, Rufus, etc.; (5) from animals and birds, e. g., Agnes, Asellus, Columba, Leo, Taurus, Ursula, etc.; (6) from agriculture, e. g., Agricola, Armentarius, Palmatinus, Stercorius, etc.; (7) from flowers, e. g., Balsamia, Flosculus, Narcissus, Rosula; (8) from jewels, e. g., Chrysanthus, Margarites, Smaragdus; (9) from military life or the sea, e. g., Emerentiana, Navigia, Pelagia, Scutarius, Thalassus; (10) from countries, cities, rivers etc.; (11) from the months, e. g., Aprilis, Januarius, Junia, etc.; (12) from personal qualities, etc., e. g., Aristo, Hilarius, Modestus, Pudens, etc.; (13) from servile condition, e. g., Servus, Servilianus, Vernacula; (14) names of historical celebrity, e. g., Cæsar, Cornelia, Pompeius, Ptolemæus, Vergilius.

B.—Names of Christian origin and significance.—(1) Names apparently suggested by Christian dogmas, e. g., Anastasia, Athanasia, Christophorus, Redemptus, Restitutus, etc.; (2) from festivals or rites, e. g., Epiphanius, Eulogia, Natalis, Pascasia, Sabbatius, and the frequently recurring Martyrius; (3) from Christian virtues, e. g., Agape, Elpis, Fides, Irene, with such derivatives as Adelphius, Agapetus, Caritosa, etc.; (4) pious sentiment, e. g., Adeodata, Ambrosius, Benedictus, Deogratias, etc., and possibly such names as Gaudentianus, Hilarius, Sozomen, Victorinus, Vincentius, but it is very hard to be sure that any distinctively Christian feeling is here latent.

On the other hand though the recurrence of such names as Agnes, Balbina, Cornelius, Felicitas, Irenæus, Justinus, etc. may very probably be due to veneration for the martyrs who first bore these names, it is rather curious that the names of the saints of the New Testament are but rarely found while those of the Old Testament are hardly less uncommon. Susanna, Daniel, Moyses, Tobias, occur pretty frequently, but it is only towards the end of the fourth century that we find the name of our Blessed Lady or become at all familiar with those of the Apostles. Even then we cannot be sure that in the case of Paulus in particular there is any intentional reference to the Apostle of the Gentiles, but Johannes at least, and Andreas, with Petrus and its derivatives like Petronia, Petrius, Petronilla, etc. are less open to doubt. The name of Mary occurs occasionally in the catacomb inscriptions

towards the close of the fourth century, for example, in the form LIVIA MARIA IN PACE (De Rossi, "Rom. Sot.", I, 143) and there is a martyr Maria assigned to the date A. D. 256 (De Rossi, "Rom. Sot.", III, 200 sqq. and compare other instances of the name, De Rossi, "Insc. Christ.", I, 331; II, 160 and 173).

CHANGE OF NAME AT BAPTISM.—If we could trust the authentic and contemporary character of the Acts of St. Balsamus, who died A. D. 311, we should have an early example of the connexion between baptism and the giving of a name. "By my paternal name", this martyr is said to have declared, "I am called Balsamus, but by the spiritual name which I received in baptism, I am known as Peter." It would seem in any case that the assumption of a new name for some devotional reason was fairly common among Christians. Eusebius the historian took the name Pamphili from Pamphilus the martyr whom he especially venerated. Earlier still St. Cyprian chose to be called Cyprianus Cæcilius out of gratitude to the Cæcilius to whom he owed his conversion. Moreover St. Dionysius of Alexandria (c. 260) declared "I am of opinion that there were many of the same name as the Apostle John, who on account of their love for him, and because they admired and emulated him, and desired to be loved by the Lord as he was, took to themselves the same name, just as many of the children of the faithful are called Paul or Peter" (Eusebius, "Hist. Eccl.", VII, xxv). It would be only natural that the assumption of any such new name should take place formally at baptism, in which the catechumen, then probably as now, had to be addressed by some distinctive appellation. On the other hand it seems likely that the imposition of a new name at baptism only became the invariable rule after infant baptism had become general. Every child had necessarily to receive some name or other, and when baptism followed soon after birth, this must have offered a very suitable opportunity for the public recognition of the choice made.

No doubt the thirtieth of the supposed Arabian Canons of Nicæa: "Of giving only names of Christians in baptism" is not authentic, even though it is of early date; but the sermons of St. John Chrysostom seem to assume in many different places that the conferring of a name, presumably at baptism, ought to be regulated by some idea of Christian edification, and he implies, though this does not seem to be borne out by the evidence now available, that such had been the practice of earlier generations. For example he says: "When it comes to giving the infant a name, caring not to call it after the saints, as the ancients at first did, people light lamps and give them names and so name the child after the one which continues burning the longest, from thence conjecturing that he will live a long time" (Hom. in Cor., xii, 13). Similarly he commends the practice of the parents of Antioch in calling their children after the martyr Meletius (P. G., I, 515), and again he urges his hearers not to give their children the first name that occurs, nor to seek to gratify fathers or grandfathers or other family connexions by giving *their* names, but rather to choose the names of holy men conspicuous for virtue and for their courage before God (P. G., LIII, 179). History preserves sundry examples of such a change of name in adult converts. Socrates (Hist. Eccl., VII, xxi) tells us of Athenais who married the Emperor Theodosius the Younger, and who previously to marriage was baptized (A. D. 421) receiving the name Eudoxia. Again Bede tells us of the case of King Cædwalla who went to Rome and was baptised by the Pope Sergius who gave him the name of Peter. Dying soon afterwards he was buried in Rome and his epitaph beginning "Hic depositus est Cædwalla qui est Petrus" was long pointed out (Bede, "Hist. Eccl.", V, vii). Later we have the well-known instance of Guthrum the Danish leader in England who after his long contest with King Alfred was eventually defeated and, consenting to ac-

cept Christianity, was baptized in 878 by the name of Æthelstan.

PRACTICE REGARDING NAMES.—But while various Fathers and spiritual writers, and here and there a synodal decree, have exhorted the faithful to give no names to their children in baptism but those of canonized saints or of the angels of God, it must be confessed that there has never been a time in the history of the Church when these injunctions have been at all strictly attended to. They were certainly not heeded during the early or the later Middle Ages. Any one who glances even casually at an extensive list of medieval names, such as are perhaps best found in the indexes to the volumes of legal proceedings which have been edited in modern times, will at once perceive that while ordinary names without any very pronounced religious associations, such as William, Robert, Roger, Geoffrey, Hugh, etc. enormously preponderate (William about the year 1200 was by far the most common Christian name in England), there are also always a very considerable number of exceptional and out-of-the-way names which have apparently no religious associations at all. Such names, to take but a few specimens, as Ademar, Ailma, Ailward, Albrea, Alditha, Amaury, Ascelina, Avice, Aystorius (these come from the lists of those cured at the shrine of St. Thomas of Canterbury) are of quite frequent occurrence. The point however cannot be dwelt on here. We may note on the other hand that a rubric in the official "Rituale Romanum" enjoins that the priest ought to see that unbecoming or ridiculous names of deities or of godless pagans are not given in baptism (curet ne obscœna, fabulosa aut ridicula vel inanium deorum vel impiorum ethnicorum hominum nomina imponantur). Some of the seventeenth century French rituals have gone further than this. For example that of Bourges (1666) addressing parents and godparents urges: "Let them give to boys the names of male saints and to girls those of women saints as right order requires, and let them avoid the names of festivals like Easter (Pâques), Christmas (Noël), All Saints (Toussaint) and others that are sometimes chosen." Despite such injunctions "Toussaint" has become a not uncommon French Christian name and "Noël" has spread even to England. The addition of Marie, especially in the form Jean-Marie, for boys, and of Joseph for girls is of everyday occurrence.

In Spain and Italy again, ardent devotion to our Blessed Lady has not remained content with the simple name Maria, but many of her festivals etc. have also created names for girls: Concepción, of which the diminutive is Concha, is one of the best known, but we have also Asunción, Encarnación, Mercedes, Dolores, etc. in Spanish and in Italian Assunta, Annunziata, Concetta, etc. It is strange on the other hand that the name Mary has by no means always been a favourite for girls, possibly from a feeling that it was too august to be so familiarly employed. In England in the twelfth century Mary as a Christian name is of very rare occurrence. George again is a name which despite the recognition of the warrior saint as patron of England, was by no means common in the thirteenth and fourteenth centuries, though strangely enough it grew in popularity after the Reformation. A writer who has made a minute examination of the registers of Oxford University from 1560 to 1621, has made out the following list of the more common names borne by the students in order of popularity: John, 3826; Thomas, 2777; William, 2546; Richard, 1691; Robert, 1222; Edward, 957; Henry, 908; George, 647; Francis, 447; James, 424; Nicholas, 326; Edmund, 298 (see Oxford Hist. Soc. Transactions, XIV). In Italy and Spain it has always been a tolerably common practice to call a child after the saint upon whose feast he is born.

CONFIRMATION NAMES.—The practice of adopting a new name was not limited to baptism. Many

medieval examples show that any notable change of condition, especially in the spiritual order, was often accompanied by the reception of a new name. In the eighth century the two Englishmen Winfrith and Wilbald going on different occasions to Rome received from the reigning pontiff, along with a new commission to preach, the names respectively of Boniface and Clement. So again Emma of Normandy when she married King Ethelred in 1002 took the name Ælfgifu; while, of course, the reception of a new name upon entering a religious order is almost universal even in our own day. It is not strange, then, that at confirmation, in which the interposition of a godfather emphasizes the resemblance with baptism, it should have become customary to take a new name, though usually no great use is made of it. In one case, however, that of Henry III, King of France, who being the godson of our English Edward VI had been christened Edouard Alexandre in 1551, the same French prince at confirmation received the name of Henri, and by this he afterwards reigned. Even in England the practice of adopting a new name at confirmation was remembered after the Reformation, for Sir Edward Coke declares that a man might validly buy land by his confirmation name, and he recalls the case of a Sir Francis Gawdye, late Chief Justice of the Common Pleas, whose name of baptism was Thomas and his name of confirmation Francis (Co. Litt. 3a).

HERBERT THURSTON.

NAMES, HEBREW.—To the philosopher a name is an artificial sign consisting in a certain combination of articulate sounds, whereby a particular class of people are wont to designate one thing and distinguish it from all others. If the name conveys an idea, it is merely because of a wholly artificial relation once arbitrarily established between the name and the thing it stands for. Primitive people, using a language as it is handed down to them without inquiring into its origin, are inclined to make much of names. This is true of the old Semitic peoples, especially of the Hebrews. All Hebrew names were supposed to bear a significance, as originally individual subjects were called by a name expressive of some characteristic, e. g., Edom, red; Esau, hairy; Jacob, supplanter. They were carefully and solemnly selected, especially personal names. Leaving aside cases where the name was Divinely given (Abraham, Gen., xvii, 5; Isaac, Gen., xvii, 19; Ismael, Gen., xvi, 11; John, Luke, i, 13; Jesus, Matt., i, 21; etc.), the naming of a child usually devolved upon the parents, and, it appears, preferably upon the mother. The women of the family (Ruth, iv, 17), or the neighbours (Luke, i, 59), talked over the name to be given. The name seems to have been given ordinarily at the time of the birth; but at a late period the day of circumcision was more usual (Luke, i, 59; ii, 21). Of the customs connected with the naming of cities we know nothing, except what may be gathered from the names themselves, and what is said of a few cities named after their founders and conquerors (Gen., iv, 17; Num., xxxii, 42; Deut., iii, 14; Jos., xix, 47; etc.).

So intimate was the relation conceived to be between the individual and his name, that the latter came frequently to be used as an equivalent of the former: "to be called" meant "to be", the name being taken to be equal to the object, nay, identical with it. Nothing is more eloquent of this fact than the religious awe in which the Hebrews held the name of God (see JEHOVAH). Similar notions prevailed with regard to all proper names. Nor were the Hebrews an exception: all Semitic peoples, and, to some extent, all primitive peoples shared the same belief. This is why the study of these names is looked upon by students of history as a sort of key to the knowledge of the reli-

gious and social conditions of these peoples. We shall here discuss only Hebrew names: I. DIVINE NAMES; II. PERSONAL NAMES; III. PLACE NAMES.

I. DIVINE NAMES.—*Yahweh*.—Jehovah (q. v.), the traditional form of this name in Western languages, is based on a misunderstanding of the Massoretic vocalization. The name *Yahweh*, of which an abbreviated form, *Yah*, and a spelling, *Yahu*, seem to have been popular, is derived doubtlessly from the verb *hayah*, "to be", and is best translated by "he is" (Lagrange in "Revue Biblique", 1903, pp. 370-86; 1908, pp. 383-86). *'El*, which is found among all Semitic peoples (Phoen. Arab.: *'El*; Assy.: *Il, Ilu*; Aram.: *'Alah*), is, in the Bible, appellative in most cases, but was certainly in the beginning a proper name (so, e. g., in Gen., xxxi, 13; xxxiii, 20; xlv, 3). Its etymology is to the present day a much mooted question: some derive the word from a root *'ul*, "to be strong"; others from *y'l*, which might connote the idea of "being the first"; others finally from *'lh*, by which, at an early stage of the development of the Semitic languages the idea of mere relation (*esse ad*) was conveyed. According to the first two opinions, the name is intended primarily to express the superiority of the Divine nature, whereas, according to the third, God is *'El* because He is the term of the aspirations (*finis*) of mankind (Lagrange, "Etudes sur les religions sémitiques", 70 sqq., especially 78-80; "Revue biblique", 1903, pp. 362-370). Closely related to *'El* are the names *'Eloh* and *'Elohim*, sometimes used as appellatives, but more frequently as proper names. The plural form of the latter to some extent still puzzles grammarians and students of the religious belief of the Hebrews (see Gesenius-Kautzsch, "Hebr. Gramm.", § 124, g-i; Prat, "Le nom divin est-il intensif en Hébreu?" in "Revue bibl.", 1901, p. 497 sqq.; Smith "The Religion of the Semites", London, 1907, 445; Lagrange, "Etudes sur les religions sémitiques", 77). We need not dwell upon the many cases where *'El* and *'Elohim* are used as appellatives, either by themselves, or as parts of compound names such as *'El Roy* (the God of the apparition), *'El 'Olam* (the Eternal God), *'El 'Elyon* (the Most High God), *'Elohe Sebaoth* (the God of Hosts), etc. (see Lagrange in "Revue biblique", 1903, pp. 364-67). *Shadday*.—As to the name *Shadday*, which is found sometimes alone, and at other times in connexion with *'El* (*'El Shadday*), it was originally an adjective conveying possibly the idea of fecundity (Gen., xvii, 1; xlix, 25) or of highness (Ps., xci, 1); at a later period the Prophets, in order to emphasize their threats of divine punishment, spoke as if the word were related to *shadad*, to "devastate"; but the people at large, unmindful of these etymological niceties, used *Shadday* merely as a substitute for *'El*, perhaps with the special connotation of "Almighty".

II. PERSONAL NAMES.—Personal names are either purely Hebrew or hebraicized. To the latter category belong not only (passing over foreign names as Teglath-phalasar, Assuerus, etc.) Babylonian (Daniel-Baltassar) and Persian (Hadassa-Esther) names assumed by some persons of Hebrew origin living in far-away countries, and the Greek and Latin names in use among Jews of later times conjointly with their Hebrew or Aramaic names (John-Mark; Saul-Paul, etc.), but also certain very old names which were handed down by tradition, such as Cain, Abel, Noe, Abraham, etc., and treated by the sacred writers as Hebrew words. There is scarcely any doubt but that in passing from one language to the other these names were altered to some extent; and as the etymological explanation pretends to interpret the Hebrew form, the meaning arrived at can hardly be more than fanciful. It is from the original language of these names that their meaning should be sought (so Abram and Abraham may be explained from the Assy. *Abi-rāmā*, or *Abi-rāme*, "my father loveth"; Sarai and Sara from

Sharat, "the great princess"; Lot from *Lātu*, or *Lā'itā*, "the consumer"; from the Egyptian might be explained likewise a few names, e. g., Moses, "the child", etc.). Of the pure Hebrew names some are simple and others compound. Simple names appear to have been more frequent in early times, but some are in reality hypocoristic, i. e., abbreviated forms of compound names, as Saul (asked), David (beloved), Nathan (he gave), etc., which were probably combined with a Divine name, *Yah* or *'El*.

Simple Names.—Of the simple names a few seem to have been suggested by particular circumstances, especially circumstances attending the child's birth: e. g., Jacob (the supplanter), Joseph (possibly an hypocoristic name: "Whom God added"—Eliasaph was at one time a favourite name for the youngest son in a family). A large class of proper names for men and women is made up of adjectives denoting personal characteristics. Here are a few instances: Acan (afflicting), Achaz (possessor), Agar (wanderer), Amos (strong), Amri (eloquent), Aod (praising), Asaph (gatherer), Aser (happy), Asir (captive), Ather (bound), Azbai (dwarf), Balac (vain), Baruch (blessed), Cetura (sweet-smelling), Dalila (yearning), Doeg (anxious), Edom (red), Esthon (woman-like), Gaddel, Geddel (tall), Gedeon (destroyer), Heled (fat), Job (ruthlessly treated), Laban (white), Manahem (consoler), Nabal (fool), Nachor (panting or snoring), Nahum (comforter), Noemi (pretty), Omri (tiro, awkward), Ornan (nimble), Ozni (long-eared), Phesse (lame), Ruth (friend), Sepho (bald-headed), etc.

Names of animals and of plants were at the same period not infrequently given to persons both by the Hebrews and by their neighbours, the Chanaanites and others. Among the names of animals assumed as proper names, we may mention: Achbor (mouse), Aia (vulture), Aran (wild goat), Caleb (dog), Debora (bee), Eglon (calf), Gaal (beetle), Hagaba, in N. T. Agabus (locust), Hulda (weasel), Jahel (chamois), Jonas (dove), Nahas (snake), Ozi (goose-like), Rachel (ewe), Saphan (coney), Sebia (gazelle), Sephora (little bird), Sual (jackal), Tabitha (Aram., gazelle), Tola (worm), Zeb (wolf).—Of the names of plants, apparently less frequently used than those of animals, here are a few instances: Asena (bush), Cassia (a kind of balsam-tree), Cos (thorn), Elas (oak), Elon (terebinth), Hadassa (myrtle), Oren (pine), Susan (lily), etc. Some modern scholars explain the relatively frequent recurrence of these two kinds of names among Palestinian populations as remnants of totemism which, these scholars maintain, prevailed in early times. This is hardly the place to discuss such a question. It is illogical to extend to all primitive peoples religious conceptions observed in some few; were we to yield to the fascination for totems which prevails among some writers, we might consider as traces of totemism such English names as Fox, Wolf, Hawthorne, and the like. Granting even that the names mentioned above are unmistakable signs of totemism among the early populations of Palestine, it would by no means necessarily follow that these names manifest the prevalence of the same religious ideas among the Hebrews. Hebrew was not the primitive language of the descendants of Abraham, they having adopted it from the natives of the land of Chanaan; naturally along with the language they adopted certain of their modes of speech.

Sometimes names of things, also of natural phenomena, even (though rarely) abstractions, and words referring to trades or avocations were taken as proper names. Of the latter class we have for instance: Abdon, Obed (servant), Amon (architect), Berzellai (blacksmith), Charmi (vine-dresser), Somer (watchman), Zamri (singer), of the former: Agag (fire), Ahod (union), Amos (burden), Anna (grace), Barac (lightning), Bezec (thunderbolt), Cis (straw), Core (frost), Ephron (dust), Hon (strength), Mary (stubbornness,

disobedience, see Num., xii), Naboth (fruit), Ur (light), Samson (sun), etc.

Compound Names.—Compound personal names are so numerous that only a few main points concerning them can be touched on here. First comes the question of the exact meaning of these names. Although the sense of each part separately is usually clear enough, yet that of the compound is not. The difficulty is to decide whether these parts are in genitive relation, or in relation of subject to predicate (the verb in the latter case being understood). In certain names, no matter which view is taken, the meaning remains practically the same; it is immaterial whether "Eliezer" be interpreted "God of help" or "God is help"; but with names like Abinadab, the difference in both constructions becomes marked, for "Father of generosity" is by no means equivalent to "my father is generous". Since no rule for all cases is available, for the sake of clearness it will be well to divide compound names into three classes: (1) Names having as one of their component parts a term connoting either kindred (father, son, etc.) or accidental relations (e. g., servant); (2) Names (known as theophorous names) containing a Divine element; (3) Names including terms both of kindred and Divinity.

(1) There is no doubt but that only a genitive relation will explain names having as their first element *Ben* (son), *Bath* (daughter), *Ebed* or *Obed* (servant). Thus Benjamin is to be interpreted "son of the right hand"; Bethsabee, "daughter of the oath"; Obededom, "servant of Edom". Names in which the first element is *Ab* (father), *Ah* (brother), *Amm* (uncle by the father's side) are to be considered sentences, for such names are applied equally to men and women,—names such as Abigail, Abisag, etc., if they meant "father of joy", "father of error", would be most unsuitable for women. The name Ahab some regard as a possible exception to this rule (it might then be interpreted "brother of the father"—uncle); whether this exception is warranted remains problematical. As to the letters *i* (י) and *u* (ו) frequently introduced after the first element of this class of names (*Abi*, *Achi*, *Ammi*), it seems rather a connecting vowel than a personal suffix.

(2) Theophorous names were at all times widely used among Semitic peoples. To limit ourselves to names found in the Bible, although names including the Divine element *Yah*, or *Yaho*, are by far the more numerous, yet they were not in use as early as those formed with *El*. These names have for their other component element either a verb or a noun. In the former case, the Divine name is the subject of the verb (*Elisama*, "God heard"; *Jonathan*, "Yahweh gave"); in the latter the Divine name may be regarded again as the subject, and the noun as the predicate (*Elisua*, "God is salvation"; *Josue*, "Yahweh is salvation"). Not only the name of the true God, but also names of foreign deities, especially *Adon*, *Baal*, *Melek*, entered into the composition of names taken by Hebrews at a period when the relations of God's people with their neighbours were most intimate. Naturally such names are to be interpreted in the same manner as those including *Yah* or *El*. Hence Adonisedec shall be understood "Adon is justice", etc.; but Ebaal can hardly mean anything else than "man of Baal". In this connexion it is noticeable that at a later period abhorrence of these foreign deities prompted first the reading, and soon afterwards the writing of Bosheth (shame) in places where originally the text had Baal (*Isboseth*, for *Isbaal*). Moreover, it matters not, in theophorous names, whether the Divine element stands in the first or in the last place (theophorous names have among western Semitic peoples only two component parts, contrary to the Assyrian and Babylonian use): for Nathan-El is equivalent to El-Nathan, *Josue* to *Isaias*, etc.

Not unfrequently two Divine names are united to

form a compound, as in *Joel*, *Elimelech*, etc. In these cases it is clear that we should see a sentence expressing an act of faith in the divinity of the god the subject of the sentence. Accordingly *Joel* will be interpreted "Yahweh is God", and *Elimelech* "Melech is God". On the other hand, *Adonias* and *Malachias* cannot mean "Adon is Yahweh" or "Melech is Yahweh", because, unlike *El*, *Yah* is never appellative; in these words, *Adon* and *Melek* are common nouns, and the compounds are equivalent respectively to "Yahweh is master" and "Yahweh is king".

(3) The rules laid down for interpreting the above classes of compound names are equally applicable to those made up of a word denoting relationship and a word denoting divinity. If the first part of these names be *Ben*, *Bath*, *Bar* (Aram., son), *Ebed*, *Ish* (man), a genitive relation may be understood to exist between it and the second part; thus *Benadad* or *Barhadad* stands for "son of Hadad"; *Abdeel* for "servant of God"; *Ebaal* for "man of Baal". On the other hand, if the first element be *Ab*, *Ah*, *Amm* or the like it seems that the relation to the Divine name should be regarded rather as one of predicate to subject. It is clear that the interpretation indicated here is the right one, for otherwise some names would convey absurd meanings: surely *Abia*, *Abiel*, *Abbaal*, *Ammiel*, cannot mean "father", "uncle", "of Yahweh", "of God", "of Baal". There might be no objection, absolutely speaking, in words like *Achiel*, *Achia*, being understood "brother of God", "of Yahweh"; but it is hard to believe the sense could be, as it is, different when the elements appear in the reverse order, as in *Joah*.

From this rapid survey, it appears that students of the history of religions may find in Hebrew proper names ample material for deductions concerning the religious belief and the theology of God's people. Not to mention what has been hinted at concerning the influence of Chanaanite idolatry, and passing over the preference given to the Divine name *El* in earlier times, a fairly complete knowledge of the attributes of God may be gathered from Divine and theophorous names. *Yahweh*, "He whose essence is to be", is God, that is to say, the term of every being's aspirations (*El*); He is Most High (*El Elyon*), eternal (*El Olam*), perfect (*Joatham*), and worthy of all praise (*El-uzai*) and glory (*Jochabed*). His eyes behold everything (*El Roy*); His knowledge comprehends all things (*Eliada*, *Joiada*), and all things are ever present to His memory (*Zacharias*). He is all-powerful (*El Shadday*), and in Him all things acknowledge their founder (*Eliacim*, *Joakim*, *Joakin*) and their upholder (*Joram*); to Him they are indebted for their increase (*Eliasaph*), their beauty (*Elnaim*, *Joad*) and their strength (*Eliphaz*, *Eliel*). His generosity (*Jonadab*) prompts Him to communicate His gifts (*Joas*, *Jonathan*, *Jozabad*, *Johanan*, *John*) to creatures. To men in particular He is a father (*Abias*, *Abiel*, *Joab*), and a brother (*Achias*, *Achiel*): He loves them (*Eliadad*). Being merciful (*Jerahmeel*), He lends a willing ear to their prayers (*Elisama*); He is their master (*Adonias*), their king (*Malachias*), their defender (*Jorib*), their help (*Eleazar*, *Eliezer*), their saviour (*Josue*, *Jesus*, *Isaias*), their protector in distress (*Eliaphan*, *Elisur*, *Eliaba*); from Him proceeds all justice and justification (*Josedec*); in the end, He shall be their judge (*Josaphat*); from Him also shall they receive their reward (*Elphaal*, *Eliasub*, *Eliho-reph*).

III. PLACE NAMES.—When we speak of Hebrew names of places in Palestine, it should be borne in mind that many of these names, like the towns and villages they designated, were in existence long before the Hebrews settled there, and even before any records mentioning places in Palestine were written (Inscr. of Thotmes III, about 1600 B. C.; El-Amarna letters, about 1450 B. C.). Nevertheless we are justified in

considering these names as Hebrew, since Hebrew is the Chanaanite language of the early inhabitants of Palestine, adopted by the Israelite conquerors.

In all countries, many names of places have been suggested by the topography. The Palestinians named certain towns Rama, Ramath, Ramatha, Ramathaim for the same reason we would name them "Height"; they said Gabaa, Geba, Gabaa, as we would say "Hill"; their Sela (Petra) would be our "Cliff"; what we might style our "Hollow" they called Horen or Horonaim. They had their Lebanon as we have our "White Mountains"; and where we would say "Blackrock", they said Hauran; the names of some of their rivers: Jordan, Cedron, Sichor, resemble our "Rapids", "Dusky", "Blackwater". Argob means a lay of rich soil; Horeb or Jabes, dry lands; Accaron, "Bad Lands". "Spring" and "Well" were then as now a prominent element in compound names of places (hence, Endor, Engaddi, etc.; Beroth, Bersabee, etc.); to a native of the Holy Land, Ham-math, Hamman sounded like "Hot Springs" to us. A large proportion of compound names are made up of Hasor (enclosed settlement), Cariath, Ir, Qir (city), Beth (house), and another element the origin of which is not always obvious (Cariath-Arbe, Bethlehem). Sometimes also the locality derived its name from some vegetable product: Abel (meadow), Atad (some kind of Rhamnus), Baca (mulberry-tree), Abel-keramim, Bethacarem, Escol, Sorec (vine); Dilan (cucumber); Ela, Elath, Elim, Eloth, Elon (oak and terebinth); Gamso (sycamore); Luz (almond-tree); Mount Olivet; Remmon (pomegranate); Rithma (broom); Samir, Bethsetta (acacia); Bettafua (apple tree); Thamar (palm-tree).

Places named after animals are not rare in Palestine: Acrabim (scorpion); Aialon (stag); Arad (wild ass); Eglon, Eglaim (calf); Ephron, Ophra (gazelle); En-gaddi (kid); Etam (hawk); Bethhagia (partridge); Humta (lizard); Lais, Lebaoth (lion); Irna-has (snake); Beth-nemra (leopard); Para (cow); Seboim (hyena); Hasar-sual (jackal); Hasar-susa, -susim (horse); Telaim, Bethcar (lamb); Zora (hornet); etc.

An important and interesting class of topographical names have reference to the religious practices of the early inhabitants of Chanaan. Such cities as Beth-sames, Ensemes, the various Hares clearly owed their names to their being given up to sun-worship; likewise such names as Sin, Sinai (Babyl. *Stn*, i. e., Moon-god), and Jericho, tell us of places consecrated to the cult of the moon. Many were the cities and mountains dedicated by the Chanaanites to the various Baals. Even Babylonian gods possessed shrines in Palestine: the names of Mt. Nebo, Nebo of Moab, Nebo of Juda (Esd., ii, 29), are of themselves very suggestive; Anath, the female companion of Anu, gave her name to Beth-Anath, Beth-Anoth, Anathoth; Bel was honoured in Ribla (Ar-bela); Ishtar in Astaroth, Astaroth-carnaim, Beestera; the name Beth-Dagon needs no comment.

Finally a certain number of distinctly Hebrew names, which either superseded older ones, or were given to localities before unnamed, have a special interest because they took their origin from events enshrined in the memory of the Hebrews. Bersabee recalls the league of Abraham and Abimelech (Gen., xix, 20); Eeeg, the quarrel of the herdsmen of Gerara with those of Isaac (Gen., xxvi, 20); Bethel, the vision of Jacob (Gen., xxviii, 17); likewise the names Abel-Misraim (Gen., i, 11), Mara (Ex., xv, 23), Massa, Meriba (Ex., xvii, 7), Thabeera (Num., xi, 3), Horma (Num., xxi, 3), Gulgala (Jos., v, 9), Bokim (Judges, ii, 5), Abenezar (I Kings, vii, 12), Pheres Oza (II Kings, vi, 8), etc., were for the Hebrew people so many records of the memorable past. And this custom of renaming places in commemoration of momentous facts persisted until the times of the New Testament, as

we gather from the (Aramaic) name Haeoldama (Matt., xxviii, 18; Acts, i, 19) given to the potter's field bought with blood-money.

CHARLES L. SOUVAY.

Names of Jesus and Mary, SISTERS OF THE HOLY, a religious congregation founded at Longueuil, Quebec, 8 December, 1844, under the patronage of Bishop Bourget, of Montreal, for the Christian education of young girls. The mother-house is at Hochelaga, Montreal. The institute was incorporated by Act of the Canadian Parliament, 17 March, 1845. A Decree *cum laude* was issued by Pius IX, 27 February, 1863, and a further Decree of 4 September, 1877, approved the institute; the constitutions received definite approval 26 June, 1901, and the institute was divided into seven provinces, 11 May, 1894, later increased to nine, 25 August, 1910. Under the direction of Rev. J. Allard three Canadian aspirants—Miss Eulalie Durocher, Miss Henriette Céré, and Miss Mélodie Dufresne—were trained according to the institute of the Holy Names of Jesus and Mary established by Mgr Eugène de Masenod of Marseilles. They took simple religious vows at Longueuil, 8 December, 1844, as Sisters Marie-Rose, Marie-Madeline, and Marie-Agnes. Bishop Bourget gave the institute diocesan approval and appointed Mother Marie-Rose, general superior for life. The community at Marseilles supplied the title of the congregation and, with modifications, the habit and the rule. Under Mother Marie-Rose, the congregation developed rapidly, and a course of study providing equally for English pupils and French was sketched on lines sufficiently broad to cover subsequent requirements. The teaching of boys was not at first contemplated, but missionary conditions rendering it imperative in certain provinces, permission from the Holy See has been temporarily obtained. The postulate lasts six months. At the end of the canonical year novices are sent for six additional months to the different houses, where they become practically acquainted with the life of the community. After five years, the young religious reconsiders her vocation during a retreat of thirty days. Final vows are perpetual. Young girls desirous of leading a hidden life in the apostolate of education, or possessing little aptitude for instruction, may enter as auxiliary sisters. Their spiritual preparation is similar to that of the choir sisters, and save for minor details in dress, no outward distinctions exist between the two classes. A general superior elected for five years, who may not be chosen for more than two consecutive terms, governs the entire congregation, assisted by four counsellors. A general chapter assemblies periodically to deliberate upon the major concerns of the institute.

In 1859 Archbishop Blanchet of Oregon City, Oregon, secured twelve sisters for his diocese. Several years later, they were invited to Seattle, Washington. To-day these two States form one province, with a novitiate (1871) and provincial headquarters at St. Mary's Academy and College, Portland. This school

was empowered to confer degrees (July, 1893), also to grant a Teachers' State Certificate good for five years, and a Teachers' State Diploma qualifying the holder for life. In 1907, an Act of the Washington State Legislature, afterwards ratified by the State Board of Education, accredited the Holy Names' Academies at Seattle and Spokane, as State Normal Schools. Two other provinces are located in the United States. That of California, established at Oakland (1868) by Bishop Alemany, possesses a novitiate since 1871; the New York province includes Florida. Quebec has four provinces; Ontario, one; Manitoba, one. Attached to Ontario are parochial schools in Detroit and Chicago. St. Mary's, Portland, opened (1860) a refuge for destitute and orphaned children and still conducts a Home for Orphan Girls. The congregation numbers (1910) professed sisters, 1257; novices, 110; postulants, 81. It conducts 99 schools, residential, select, and parochial, attended by 24,208 pupils. Of these establishments, 48 are in the United States.

MARIE R. MADDEN.

NAMUR, DIOCESE OF (NAMURCENSIS), constituted by the Bull of 12 May, 1559, from territory previously belonging to the Diocese of Liège, and made suffragan of the new metropolitan See of Cambrai. The Concordat of 1801 re-established a Diocese of Namur, its limits to coincide with those of the Department of Sambre-et-Meuse, and to be suffragan of Mechlin. On 14 Sept., 1823, the Diocese of Namur was increased by the territory of Luxembourg, which had formerly belonged to the Diocese of Metz, and which, forming, under the First Empire, part of the Departments of the Forêts and the Ardennes, had been given, in 1815, to the Kingdom of the Netherlands. After the Revolution of 1830, which brought about the separation between the Grand Duchy of Luxembourg and the Belgian Province of Luxembourg, the City of Luxembourg received a vicar Apostolic. In 1840 the jurisdiction of this vicar was extended to the whole grand duchy. On 7 October, 1842, the jurisdiction of the Diocese of Namur was definitively restricted to the two Belgian Provinces of Namur and Luxembourg.

In 1047, Albert II, Count of Namur, caused the erection, on the site of an ancient chapel, which an unauthenticated legend says was dedicated by Pope Cornelius in the third century, of a collegiate church, served by twelve canons, who had the right of administering justice within their lands. The first dean, Frederick of Lorraine, brother-in-law of Albert II, about 1050 secured from the chapter of Mainz a portion of the head of St. Aubain, martyr. The collegiate church took the name of St. Aubain the Martyr. In 1057 Frederick became pope under the name of Stephen IX. The various successors of Albert II enriched this foundation with numerous privileges. In 1209 Innocent III, by a Brief, took it under his protection. In 1263 Baldwin, Emperor of Constantinople, heir of the counts of Namur, sold the countship to Guy de Dampierre, Count of Flanders, and the House of Dampierre also protected the collegiate church. In 1429 Count John III sold the countship to Philip the Good, Duke of Burgundy. Thenceforth, until the French Revolution, Namur belonged to the House of Burgundy-Austria, except during the years 1692-95, when it was occupied by Louis XIV. Charles the Bold, Philip the Fair, Charles V, Albert and Isabella all knelt and took the oath in the sanctuary of St. Aubain. This church thus held a most important place in the political life of the country. It was rebuilt in the eighteenth century after the model of St. Peter's at Rome, as the cathedral. Don John of Austria is buried there.

The Church of Namur resisted Josephinism. In 1789, despite the formal prohibition of Joseph II, the image of the Blessed Virgin was carried in processions through the streets in honour of the Immaculate Con-

ception. Under the Directory, the vicar capitular, Stevens, formerly a professor in the University of Louvain, and famous for his opposition to Josephinism, directed the clergy by mysteriously circulated communications issued from his hiding-place at Fleurus. After the Concordat, when the Frenchman Leopold-Claude de Bexon had been made Bishop of Namur, Stevens feared that the new bishop would be too compliant towards Napoleon. The pamphlets which he circulated under the title "*Sophisme dévoilé*" advised the clergy to refuse adhesion to the Concordat, as it would be taken by the State for adhesion to the Organic Articles. A *petite église* formed of persons calling themselves "Stevenists" was formed in the diocese. It was strengthened by the subservience of Bishop Bexon, whom age had weakened, for the prefect Péres and by the circular (13 November, 1802) in which he denied having disapproved of the Organic Articles. At last Bexon resigned, 15 Sept., 1803, and was succeeded by Pisani de la Gaude. But Stevenism continued to exist. Stevens admitted that the Concordat was legitimate, and that the new bishops might be received; he only protested against the formula of adhesion to the Concordat. But the Stevenists went farther: they held that the jurisdiction of the bishops was radically defective, and they would recognize no other spiritual head than Stevens. The schism lasted until 1814, when Pisani de la Gaude accepted the declaration recognizing the legitimate bishop which the Stevenists were willing to make. Stevens died on 5 September, 1828. He had submitted all his writings to the Holy See, which never passed judgment. Since 1866 the right of appointing the dean and chapter of Namur has been reserved to the pope. Dechamps, later Cardinal Archbishop of Mechlin, was Bishop of Namur from 1865 to 1867.

Two abbeys in the Diocese of Namur had great renown during the Middle Ages: the Benedictine Abbey of Brogne, founded by St. Gerard (see GÉRAUD, SAINT, Abbot of Brogne), and the Premonstratensian Abbey of Floreffe (q. v.). In 1819 a preparatory seminary was installed at Floreffe, which was suppressed by the Government in 1825 and re-established in 1830. The Benedictine Abbey of Gemblours, founded in 922 by Guibert de Darnau, acquired great renown in the twelfth century. Sigebert and Gottschalk wrote there an important chronicle. Ravaged by the Calvinists in 1578, and by fire in 1712, the Abbey of Gemblours was suppressed in 1793. The Abbey of Waulsort was founded in 946 for Scotch (Irish) monks under Benedictine rule. Its first two abbots were St. Maccellan and St. Cadroes; the bishop St. Forannan (d. 980) was also Abbot of Waulsort. In 1131 Innocent II consecrated the main altar of the church of the Abbey of Géronsart, administered by the Canons Regular of St. Augustine. The buildings of the Abbey of Paix Notre-Dame, founded in 1613 by the Reformed Benedictines of Douai, have since 1831 sheltered a college of the Jesuits. The Assumptionist fathers have a novitiate at Bure. A very important centre of studies was founded at Maredsous in 1872 by the Benedictines; it was erected into an abbey in 1878, and in 1888 provided with a beautiful Gothic church. The "*Revue Bénédictine*" and the "*Analecta Maredsolana*" have already assured the fame of this abbey. The first abbot was Placide Wolter, who in 1890 became Abbot of Beuron; the second was Hildebrand de Hemptinne, who, in 1893, became Abbot of St. Anselm at Rome and primate of the Benedictine Order. In 1907 there were in the community of Maredsous 140 monks, 64 of whom were priests. A college for higher education and a technical school are connected with the abbey. At Maredret, near Maredsous, was established in 1893 the Benedictine abbey of St. Scholastica, which in 1907 numbered 41 nuns.

The Diocese of Namur honours with special veneration Sts. Maternus, Servatus (Servais), and Remacu-

lus, the first apostles of the Diocese of Tongres, which later became that of Liège (q. v.), and some saints of the Diocese of Liège, Sts. Lambert, Hubert, and Juliana. Mention may also be made of St. Foillan, of Irish origin, founder, in 650, of the monastery of Fosses; St. Begge, sister of St. Gertrude of Nivelles, and foundress, in 692, of the monastery of Andenne, where her relics are preserved; St. Hadelin, founder of the monastery of Celles, d. about 690; St. Walhère, or Vohy, parish priest of Onhay (thirteenth century); St. Mary of Oignies, b. at Nivelles about 1177, celebrated for her visions, d. at the béguinage of Oignies, where her director, Jacques de Vitry, who became Bishop of St. Jean d'Acre and cardinal, wished also to be buried. Lastly, the Diocese of Namur honours in a special manner the Martyrs of Gorkum, whose relics it possesses. At Arlon, which now belongs to the diocese, was born Henri Busch, famous as "Bon Henri", founder of the shoemakers' and the tailors' fraternities in Paris (seventeenth century).

The religious congregations administer in the Diocese of Namur, according to "La Belgique Charitable", 2 orphanages for boys, 7 for girls, 1 mixed, 18 hospitals or infirmaries, 4 clinics, 194 infant schools, 1 house of rescue, 6 houses for the care of the sick in their homes, 1 asylum for deaf mutes, 2 houses of retreat, 1 insane asylum. In 1907 the Diocese of Namur numbered 583,722 inhabitants, 36 deaneries, 37 parishes, 677 succursals, 96 auxiliary chapels, 111 curacies paid by the State.

GEORGES GOYAU.

Nancy, DIOCESE OF (NANCEIENSIS ET TULLENSIS), comprises the Departments of Meurthe and Moselle, France, suffragan of Besançon. The See of Nancy is the heir, so to speak, of the celebrated See of Toul.

St. Mansuetus, Apostle of the Leuci and first Bishop of Toul, and according to some a disciple of St. Peter, cannot have been anterior to the fourth century. The dates of his saintly successors, Amundus, Alchas, and Celsinus, cannot be determined. Among the bishops of Toul should be mentioned: St. Auspicius (about 470); St. Ursus (Ours), from whom Clovis in 496 requested an ecclesiastic to instruct him in the teachings of Christianity; St. Epyre (Aper) (500-505), brother of St. Evronie (Apronia); St. Albant (about 508), established a community of ecclesiastics from which originated the Abbey of St. Epyre; St. Leudinus-Bodo (second half of the seventh century), founder of the monastery of Bon Moustiers and brother of St. Salaberge, foundress and first abbess of the monastery of Laon; St. Jacob (756-65); St. Gauzelin (922-62), who reformed the monastery of St. Epyre and founded that of Notre-Dame de Bouxières; St. Gerard (963-94); Bruno of Dagsbourg (1026-51), eventually St. Leo IX; Guillaume Fillâtre (1449-60); Cardinal John of Lorraine (1517-43), who held twelve sees and six large abbeys; Charles of Lorraine, cardinal of Vaudeumont (1580-87); Cardinal Nicholas François of Lorraine (1625-34); André du Saussay (1649-75), author of "Martyrologium Gallicanum".

The title of count and the rights of sovereignty of the medieval Bishops of Toul originated in certain grants which Henry the Fowler gave St. Gauzelin in 927. The See of Toul was disturbed by the Conflict of Investitures in 1108. The chapter was divided; the majority elected Riquin of Commercy bishop; the minority chose Conrad of Schwarzenburg. Henry V declared for the latter; Pascal II for the former, but nevertheless he granted Conrad the title of bishop,

provided he performed no episcopal office. In 1271 grave differences broke out again in the chapter of Toul; after seven years' vacancy the Holy See rescinded the four elections made by the chapter, and in 1278 Nicholas III personally appointed as bishop Conrad of Tübingen. Thenceforth it was generally the Holy See which appointed the bishops, alleging various reasons as the vacancies arose, hence the many Italian prelates who held this important see until 1552, when Toul was occupied by France. In 1597 Charles III, Duke of Lorraine, impatient of his dependence on a diocese henceforth French, asked Clement VIII for the dismemberment of the See of Toul and the creation of a see at Nancy; this failed through the opposition

THE CATHEDRAL, NANCY

of Arnaud d'Ossat, Henry's ambassador at Rome. Clement VIII, however, decided that Nancy was to have a primatial church and that its prelate would have the title of primate of Lorraine and wear episcopal insignia, but should not exercise episcopal jurisdiction.

In 1777 and 1778 Toul lost territories out of which were formed two new dioceses: Saint-Dié and Nancy, both of them suffragans of Trier. The Concordat of 1802, which suppressed Toul, made Nancy the seat of a vast diocese which included the three Departments of Meurthe, Meuse, and Vosges; the latter two were detached from Nancy in 1822 on the re-establishment of the Dioceses of Verdun and Saint-Dié. When France lost Alsace-Lorraine in 1871, Nancy lost the arrondissements of Sarrebourg and Château-Salins which, having become German, were united with the Diocese of Metz. Nancy however annexed the arrondissement of Briey which remained French, and was detached from the Diocese of Metz (consistorial decrees of 10 and 14 July, 1874). Since 1824 the bishops of Nancy have borne the title of Bishops of Nancy and Toul, as the ancient Diocese of Toul is almost entirely united with Nancy. It has had some illustrious bishops: Forbin-Janson (1824-44); Darboy (1859-63); the future Cardinal Laviege (1863-67); and the future Cardinal Foulon (1867-82). Since 1165, whenever the Bishop of Toul officiated pontifically, he wore an ornament called *surhumeral*, or *rationale*, a sort of pallium covered with precious stones, which decoration he alone of all the bishops of the Latin Church wore. A brief of 16 March, 1865, re-

Aindre; Actardus (843-71), during whose time the Breton prince, Nomenoe, in his conflict with the metropolitan See of Tours (q. v.), created a see at Guérande, in favour of an ecclesiastic of Vannes, in the heart of the Diocese of Nantes; the preacher Cospeau (1621-36). The diocese venerates: the monk St. Hervé (sixth century); the hermits Sts. Friard and Secondel of Beané (sixth century); St. Victor, hermit at Cambon (sixth or seventh century); the English hermit Vital, or St. Viaud (seventh or eighth century); the Greek St. Benoit, Abbot of Masserac in Charlemagne's time; St. Martin of Vertou (d. 601), apostle of the Herbages district and founder of the Benedictine monastery of Vertou; St. Hermeland, sent by St. Lambert, Abbot of Fontenelle, at the end of the seventh century to found on an island in the Loire the great monastery of Aindre (now Indret); the celebrated missionary St. Amand, Bishop of Maastricht (seventh century), a native of the district of Herbages. Blessed Françoise d'Amboise (1427-85), who became Duchess of Brittany in 1450, had a great share in the canonization of St. Vincent Ferrier, rebuilt the choir of the collegiate church of Notre-Dame, and founded at Nantes the monastery of the Poor Clares. Widowed in 1457, she resisted the intrigues of Louis XI, who urged her to contract a second marriage, and in 1468 became a Carmelite nun at Vannes. In 1477, at the request of Sixtus IV, she restored the Benedictine monastery of Couëts, near Nantes. The philosopher Abelard (q. v.) was a native of the diocese. The Abbey of La Meilleraye, founded in 1132, was the beginning of an establishment of Trappist Fathers, who played a most important part in the agricultural development of the country. The crusades were preached at Nantes by Blessed Robert of Arbrissel, founder of Fontevrault. Venerable Charles of Blois won Nantes from his rival Jean de Montfort in 1341. On 8 August, 1499, Louis XII married Anne of Brittany at Nantes—a marriage which later led to the annexation of the Duchy of Brittany to the Crown of France (1532). Chateaubriant, a town of the diocese, was a Calvinistic centre in the sixteenth century. For the Edict of Nantes (1595), which granted Protestants religious freedom and certain political prerogatives, see HUGUENOTS.

In 1665, by order of Louis XIV, Cardinal Retz was imprisoned in the castle of Nantes, from which he contrived to escape. A college was created at Nantes in 1680 for the education of Irish ecclesiastics. Certain regions of the diocese were, during the Revolution, the scene of the War of La Vendée, waged in defence of religious freedom and to restore royalty. At Savenay in December, 1793, succumbed the remains of the Vendean army, already defeated in the battle of Cholet. The atrocities committed at Nantes by the terrorist Carrier are well-known. Four councils were held at Nantes, in 660, 1127, 1264, and 1431. The mausoleum of Francis II, last Duke of Brittany, executed in 1507 by Michel Colomb, is one of the finest monuments of the Renaissance. The chief places of pilgrimage of the diocese are: Notre-Dame de Bon Garant at Orvault, a very old pilgrimage, repeatedly made by Francis II, Duke of Brittany; Notre-Dame de Bon Secours at Nantes, a pilgrimage centre which dates back to the fourteenth century; Notre-Dame de Toutes Aides. Notre-Dame de Miséricorde became a place of pilgrimage in 1026 in memory of the miracle by which the country is said to have been freed from a dragon; the present seat of the pilgrimage is the Church of St. Similien at Nantes. Before the law of 1901 against congregations, the diocese counted Capuchins, Trappists, Jesuits, Missionary Priests of Mary, Augustinians, Franciscans, Missionaires of Africa, Premonstratensians, Sulpicians, and several orders of teaching brothers. The Ursulines of Nantes were established by St. Angela of Merici in 1540.

Among the congregations for women originating in the diocese are: the Sisters of Christian Instruction, a teaching order founded in 1820 at Beignon (Diocese of Vannes) by Abbé Deshayes, of which the mother-house was transferred to St-Gildas des Bois in 1828; Sisters of the Immaculate Conception, a teaching and nursing order, founded in 1853 (mother-house at La Haye Mahéas); Franciscan Sisters, founded in 1871 (mother-house at St-Philbert de Grandlieu); Oblate Franciscan Sisters of the Heart of Jesus, founded in 1875 by Mlle Gazeau de la Brandannière (mother-house at Nantes). At the beginning of the twentieth century, the religious congregations of the diocese conducted three *crèches*, 44 day nurseries, 3 homes for sick children, 1 institution for the blind, 1 deaf and dumb institution, 6 boys' orphanages, 17 girls' orphanages, 3 homes for poor girls, 1 institution for the extinction of mendicity, 2 houses of mercy, 1 house to supply work to the unemployed, 1 vestiar, 10 houses of visiting nurses, 7 homes for invalids and for retirement, 23 hospitals or asylums. The Diocese of Nantes has 664,971 Catholics, 52 parishes, 209 succursal parishes.

GEORGES GOYAU.

Nantes, EDICT OF. See HUGUENOTS.

Nanteuil, ROBERT, French engraver and crayonist, b. at Reims, 1623 (1626, or 1630); d. at Paris, 1678. Little is known of his early life save that his father, a merchant of Reims, sent him to the Jesuit school, where he received a splendid classical training but no encouragement to draw.

In every spare moment he was busy with his pencil or burin, and he even engraved on the trees in the forest. He cut in wood a "Christ" and a "Virgin", copying from old copper plates. He later went to the Benedictines, who fostered his artistic bent; one of the order, who patiently sat for him, is seen in the "Buste d'un Religieux" (published in 1644).

He also engraved ornaments for his thesis in philosophy in 1645 (Piety, Justice, and Prudence Saluting the University), both these early attempts with the graver being notable successes. His family being in dire financial straits, Nanteuil went to Paris (1648), and worked with Regnerson whose sister he had married. His style now changed and developed quickly: his first method had been to use straight lines only, shallow or deep; then he practised cross-hatching and added stippling for the middle-tints (in this following Boulanger). The acme of his style shows special strokes and individual treatment for each part of the face and for each texture of the draperies. His crayon and pastel por-

traits brought him a pension of 1000 *livres* and the appointment of Royal Engraver (1658), together with an atelier in the Gobelins. Two years later Louis XIV issued an edict, mainly inspired by Nanteuil, lifting engraving out of the realm of mechanical arts and giving to engravers all the privileges of other artists.

Nanteuil's bold, broad, and vigorous pastel or crayon life-size sketches have nearly all disappeared, for he used them only as studies for his engravings; and his rich, yet delicate and silvery tones, his splendid modelling of the face, his suggestion of colour throughout the plate and unaffected justness of the likeness are largely due to his following the fresh and crisp sketch in chalks. He engraved portraits of many of the princes of Europe and of all the celebrated men of France in Louis XIV's time. Of the *Grand Monarque* alone he made nineteen portraits at various periods of his life. He was rich, affable, and very generous, and would often send back payments for great plates when he found the sitters were poor. He was received by the nobility and men of letters, and himself wrote poetry and recited pleasingly. His verses are often to be found beneath his portraits. He was the pioneer of modern engraving, and much of his work equals and strongly resembles the best of recent times. He was a rapid and prolific worker, many of his 243 plates being life-size. Fairthorne, a great English engraver, learned much from him, and Edelinck was his friend and follower. His masterpieces are: J. B. van Steenberghen (after Duchatel), called "L'Advocat de Hollande" (1668); M. de Pomponne (after Le Brun); Jean Loret; Duchesse de Nemours; and Marshal Turenne. A few of his chalk originals are in the Louvre and all of his 243 plates are in the Bibliothèque Richelieu.

LEIGH HUNT.

Naphtali. See NEPHTALI.

Naples, the capital of a province in Campania, southern Italy, and formerly capital of the Kingdom of the Two Sicilies; it is situated on the northern side of the bay of Naples, on the Capodimonte, the Vomero, and the Posilipo hills, in one of the most enchanting spots upon the earth. The most populous town in Italy, its suburbs stretch along the bay, as far as Torre Annunziata. Naples is a very industrial town, and its fisheries, navigation, and commerce are very active; commercially, it is the most important centre of Italy, after Genoa, and contains an arsenal of the Royal Navy. In its neighbourhood, the vine and all species of esculent plants are cultivated; and fruits and vegetables are exported in great quantities. The silk industry is very important. Naples has frequently been damaged by the eruptions of the neighbouring Mt. Vesuvius; the most memorable of these occurred in the year 72 of the Christian era, the first eruption of Vesuvius after several centuries of inactivity; in 205, 407, 512, 982, and 1139, the eruptions were less violent; until 1631, the volcano gave no signs of activity, and was covered with vegetation; there were more or less violent eruptions, however, in 1680, 1694, 1707, 1723, 1794, 1804, 1805, 1822, 1828, 1839, 1850, and 1872; the eruption of 1904 was one of the most violent of all, and caused the ruin of Ottaviano and of San Giuseppe.

BUILDINGS.—*Sacred.*—The cathedral or church of Saint Januarius, begun by order of Charles of Anjou in 1272, on the site of the ancient Stefania cathedral of the eighth century, and completed in 1341, the work of Niccolò Pisano, Maglione, and Masuccio, is in Gothic style with three naves; the façade, modified by the restoration of 1788, has been brought again to its original style; its principal door is a work of Babucio Piferano (1407), while its chapel of St. Restituta is said

to date from the time of Constantine. The fourteen pilasters are adorned with busts of famous archbishops of Naples. In the crypt, which was built by Malvito by order of Archbishop Carafa, is venerated the body of St. Januarius, taken there from Montevergine in 1479. Of the lateral chapels, that of the Treasure is the most notable; it is there that the head of St. Januarius and the ampullæ that contain the martyr's blood are preserved (see JANUARIUS, St.). The cathedral contains the superb sepulchres of Innocent IV and of Cardinal Minutoli, the second, a work of Girolamo d'Auria; also, valuable thirteenth-century frescos of Santafede, Vincenzo Forti, Luca Giordano, and others, and paintings by John of Nola, Franco, Perugino, and Domenichino. Among other churches are the church of St. Augustine of the Mint, which has a pulpit of the fifteenth century, sculptures by Vincent d'Angelo and Jian da Nola, and a painting by Diana (the Communion of St. Augustine); the church of the Holy Apostles, restored in 1608 by the labour of famous artists, among whom were Giordano, Marco da Siena, Bonomini, and Dolci, the tabernacle of the high altar being the work of Caugiano; the church of S. Domenico Maggiore, dating from 1255, is rich in paintings, mosaics, and sepulchres, and in the ancient monastery connected with this church is the cell of St. Thomas Aquinas; the church of Donna Regina, built by Mary of Hungary, in 1300, and renewed by the Theatine Guarino in 1670, contains valuable paintings and frescos, and also, the tomb of the foundress.

The church of St. Philip Neri, in baroque style, by Dionisio di Bartolomeo (1592), contains statues by Sammartino, and both the church and the sacristy have very valuable paintings by Luke Giordano, Guerra, Guido Reni, Caravaggio, Spagnoletto, Domenichino, and others; the church of St. Francis of Paul (1817), an imitation of the Pantheon, with two wings that have porticoes, is adorned with paintings of the nineteenth century. The church of San Giacomo of the Spaniards (1540) is decorated with works of art; St. John Carbonara (1343) contains the mausoleums of King Ladislaus and of the constable Sergianni Caracciolo, and paintings by famous artists. The church of St. Barbara, a work of Giuliano di Maiano, has a beautiful bas-relief of the Madonna with angels over the principal entrance, and another fine bas-relief within the edifice; adjacent to the church is the cell inhabited by St. Francis of Paula. The church of St. Clare (1310), restored in 1752, contains the mausoleums of Robert the Wise and of other personages, and also, paintings by Lanfranco, Giotto, and other artists; the pulpit is a graceful work of art. The church of Santa Maria del Carmine, built in the thirteenth century, and restored in 1769, contains the tomb of Conradin executed by Schoepf in 1874 by order of King Louis of Bavaria. The church of St. Mary of Piedigrotta, where each year, about September, popular feasts are celebrated; the church of St. Anna of the Lombards of Mt. Olivet (1411) contains many works of art, and also the tomb of the architect Charles Fontana; the church of St. Peter *ad aram*, so called because it contains an altar upon which St. Peter is said to have celebrated Mass. The church of Santa Maria del Parto, built by the poet Sannazaro, contains the mausoleum of its founder, a work of Fra Giovanni Montorsoli; the church of S. Paolo Maggiore, built on the ruins of the ancient temple of Castor and Pollux, after the plans of the Theatin Grimaldi; the church of SS. Severinus and Sosius, which is very ancient, was restored in 1490 and in 1609. While painting the vault of this temple, the artist Correnzio, falling from the scaffolding, was killed and he lies buried at the place of his fall; other artists have also adorned this church with fine works. The church of the Most Holy Trinity, or the New Gesù, an ancient palace converted into a church by the Jesuit Proveto (1584). Mention should be made, however, of the catacombs, near the

church of St. Januarius of the Poor, famous in the second century, and of the new cemetery, rich in artistic monuments, among which are the *Pietà* by Call in the chapel, and the statue of Religion by Angelini.

Secular.—The Royal Palace, which ranks among the grandest of palaces on account of the majestic severity of its style, was begun in the early part of the seventeenth century by the viceroy Count of Lemos according to the designs of Domenico Fontana; it has a sumptuous interior, and contained valuable artistic collections, one of which, consisting of 40,000 engravings, is now at the Museo Nazionale. There is another royal palace at Capodimonte, built by Charles III, where there is a collection of arms and of modern paintings; the Palace of the Prefecture is modern; S. Giacomo Palace, formerly the residence of the minister of State, now contains the municipal and

ical institute, a nautical institute, and many intermediate schools. The National Library has nearly 390,000 volumes, and the Brancacciana Library more than 115,000 volumes. The State Archives are very important. Nearly all of the great families of the ancient Kingdom of Naples built sumptuous palaces, the private monumental architecture of Naples antedating that of Florence. Naples has more than 60 charitable institutions, some of which date from the thirteenth century, as, for example, the boarding-school of St. Eligius (1273), accommodating 300 young girls; the Casa Santa dell' Annunziata (1304); the boarding-school del Carmelo (1611), for 300 girls; and St. Januarius of the Poor (1669). Few ancient monuments are to be found at Naples; there is the piercing of the Posilipo ridge (*crypta neapolitana*), 815 yards in length, done by one Cocceius, probably under Tiberius, and there are the ruins of villas of the ancient

other offices. The Capuan Castle, built by William I in 1131, and thereafter the residence of the Durazzos, of the sovereigns of the house of Aragon, and of the viceroys, is now the court-house; the Castle of the Egg, also built by William I (1154), is at present a barrack and a fort, as are also Castel del Carmine and Castelnuovo, built by Charles I, and having a triumphal arch of Alfonso of Aragon. Castel San Erasmo is a fort, situated upon a height commanding the city and the harbour. The museum of ancient art at Naples is one of the best of its kind in the world; its chief sculptures, the Hercules, the Farnese Bull, and others, are from the collections of the Farnese family, and it possesses many interesting objects found in the ruins of Pompeii and Herculaneum, frescos and mosaics, among others; it contains also rich collections of cameos, coins, and inscriptions (Neapolitan laws), besides a gallery of pictures. At S. Martino, a former convent of the Cistercians, there is a collection of paintings by Neapolitan artists, which belonged, for the most part, to that monastery. The Filanzieri Museum and the Gallery of the Fondi palace should also be noted. The aquarium for the study of submarine animal life was established by the co-operation of several countries, among them, the United States. There is at Naples a university founded in 1224, furnished with various scientific collections and with a library of more than 250,000 volumes; the town has a seminary, a theolog-

ical institute, a nautical institute, and many intermediate schools. The National Library has nearly 390,000 volumes, and the Brancacciana Library more than 115,000 volumes. The State Archives are very important. Few ancient monuments are to be found at Naples; there is the piercing of the Posilipo ridge (*crypta neapolitana*), 815 yards in length, done by one Cocceius, probably under Tiberius, and there are the ruins of villas of the ancient

city, of a theatre and some temples; there is also the tomb of Vergil on the Pozzuoli road.

HISTORY.—Naples was founded by Greeks from Cumæ, and Cumæ, according to Mommsen, is the Palæopolis to which Livy refers as existing not far from Naples and as being allied with the latter city against the Samnites. Naples, also, was obliged to receive the Samnites within its walls and to give to them participation in the government of the city, which explains her ambiguous conduct towards Rome during the Samnite War (325 B. C.). In its alliance with Rome, Naples furnished only ships. During the Punic War, the town was so strongly fortified that Hannibal did not venture to attack it. When Roman citizenship was offered to Naples, the latter accepted, on condition that it should retain its language and its municipal institutions; and consequently, even in the time of Tacitus, Naples was a Greek city, to which those Romans who wished to devote themselves to the study of philosophy betook themselves by preference. In the games, called *Sebasta*, celebrated at Naples every five years, Nero once appeared. In 476, the last Emperor of the West was relegated to this city. The capture of Naples by Belisarius, in the Gothic War, when he entered the city through the tube of the aqueduct (536), is famous. Totila recaptured the town in 543, but the battle of Mt. Vesuvius decided the fate of the Goths, and Naples came under the Byzantine power, receiving a *dux* who depended

try, and after a long war Joanna was restored (1352). Having no children, she adopted as her heir Louis of Anjou, a brother of Charles V, King of France. This action led Charles of Durazzo to declare war upon Joanna, in which he received the support of Urban VI; the queen was killed (1382), and Louis, also, having died (1384), the throne was left to Charles without a contestant, but Charles died in Hungary in 1386.

Many who were dissatisfied with the regency for Ladislaus I, the minor son and heir of Charles, called to the throne Louis (II) of Anjou, also a minor, and thereby gave rise to a new war between the Durazzo and the Angevin parties. Ladislaus was victorious (1400) and sought to restore to Naples its preponderance in Italy; in this attempt, he invaded the Pontifical States, and entered Rome itself (1408 and 1410). His successor was Joanna II (1414-1434), who was noted for the perversity of her life. Louis III (of Anjou) declared war against her in 1420, on which account she adopted Alfonso V, son of Ferdinand of Aragon and Sicily; but as that prince wished the immediate possession of the kingdom, Joanna adopted Louis III, and after his death in 1434 his brother René. The latter, assisted by Filippo Visconti, defeated the Sicilian fleet of Alfonso near Ponza, in 1435; Alfonso himself was taken prisoner to Milan, but was soon set at liberty, and received even the assistance of Filippo to conquer Naples, which he accomplished in 1442, establishing Spanish rule in that kingdom, which he left in 1458 to his illegitimate son, Ferdinand, while Sicily remained united to Aragon. Ferdinand refused to pay tribute to the pope, his suzerain, usurped ecclesiastical rights, violated boundaries, and in other ways provoked the displeasure of the barons of the kingdom and of Innocent VIII; the latter, therefore, gave his support to the barons, who revolted (1484-87), but Lorenzo de' Medici restored harmony to the state. Scarcely had Alfonso II ascended the throne (1494), when Charles VIII, wishing to maintain the rights which he claimed to inherit from the House of Anjou to the throne of Naples, undertook his famous expedition into Italy. Alfonso II, knowing the hatred in which he was held, abdicated in favour of his son Ferdinand II; vainly, however, for almost without striking a blow, Charles became master of the kingdom. His success was but transitory, and Ferdinand was able to return to Naples in 1496, leaving the principal ports of the Adriatic coast in the hands of the Venetians. By the Treaty of Granada, Ferdinand the Catholic and Louis XII divided the Kingdom of Naples between themselves at the expense of Frederick II, who had succeeded Ferdinand, and whose territory they invaded. There soon arose contentions between the two invaders with the result that Gonzalvo de Cordova drove the French from Italy (battle of Cerignola, 1503), and Naples thereafter was governed by Spanish viceroys. In 1528, the French general Lautrec had reached the walls of Naples, when Andrew Doria suddenly passed over with his fleet to the side of the Spaniards, who remained masters of the country. There were a great many insurrections against Spanish rule; in 1547, on account of the attempt to introduce the Inquisition; in 1599, at the instigation of Tommaso Campanella, O.P.; in 1647 (Giuseppe d'Allesio at Messina, and Masaniello at Naples) it was proposed to offer the crown to Duke Henry of Guise; in 1674, there was a revolt at Messina; all of these insurrections were suppressed.

In the war of the Spanish succession, Naples was conquered by the Austrians for Charles III, son of Emperor Leopold, and pretender to the throne of Spain; later, he became emperor as Charles VI. At the peace of Utrecht (1713), Sicily was given to King Amadeus of Savoy, but in 1720, it was reunited to Naples. In 1734 Charles of Bourbon, son of Duke Philip of Parma, assisted by the Spanish general Montemar, conquered Naples without much difficulty

and took the name of Charles III; the Austrians attempted in the following year to retrieve their loss, but were defeated at Velletri. Charles introduced many reforms, several, however, to the disadvantage of the Church (Tannucci ministry), and consequently he had difficulties with the Holy See which were not entirely cleared away by the concordat of 1755. When Charles ascended the throne of Spain, he left Naples to his third son Ferdinand IV (1759-1825). Having failed to drive the French from the Papal States in 1798, Ferdinand was compelled to withdraw to Sicily; the French invaded Naples, and in January, 1799, proclaimed the Parthenopian Republic. The kingdom was soon restored, however, through the efforts of Cardinal Fabricius Ruffo Scilla. In 1806, Naples was again conquered by Joseph Bonaparte, who became its king; upon ascending the throne of Spain, he was succeeded at Naples by Murat, who was dethroned and killed in 1815. In 1820-21 sectarian agitations brought about an insurrection; the king gave a constitution, but was compelled by Austria to withdraw it, and with Austrian assistance, returned to the throne (1821). Under Francis I (1825) and Ferdinand II (1830-59), conspirators maintained their activity, especially in 1848 and 1849, when Sicily again attempted to sever its union with Naples. Cavour gave his support to the expedition of Garibaldi against Francis II. Garibaldi landed at Marsala on 11 May, 1860, and soon conquered Sicily; he then passed over to Calabria, and on 7 September, took Naples. After the battle of Volturmo (1 October), the regular troops of Piedmont entered the Kingdom of Naples, and King Francis withdrew to Gaeta, where, after a brave resistance, he capitulated on 12 February, 1861, and signed the annexation of his dominions to the Kingdom of Italy.

According to a legend connected with the church of St. Peter *ad aram*, the Apostle on his way to Rome consecrated as Bishop of Naples St. Asprenus, a brother of St. Candida, who had given hospitality to St. Peter. This St. Candida, however, is probably the one who lived in the sixth century and whose metrical epitaph is preserved. At all events, it was natural that Christianity should be taken to Naples at an early date, especially among the Hebrews, since that city was in the neighborhood of Pozzuoli (Acts, xxviii, 13), and the catacombs of St. Januarius, St. Severus, and St. Gaudiosus show that there was a considerable number of Christians at Naples in the beginning of the second century. Hence the establishment of the episcopal see may date from that time, as there is record of only nine bishops prior to 300, the first of them being Asprenus; the sixth, St. Agrippinus, suffered martyrdom, possibly under Valerian; the deacons Marianus and Rufus, also, were martyred. Bishop St. Maximus was exiled by Constantius on account of the prelate's firm catholicity (357?). At the close of the fourth century, the pagans were still numerous, and the pagan Symmachus calls Naples *urbs religiosa* (Epist. I, VIII, 27). The first removal of the body of St. Januarius from Pozzuoli to Naples took place under Bishop Severus (367); Bishop St. Nostrianus (about 450) fought against Pelagianism and during his incumbency, St. Gaudiosus, fleeing from the persecutions of the Vandals in Africa, landed at Naples, and died there. Bishop Demetrius was deposed by St. Gregory the Great (593), who appointed to the See of Naples the Roman Fortunatus; the courage of Bishop St. Angelus (671-91) saved the city from the invasion of the Saracens; Sergius, before he became bishop in 716, was famous for having retaken the castle of Cuma from the Lombards. St. Paul I (762), a friend of Pope Paul I, was prevented from taking possession of his diocese by the iconoclast *dux*; St. Tiberius (818) died in prison, in which he was confined because of his condemnation of the wickedness of the consul Bonus; St. Athanasius I (850) was persecuted by his nephew, the

NAPOLÉON — PAUL DELAROCHE

too easy, and when a prelate was sent to Paris to negotiate the treaty, he was told that as an indispensable condition of peace, Pius VI must revoke the Briefs relating to the Civil Constitution of the clergy and to the Inquisition. The pope refused, and negotiations were broken off; they failed again at Florence, where an attempt had been made to renew them.

During these pourparlers between Paris and Rome, Bonaparte repulsed the repeated efforts of the Austrian Wurmser to reconquer Lombardy. Between 1 and 5 August, Wurmser was twice beaten at Lonato and again at Castiglione; between 8 and 15 September, the battles of Roveredo, Primolano, Bassano, and San Giorgio forced Wurmser to take refuge in Mantua, and on 16 October Bonaparte created the Cispadan Republic at the expense of the Duchy of Modena and of the Legations, which were pontifical territory. Then, 24 October, he invited Cacaault, the French minister at Rome, to re-open negotiations with Pius VI "so as to catch the old fox"; but on 28 October he wrote to the same Cacaault: "You may assure the pope that I have always been opposed to the treaty which the Directory has offered him, and above all to the manner of negotiating it. I am more ambitious to be called the preserver than the destroyer of the Holy See. If they will be sensible at Rome, we will profit by it to give peace to that beautiful part of the world and to calm the conscientious fears of many people." Meanwhile the arrival in Venetia of the Austrian troops under Alvinzi caused Cardinal Busca, the pope's secretary of State, to hasten the conclusion of an alliance between the Holy See and the Court of Vienna; of this Bonaparte learned through intercepted letters. His victories at Arcoli (17 November, 1796) and Rivoli (14 January, 1797) and the capitulation of Mantua (2 February, 1797), placed the whole of Northern Italy in his hands, and in the spring of 1797 the Pontifical States were at his mercy.

The Directory sent him ferocious instructions. "The Roman religion", they wrote, "will always be the irreconcilable enemy of the Republic; first by its essence, and next, because its servants and ministers will never forgive the blows which the Republic has aimed at the fortune and standing of some, and the prejudices and habits of others. The Directory requests you to do all that you deem possible, without rekindling the torch of fanaticism, to destroy the papal Government, either by putting Rome under some other power or—which would be still better—by establishing some form of self-government which would render the yoke of the priests odious." But at the very moment when Bonaparte received these instructions he knew, by his private correspondence, that a Catholic awakening was beginning in France. Clarke wrote to him: "We have become once more Roman Catholic in France", and explained to him that the help of the pope might perhaps be needed before long to bring the priests in France to accept the state of things resulting from the Revolution. Considerations such as these must have made an impression on a statesman like Bonaparte, who, moreover, at about this period, said to the parish priests of Milan: "A society without religion is like a ship without a compass; there is no good morality without religion." And in February, 1797, when he entered the Pontifical States with his troops, he forbade any insult to religion, and showed kindness to the priests and the monks, even to the French ecclesiastics who had taken refuge in papal territory, and whom he might have caused to be shot as *émigrés*. He contented himself with levying a great many contributions, and laying hands on the treasury of the Santa Casa at Loretto. The first advances of Pius VI to his "dear son General Bonaparte" were met by Bonaparte's declaring that he was ready to treat. "I am treating with this rabble of priests [*cette prêtraille*], and for this once Saint Peter will again save the Capitol", he wrote to Joubert, 17

February, 1797. The Peace of Tolentino was negotiated on 19 February: the Holy See surrendered the Legations of Bologna, Ferrara, and Ravenna, and recognized the annexation of Avignon and the Comtat Venaissin by France. But Bonaparte had taken care not to infringe upon the spiritual power, and had not demanded of Pius VI the withdrawal of those Briefs which were offensive to the Directory. As soon as the treaty was signed he wrote to Pius VI to express to him "his perfect esteem and veneration"; on the other hand, feeling that the Directory would be displeased, he wrote to it: "My opinion is that Rome, once deprived of Bologna, Ferrara, the Romagna, and the thirty millions we are taking from her, can no longer exist. The old machine will go to pieces of itself." And he proposed that the Directory should take the necessary steps with the pope in regard to the religious situation in France.

Then, with breathless rapidity, turning back towards the Alps, and assisted by Joubert, Masséna, and Bernadotte, he inflicted on Archduke Charles a series of defeats which forced Austria to sign the preliminaries of Leoben (18 April, 1797). In May he transformed Genoa into the Ligurian Republic; in October he imposed on the archduke the Treaty of Campo Formio, by which France obtained Belgium, the Rhine country with Mainz, and the Ionian Islands, while Venice was made subject to Austria. The Directory found fault with this last stipulation; but Bonaparte had already reached the point where he could act with independence and care little for what the politicians at Paris might think. It was the same with his religious policy: he now began to think of invoking the pope's assistance to restore peace in France. A note which he addressed to the Court of Rome, 3 August, 1797, was conceived in these terms: "The pope will perhaps think it worthy of his wisdom, of the most holy of religions, to execute a Bull or ordinance commanding priests to preach obedience to the Government, and to do all in their power to strengthen the established constitution. After the first step, it would be useful to know what others could be taken to reconcile the constitutional priests with the non-constitutional."

While Bonaparte was expressing himself thus, the Councils of the Five Hundred and the Ancients were passing a law to recall, amnesty, and restore to their civil and political rights the priests who had refused to take the oath of the Civil Constitution of the Clergy. But Directors Barrès, Rewbell, and Lareveillère-Lépeaux, considering that this act jeopardized the Republic, employed General Augereau, Bonaparte's lieutenant, to carry out the *coup d'état* of 18 Fructidor against the Councils (4 Sept., 1797), and France was once more a prey to a Jacobin and anti-Catholic policy. These events were immediately echoed at Rome, where Joseph Bonaparte, the general's brother, and ambassador from the Directory, was asked by the latter, to favour the Revolutionary party. Disturbances arose: General Duphot was killed in Joseph Bonaparte's house (28 December, 1797), and the Directory demanded satisfaction from the Holy See. General Bonaparte had just returned to Paris, where he apparently confined himself to his functions as a member of the Institute (Scientific Section). He was by no means anxious to lead the expedition against Rome, which the Directory was projecting, and contented himself with giving Berthier, who commanded it, certain instructions from a distance. For this expedition for Berthier's entry into Rome and the proclamation of the Roman Republic (10-15 February, 1798), and for the captivity of Pius VI, who was carried off a prisoner to Valence, see PRUS VI.

The Campaign in Egypt.—While in Paris, Bonaparte induced the Directory to take up the plan of an expedition to Egypt. His object was to make the Mediterranean a French lake, by the conquest of

Malta and the Nile Valley, and to menace England in the direction of India. He embarked on 19 May, 1798. The taking of Malta (10 June), of Alexandria (2 July), the battle of the Pyramids (21 July), gave Bonaparte the uncontested mastery of Cairo. At Cairo he affected a great respect for Islam; reproached with this later on, he replied: "It was necessary for General Bonaparte to know the principles of Islamism, the government, the opinions of the four sects, and their relations with Constantinople and Mecca. It was necessary, indeed, for him to be thoroughly acquainted with both religions, for it helped him to win the affection of the clergy in Italy and of the ulemas in Egypt." The French troops in Egypt were in great danger when the naval disaster of Aboukir, inflicted by Nelson, had cut them off from Europe. Turkey took sides with England: in the spring of 1799, Bonaparte made a campaign in Syria to strike both Turkey and England. Failing to effect the surrender of Acre, and as his army was suffering from the plague (May, 1799), he had to make his way back to Egypt. There he re-established French prestige by the victory of Aboukir (25 July, 1799), then, learning that the Second Coalition was gaining immense successes against the armies of the Directory, he left Kléber in Egypt and returned secretly to France. He landed at Fréjus, 9 October, 1799, and was in Paris seven days later. Besides certain political results, the expedition to Egypt had borne fruit for science: Egyptology dates its existence from the creation of the Institute of Egypt (Institut d'Égypte) by Bonaparte.

Bonaparte, First Consul.—While Bonaparte was in Egypt, the religious policy of the Directory had provoked serious troubles in France. Deportations of priests were multiplying; Belgium, where 6000 priests were proscribed, was disturbed; the Vendée, Normandy, and the departments of the South were rising. France was angry and uneasy. Spurred on by his brother Lucien, president of the Five Hundred, allied with Directors Sieyès and Roger-Ducos, Bonaparte caused Directors Gohier and Moulins to be imprisoned, and broke up the Five Hundred (18 Brumaire; 9-10 November, 1799). The Directorial Constitution was suppressed, and France thenceforward was ruled by three consuls. First Consul Bonaparte put into operation the Constitution known as that of the Year VIII, substituted for the departmental administrators elected by the citizens, others appointed by the Executive Power, and reorganized the judicial and financial administrations. He commissioned the Abbé Bernier to quiet the religious disturbance of the Vendéans, and authorized the return of the non-juring priests to France on condition of their simply promising fidelity to the laws of the republic. Then, to make an end of the Second Coalition, he entrusted the Army of Germany to Moreau, and, himself taking command of the Army of Italy, crossed the Great St. Bernard (13-16 May, 1800) and, with the co-operation of Desaix, who was mortally wounded, crushed the Austrians (14 June, 1800) between Marengo and San Giuliano at the very spot he had marked on the map in his study in the Tuileries. The Peace of Lunéville, concluded with Austria, 9 February, 1801, extended the territory of France to 102 departments.

Bonaparte spent the years 1801 and 1802 effecting internal reforms in France. A commission, established in 1800, elaborated a new code which, as the "Code Napoléon", was to be promulgated in 1804, to formally introduce some of the "principles of 1789" into French law, and thus to complete the civil results of the Revolution. But it was Napoleon's desire that, in the new society which was the issue of the Revolution, the Church should have a place, and consciences should be set at rest. The Concordat with the Holy See was signed on 17 July, 1801; it was published, together with the Organic Articles, as a law, 16 April, 1802. For these two acts, one of which established

the existence of the Church in France, while the other involved the possibility of serious interference by the State in the life of the Church, see CONCORDAT; ARTICLES, THE ORGANIC. Napoleon never said, "The Concordat was the great fault of my reign." On the contrary, years afterwards, at St. Helena, he considered it his greatest achievement, and congratulated himself upon having, by the signature of the Concordat, "raised the fallen altars, put a stop to disorders, obliged the faithful to pray for the Republic, dissipated the scruples of those who had acquired the national domains, and broken the last thread by which the old dynasty maintained communication with the country." Fox, in a conversation with Napoleon at this period, expressed astonishment at his not having insisted upon the marriage of priests: "I had, and still have, to accomplish peace", Napoleon replied, "theological controversies are allayed with water, not with oil." The Concordat had wrecked the hopes of those who, like Mme de Staël, had wished to make Protestantism the state religion of France; and yet the Calvinist Jaucourt, defending the Organic Articles before the Tribunat, gloried in the definitive recognition of the Calvinist religion by the state. The Jewish religion was not recognized until later (17 March, 1808), after the assembly of a certain number of Jewish delegates appointed by the prefects (29 July, 1806) and the meeting of the Great Sanhedrim (10 February—9 April, 1807); the State, however, did not make itself responsible for the salaries of the rabbis. Thus did the new master of France regulate the religious situation in that country.

On 9 April, 1802, Caprara was received for the first time by Bonaparte in the official capacity of Pius VII's legate *a latere*, and before the first consul took an oath which, according to the text subsequently published by the "Moniteur", bound him to observe the constitution, the laws, statutes, and customs of the republic, and nowise to derogate from the rights, liberties, and privileges of the Gallican Church. This was a painful surprise for the Vatican, and Caprara declared that the words about Gallican liberties had been interpolated in the "Moniteur". Another painful impression was produced at the Vatican by the attitude of eight constitutional priests whom Bonaparte had nominated to bishoprics, and to whom Caprara had granted canonical institution, and who afterwards boasted that they had never formally abjured their adhesion to the Civil Constitution of the clergy. In retaliation, the Roman Curia demanded of the constitutional parish priests a formal retraction of the Civil Constitution, but Bonaparte opposed this and when Caprara insisted, declared that if Rome pushed matters too far the consuls would yield to the desire of France to become Protestant. Talleyrand spoke to Caprara in the same sense, and the legate desisted from his demands. On the other hand, though Bonaparte had at first been extremely irritated by the allocation of 24 May, 1802, in which Pius VII demanded the revision of the Organic Articles, he ended by allowing it to be published in the "Moniteur" as a diplomatic document. A spirit of conciliation on both sides tended to promote more cordial relations between the two powers. The proclamation of Bonaparte as consul for life (August, 1802) increased in him the sense of his responsibility towards the religion of the country, and in Pius VII the desire to be on good terms with a personage who was advancing with such long strides towards omnipotence.

Bonaparte took care to gain the attachment of the revived Church by his favours. While he dissolved the associations of the Fathers of the Faith, the Adorers of Jesus, and the Panarists, which looked to him like attempts to restore the Society of Jesus, he permitted the reconstitution of the Sisters of Charity, the Sisters of St. Thomas, the Sisters of St.

Charles, and the Vatelotte Sisters, devoted to teaching and hospital work, and made his mother, Madame Lætitia Bonaparte, protectress of all the congregations of hospital sisters. He favoured the revival of the Institute of the Christian Schools for the religious instruction of boys; side by side with the *lycées*, he permitted secondary schools under the supervision of the prefects, but directed by ecclesiastics. He did not rest content with a mere strict fulfilment of the pecuniary obligations to the Church to which the Concordat had bound the State; in 1803 and 1804 it became the custom to pay stipends to canons and *desservants* of succursal parishes. Orders were issued to leave the Church in possession of the ecclesiastical buildings not included in the new circumscription of parishes. Though the State had not bound itself to endow diocesan seminaries, Bonaparte granted the bishops national estates for the use of such seminaries and the right to receive donations and legacies for their benefit; he even founded, in 1804, at the expense of the State, ten metropolitan seminaries, re-established, with a government endowment, the Lazarist house for the education of missionaries, and placed the Holy Sepulchre and the Oriental Christians under the protection of France. As to the temporal power of the popes Bonaparte at this period affected a somewhat complaisant attitude towards the Holy See. He restored Pesaro and Ancona to the pope, and brought about the restitution of Benevento and Pontecorvo by the Court of Naples. After April, 1803, Cacault was replaced, as his representative at Rome, by one of the five French ecclesiastics to whom Pius VII had consented to grant the purple late in 1802. This ambassador was no other than Bonaparte's own uncle, Cardinal Joseph Fesch (q. v.), whose secretary for a short time was Chateaubriand, recently made famous by his "*Le génie du Christianisme*". One of Bonaparte's grievances against Cacault was a saying attributed to the latter: "How many sources of his glory would cease if Bonaparte ever chose to play Henry VIII!" Even in those days of harmony Cacault had a presentiment that the Napoleonic policy would yet threaten the dignity of the Holy See.

The idea of a struggle with England became more and more an imperious obsession of Bonaparte's mind. The Peace of Amiens (25 March, 1802) was only a truce: it was broken on 22 May, 1803, by Mortier's invasion of Hanover and the landing of the English in French Guiana. Napoleon forthwith prepared for his gigantic effort to lay the ban of Europe on England. The Duc d'Enghien, who was suspected of complicity with England and the French Royalists, was carried off from Ettenheim, a village within the territory of Baden, and shot at Vincennes, 21 March, 1804, and one of Cardinal Fesch's first acts as ambassador at Rome was to demand the extradition of the French *émigré* Vernègues, who was in the service of Russia, and whom Bonaparte regarded as a conspirator.

NAPOLEON EMPEROR. *The Coronation.*—While the Third Coalition was forming between England and Russia, Bonaparte caused himself to be proclaimed hereditary emperor (30 April–18 May, 1804), and at once surrounded himself with a brilliant Court. He created two princes imperial (his brothers Joseph and Louis), seven permanent high dignitaries, twenty great officers, four of them ordinary marshals, and ten marshals in active service, a number of posts at Court open to members of the old nobility. Even before his formal proclamation as emperor, he had given Caprara a hint of his desire to be crowned by the pope, not at Reims, like the ancient kings, but at Notre-Dame de Paris. On 10 May, 1804, Caprara warned Pius VII of this wish, and represented that it would be necessary to answer yes, in order to retain Napoleon's friendship. But the execution of the Duc d'Enghien had produced a deplorable impression in Europe;

Royalist influences were at work against Bonaparte at the Vatican, and the pope was warned against crowning an emperor who, by the Constitution of 1804, would promise to maintain "the laws of the Concordat" in other words, the Organic Articles. Pius VII and Consalvi tried to gain time by dilatory replies, but these very replies were interpreted by Fesch at Rome, and by Caprara at Paris, in a sense favourable to the emperor's wishes. At the end of June, Napoleon I joyfully announced, at the Tuileries, that the pope had promised to come to Paris. Then Pius VII tried to obtain certain religious and political advantages in exchange for the journey he was asked to make. Napoleon declared that he would have no conditions dictated to him; at the same time he promised to give new proofs of his respect and love for religion, and to listen to what the pope might have to submit. At last the cleverness of Talleyrand, Napoleon's minister of foreign affairs, conquered the scruples of Pius VII; he declared, at the end of September, that he would accept Napoleon's invitation if it were officially addressed to him; he asked only that the ceremony of consecration should not be distinct from the coronation proper, and that Napoleon would undertake not to detain him in France. Napoleon had the invitation conveyed to Pius VII, not by two bishops, as the pope expected, but by a general; and before setting out for France, Pius VII signed a conditional act of abdication, which the cardinals were to publish in case Napoleon should prevent his returning to Rome; then he began his journey to France, 2 November, 1804.

Napoleon would not accord any solemn reception to Pius VII: surrounded by a hunting party, he met the pope in the open country, made him get into the imperial carriage, seating himself on the right, and in this fashion took him to Fontainebleau. Pius VII was brought to Paris by night. The whole affair nearly fell through at the last moment. Pius VII informed Josephine herself, on the eve of the day set for the coronation of the empress, that she had not been married to Napoleon in accordance with the rules of religion. To the great annoyance of the emperor, who was already contemplating a divorce, in case no heir were born to him, and was displaying a lively irritation against Josephine, Pius VII insisted upon the religious benediction of the marriage; otherwise, there was to be no coronation. The religious marriage ceremony was secretly performed at the Tuileries, on the first of December, without witnesses, not during the night, but at about four o'clock in the afternoon, by Fesch, grand almoner of the imperial household. As Welschinger has proved, Fesch had previously asked the pope for the necessary dispensations and faculties, and the marriage was canonically beyond reproach. On 2 December the coronation took place. Napoleon arrived at Notre-Dame later than the hour appointed. Instead of allowing the pope to crown him, he himself placed the crown on his own head and crowned the empress, but, out of respect for the pope, this detail was not recorded in the "*Moniteur*". Pius VII, to whom Napoleon granted but few opportunities for conversation, had a long memoranda drawn up by Antonelli and Caprara, setting forth his wishes; he demanded that Catholicism should be recognized in France as the dominant religion; that the divorce law should be repealed; that the religious communities should be re-established; that the Legations should be restored to the Holy See. Most of these demands were to no purpose: the most important of the very moderate concessions made by the emperor was his promise to substitute the Gregorian Calendar for that of the Revolution after 1 January, 1806. When Pius VII left Paris, 4 April, 1805, he was displeased with the emperor.

But the Church of France acclaimed the emperor. He was lauded to the skies by the bishops. The par-

ish priests, not only in obedience to instructions, but also out of patriotism, preached against England, and exhorted their hearers to submit to the conscription. The splendour of the Napoleonic victories seemed, by the enthusiasm with which it inspired all Frenchmen, to blind the Catholics of France to Napoleon's false view of the manner in which their Church should be governed. He had reorganized it; he had accorded it more liberal pecuniary advantages than the Concordat had bound him to; but he intended to dominate it. For example, in 1806 he insisted that all periodical publications of a religious character should be consolidated into one, the "*Journal des curés*", published under police surveillance. On 15 August, 1806, he instituted the Feast of St. Napoleon, to commemorate the martyr Neopolis, or Neopolas, who suffered in Egypt under Diocletian. In 1806 he decided that ecclesiastical positions of importance, such as cures of souls of the first class, could be given only to candidates who held degrees conferred by the university, adding that these degrees might be refused to those who were notorious for their "ultramontane ideas or ideas dangerous to authority". He demanded the publication of a single catechism for the whole empire, in which catechism he was called "the image of God upon earth", "the Lord's anointed", and the use of which was made compulsory by a decree dated 4 April, 1806. The prisons of Vincennes, Fenestrelles, and the Island of Sainte Marguerite received priests whom the emperor judged guilty of disobedience to his orders.

The Great Victories; Occupation of Rome; Imprisonment of Pius VII (1805-09).—After 1805 relations between Pius VII and Napoleon became strained. At Milan, 26 May, 1805, when Napoleon, as King of Italy, took the Iron Crown of Lombardy, he was offended because the pope did not take part in the ceremony. When he asked Pius VII to annul the marriage which his brother Jerome Bonaparte had contracted, at the age of nineteen, with Elizabeth Patterson of Baltimore, the pope replied that the decrees of the Council of Trent against clandestine marriages applied only where they had been recognized, and the reply constituted one more cause of displeasure for the emperor, who afterwards, in 1806, obtained an annulment from the complaisant ecclesiastical authorities of Paris. And when Consalvi, in 1805, complained that the French Civil Code, and with it the divorce law, had been introduced into Italy, Napoleon formally refused to make any concession.

The great war which the emperor was just then commencing was destined to be an occasion of conflict with the Holy See. Abandoning the preparations which he had made for an invasion of England (the Camp of Boulogne), he turned against Austria, brought about the capitulation of Ulm (20 October, 1805), made himself master of Vienna (13 November), defeated at Austerlitz (2 December, 1805) Emperor Francis I and Tsar Alexander. The Treaty of Presburg (26 December, 1805) united Dalmatia to the French Empire and the territory of Venice to the Kingdom of Italy, made Bavaria and Wurtemberg vassal kingdoms of Napoleon, enlarged the margravate of Baden, and transformed it into a grand-duchy, and reduced Austria to the valley of the Danube. The victory of Trafalgar (21 October, 1805) had given England the mastery of the seas, but from that time forward Napoleon was held to be the absolute master of the Continent. He then turned to the pope, and demanded a reckoning of him.

To prevent a landing of Russian and English troops in Italy, Napoleon, in October, 1805, had ordered Gouvion Saint Cyr to occupy the papal city of Ancona. The pope, lest the powers hostile to Napoleon might some day reproach him with having consented to the employment of a city of the Pontifical States as a base of operations, had protested against this arbitrary exercise of power: he had complained, in a letter to the

emperor (13 November, 1805), of this "cruel affront", declared that since his return from Paris he had "experienced nothing but bitterness and sorrow", and threatened to dismiss the French ambassador. But the treaty of Presburg and the dethronement of the Bourbons of Naples by Joseph Bonaparte and Masséna (January, 1806), changed the European and the Italian situation. From Munich Napoleon wrote two letters (7 January, 1806), one to Pius VII, and the other to Fesch, touching his intentions in regard to the Holy See. He complained of the pope's ill-will, tried to justify the occupation of Ancona, and declared himself the true protector of the Holy See. "I will be the friend of Your Holiness", he concluded, "whenever you consult only your own heart and the true friends of religion." His letter to Fesch was much more violent: he complained of the refusal to annul Jerome's marriage, demanded that there should no longer be any minister either of Sardinia or of Russia in Rome, threatened to send a Protestant as his ambassador to the pope, to appoint a senator to command in Rome and to reduce the pope to the status of mere Bishop of Rome, claimed that the pope should treat him like Charlemagne, and assailed "the pontifical camarilla which prostituted religion". A reply from Pius VII (29 January, 1806), asking for the return of Ancona and the Legations let loose Napoleon's fury. In a letter to Pius VII (13 February), he declared: "Your Holiness is the sovereign of Rome but I am its emperor; all my enemies ought to be yours"; he insisted that the pope should drive English, Russian, Sardinian, and Swedish subjects out of his dominions, and close his ports to the ships of those powers with which France was at war; and he complained of the slowness of the Curia in granting canonical institution to bishops in France and Italy. In a letter to Fesch he declared that, unless the pope acquiesced he would reduce the condition of the Holy See to what it had been before Charlemagne.

An official note from Fesch to Consalvi (2 March, 1806) defined Napoleon's demands; the cardinals were in favour of rejecting them, and Pius VII, in a very beautiful letter, dated 21 March, 1806, remonstrated with Napoleon, declared that the pope had no right to embroil himself with the other states, and must hold aloof from the war; also, that there was no emperor of Rome. "If our words", he concluded, "fail to touch Your Majesty's heart we will suffer with a resignation conformable to the Gospel, we will accept every kind of calamity as coming from God." Napoleon, more and more irritated, reproached Pius VII for having consulted the cardinals before answering him, declared that all his relations with the Holy See should thenceforward be conducted through Talleyrand, ordered the latter to reiterate the demands which the pope had just rejected, and replaced Fesch as ambassador at Rome with Alquier, a former member of the Convention. Then the emperor proceeded from words to deeds. On 6 May, 1806, he caused Cività Vecchia to be occupied. Learning that the pope, before recognizing Joseph Bonaparte as King of Naples, wished Joseph to submit to the ancient suzerainty of the Holy See over the Neapolitan Kingdom, he talked of "the spirit of light-headedness" (*esprit de vertige*) which prevailed at Rome, remarked that, when the pope thus treated a Bonaparte as a vassal, he must be tired of wielding the temporal power, and directed Talleyrand to tell Pius VII that the time was past when the pope disposed of crowns. Talleyrand was informed (16 May, 1806) that, if Pius VII would not recognize Joseph, Napoleon would no longer recognize Pius VII as a temporal prince. "If this continues", Napoleon went on to say, "I will have Consalvi taken away from Rome." He suspected Consalvi of having sold himself to the English. Early in June, 1806, he seized Benevento and Pontecorvo, two principalities which belonged to the Holy

See, but which were shut in by the Kingdom of Naples.

Yielding before the emperor's wrath, Consalvi resigned his office: Pius VII unwillingly accepted his resignation, and replaced him with Cardinal Casoni. But the first dispatch written by Casoni under Pius VII's dictation confirmed the pope's resistance to the emperor's behests. Napoleon then violently apostrophized Caprara, in the presence of the whole court, threatening to dismember the Pontifical States, if Pius VII did not at once, "without ambiguity or reservation", declare himself his ally (1 July, 1806). A like ultimatum was delivered, on 8 July, to Cardinal Casoni by Alquier. But Continental affairs were claiming Napoleon's attention, and the only immediate result of his ultimatum was the emperor's order to his generals occupying Ancona and Civit  Vecchia, to seize the pontifical revenues in those two cities. On the other hand, the constitution of the Imperial University (May, 1806), preparing for a state monopoly of teaching, loomed up as a peril to the Church's right of teaching, and gave the Holy See another cause for uneasiness.

The Confederation of the Rhine, formed by Napoleon out of fourteen German States (12 July, 1806), and his assertion of a protectorate over the same, resulted in Francis II's abdication of the title of emperor of Germany; in its place Francis took the title of emperor of Austria. Thus ended, under the blows dealt it by Napoleon, that Holy Roman Germanic Empire which had exerted so great an influence over Christianity in the Middle Ages. The pope and the German emperor had long been considered as sharing between them the government of the world in the name of God. Napoleon had definitively annihilated one of these "two halves of God", as Victor Hugo has termed them. Frederick William II of Prussia became alarmed, and in October, 1806, formed, with England and Russia, the Fourth Coalition. The stunning victories of Auerst dt, won by Davoust, and Jena, won by Napoleon (14 October, 1806), were followed by the entry of the French into Berlin, the King of Prussia's flight to K nigsberg, and the erection of the Electorate of Saxony into a kingdom in alliance with Napoleon. From Berlin itself Napoleon launched a decree (21 November, 1806) by which he organized the Continental blockade against England, aiming to close the whole Continent against English commerce. Then, in 1807, penetrating into Russia, he induced the tsar by means of the battles of Eylau (8 February, 1807) and Friedland (14 June, 1807), to sign the Peace of Tilsit (8 July, 1807). The empire was at its apogee; Prussia had been bereft of its Polish provinces, given to the King of Saxony under the name of the Grand-Duchy of Warsaw; the Kingdom of Westphalia was being formed for Jerome Bonaparte, completing the series of kingdoms given since 1806 to the emperor's brothers—Naples having been assigned to Joseph, and Holland to Louis. A series of principalities and duchies, "great fiefs", created all over Europe for his marshals, augmented the might and prestige of the empire. At home, the emperor's personal power was becoming more and more firmly established; the supervision of the press more rigorous; summary incarcerations more frequent. He created an hereditary nobility as an ornament to the throne.

To him it was something of a humiliation, that the Court of Rome persisted in holding aloof, politically, from the great conflicts of the nations. He began to summon the pope anew. He had already, soon after Jena, called Mgr Arezzo to him from Saxony, and in menacing fashion had bidden him go and demand of Pius VII that he should become the ally of the empire; once more Pius VII had replied to Arezzo that the pope could not consider the enemies of France his enemies. Napoleon also accused the pope of hindering the ecclesiastical reorganisation of Germany, and

of not making provision for the dioceses of Venetia. His grievances were multiplying. On 22 July, 1807, he wrote to Prince Eug ne, who governed Milan as his viceroy, a letter intended to be shown to the pope: "There were kings before there were popes", it ran. "Any pope who denounced me to Christendom would cease to be pope in my eyes; I would look upon him as Antichrist. I would cut my peoples off from all communication with Rome. Does the pope take me for Louis the Pious? What the Court of Rome seeks is the disorder of the Church, not the good of religion. I will not fear to gather the Gallican, Italian, German and Polish Churches in a council to transact my business [*pour faire mes affaires*] without any pope, and protect my peoples against the priests of Rome. This is the last time that I will enter into any discussion with the Roman priest-rabble [*la pr traille romaine*]". On 9 August Napoleon wrote again to Prince Eug ne, that, if the pope did anything imprudent, it would afford excellent grounds for taking the Roman States away from him. Pius VII, driven to bay, sent Cardinal Litta to Paris to treat with Napoleon: the pope was willing to join the Continental blockade, and suspend all intercourse with the English, but not to declare war against them. The pope even wrote to Napoleon (11 September, 1807) inviting him to come to Rome. The emperor, however, was only seeking occasion for a rupture, while the pope was seeking the last possible means of pacification.

Napoleon refused to treat with Cardinal Litta, and demanded that Pius VII should be represented by a Frenchman, Cardinal de Bayanne. Then he pretended that Bayanne's powers from the pope were not sufficient. And while the pope was negotiating with him in good faith, Napoleon, without warning, caused the four pontifical Provinces of Macerata, Spoleto, Urbino, and Foligno to be occupied by General Lemarrois (October, 1807). Pius VII then revoked Cardinal Bayanne's powers. It was evident that, not only did Napoleon require of him an offensive alliance against England, but that the emperor's pretensions, and those of his new minister of foreign affairs, Champagny, Talleyrand's successor, were now beginning to encroach upon the domain of religion. Napoleon claimed that one third of the cardinals should belong to the French Empire; and Champagny let it be understood that the emperor would soon demand that the Holy See should respect the "Gallican Liberties", and should abstain from "any act containing positive clauses or reservations calculated to alarm consciences and spread divisions in His Majesty's dominions". Henceforth it was the spiritual authority that Napoleon aspired to control. Pius VII ordered Bayanne to reject the imperial demands. Napoleon then (January, 1808) decided that Prince Eug ne and King Joseph should place troops at the disposition of General Miollis, who was ordered to march on Rome. Miollis at first pretended to be covering the rear of the Neapolitan army, then he suddenly threw 10,000 troops into Rome (2 February). Napoleon wrote to Champagny that it was necessary "to accustom the people of Rome and the French troops to live side by side, so that, should the Court of Rome continue to act in an insensate way, it might insensibly cease to exist as a temporal power, without anyone noticing the change". Thus it may be said that, in the beginning of 1808, Napoleon's plan was to keep Rome.

In a manifesto to the Christian powers, Pius VII protested against this invasion; at the same time, he consented to receive General Miollis and treated him with great courtesy. Champagny, on 3 February, again insisted on the pope's becoming the political ally of Napoleon, and Pius VII refused. The instructions given to Miollis became more severe every day: he seized printing presses, journals, post offices; he decimated the Sacred College by having seven cardinals conducted to the frontier, because Napoleon accused

them of dealing with the Bourbons of the two Sicilies, then, one month later, he expelled fourteen other cardinals from Rome because they were not native subjects of the pope. Cardinal Doria Pamphili, who had been appointed secretary of state, in February, 1808, was also expelled by Miollis; Pius VII now had with him only twenty-one cardinals, and the papal Government was disorganized. He broke off all diplomatic relations with Napoleon, recalled Bayanne and Caprara from Paris, and uttered his protest in a consistorial allocution delivered in March. Napoleon, on his side, recalled Alquier from Rome. The struggle between pope and emperor was taking on a tragic character.

On 2 April Napoleon signed two decrees: one annexed to the Kingdom of Italy "in perpetuity" the Provinces of Urbino, Ancona, Macerata, and Camerino; the other ordered all functionaries of the Court of Rome who were natives of the Kingdom of Italy to return to that kingdom, under pain of confiscation of their property. Pius VII protested before all Europe against this decree, on 19 May, and, in an instruction addressed to the bishops of the provinces which Napoleon was looting off from his possessions, he denounced the religious "indifferentism" of the imperial Government, and forbade the faithful of those provinces to take the oath of allegiance to Napoleon or accept any offices from him. Miollis retaliated, 12 June, by driving Gavrielli, the new secretary of state, out of Rome. Pius VII then replaced Gavrielli with Cardinal Pacca, reputed an opponent of France; on 11 July he delivered a very spirited allocution, which, in spite of the imperial police, was circulated throughout Europe; and Pacca, on 24 August, directed a note against the institution of the "Civic Guard"—an idea recently conceived by Miollis—in which Miollis was compelling even the pope's soldiers to enroll. On 6 September, 1808, Miollis sent two officers to the Quirinal to arrest Pacca; Pius VII interposed, declaring that they should not arrest Pacca without arresting the pope, and that in future the secretary of state should sleep at the Quirinal, which was closed to all the French.

The definitive execution of Napoleon's projects against the Holy See was retarded by the wars which occupied him during the year 1808. When he transferred his brother Joseph from the Throne of Naples to that of Spain, Spain rose, and the English invaded Portugal. Dupont's capitulation, at Baylen (20 July, 1808), and Junot's at Cintra (30 August, 1808), were painful reverses for French arms. Napoleon, having made an alliance with the tsar in the celebrated interview of Erfurt (27 September–14 October, 1808), hastened to Spain. There he found a people whose spirit of resistance was exasperated all the more because they believed themselves to be fighting for their liberty and the integrity of their faith as much as for their country. In November he gained the victories of Burgos, Espinosa, Tudela, and Somo Sierra, and reopened the gates of Madrid for Joseph; on 21 February Saragossa was taken by the French armies after an heroic resistance. A Fifth Coalition was formed against Napoleon: he returned from Spain and, rushing across Bavaria, bombarded and took Vienna (11–13 May, 1809). On the day after the victory he devoted some of his leisure hours to thinking about the pope.

For some time Murat, who in 1808 had replaced Joseph as King of Naples, had been ready to support Miollis whenever Napoleon should judge that the hour had come to incorporate Rome with the empire. On 17 May, 1809, Napoleon issued from Schönbrunn two decrees in which, reproaching the popes for the ill use they had made of the donation of Charlemagne, his "august predecessor", he declared the Pontifical States annexed to the empire, and organized, under Miollis, a council extraordinary to administer them.

On 10 June Miollis had the Pontifical flag, which still floated over the castle of S. Angelo, lowered. Pius VII replied by having Rome placarded with a Bull excommunicating Napoleon. When the emperor received news of this (20 June) he wrote to Murat: "So the pope has aimed an excommunication against me. No more half measures; he is a raving lunatic who must be confined. Have Cardinal Pacca and other adherents of the pope arrested." In the night of 5–6 July, 1809, Radet, a general of gendarmerie, by the orders of Miollis, entered the Quirinal, arrested Pius VII and Pacca, gave them two hours to make their preparations, and took them away from Rome at four in the morning. Pius VII was taken to Savona, Pacca to Fenestrella. Meanwhile Napoleon, completing the work of crushing Austria, had been the victor at Essling (21 May, 1809) and at Wagram (6 July, 1809), and the Peace of Vienna (15 October, 1809) put the finishing touch to the mutilation of Austria by handing over Carniola, Croatia, and Friuli to France, at the same time obliging the Emperor Francis to recognize Joseph as King of Spain. The young German, Staps, who attempted to assassinate Napoleon at Schönbrunn (13 October), died crying: "Long live Germany!"

Discussions with the Captive Pius VII; Second Marriage; Ecclesiastical Councils of 1809 and 1811.—The conflict with his prisoner, the pope, was another embarrassment, a new source of anxiety to the emperor. At first he took all possible steps to prevent the public from hearing of what had happened at Rome: the "Moniteur" made not the slightest allusion to it; the newspapers received orders to be silent. He also wished his excommunication to be ignored; the newspapers must be silent on this point also; but the Bull of Excommunication, secretly brought to Lyons, was circulated in France by members of the Congregation, a pious association, founded 2 February, 1801, by Père Delpuits, a former Jesuit. Alexis de Noailles and five other members of the Congregation were arrested by the emperor's command, and his anger extended to all the religious orders. He wrote (12 September, 1809) to Bigot de Préameneu, minister of public worship: "If on 1 October there are any missions or congregations still in France, I will hold you responsible." The celebrated Abbé Fraysinoux had to discontinue his sermons; the Lazarists dispersed; the Sulpicians were threatened. Napoleon consulted Bigot de Préameneu as to the expediency of laying the Bull before the Council of State, but abstained from doing so.

It was not long, however, before he had to face an enormous difficulty: there were more than twenty bishoprics vacant, and Pius VII declared to Fesch, to Caprara, and to Maury that, so long as he was a prisoner, so long as he could not communicate freely with his natural counsellors, the cardinals, he would not provide for the institution of the bishops. Thus the life of the Church of France was partially suspended. In November, 1809, Napoleon appointed an "ecclesiastical council" to seek a solution of the difficulty. With Fesch as president, this council included as members Cardinal Maury, Barral, Archbishop of Tours, Duvoisin, Bishop of Nantes, Emery, Superior of S. Sulpice, Bishops Canaveri of Vercelli, Bourlier of Evreux, Mannay of Trèves, and the Barnabite Fontana. Bigot de Préameneu, in the name of the emperor, laid before the council several sets of questions relating to the affairs of Christendom in general, then to those of France, and lastly to those of Germany and Italy, and to the Bull of Excommunication.

In the preamble to its replies, the council gave voice to a petition for the absolute liberty of the pope and the recall of the cardinals. It declared that if a general council were assembled for the settlement of the religious questions then pending, the pope's presence at the council would be necessary, and that a national

council would not have sufficient authority in questions affecting the whole Catholic Church. It also declared that the pope could not complain of any essential violation of the Concordat, that, when he advanced his temporal spoliation, as one reason for his refusal to institute the bishops canonically, he was confounding the temporal order with the spiritual, that the temporal sovereignty was only an accessory of the papal authority, that the invasion of Rome was not a violation of the Concordat, and that the national council would interpose an appeal from the Bull of Excommunication either to the general council or to the pope better informed. The manner in which canonical institution might be secured for the bishops, if the pope should continue his resistance, was twice discussed. Urged by the Government, the council admitted that, taking the circumstances into consideration, the conciliary institution given by a metropolitan to his suffragans, or by the senior suffragan to a national council as, provisionally, a substitute for pontifical Bulls. Emery, thinking the council too lenient, refused to endorse the answers, which were sent to Napoleon on 11 January, 1810.

On 17 February, 1810, the Act regulating the Roman territory and future condition of the pope, introduced by Régault de Saint-Jean d'Angély, was passed unanimously by the senate. The Papal States, in accordance with this decree, were to form two departments; from Rome, was declared the first city of the empire, the prince imperial was to take his title of king. The emperor, already crowned once at Notre-Dame, was to go within ten years to be crowned at St. Peter's. The pope was to have a revenue of two millions. The empire was to charge itself with the maintenance of the Sacred Congregation of Propaganda. The pope, on his accession, must promise to do nothing contrary to the four articles of the Gallican Church. Another Act of the Senate, of 25 February, 1810, made the Declaration of 1682 a general law of the empire. Thus did Napoleon flatter himself that he would reduce the papacy to servitude and bring Pius VII to live in Paris. He even prepared a letter to Pius VII in which he told him: "I hold in execration the principles of the Bonifaces and the Gregorys. It is my mission to govern the West; do not meddle with it." This letter he would have had taken to the pope by bishops who were to give notice to Pius VII that in future the popes must swear allegiance to Napoleon, as of yore to Charlemagne, and to inform him that he himself would be dispensed from this obligation, but that he must undertake not to reside at Rome. Napoleon expected in this way to bend the pope to his will. Wiser counsellors, however, prevailed upon him not to send this insulting letter. Nevertheless, to carry out his plan of removing the papal throne from Rome, he ordered Miollis to compel all the cardinals who were still at Rome to set out for Paris, and to have the Vatican archives transported thither. In 1810 there were twenty-seven Roman cardinals in Paris: he lavished gifts upon them, invited them to the court festivals, and wished them to write and urge Pius VII to yield; but, following the advice of Consalvi, the cardinals refused.

It was in the midst of these bitter conflicts with the church that, Napoleon desiring an heir, resolved to divorce Josephine. Ever since the end of 1807 Metternich had been aware of the reports that were current about the emperor's approaching divorce. On 12 December, 1807, Lucien Bonaparte had vainly endeavored to obtain from Josephine her consent to this divorce; some time after, Fouché had made a similar attempt with no better success. In December, 1809, at Fontainebleau, in the presence of Prince Eugène, Josephine's son, the emperor induced her to consent; on 15 December, this was solemnly proclaimed in the throne room, in the presence of the Court, in an ad-

dress delivered by Napoleon, and another read by the unhappy Josephine, who was prevented by her tears from finishing it. The Act of the Senate (16 December), based on a report of Lacépède, the naturalist, himself a member of the Senate, ratified the divorce. Napoleon then thought of marrying the tsar's sister. But Metternich, getting wind of this project, made Laborde and Schwarzenberg sound the Tuileries to see if Napoleon would marry an Austrian archduchess. The idea pleased Napoleon. The Court of Vienna, however, first required that the spiritual bond between Napoleon and Josephine should be severed.

This bond the pope alone was competent to dissolve; Louis XII had had recourse to Alexander VI; Henry IV to Clement VIII; but Napoleon, excommunicated by his prisoner Pius VII, could not apply to him. Cambacères, the arch-chancellor, sent for the diocesan officials of Paris and explained to them that the marriage of Napoleon and Josephine had been invalid in consequence of the absence of the parish priest of the two parties and of witnesses. In vain did they object that only the pope could decide such a case; they were told to commence proceedings, and be quick about it. On 26 December, the promoter of the case, Rudemare, begged Cambacères to submit the matter to the ecclesiastical council over which Fesch presided. On 2 January, 1810, Cambacères sent a request to the official, Boileve, for a declaration of nullity of the marriage, alleging, this time, that there had been absence of consent on Napoleon's part. On the next day the ecclesiastical council replied that if the defect of Napoleon's consent could be proved to the officiality, the marriage would be null and void. Cambacères wished to produce Fesch, Talleyrand, Duroc, and Berthier as witnesses. The testimony of Fesch was very confused; he explained that the pope had given him the necessary dispensations to bless the marriage; that two days later he had given Josephine a marriage certificate; that the emperor had then upbraided him, declaring to him that he (the emperor) had only agreed to this marriage in order to quiet the empress, and that it was, moreover, impossible for him to renounce his hopes of direct descendants. The other two witnesses told how Napoleon had repeatedly expressed the conviction that he was not bound by this marriage and that he regarded the ceremony only as "a mere concession to circumstances [*acte de pure circonstance*] which ought not to have any effect in the future".

On 9 January the diocesan authorities declared the marriage null and void, on the ground of the absence of the lawful parish priest and of witnesses; it pronounced this decision only in view of the "difficulty in the way of having recourse to the visible head of the Church, to whom it has always belonged in fact to pronounce upon these extraordinary cases." The promoter Rudemare had concluded with the recommendation that the tribunal should at least lay a precept upon the two parties to repair the defect of form which had vitiated their marriage; Boileve, the official, refrained from proffering this invitation. Rudemare then appealed to the metropolitan authorities on this point. On 12 January, 1810, the official, Lejeune, with much greater complaisance, admitted both the grounds of nullity advanced by Cambacères—that is, not only the defect of form, but also the defect of the emperor's consent. He alleged that the civil marriage of Napoleon and Josephine had been annulled by the decree of the Senate, that by the concordatory laws (*lois concordataires*) the religious marriage ought to follow the civil, and that the Church could not now ask two parties who were no longer civilly married to repair the defects of form in their religious marriage. Thus, he declared, the marriage was religiously annulled. It may be noted here that the Catholic Church cannot be held responsible for the excessive complaisance shown in this matter by the ecclesiasti-

cal council and the diocesan authorities of Paris. On 21 January, 1810, Napoleon resolved to ask for the hand of Marie-Louise. The French ambassador at Vienna, at the request of the Archbishop of Vienna, gave him his word of honour that the sentence pronounced by the diocesan authorities of Paris was legal. At last all the religious obstacles to the celebration of the new marriage were disposed of.

It took place on 1 April, 1810, but thirteen of the cardinals then in Paris refused to be present. These thirteen cardinals were turned away when they presented themselves at the Tuileries two days later; the minister of public worship informed them that they were no longer cardinals, that they no longer had any right to wear the purple; the minister of police forwarded them, two by two, to small country towns; their pensions were suppressed, their property sequestered. People called them "the black cardinals". The bishops and priests of the Roman States were treated with similar violence; nineteen out of thirty-two bishops refused the oath of allegiance to the emperor, and were imprisoned, while a certain number of non-juring parochial clergy were interned in Corsica, and the emperor announced his intention of reducing the number of dioceses and parishes in the Roman States by three-fourths. This policy of bitter persecution coincided with fresh overtures to his prisoner, the pope, through the Austrian diplomat Lebzelter (May, 1810). Pius VII's reply was that, to negotiate, he must be free and able to communicate with the cardinals. In July Napoleon sent Cardinals Spina and Caselli to Savona, but they obtained nothing from the pope. There had been no solution of the internal crisis of the Church of France; while Pius VII was a prisoner the bishops were not to receive canonical institution. Bigot de Préameneu and Maury suggested to the emperor a possible arrangement: to invite the chapter in each diocese to designate the bishop who had been nominated, but not yet canonically instituted, provisional administrator. Feesch refused to lend himself to this expedient and occupy the Archbishopric of Paris; but a certain number of nominated bishops did go to their episcopal cities in the capacity of provisional administrators. Going one step further, Napoleon removed Maury from the See of Montefiascone, and d'Osmond from that of Nancy, and had them designated by the respective chapters provisional administrators of the two vacant Archdioceses of Paris and Florence. Maury and d'Osmond, at the emperor's bidding, left the dioceses given them by the pope to install themselves in these archdioceses.

Despite the rigour of his captivity, Pius VII was able to make known the pontifical commands to Cardinal di Pietro at Semur: a secret agency at Lyons, established by certain members of the Congregation, devised ingenious ways of facilitating these communications as well as the circulation of Bulls. In November, 1810, the Court was stupefied with the news that two Bulls of Pius VII, addressed to the Chapters of Florence and Paris, forbade their recognizing d'Osmond and Maury. The imperial fury was let loose. On 1 January, 1811, Napoleon, during an audience to Maury and the canons, demanded an explanation from d'Astros, the vicar capitular, who had received the Bull, telling him that there is "as much difference between the religion of Bossuet and that of Gregory VII as between heaven and hell"; d'Astros, taken by Maury himself to police headquarters, was imprisoned at Vincennes. At the Council of State, 4 January, 1811, Portalis, a relative of d'Astros, was openly accused of treason by Napoleon, and immediately put out of the council chamber (with a brutality that the emperor afterwards regretted) and was then ordered to quit Paris. Cardinals di Pietro, Oppizzone, and Gabrielli, and the priests Fontana and Gregori, former counsellors of the pope, were thrown into prison. Maury used his influence with the canons of Paris to

induce them to apologize to Napoleon, who received them, told them that the pope must not treat him as a *roi fainéant*, and declared that, since the pope was not acting up to the Concordat in the matter of institution of bishops, the emperor, on his side, renounced the Concordat. The conditions of the pope's captivity were made more severe; all his correspondence had to pass through Paris, to be inspected by the Government; the lock of his desk was picked; he could no longer receive visits without the presence of witnesses; a gendarme demanded of him the ring of St. Peter, which Pius VII surrendered after breaking it in two. Chabrol, the pope's custodian, showed him the addresses in which some of the chapters were expressing their submission to the emperor, but Pius VII was inflexible. A commission of juriconsults in Paris, after discussing the possibility of a law regulating the canonical institution of bishops without the pope's co-operation, ended by deciding that to pass such a law was almost equivalent to schism.

Napoleon was not willing to go so far. He summoned the ecclesiastical council which he had already established and, 8 February, 1811, proposed to it these two questions: (1) All communication between the pope and the emperor's subjects being interrupted, to whom must recourse be had for the dispensations ordinarily granted by the Holy See? (2) What canonical means is there of providing institution for bishops when the pope refuses it? Feesch and Emery tried to sway the council towards some courses which would save the papal prerogative. But the majority of the council answered: (1) That recourse might be had, provisionally, to the bishops for the dispensations in question; (2) That a clause might be added to the Concordat stipulating that the pope must grant canonical institution within a stated time; failing which, the right of institution would devolve upon the council of the province; and that, if the pope rejected this amendment of the Concordat, the Pragmatic Sanction would have to be revived so far as concerned bishops. The council added that, if the pope persisted in his refusal, the possibility of a public abolition of the Concordat by the emperor would have to be considered; but that these questions could be broached only by a national council, after one last attempt at negotiation with the pope.

On 16 March, 1811, Napoleon summoned to the Tuileries the members of the council and several of the great dignitaries of the empire; inveighing bitterly against the pope, he proclaimed that the Concordat no longer existed and that he was going to convoke a council of the West. At this meeting Emery, who died on 28 April, boldly faced Napoleon, quoting to him passages from Bossuet on the necessity of the pope's liberty. Pius VII not yielding to a last summons on the part of Chabrol, the council was convoked on 25 April to meet on 9 June. By this step Napoleon expected to subdue the pope to his will. In pursuance of a plan outlined by the philosopher Gerando, Archbishop Barral, and Bishops Duvoisin and Mannay were sent to Pius VII to gain him over on the question of the Bulls of institution. They were joined by the Bishop of Faenza, and arrived at Savona on 9 May. At first the pope refused to discuss the matter, not being free to communicate with his cardinals. But the bishops and Chabrol insisted, and the pope's physician added his efforts to theirs. They represented that the Church was becoming disorganized. At the end of nine days, the pope, who was neither eating nor drinking anything, being very much fatigued, consented, not to ratify, but to take as "a basis of negotiation" a note drawn up by the four bishops to the purport that, in case of persistent refusal on his part, canonical institution might be given to bishops after six months. On 20 May, at four o'clock in the morning, the bishops started for Paris with this note; at seven o'clock the pope summoned Chabrol and told him

that he did not accept the note in any definitive sense, that he considered it only a sketch, and that he had made no formal promise. He also asked that a courier should be sent after the bishops to warn them of this. The courier bearing this message overtook the bishops at Turin on 24 May. Pius VII warned Chabrol that if the first note were exploited as representing an arrangement definitely accepted by the pope, he "would make a noise that should resound through the whole Christian world". Napoleon, in his blindness, resolved to do without the pope and put all his hopes in the council.

Council of 1811.—The council convoked for 9 June, 1811, was not opened at Notre-Dame until 17 June, the opening being postponed on account of the baptism of the King of Rome, just born of Marie-Louise. Paternal pride and the seemingly assured destinies of his throne, rendered Napoleon still more inflexible in regard to the pope. Only since 1905 has the truth about this council been known, thanks to Welschinger's researches. Under the Second Empire, when D'Haussonville wrote his work on the Roman Church and the First Empire (see below) Marshal Vallant had refused him all access to the archives of the council. These archives Welschinger was able to consult. Boulogne, Bishop of Troyes, in his opening sermon affirmed the solidarity of the pope and the bishops, while Fesch, as president of the council, made all its members swear obedience and fidelity to Pius VII. Upon this Napoleon gave Fesch a sound rating, on the evening of 19 June, at Saint-Cloud. The emperor had packed his council in very arbitrary fashion, choosing only 42 out of 150 Italian bishops to mix with the French bishops, with a view to œcumenical effect. A private bulletin sent to the emperor, 24 June, noted that the fathers of the council themselves were generally impressed with a sense of restraint. The opposition to the emperor was very firmly led by Broglie, Bishop of Ghent, seconded by Aviau, Archbishop of Bordeaux, Dessole, Bishop of Chambéry, and Hirn, Bishop of Tournai. The first general assembly of the council was held on 20 June. Bigot de Préameneu and Marescalchi, ministers of public worship for France and Italy, were present and read the imperial message, one draft of which had been rejected by Napoleon as too moderate. The final version displeased all the bishops who had any regard for the papal dignity. Napoleon in this document demanded that bishops should be instituted in accordance with the forms which had obtained before the Concordat, no see to be vacant for longer than three months, "more than sufficient time for appointing a new incumbent". He wished the council to present an address to him, and the committee that should prepare this address to be composed of the four prelates he had sent to Savona. The address, which was prepared in advance by Duvoisin, one of these four prelates, was an expression of assent to Napoleon's wishes. But the council decided to have on the committee besides these four prelates, some other bishops chosen by secret ballot, and among the latter figured Broglie. Broglie discussed Duvoisin's draft and had a number of changes made in it, and Fesch had some trouble in keeping the committee from at once demanding the liberation of the pope. The address, as voted, was nonsensical. It was not what Napoleon expected, and the audience which he was to have given to the members of the council on 30 June, did not take place.

Another committee was appointed by the council to inquire into the pope's views on the institution of bishops. After a conflict of ten days, Broglie secured against Duvoisin, by a vote of 8 to 4, a resolution to the effect that, in this matter, nothing must be done without the pope, and that the council ought to send him a deputation to learn what was his will. Napoleon was furious and said to Fesch and Barral: "I

will dissolve the council. You are a pack of fools". Then, on second thought, he informed the council that Pius VII by way of concession, had formally promised canonical institution to the vacant bishoprics and had approved a clause enabling the metropolitans themselves in future, after six months vacancy of any see, to give canonical institution. Napoleon required the council to issue a note to this effect and sent a deputation to thank the pope. First the committee voted as the emperor wished, then on more mature consideration, suspecting some stratagem on the emperor's part, it recalled its vote, and, on 10 July, Hirn, Bishop of Tournai, speaking for the committee, proposed to the council that no decision be made until a deputation had been sent to the pope. Then, on the morning of 11 July, Napoleon pronounced the council dissolved. The following night Broglie, Hirn, and Boulogne were imprisoned at Vincennes. The emperor next thought of turning over the administration of the dioceses to the prefects, but presently took the advice of Maury, viz., to have all the members of the council called up, one by one, by the minister of public worship, and their personal assent to the imperial project obtained in this way. After fifteen days devoted to conversations between the minister and certain of the bishops, the emperor reconvened the council for 5 August, and the council, by a vote of 80 to 13, passed the decree by which canonical institution was to be given within six months, either by the pope or, if he refused, by the metropolitan. The bishops who passed this decree tried to palliate their weakness by saying that they had no idea of committing an act of rebellion, but formally asked for, and hoped to obtain, the pope's assent. Napoleon believed himself victorious; he held in his hands the means of circumventing the pope and organizing without his co-operation the administration of French and Italian dioceses. He had brought the Sacred College, the Dataria, the Penitentiary, and the Vatican Archives to Paris, and had spent several millions in improving the archiepiscopal palace which he meant to make the pontifical palace. He wished to remove the Hôtel-Dieu, install the departments of the Roman Curia in its place, and make the quarter of Notre-Dame and the Isle de Saint-Louis the capital of Catholicism. But his victory was only apparent: to make the decree of the national council valid, the pope's ratification was needed, and once more the resistance of Pius VII was to hold the emperor in check.

On 17 August Napoleon commissioned the Archbishops of Tours and Mechlin, the Patriarch of Venice, the Bishops of Evreux, Trier, Feltro, and Piacenza to go to Savona and demand of the pope his full adhesion to the decree of 5 August; and the bishops were even to be precise in stating that the decree applied to episcopal sees in the former Papal States, so that, in giving his assent, Pius VII should by implication assent to the abolition of the temporal power. That Pius VII might not allege the absence of the cardinals as a reason for postponing his decisions, Napoleon sent to Savona five cardinals on whom he could rely (Roverella, Dugnani, Fabrizio Ruffo, Bayanne, and Doria), with instructions to support the bishops. The emperor's artifice was successful. On 6 September, 1811, Pius VII declared himself ready to yield, and charged Roverella to draw up a Brief approving the Decree of 5 August, and on 20 September the pope signed the Brief. But even then, the Brief as it was, was not what Napoleon wanted: Pius VII abstained from recognizing the council as a national council, he treated the Church of Rome as the mistress of all the Churches, and did not specify that the decree applied to the bishoprics of the Roman States; he also required that, when a metropolitan gave canonical institution, it should be given in the name of the pope. Napoleon did not publish the Brief. On 17 October he ordered the deputation of prelates to notify the pope that the

decree applied equally to bishoprics in the Roman States. This interpretation Pius VII then formally repudiated, and announced once more that any further decision on his part would be postponed until he should have with him a suitable number of cardinals. Napoleon first wreaked his irritation on the Bishops of Ghent, Tournai, and Troyes, whom he forced to resign their sees and caused to be deported to various towns, then, on 3 December, he declared the Brief unacceptable, and charged the prelates to ask for another. Pius VII refused.

On 9 January, 1812, the prelates informed the pope, from the emperor, that, if the pope resisted any longer, the emperor would act on his own discretion in the matter of the institution of bishops. Pius VII sent a personal reply to the emperor, to the effect that he (the pope) needed a more numerous council and facility of communication with the faithful, and that he would then do, "to meet the emperor's wishes, all that was consistent with the duties of his Apostolic ministry." By way of rejoinder, Napoleon dictated to his minister of public worship, on 9 February, an extraordinarily vehement letter, addressed to the deputation of prelates. In it he refused to give Pius VII his liberty or to let the "black cardinals" go back to him; he made known that if the pope persisted in the refusal to govern the Church, they would do without the pope; and he advised the pope, in insulting terms, to abdicate. Chabrol, the prefect of Montenotte, read this letter to Pius VII, and advised him to surrender the tiara. "Never," was the pope's answer. Then on 23 February, Chabrol notified the pope, in the emperor's name, that Napoleon considered the Concordats abrogated, and that he would no longer permit the pope to interfere in any way in the canonical institution of the bishops. Pius VII answered that he would not change his attitude. Mme de Staël wrote to Henri Meister: "What a power is religion which gives strength to the weak when all that was strong has lost its strength!" The difference between the pope and the emperor naturally reacted upon the feelings of the clergy towards Napoleon, and upon the emperor's policy towards religion. From this time Napoleon refused the semi-varys any exemption from military service. He made stricter the university monopoly of teaching, and Broglie, Bishop of Ghent, who, after leaving the prison of Vincennes, had continued to correspond with his clergy, was sent to the Island of Sainte-Marguerite.

Last Great Wars: Concordat of Fontainebleau.—At this time Napoleon was absolutely drunk with power. The French Empire had 130 departments; the Kingdom of Italy 240. The seven provinces of Illyria were subject to France. The rigour of the Continental blockade was ruining English commerce and embarrassing the European states. The tsar would have liked Napoleon, master of the West, to leave him freedom of action in Poland and Turkey; enraged at receiving no such concessions, he approached England. The French armies in Spain were exhausting their strength in a savage and ineffectual war against a ceaseless uprising of the native population; nevertheless Napoleon resolved to attack Russia also. At Dresden, from March to June, 1812, he held a congress of kings, and prepared for war. It was at Dresden, in May, 1812, that, under pretext of satisfying the demands of Francis Joseph for gentler treatment of the pope, Napoleon decided to have Pius VII removed from Savona to Fontainebleau; the fact is that he was afraid the English would attempt a *coup de main* on Savona and carry off the pope. After a journey the painful incidents of which have been related by d'Haussonville, following a manuscript in the British Museum, Pius VII reached Fontainebleau on 19 June. Equipages were placed at his disposal, he was desired to appear in public and officiate; but he refused, led a solitary life in the interior of the palace,

and gave not the least indication of being ready to yield to Napoleon's demands.

Napoleon definitely declared war against the tsar on 22 June, 1812. The issue was soon seen to be dubious. The Russians devastated the whole country in advance of the French armies, and avoided pitched battles as much as possible. The victory of Borodino (7 September, 1812), an extremely bloody one, opened to Napoleon the gates of Moscow (14 September, 1812). He had expected to pass the winter there, but the conflagration brought about by the Russians forced him to retrace his steps westward, and the retreat of the "Grande Armée" so heroically covered by Marshal Ney, cost France the lives of numberless soldiers. The passage of the Beresina was glorious. As far as Lithuania, Napoleon shared the sufferings of his army, then he hastened to Paris, where he suppressed General Malet's conspiracy and prepared a new war for the year 1813. When he set out for Prussia it was his idea to extend his march beyond that country, through Asia to India, to knock over "the scaffolding of mercantile greatness raised by the English, and strike England to the heart". "After this", he declared, "it will be possible to settle everything and have done with this business of Rome and the pope. The cathedral of Paris will become that of the Catholic world. . . . If Bossuet were living now, he would have been Archbishop of Paris long ago, and the pope would still be at the Vatican, which would be much better for everybody, for then there would be no pontifical throne higher than that of Notre-Dame, and Paris could not fear Rome. With such a president, I would hold a Council of Nicaea in Gaul."

But the failure of the Russian campaign upset all these dreams. The emperor's haughty attitude towards the Church was now modified. On 29 December, 1812, he wrote with his own hand an affectionate letter to the pope expressing a desire to end the quarrel. Duvoisin was sent to Fontainebleau to negotiate a Concordat. Napoleon's demands were these: the pope must swear to do nothing against the four articles; he must condemn the behaviour of the black cardinals towards the emperor; he must allow the Catholic sovereigns to choose two-thirds of the cardinals, take up his residence in Paris, accept the decree of the council on the canonical institution of bishops, and agree to its application to the bishoprics of the Roman States. Pius VII spent ten days discussing the matter. On 18 January, 1813, the emperor himself came to Fontainebleau and spent many days in stormy interviews with the pope though, according to Pius VII's own statement to Count Paul Van der Vrecken, on 27 September, 1814, Napoleon committed no act of violence against the pope. On 25 January, 1813, a new Concordat was signed. In it there was no mention either of the Four Articles, or of the nomination of cardinals by the Catholic sovereigns, or of the pope's place of residence: the six suburbicane dioceses were left at the pope's disposition, and he could moreover provide directly for ten bishoprics, either in France or in Italy—on all these points Napoleon made concessions. But on the other hand, the pope confirmed the decree of the Council of 1811 on the canonical institution of bishops.

According to the very words of its preamble, this Concordat was intended only "to serve as basis for a definitive arrangement". But, on 13 February, Napoleon had it published, just as it stood, as a law of the State. This was very unfair towards Pius VII: the emperor had no right to convert "preliminary articles" thus into a definitive act. On 9 February the imprisoned cardinals had been liberated by Napoleon; going to Fontainebleau, they had found Pius VII very anxious on the subject of the signature he had given, and which he regretted. With the advice of Consalvi, he prepared to retract the "preliminary articles". In his letter of 24 March to Napoleon he reproached him-

self for having signed these articles and disavowed the signature he had given. Napoleon had failed egregiously. He did not listen to the advice of the Comte de Narbonne, who, in a letter drafted by young Villemain, expressed the opinion that the pope ought to be set at liberty and sent back to Rome. It has been claimed that Napoleon had said to his ministers of State: "If I don't knock the head off the shoulders of some of those priests at Fontainebleau, matters will never be arranged." This is a legend; on the contrary, he ordered the minister of public worship to keep secret the letter of 24 March. Immediately, acting on his own authority, he declared the Concordat of Fontainebleau binding on the Church, and filled twelve vacant sees. On 5 April he had Cardinal di Pietro removed from Fontainebleau and threatened to do the same for Cardinal Pacca.

In the Dioceses of Ghent, Troyes, and Tournai, the chapters regarded the bishops appointed by Napoleon as intruders. The irregular measures of the emperor only exasperated the resistance of the clergy. The Belgian clergy, warned by Count Van der Vrecken of the pope's retraction, began to agitate against the imperial policy. Meanwhile, on 25 April, 1813, Napoleon assumed command of the Army of Germany. The victories of Lutzen (2 May) and Bautzen (19-22 May) weakened the Prussian and Russian troops. But the emperor made the mistakes of accepting the mediation of Austria—only a device to gain time—and of consenting to hold the Congress of Prague (July). A letter from Pius VII, secretly carried in the face of many dangers by Van der Vrecken, warned the Congress of Prague that the pope formally rejected the articles of 25 January. Napoleon continued nevertheless to send from his headquarters with the army severe orders calculated to overcome the resistance of the Belgian clergy: on 6 August he caused the director of the seminary of Ghent to be imprisoned, and all the students to be taken to Magdeburg; on 14 August he had the canons of Tournai arrested. But his perils were increasing. Joseph had been driven out of Spain. Bernadotte, King of Sweden, one of Napoleon's own veterans, was driving the French troops out of Stralsund. Under Schwarzenberg, Blücher and Bernadotte, three armies were forming against the emperor. He had but 280,000 men against 500,000. He was victor at Dresden (27 August), but his generals were falling away on all sides. He was deserted by the Bavarian contingents in the celebrated "Battle of the Nations" at Leipzig (18-19 October), the defection of the Wurtembergers and the Saxons was the chief cause of his defeat. The victories of Hanau (30 October) and Hochoheim (2 November) enabled his troops to get back to France, but the Allies were soon to enter that land.

Liberation of the Pope: End of the Empire.—The liberation of the pope figured on the programme of the Allies. In vain did the emperor send the Marchesa di Brignoli to Consalvi, and Fallot de Beaumont, Archbishop of Bourges, to Pius VII, to open negotiations. In vain, on 18 January, 1814, when he learned that Murat had gone over to the Allies and occupied the Roman provinces on his own account, did he offer to restore the Papal States to Pius VII. Pius VII declared that such a restitution was an act of justice, and could not be made the subject of a treaty. Meanwhile, Blücher and Schwarzenberg were advancing through Burgundy. On 24 January, Lagorse, the commandant of gendarmes who had guarded Pius VII for four years, announced to him that he was about to take him back to Rome. The pope was conveyed by short stages through southern and central France. Napoleon defeated the Allies at Saint-Dizier and at Brienne (27-29 January, 1814), the princes offered peace on condition that Napoleon should restore the boundaries of France to what they were in 1792. He refused. As the Allies demanded the liberation of the

pope, Napoleon sent orders to Lagorse, who was taking him through the south of France, to let him make his way to Italy. On 10 March the prefect of Montemotte received orders to have the pope conducted as far as the Austrian outposts in the territory of Piacenza. The captivity of Pius VII was at an end.

The war was resumed immediately after the Congress of Chatillon. In five days Napoleon gave battle to Blücher four times at Champaubert, Montmirail, Chateau-Thierry, and Vauchamp, and hurled him back on Chalons; against Schwarzenberg he fought the battles of Guignes, Mormant, Nangis, and Méry, thus opening the way to Troyes. But Lyons was taken by the Austrians, Bordeaux by the English. Exhausted as he was, Napoleon beat Blücher again at Craonne (7 March), retook Reims and Eprenay, and contemplated cutting off the retreat of Blücher and Schwarzenberg on the Rhine. He caused a general levy to be decreed; but the Allies had their agents in Paris. Marmont and Mortier capitulated. On 31 March the Allies entered Paris. On 3 April the Senate declared Napoleon dethroned. Returning to Fontainebleau, the emperor, determined to try one last effort, was stopped by the defection of Marmont's corps at Essonnes. On 20 April he left Fontainebleau; on 4 May he was in Elba.

At the end of ten months, learning of the unpopularity of the regime founded in France by Louis XVIII, Napoleon secretly left Elba, landed at Cannes (1 March, 1815), and went in triumph from Grenoble to Paris (20 March, 1815). Louis XVIII fled to Ghent. Then began the Hundred Days. Napoleon desired to give France liberty and religious peace forthwith. On the one hand, by the *Acte Additionnel*, he guaranteed the country a constitutional Government; on the other hand (4 April, 1815), he caused the Duke of Vicenza to write to Cardinal Pacca, and he himself wrote to Pius VII, letters in a pacific spirit, while Isoard, auditor of the Rota, was commissioned to treat with the pope in his name. But the Coalition was re-formed. Napoleon had 118,000 recruits against more than 800,000 soldiers; he beat Blücher at Ligny (16 June), whilst Ney beat Wellington at Quatre Bras; next day, at Waterloo, Napoleon was victorious over Bülow and Wellington until seven o'clock in the evening, but the arrival of 30,000 Prussians, under Blücher, resulted in the emperor's defeat. He abdicated in favour of his son, set out for Rochefort, and claimed the hospitality of England. England declared him the prisoner of the Coalition and, in spite of his protests, had him taken to the Island of St. Helena. There he remained until his death, strictly watched by Hudson Lowe, and dictated to General Monthonol, Gourgaud, and Bertrand those "Mémoires" which entitle him to a place among the great writers. Las Casas, at the same time, wrote day by day, the "Mémorial de Sainte-Hélène", a journal of the emperor's conversations. In the first of his captivity, Napoleon complained to Monthonol of having no chaplain. "It would rest my soul to hear Mass", he said. Pius VII petitioned England to accede to Napoleon's wish, and the Abbé Vignali became his chaplain. On 20 April, 1821, Napoleon said to him: "I was born in the Catholic religion. I wish to fulfil the duties it imposes, and receive the succour it administers." To Monthonol he affirmed his belief in God, read aloud the Old Testament, the Gospels, and the Acts of the Apostles. He spoke of Pius VII as "an old man full of tolerance and light". "Fatal circumstances", he added, "embroidered our cabinets. I regret it exceedingly." Lord Rosebery has attached much importance to the paradoxes with which the emperor used to tease Gourgaud, and amused himself in maintaining the superiority of Mohammedanism, Protestantism, or Materialism. One day, when he had been talking in this strain, Monthonol said to him: "I know that

your Majesty does not believe one word of what you have just been saying". "You are right", said the emperor. "At any rate it helps to pass an hour."

Napoleon was not an unbeliever; but he would not admit that anyone was above himself, not even the pope. "Alexander the Great", he once said to Fontanes, "declared himself the son of Jupiter. And in my time I find a priest who is more powerful than I am". This transcendent pride dictated his religious policy and utterly vitiated it. By the Concordat, as Talleyrand said, he had "done not only an act of justice, but also a very clever act, for by this one deed he had rallied to himself the sympathies of the whole Catholic world." But the same Talleyrand declares, in his "Mémoires", that his struggle with Rome was produced by "the most insensate ambition", and that when he wished to deprive the pope of the institution of bishops, "he was all the more culpable because he had had before him the errors of the Constituent Assembly". This double judgment of the former Constitutional bishop, later the emperor's minister of foreign affairs, will be accepted by posterity. By a strange destiny, this emperor who travelled all over Europe, and whose attitude towards the Catholic religion was in a measure inherited from the old Roman emperors, never set foot in Rome; through him Rome was for many years deprived of the presence of the remotest successor of St. Sylvester and of Leo III; but the successor of Constantine and of Charlemagne did not see Rome, and Rome did not see him.

GEORGES GOTAU.

Napoleon III (CHARLES-LOUIS-NAPOLÉON), originally known as LOUIS-NAPOLÉON-BONAPARTE, Emperor of the French; b. at Paris, 20 April, 1808; d. at Chiselhurst, England, 6 January, 1873; third son of Louis Bonaparte, King of Holland and Hortense de Beauharnais, daughter of the Empress Josephine. After the fall of the First Empire, Hortense, who had been separated from her husband, took her two sons to Geneva, Aix in Savoy, Augsburg, and then (1824) to the castle of Arenenberg in Switzerland. Louis Napoleon had for tutor the scholar Le Bas, son of a member of the Convention. The "principle of nationalities" attracted him in youth, and with his brother, he took part in an attempted insurrection in the States of the Church, in 1831. He was on the point of setting out for Poland when he heard that the Russians had entered Warsaw. On the death of the Duke of Reichstadt (1832) he regarded himself as the heir of the Napoleonic Empire. The Republican press, engaged in a struggle with Louis Philippe's government, manifested a certain sympathy for Louis Napoleon. Though Casimir Périer had expelled him from France in 1831, he and a few officers from Strasburg attempted, but failed in, a *coup de main* (1836). In his book, "Idées Napoléoniennes", published in 1838, he appears as the testamentary executor of Napoleon I and a bold social reformer. His attempted descent on Boulogne, in August, 1840, resulted in a sentence of life imprisonment, notwithstanding his defence by Berryer. While in prison at Ham, he wrote, among other brochures, one on the "Extinction of Pauperism". He escaped from Ham in 1846. After the Revolution of 1848 he returned to Paris, became a member of the Constituent Assembly, and finally was elected President of the Republic by 5,562,834 votes, on 10 December, 1848.

Presidency of Louis Napoleon.—Before his election Louis Napoleon had entered into certain engagements with Montalembert in regard to freedom of teaching and the restoration of Pius IX, who had been driven to Gaeta by the Roman Revolution. When General Oudinot's expedition made its direct attack on the Roman Republic, April, 1849, and the Constituent Assembly passed a resolution of protest (7 May, 1849), a letter from Louis Napoleon to Oudinot requested him to persist in his enterprise and assured him of reinforcements (8 May, 1849); at the same time, however, Louis Napoleon sent Ferdinand de Lesseps to Rome to negotiate with Mazzini, an agreement soon after disavowed. In this way the difficulties of the future emperor reveal themselves from the beginning; he wished to spare the religious susceptibilities of French Catholics and to avoid offending the national susceptibilities of the Italian revolutionists—a double aim which explains many an inconsistency and many a failure in the religious policy of the empire. "The more we study his character, the more nonplussed we are", writes his historian, de la Gorce. Oudinot's victory (29 June, 1849) having crushed the Roman Republic, Napoleon, ignoring the decided Catholic majority in the Legislative Assembly elected on 18 May, addressed to Colonel Ney, on 18 August, 1849, a sort of manifesto in which he asked of Pius IX a general amnesty, the secularization of his administration, the establishment of the Code Napoléon, and a Liberal Government. The Legislative Assembly, on

Montalembert's motion, voted approval of the "Motu Proprio" of 12 September, by which Pius IX promised reforms without yielding to all the president's imperative demands. The president was dissatisfied, and forced the Falloux Cabinet to resign; but he was soon working with all the influence of his position for the passage of the Falloux Law on freedom of teaching—a law which involved a great triumph for the Catholics—while, in the course of his journeys through France, his deferential treatment of the bishops was extremely marked. And when, by the *Coup d'Etat* of 2 December, 1851, Louis Napoleon had dissolved the Assembly, and by the *plébiscite* appealed to the French people as to the justice of that act, many Catholics, following Montalembert and Louis Veuillot, decided in his favour; the prince-president obtained 7,481,231 votes (21 November, 1852). The Dominican Lacordaire, the Jesuit Ravignan, and Bishop Dupanloup were more reserved in their attitude. Lacordaire went so far as to say: "If France becomes accustomed to this order of things, we are moving rapidly towards the Lower Empire".

Dictatorial Period of the Empire, 1852-60.—The first acts of the new government were decidedly favourable to the Church. By the "Decree Law" of 31 January, 1852, the congregations of women, which previously could be authorized only by a legislative act, were made authorizable by simple decrees. A great many bishops and parish priests hailed with joy the day on which Louis Napoleon was proclaimed emperor and the day (30 January, 1853) of his marriage with the Spanish Eugénie de Montijo, which seemed to assure the future of the dynasty. At this very time Dupanloup, less optimistic, published a pastoral letter on the liberty of the Church, while Montalembert began to perceive symptoms which made him fear that the Church would not always have reason to congratulate itself on the new order. For some years the Church enjoyed effective liberty: the bishops held synods at their pleasure; the budget of public worship was forthcoming; cardinals sat in the Senate as of right; the civil authorities appeared in religious processions; missions were given; from 1852-60 the State recognized 982 new communities of women; primary and secondary educational institutions under ecclesiastical control increased in number, while, in 1852, Pères Petetot and Gratry founded the Oratory as a Catholic centre of science and philosophy. Catholics like Ségur, Cornudet, Baudon, Cochin, and the Vicomte de Melun founded many charitable institutions under state protection. Napoleon III was anxious that Pius IX should consent to come to crown him at Notre Dame. This request he caused to be preferred by Mgr de Ségur, auditor of the Rota, and Pius IX explained that, if he crowned Napoleon III, he would also be obliged to go and crown Francis Joseph of Austria, hinting, at the same time, that Napoleon could come to Rome; and he gave it to be understood that, if the emperor were willing to suppress the Organic Articles, he, the pope, might be able to accede to his request at the end of three months. Pius IX also wished Napoleon III to make the Sunday rest obligatory and abrogate the legal necessity of civil marriage previous to the religious ceremony. After two years of negotiations the emperor gave up this idea (1854), but thereafter his relations with the Church seemed to be somewhat less cordial. The Bull in which Pius IX defined the Immaculate Conception was admitted into France grudgingly, and after some very lively opposition on the part of the Council of State (1854). Dreux Brézé, Bishop of Moulins, was denounced to the Council of State for infringement of the Organic Articles, while the "Correspondant" and the "Univers", having defended the bishop, were rigorously dealt with by the authorities. Lastly, the return to the *Cour de Cassation* (Court of Appeals) of the former *procureur général* Dupin, who had resigned

in 1852, was looked upon as a victory for Gallican ideas.

The Crimean War (1853-56) was undertaken by Napoleon, in alliance with England, to check Russian aggression in the direction of Turkey. The Fall of Sebastopol (8 September, 1855) compelled Alexander II to sign the Treaty of Paris (1856). In this war Piedmont, thanks to its minister, Cavour, had had a part, both military and diplomatic; for the first time Piedmont was treated as one of the Great Powers. After all, the Italian Question interested the emperor more than any other, and upon this ground difficulties were about to arise between him and the Church. As early as 1856 Napoleon knew, through Cavour, that the Piedmontese programme involved the dismemberment of the Pontifical States; at the promptings of the French Government the Congress of Paris expressed a wish that the pope should carry out liberal reforms, and that the French and Austrian troops should soon leave his territories. The attempt on the emperor's life by the Italian Orsini (14 January, 1858), set in motion a policy of severe repression ("Law of General Security" and proceedings against Proudhon, the socialist). But the letter which Orsini wrote from his prison to Napoleon, beseeching him to give liberty to twenty-five million Italians, made a lively impression upon the emperor's imagination. Pietri, the prefect of police obtained from Orsini another letter, pledging his political friends to renounce all violent methods, with the understanding that the enfranchisement of Italy was the price to be paid for this assurance. From that time, it was Napoleon's active wish to realize Italian unity. On 21 July, 1858, he had an interview with Cavour at Plombières. It was agreed between them that France and Piedmont should drive the Austrians from Italy, and that Italy should become a confederation, under the rule of the King of Sardinia, though the pope was to be its honorary president. The result of this interview was the Italian War. For this war public opinion had been schooled by a series of articles in Liberal and government organs—the "Siècle", "Presse", and "Patrie"—by Edmond About's articles on the pontifical administration, published in the "Moniteur", and by the anonymous brochure "L'Empereur Napoléon III et l'Italie" (really the work of Arthur de la Guéronnière), which denounced the spirit of opposition to reform shown by the Italian governments. Catholics tried to obtain Napoleon's assurance that he would not aid the enemies of Pius IX. In the House of Representatives (Corps Législatif) the Republican Jules Favre asked: "If the government of the cardinals is overthrown shall we shed the blood of the Romans to restore it?" And the minister, Baroche, made no answer (26 April, 1859). But Napoleon, in the proclamation announcing his departure for Italy (10 May, 1859), declared that he was going to deliver Italy as far as the Adriatic, and that the pope's power would remain intact. The victories of the French troops at Magenta (4 June, 1859) and Solferino (24 June, 1859) coincided with insurrectionary movements against the papal authority. Catholics were alarmed, and so was the emperor; he would not appear as an accomplice of these movements, and on 11 July he signed the treaty of Villafranca. Austria ceded Lombardy to France, and France retroceded it to Sardinia. Venetia was still to belong to Austria, but would form part of the Italian Confederation which would be under the honorary presidency of the pope. The pope would be asked to introduce the indispensable reforms in his state. In November, 1859, at Zurich, these preliminaries were formally embodied in a treaty.

Neither the pope nor the Italians were pleased with the emperor. On the one hand the pope did not thank Napoleon for his hints on the way to govern the Romagna, and an eloquent brochure from the pen of

Dupanloup denounced the schemes which menaced the pope. On the other hand it was plain to the Italians that the emperor had halted before enfranchising Italy as far as the Adriatic. Napoleon then dreamed of settling the affairs of Italy by means of a congress, and Arthur de la Guéronnière's pamphlet, "Le pape et le congrès", demanded of Pius IX, in advance, the surrender of his temporal power. On 1 January, 1860, Pius IX denounced this pamphlet as a "monument of hypocrisy", and on 9 January he answered with a formal refusal a letter from Napoleon advising him to give up the Legations. A few months later, the Legations themselves joined Piedmont, while Napoleon, by making Thouvenel his minister of foreign affairs and by negotiating with Cavour the annexation of Nice and Savoy to France, proved that he was decidedly more devoted to the aspirations of Piedmont than to the temporal power of the pope. Meanwhile the Catholics in France commenced violent press campaigns under the leadership of the "Univers" and the "Correspondant". On 24 January, 1869, the "Univers" was suppressed. The minister of state, Billault, prosecuted the Catholic publications and pulpit utterances deemed seditious. To be sure Baroche, on 2 April, announced in the Corps Législatif, that the French troops would not leave Rome so long as the pope was unable to defend himself. But Napoleon, only too anxious to withdraw his troops, at one moment thought of having them replaced by Neapolitan troops, and then proposed to Pius IX, though in vain, that the Powers of the second order should be induced to organize a body of papal troops, to be paid by all the Catholic states jointly. Pius IX, on the other hand, allowed Mgr de Mérode to make an appeal to the aristocracy of France and Belgium for the formation of a special corps of pontifical troops, which should enable the pope to do without the emperor's soldiers. Among these soldiers of the pope were a large number of French Legitimists; Lamoricière, their commander, had always been a foe of the imperial regime. Napoleon III was annoyed, and ordered his ambassador at Rome to enter into negotiations for the withdrawal of the French troops: on 11 May, 1860, it was decided that within three months the soldiers given to the pope by Napoleon III should return to France.

In the meantime, however, Garibaldi's campaign in Sicily and Calabria opened. Farini and Cialdini, sent by Cavour to Napoleon, represented to him (28 August) the urgent necessity of checking the Italian revolution, that Garibaldi was about to march on Rome, and that France ought to leave to Piedmont the task of preserving order in Italy, for which purpose the Piedmontese must be allowed to cross the pontifical territories so as to reach the Neapolitan frontier. "Faites vite (act quickly)", said the emperor, and himself left France, travelling in Corsica and Algeria, while the Piedmontese troops invaded Umbria and the Marches, defeated the troops of Lamoricière at Castelfidardo, captured Ancona, and occupied all the States of the Church except Rome and the province of Viterbo. Napoleon publicly warned Victor Emmanuel that, if he attacked the pope without legitimate provocation, France would be obliged to oppose him; he withdrew his minister from Turin, leaving instead only a chargé d'affaires, and was a mere spectator of that series of events which, in February, 1861, ended in Victor Emmanuel's being proclaimed King of Italy. The expedition to Syria (1859), in which 80,000 French troops went to the relief of the Maronite Christians, who were being massacred by the Druses with the connivance of the Turks, the two expeditions to China (1857 and 1860), in co-operation with England, which resulted, among other things, in the restoration to the Christians of their religious establishments, and the joint expedition of France and Spain (1858-62) against the Annamese Empire, which avenged the persecution

of Christians on Annam and ended in the conquest of Cochinchina by France, merited for the armies of France the gratitude of the Church. Still the attitude of Napoleon III in regard to Italian affairs caused great pain to Catholics. Falloux in an article entitled "Antécédents et conséquences de la situation actuelle", published in the "Correspondant", implied that Napoleon was an accomplice in the Italian revolution. The Catholic associations formed to collect subscriptions for the pope's benefit were suppressed, and Pius IX, in the consistorial allocation of 17 December, 1860, accused the emperor of having "feigned" to protect him.

Liberal Period of the Empire, 1860-70.—It was just at this time that the emperor, by the decree of 24 November, 1860, made his first concession to the Opposition, and to Liberal ideas, by granting more independence and power of initiative to the Legislature. But the Liberal opposition was not disarmed, and the Catholic discontent was aggravated by his Italian policy. The emperor replied to Pius IX by publishing la Guéronnière's book, "La France, Rome et l'Italie", a violent arraignment of Rome. Then Bishop Pie of Poitiers published his pastoral charge in which the words, "Lave tes mains, O Pilate" (Wash thy hands, O Pilate), were addressed to Napoleon III. In the Senate, an amendment in favour of the temporal power of the pope was lost by only a very small majority; in the Corps Législatif, one-third of the deputies declared themselves for the pontifical cause. The emperor asserted his Italian sympathies more and more clearly: in June, 1862, he recognized the new kingdom; he sent an ambassador to Turin, and to Rome two partisans of Italian unity; and he used his influence with Russia and Prussia to procure their recognition of the Kingdom of Italy. One striking symptom of the emperor's changed feelings towards the Church was the circular of January, 1862, by which Persigny declared all the St. Vincent de Paul societies dissolved. Following upon Garibaldi's blow at the Pontifical States, which had been stopped by his defeat at Aspromonte (29 August, 1862), General Durando, minister of foreign affairs in Rattazzi's cabinet, declared in a circular that "the whole Italian nation demanded its capital". Thus were the Italians proclaiming their eagerness to be installed at Rome. Fearing that at the forthcoming legislative elections the Catholics would revolt from the imperial party, Napoleon suddenly manifested a much colder feeling for Italy. The Catholic influence of the empress gained the upper hand of Prince Napoleon's anti-religious influence. Thouvenel was supplanted by Drouin de Lhuys (15 October, 1862), who was made to give out a curt statement that the French Government had no present intention of taking any action in consequence of the Durando circular, thus bringing about the fall of the Rattazzi cabinet in Italy. A great many Catholics recovered their confidence in Napoleon; but a political alliance between a certain number of Liberal Catholics, devoted to the Royalist cause and members of the Republican party resulted, in

NAPOLÉON III

June, 1863, in the return of thirty-five Opposition members to the Chamber, mostly men of great ability. Republicans and Monarchists, Freethinkers and Catholics, they grouped themselves around Thiers, who had been Louis Philippe's minister, and who won the confidence of Catholics by pronouncing unequivocally in favour of the temporal power. But the alliance between Republicans who wanted Napoleon to desist from protecting the temporal power and Catholics who thought he did not protect it enough, could not be very stable. From 1862 to 1864 the emperor did nothing in regard to Italy that could cause Pius IX any uneasiness. He was at that period busy with the early stages of the Mexican War, in which he had very imprudently allowed himself to become involved. Four years of fighting against President Juarez were destined to end in the evacuation of Mexico by the French troops, early in 1867, and the execution of Maximilian, brother of the Emperor of Austria, whom France had caused to be proclaimed Emperor of Mexico. The impression created by this disaster notably increased the strength of the Opposition in France.

Negotiations between Napoleon III and Italy recommenced in 1864, the Italian Government beseeching the emperor to put an end to the French occupation of the Pontifical States. The Convention of 15 September, 1864, obliged Italy to refrain from attacking the actual possessions of the Holy See and, on the contrary, to defend them, while France promised to withdraw her troops within a period of not more than two years, *pari passu* with the organization of the pope's army. This arrangement caused profound sorrow at the Vatican; Pius IX drew the conclusion that Napoleon was preparing to leave the States of the Church at the mercy of the Italians. The diplomatic remonstrances with which the emperor's government replied to the Syllabus, its prohibition against the circulation of that document, and Duruy's project to organize primary education without the concurrence of the Church, were causes of dissatisfaction to Rome and to the Catholics. The speech of Thiers against Italian unity, denouncing the imprudence of the Imperial policy, was loudly applauded by the faithful supporters of the Holy See. Napoleon III, always a prey to indecision, no doubt asked himself from time to time whether his policy was a wise one, but the circumstances which he himself had created carried him along. Late in 1864 he thought of negotiating an alliance between the Courts of Berlin and Turin against Austria, so as to allow Italy to get possession of Venetia. Having paved the way for Italian unity, he was inaugurating a policy by means of which Prussia was to achieve German unity. He did nothing to prevent the conquest of Austria by Prussia at Sadowa (1866), and when he made a vain attempt to have Luxemburg ceded to him, Bismarck exploited the proceedings to convince public opinion in Germany of the danger of French ambition and the serious necessity of arming against France. By the end of 1866 the withdrawal of the French troops which had guarded the pope was complete. But Napoleon at the very time when he was thus carrying out the Convention of 15 September was organizing at Antibes a legion to be placed at the disposal of the pope; he once more exacted of Italy a pledge not to invade the Papal States; he conceived a plan to obtain from the Powers a collective guarantee of the pope's temporal sovereignty. On 3 November, 1866, he wrote to his friend Francesco Arese: "People must know that I will yield nothing on the Roman question, and that my mind is made up, while carrying out the Convention of 15 September, to support the temporal power of the pope by all possible means". But the season of ill-luck and of blundering was setting in for the Imperial diplomacy. None of the Powers responded to Napoleon's appeal. Italy, displeased at the organization of the

Antibes Legion and the confidence reposed by the emperor in Rouher, a devoted champion of Catholic interests, complained bitterly: Napoleon answered by complaining of the Garibaldian musters that threatened the pope's territories. When the Garibaldians made an actual incursion, on 25 October, 1867, the French troops which had for some weeks been concentrated at Toulon, embarked for Civit  Vecchia and helped the papal troops defeat the invaders at Mentana. Cardinal Antonelli asked that the French forces should be directed against those of Victor Emmanuel, but the emperor refused. Menabrea, Victor Emmanuel's minister, though he gave orders for the arrest of the Garibaldians, published in spite of Napoleon, a circular affirming Italy's right to possess Rome. Napoleon found it increasingly difficult to extricate himself from the coils of the Roman Question; he was still thinking of a European congress, but Europe declined. At the close of 1867, Thier's speech in support of the temporal power gave Rouher occasion to say, amid the applause of the majority, "We declare it in the name of the French government, Italy shall not take possession of Rome. Never, never will France tolerate such an assault upon her honour and her Catholicity". That never was extremely unpleasant to the Italian patriots. The emperor had offended both the pope and Italy at the same time. When the Vatican Council was convoked the imperial government manifested no antagonism. M. Emile Ollivier, president of the Ministry of Foreign Affairs, opined, on 2 January, 1870, that the States ought not to interfere in the deliberations of the council. His colleague Daru instructed Banneville, the French ambassador to Rome, on 20 February, to protest in the name of French Constitutional law against the programme of enactments "De ecclesia", and tried to bring about concerted action of the Powers; but, after Antonelli's demurrer of 10 March, Daru confined himself to reiterating his objections in a memorandum (5 April) which Pius IX declined to submit to the council. M. Ollivier, against the requests of certain anti-infallibilist prelates, directed Banneville not to try to meddle in the proceedings of the council.

In 1870 Prince Leopold of Hohenzollern's claim to the crown of Spain brought on a conflict between France and King William of Prussia. A dispatch relating to a conversation which took place at Ems, between William and Napoleon's ambassador, Benedetti, was, as Bismarck himself afterwards confessed, tampered with in such a way as to make war inevitable. Bismarck's own "Recollections" thus supply the refutation of the charge made by him in the Reichstag (5 December, 1874), that the empress and the Jesuits had desired the war and driven him into it. The German historian Sybel has formally cleared the empress and the Jesuits of this accusation. (On this point, which has provoked numerous polemics, see D hr, "Jesuitenfabeln", 4th ed., Freiburg, 1904, pp. 877-79). Pius IX wrote to Emperor William offering his good offices as mediator (22 July, 1870), but to no purpose. As for the Italian government, on 16 July, 1870, it refused an alliance with France because Napoleon had refused it Rome. On 20 July Napoleon promised that the imperial troops should be recalled from Rome, but no more, and so, as usual, he offended both the pope, whom he was about to leave defenceless, and Italy, whose highest ambitions he was balking. The negotiations between France and Italy were continued in August, by Prince Napoleon, who made a visit to Florence. Italy absolutely insisted upon being allowed to take Rome, and, on 29 August, Visconti Venosta, minister of foreign affairs, affirmed the right of the Italians to have Rome for their capital. The anti-Catholic controversialists of France have often made use of these facts to support their allegation that the emperor would have had the Italian alliance in the War of 1870 if he had not persisted in his demand that

the pope should remain master of Rome, and that Italy's abstention entailed that of Austria, which would have helped France if Italy had. M. Welschinger has proved that in 1870 these two powers were in no condition to be of material assistance to France. After the surrender of Sedan (2 September, 1870), Napoleon was sent, a prisoner, to Wilhelmshöhe, where he learned that the Republic had been proclaimed at Paris, 4 September, and that the Piedmontese had occupied Rome (20 September). The National Assembly of Bordeaux, on 23 February, 1871, confirmed the emperor's dethronement. After the Peace of Frankfurt he went to reside at Chiselhurst, where he died. His only son, Eugène-Louis-Jean-Joseph-Napoléon, born 16 March, 1856, was killed by the Zulus, 23 June, 1879. Napoleon III left unfinished a "Vie de César", begun in 1865, with the assistance of the historian Duruy, and of which only three volumes were published. His history still affords occasion for numerous polemics animated by party feeling. The portrait of him drawn by Victor Hugo in "Les Châtiments" is extremely unfair. Napoleon was a tender-hearted dreamer, kindness was one of his most evident qualities. As regards his personal practice of religion, he was faithful to his Easter duties. Much of the censure which his foreign policy has merited is equally applicable to the anticlericals and the Republicans of his time, whose press organs were clamouring for French aid towards the speedy realization of Italian unity, while their systematic opposition, in 1868, to the Government programme for strengthening the army was partly responsible for the military weakness of France in 1870.

The works of Napoleon III, including those written before he became emperor, his speeches as president, and his military works were published in 5 vols., Paris, 1854-57, and 1869: THIRIA, *Napoléon III avant l'Empire* (2 vols., Paris, 1896); DE LA GORCE, *Histoire du second Empire* (7 vols., Paris, 1895-1902); BLANCHARD JERROLD, *Life of Napoleon III* (4 vols., London, 1882); FORBES, *The Life of Napoleon the Third* (London, 1898); WOERTZ, *Le règne de Napoléon III* (Brussels, 1907); OLLIVIER, *L'Empire libéral* (14 vols., Paris, 1895-1910); GIRAUDAU, *Napoléon III intime* (Paris, 1895); WELSCHINGER, *La Guerre de 1870, causes et responsabilités* (2 vols., Paris, 1910). On Napoleon III and the Italian question, see bibliographies to FALLoux, MONTALEMBERT, DUPANLOUP, PUIS IX, VÉUILLOT; also GIACOMETTI, *La question italienne* (Paris, 1893); IDEM, *L'unité italienne* (2 vols., Paris, 1896-98); THOUVENEL, *Le secret de l'empereur* (2 vols., Paris, 1889); CIALA, *Politica segreta di Napoleone III e di Cavour in Italia e in Ungheria* (Turin, 1895); BOURGEOIS and CLEMENT, *Rome et Napoléon III* (Paris, 1907); BONFADINI, *Vita di Francesco Arca* (Turin, 1894); CAUVIN, *Un Portrait inédit de Napoléon III in Revue de l'Institut Catholique de Paris* (1910), attributed to Falloux, characterizing the attitude of Napoleon III in Italian affairs.

GEORGES GOYAU.

Napper (or NAPIER), GEORGE, VENERABLE, English martyr, b. at Holywell manor, Oxford, 1550; executed at Oxford 9 November, 1610. He was a son of Edward Napper (d. in 1558), sometime Fellow of All Souls College, by Anne, his second wife, daughter of John Peto, of Chesterton, Warwickshire, and niece of William, Cardinal Peto. He entered Corpus Christi College 5 January, 1565-6, but was ejected in 1568 as a recusant. On 24 August, 1579, he paid a visit to the English College at Reims, and by December, 1580, he had been imprisoned. He was still in the Wood Street Counter, London, on 30 September, 1588; but was liberated in June, 1589, on acknowledging the royal supremacy. He entered the English College, Douai, in 1596, and was sent on the mission in 1603. He appears to have lived with his brother William at Holywell. He was arrested at Kirtlington, four miles from Woodstock, very early in the morning of 19 July, 1610, when he had on him a pyx containing two consecrated Hosts as well as a small reliquary. Brought before Sir Francis Eure at Upper Heyford (Wood says before a justice named Chamberlain), he was strictly searched; but the constable found nothing but his breviary, his holy oils, and a needle case with thread and thimble. The next day he was sent to Oxford Castle, and indicted at the sessions soon after

under 27 Elis., c. 2 for being a priest. The possession of the oils was held to be conclusive and he was condemned, but reprieved. In gaol he reconciled a condemned felon named Falkner, and this was held to aggravate his crime, but as late as 2 November it was believed that he would have his sentence commuted to one of banishment. As he refused the oath of allegiance, which described the papal deposing power as a "false, damnable, and heretical" doctrine, it was decided to execute him. He suffered between one and two in the afternoon, having said Mass that morning. His head according to Wood was set up on Tom Gateway; according to Challoner's less probable statement on Christ Church steeple. His quarters were placed on the four city gates, but at least some were secretly removed, and buried in the chapel (now a barn) of Sanford manor, formerly a preceptory of Knights Templar.

JOHN B. WAINEWRIGHT.

Narbonne. See TOULOUSE, ARCHDIOCESE OF.

Nardi, JACOPO, Italian historian; b. at Florence, 1476; d. at Venice, 11 March, 1563. His father, Salvestro Nardi, belonged to an old Florentine family, originally from the suburbs of the city. Jacopo was an earnest follower of Savonarola, whose death he witnessed. He was attached to the Republican party, under which he held various offices in the State, but nevertheless kept on friendly terms with the Medici after their restoration in 1512, and even composed pageants for them. Having been concerned in the Republican revolution of 1527, he was banished from Florence in 1530, and took a leading part in the efforts of the exiles to return, pleading their cause against the tyranny of Duke Alessandro before Charles V, in 1536. He finally settled at Venice, where he died in poverty. All his contemporaries bear witness to his upright and noble character. Before his exile, Nardi composed two comedies "L'Amicizia" and "I Due Felici Rivali", together with a few *canti carnascialeschi*, or carnival-songs. To a later date belong his political discourses, his translations from Livy and Cicero, and his Life of Antonio Giacomini, an austere soldier of the republic who died in 1517. His "Istorie della città di Firenze" (History of the City of Florence) was written in the last years of his life. It deals with the tragic epoch in Florentine history from 1494 until within a few years of the author's death, and is especially noteworthy for its high moral tone and its faithful record of the events in which Nardi himself had shared.

GELLI, ed., *Istorie della città di Firenze di Jacopo Nardi* (Florence, 1858); GARGIOLLI, ed., *Vita di Antonio Giacomini e altri scritti minori di Jacopo Nardi* (Florence, 1867); PIERALLI, *La vita e le opere di Jacopo Nardi* (Florence, 1901).

EDMUND G. GARDNER.

Nardò, DIOCESE OF (NERITONENSIS), in southern Italy. Nardò was already an episcopal see, when, about 761, Greek monks arrived there, fleeing from the persecutions of the Iconoclasts. Paul I assigned to these monks the episcopal palace and the revenues of the see, then vacant, and the city was made part of the Diocese of Brindisi. The monastery became a centre of Greek culture; but, in 1090, Urban II put Latin Benedictines there, and Paschal II gave episcopal jurisdiction to the abbot; for a long time the Greek and Latin rites were maintained together at the monastery. In 1388, a bishop was established at Nardò by the antipope, Clement VII, but was deposed by Boniface IX, who entrusted the care of the diocese to the Archbishop of Otranto. The latter proposed to

suppress the Greek Rite in the diocese, but, at the instance of the Benedictines and of King Ladislaus, the pope maintained its use. From the report made on this subject, it is known that the Greek Rite obtained in sixteen towns of the diocese, and that there was a protopope at Balatone. The see was re-established in 1413, in favour of Giovanni degli Epifani. Other bishops were Ambrogio Salvi, O.P. (1569), who introduced the reforms of the Council of Trent; Fabio Fornari (1583), who also tried to abolish the use of the Greek Rite; Lelio Landi (1607), a learned Orientalist, employed by the Congregation *de auxiliis* and also in the correction of the Vulgate; Fabio Chigi (1635), who became Alexander VII; Antonio Sanfelice (1707), founder of a public library and of a workhouse for girls. The diocese is directly dependent on the Holy See. It has 16 parishes, with 70,500 inhabitants, 2 houses of Franciscans, and 4 religious houses of women, 2 schools for boys, and 4 for girls.

CAPPELLETTI, *Le Chiese d'Italia*, XX (Venice, 1857).

U. BENIGNI.

Narni and Terni, UNITED DIOCESES OF (NARNIENSIS ET INTERAMNENSIS), in Central Italy. Narni is the ancient Nequinum of the Sabines; in 300 and 299 B. C., it was besieged by the Romans, who destroyed the city and sent there a Latin colony, changing the name to Narnia. Luitprand captured the town in 726, but Pope Zacharias persuaded him to restore it to the Duchy of Rome in 742, after which it remained under pontifical rule. From 1198 to 1214, Narni was in rebellion against Innocent III, who temporarily suppressed its episcopal see. The churches of this city contain many paintings of the ancient Umbrian school. This town is the birthplace of the Blessed Lucia of Narni, a tertiary of St. Dominic, who died in 1544, and of the *condottiere* Erasmo Gattamelata. Narni venerates as its first bishop the martyr Juvenalis, who died in the second half of the fourth century; St. Maximus, who was bishop in 425, was succeeded by his two sons Hercules and Pancratius; St. Gregory the Great refers to the bishop St. Cassius, who died in 558; the same pontiff wrote a letter to the bishop Projectinus which shows that, at Narni, at that time, there were still pagans to be converted; Bishop John (940) was succeeded by his son, who became John XIII; among other bishops were: William, a Franciscan, whom Urban V employed against the Fraticelli (1367); and Raimondo Castelli (1656), founder of the seminary.

In 1908, the sees of Narni and of Terni were united. Terni is on the river Nera, at its confluence with the Velino; the magnificent cascade of the latter is well-known through the noble description by Lord Byron in "Childe Harold". Terni is the ancient Interamna Nahars of the Umbrians, and its former splendour is witnessed to by the ruins of an amphitheatre in the garden of the episcopal palace, a theatre, and baths near the church of St. Nicholas. The cathedral, and other churches, are built on the sites of pagan temples. After the Lombard invasion, Terni belonged to the Duchy of Spoleto, and with the latter, came into the Pontifical States; it was at this town that Pope Zacharias entered into the agreement with King Luitprand for the restitution of the cities of Bieda, Orte, Bomarzo, and Amelia to the Duchy of Rome. It is believed that the gospel was preached at Terni by St. Peregrinus, about the middle of the second century. The townsmen have great veneration for St. Valentinus, whose basilica is outside the city, and was, probably, the meeting-place of the first Christians of Terni. There were other martyrs from this city, among them, Sts. Proculus, Ephebus, Apollonius, and the holy virgin Agape. In the time of Totila, the Bishop of Terni, St. Proculus, was killed at Bologna, and St. Domnina and ten nuns, her companions, were put to death at Terni itself. After the eighth century

Terni was without a bishop until 1217, in which year the diocese was re-established. Among its bishops since that time, were Ludovico Mazzanico III (1406), who governed the diocese for fifty-two years; Cosmas Manucci (1625), who gave the high altar to the cathedral, and Francesco Rapaccioli (1646), a cardinal who restored the cathedral. The united sees are immediately dependent upon Rome; they have 57 parishes, with 66,600 inhabitants, 3 religious houses of men, and 11 of women.

U. BENIGNI.

Narthex, in early Christian architecture a portion of the church at the west end, separated from the nave by a low wall or screen and reserved for the catechumens, energumens, and penitents who were not admitted amongst the congregation. The narthex was of two kinds, exterior and interior: the former consisted of an open atrium arcade continued across the front of the church; in the latter, the aisle and gallery were returned across the nave. A survival of the exterior narthex may be found in the church of San Ambrogio at Milan; of the interior narthex, in Santa Agnese, at Rome. The outer narthex was sometimes used as a hall of judgment and for other secular purposes, and, after the sixth century, as a place of burial, while the inner narthex, sometimes called the *matroneum*, was used, probably, for certain persons of rank or distinction, rather than as a women's gallery. After the abandonment of the atrium in the West, about 1000, the narthex developed by degrees into the great west porch which is so characteristic of the churches of southern France. Among the monastic orders it continued in use down to the beginning of the thirteenth century, as, for example, in the abbeys of Cluny and Vézelay. With the full development of Gothic it disappeared, its place being taken by the three great western porches, or doorways. Properly speaking, the name should have ceased with the function, and the so-called narthex of medieval churches and abbeys should justly be called a porch. For the same reason there is no excuse for the recent revival of the word as a designation either of an exterior porch, or an interior vestibule.

RALPH ADAMS CRAM.

Nashville, Diocese of, comprises the entire territory of the State of Tennessee. From its inland location and peculiar civil history, it has not profited much from the tide of immigration, and hence its Catholic development has been chiefly due to its own internal work. There is little need of consulting any historical references as to the growth of the Church in Tennessee since no such work of any importance exists. This is chiefly due to the fact that heretofore the diocese was in an embryo state and those who could write its history had neither time nor opportunity to do what was so much needed. Up to twenty years ago, or in the decade of 1880-90, much of the diocesan history could have been learned from the early pioneers of Catholicity, or their children, who were then living. The Diocese of Nashville was established 28 July, 1837, having been separated from the Diocese of Bardstown (now Diocese of Louisville) and the first Bishop of Nashville was Rt. Rev. Richard Pius Miles, consecrated at Bardstown, 16 Sept., 1838. Before this date there is no authentic record of any ecclesiastical missionary work in what is now the State of Tennessee, except in sporadic efforts. The earliest records attainable are two letters in the archives of Baltimore, dated 1799, to Bishop Carroll from Father Badin, concerning an offer from John Sevier, the first governor of Tennessee, that Father Badin might arrange for the immigration of at least one hundred Catholic families for whose maintenance the governor guaranteed sep-

PORTICO OF THE CATHEDRAL

arate tracts of land. The offer of the warrior-statesman was not accepted, however, although many distinctly Catholic names are to be found to-day among the inhabitants of east Tennessee, probably due to the fact that the insurgents of Ireland were sold into a species of slavery by the English government to the American colonists. That they or their children have fallen from the old faith of their fathers can be accounted for by the fact that the exiles had then neither church nor priests, nor Catholic schools. For a good many years the present writer has been seeking information as to early Catholic settlers and Catholic work, but must confess the evidence very doubtful as to whether the first priestly ministrations were in the neighbourhood of Nashville or Knoxville. Civic history and geographical position seem to give the preference to Knoxville.

The first authentic records of a priest in Tennessee are contained in the archives of St. Mary's cathedral, Nashville, when Father Abell came (1820) from Bardstown to attend the few Catholics then living in Nashville. Shortly after his arrival, Father Abell undertook the building of the first church in Tennessee, at Nashville, a small building on what is now Capitol hill. The State Capitol now occupies the site. Father Abell visited Nashville as a mission for four or five years, and then (1849) Father Durbin took charge, and about the following year he was assisted by Father Brown who made Ross Landing (now Chattanooga) his headquarters, just previous to the advent of Bishop Miles. After a difficult journey on horseback and in a canoe from Bardstown, Ky., Bishop Miles took possession of his diocese and early in 1839, began his first episcopal visitation of Tennessee. At the end of his journey he declared that he did not find more than three hundred Catholics in Tennessee. In 1840, he again journeyed to Memphis to establish there the first church, under the management of Father McEleer; it has since been rebuilt as St. Peter's by the Dominicans. In 1844 he laid the corner stone of St. Mary's cathedral, Nashville. In addition mission churches were established in outlying stations so that in 1847 Bishop Miles was able to report to Rome that he had 6 priests, 6 churches, 8 chapels, and a Catholic population of about 1500.

In 1849 a church was erected at Jackson; in 1852 one at Chattanooga; in 1854 one at Knoxville; in 1856 one at McEwen; in 1857 one at Edgefield (now East Nashville); in 1858 one at Shelbyville (later discontinued); and in 1858 one at Nashville (church of the Assumption). Bishop Miles died on 19 February, 1860, at the outbreak of the Civil War, and he was succeeded by Bishop Whelan. His diocese became the great theatre of war; his cathedral was converted into a hospital; his flock scattered. The burden proved too great for his strength, and in 1863 he was forced to resign. Two years later Bishop Feehan succeeded him. Under his jurisdiction, new priests were added to the diocese, new churches were built, especially St. Patrick's (1866), St. Bridget's (1870), and St. Joseph's (1875), all at Memphis. In 1881 St. Columba's church in East Nashville was built, to replace the old St. John's church, which was burned down a few years previously. In the decade 1870-80, mission chapels were erected at Humboldt, Belview, and Lawrenceburg; Bishop Feehan reported to Rome (1880) that his diocese had 30 churches of which 18 had resident priests, besides numerous stations. This was a rapid growth, when we consider the ravages of pestilence which visited the people during 1873, 1878, and 1879, and which buried from the ranks of the Catholics in Memphis alone, twenty-two priests and thousands of lay people. In 1880 Bishop Feehan became the first Archbishop of Chicago, Illinois. Bishop Rademacher succeeded him as Bishop of Nashville in 1883, but owing to ill-health his work was somewhat retarded, although some progress was made. During

his administration St. Joseph's and St. Patrick's churches were built at Nashville. In July, 1893, Bishop Rademacher was transferred to the Diocese of Fort Wayne, Ind., where he died in 1900.

In 1894, the present head of the diocese, Bishop Byrne, was consecrated Bishop of Nashville, and his work has not only been that of restoration, but also of great progress; while the ranks of the clergy have been strengthened by the addition of many new men. Faithful and tireless in his energy, scholarly in his attainments, he has aroused the latent zeal in his clergy and people. Among his many undertakings may be mentioned the building of the new pro-cathedral, the enlarging of the Assumption church and St. Joseph's church at Nashville, the building of the Holy Family church for coloured people at Nashville, the rebuilding of St. Patrick's church, and the building of the Sacred Heart church at Memphis, the building of the Holy Ghost church at Knoxville, besides numerous mission chapels throughout the diocese. In addition to this he has directed the building or enlarging of various institutions of charity and learning. He also convoked, 10 Feb., 1905, the first synod of the diocese, at which 34 priests were present, with 7 unavoidably absent. Scarcely had the diocese been formed, when its bishops and priests recognized the need of these institutions, and with their untiring energy, asylums, hospitals, and schools sprang into existence. Chief among them may be mentioned first of all that every parish having a residential pastor has also a Catholic school, and in addition there are four academies for young ladies, St. Agnes (Memphis), conducted by the Dominican (Ky.) Sisters, established in 1850; the Sacred Heart (Memphis), conducted by Dominican (Nashville) Sisters, established in 1890; St. Cecilia's (Nashville), conducted by Dominican Sisters at their mother-house, established in 1860; St. Bernard's (Nashville), conducted by the Sisters of Mercy, established in 1868. For the higher education and technical instruction of coloured girls, the Sisters of the Blessed Sacrament (Pa.) conduct an academy at Nashville, established in 1905. The Christian Brothers at Memphis, since 1871, conduct a college for young men. For charitable institutions, there are two well equipped orphanages, one at Nashville and one at Memphis; St. Joseph's Hospital at Memphis, erected in 1885, is conducted by the Sisters of St. Francis, while St. Thomas' Hospital at Nashville is conducted by the Sisters of Charity from Emmitsburg. The Sisters of the Good Shepherd have a home at Memphis for the reformation of wayward girls, and the Little Sisters of the Poor have an institution at Nashville for the aged and infirm. There are also in the diocese the Franciscans and the Dominicans, each with a parish church at Memphis; the Josephite Fathers, having churches at Nashville and Memphis; the Paulist Fathers, with a Mission house at Winchester; the Sisters of the Precious Blood (Maria Stein), having a school at Lawrenceburg. Bishop Byrne has at present (1910) under his direction, 46 priests; 25 parishes with a resident priest and parochial schools, and under Catholic care in schools and institutions for children, about 5000 pupils; the total Catholic population is between 20,000 and 25,000.

JAS. T. LORIGAN.

Nasoreans, sometimes called **MANDÆANS**, **SABAIANS**, or **CHRISTIANS OF ST. JOHN**, are pagan Gnostics who shortly before the rise of Christianity, formed a sect which flourished in Mesopotamia and Babylonia, and which was one of the foremost religions in Western Asia in the early years of Mohammedanism. Though some 2000 families strong in the seventeenth century, they have dwindled at the present day to some 1500 adherents living on the Shat-el-Arab near the Persian Gulf. It is the only Gnostic sect that has survived and the sacred writings of which are still extant; a few

remnants excepted, the writings of the so-called Christian Gnostics have perished. I Names, II Doctrines, III Discipline and Ritual, IV History.

I NAMES. Mandæan (ܡܢܕܝܐ) is a Babylonian-Aramaic word in dialectic form, meaning: Gnostics, *γνῶστοι*, "those who are good at knowing". The Hebrew word for knowledge *מַדָּע* *Madda* is of the same root and is the noun from which the adjective *Mandaya* is derived. It is the name adopted by the sect itself, being employed in their sacred books, and is characteristic of their worship of the *דַּוְיָא* *ḏawīa* *γνῶσις ῥῆς ζωῆς* or "knowledge of life". Another name also found in their sacred books is that of Sabians (ܣܒܝܐ) which means Baptists (ܒܬܝܬܐ) to baptize in Syriac and Aramaic). This name is known to the Mohammedans (sing. *Sabia*, pl. fr. *Subd'u*) from the Koran (Sure V, 73; II, 59; XXII, 17) in which Christians, Sabians, and Jews are enumerated as religions which can be tolerated by Islam. It is based on the prominence of frequent baptism in their religious discipline and hence they are no doubt referred to by the Fathers as Hemerobaptists *ἡμεροβαπτισται* i. e. practising daily baptism. The name *Σουβαίτοι* was even known in Greek writers. The name, however, most frequently used in their sacred literature is that of Nasoræans, ܢܫܪܝܐ which is also the usual Arabic (sing. *Nasrani*, pl. *Nasāra*) for Christians. The coincidence is striking, the more so as the Nasoræans have no leaning towards Christianity, but rather contempt and hatred for it; nor do their doctrines betray any approximation to Christian beliefs, except perhaps in that of the existence of a saviour, although some of their ceremonies bear a superficial resemblance to Christian mysteries. If, however, we remember that the Manichæans in Europe paraded as the true Christians, though their system has but the use of half a dozen terms in common with Christianity, and that some Gnostic sects had barely any similarity with the Church of Christ, though self-styled Christians, it becomes less strange that even Mandæans should have styled themselves Nasoræans. The term *Kristiānā*, as transliteration of the Greek word, they reserve for the followers of Jesus Christ. Christianity was no doubt a name to conjure with, but the absence of any reason for the adoption of the title remains a mystery. It is suggested by some that the name is only given to the most perfect amongst them, but this seems contrary to fact. The name "Christians of St. John" is of European origin and based on a mistake. The Nasoræans have an extraordinary veneration for St. John the Baptist, who figures largely in their mythology. This veneration, together with the similarity of their rites to Christian sacraments, led the first missionaries from Europe to regard them as descendants of the Christians baptized only with the baptism of St. John. Such, e. g. was the impression of the Carmelite Ignatius a Jesu, who lived some years in Bassa and wrote a description of the sect (1652).

II DOCTRINES. These are to be gathered from a voluminous compilation called *Genza* or "The Treasure", and sometimes *Sidra Rabba* or "The Great Book", of which copies dating from the sixteenth and seventeenth centuries are in the Bibliothèque Nationale at Paris and have been published by Petermann (*Thesaurus s. Liber Magnus*, vulgo *Liber Adami*, etc., Berlin, 1867) in Nasoræan script and language. The former is not unlike *Estrangela* with vowels added in the modifications of the consonants, and the latter closely resembles that of the Aramaic in the Talmud. The same text in Syriac characters with a somewhat free Latin translation was published by Norberg (London and Gotha, 1817). Selections from the *Genza* (about one fourth) have been translated into German by Brandt. This book is arbitrarily divided into two sections, called the Right and the Left *Genza* from the curious Nasoræan custom of writing these two portions in one volume but in inverted positions, the

left being used at funerals and being written for the benefit of the dead. The *Genza* is a collection of writings from all ages and sources, some dating even after the Mohammedan conquest. Another sacred book is the *Kolasta*, or "Summa" or practical *vademecum* containing hymns, liturgies, rites for marriages, etc. (published as "*Qolasta*" by Euting, Stuttgart, 1867). The *Sidra de Yahya* i. e. Book of St. John or *Drāshê de malkê*, "Lectures of the Kings" was published in 1905 by Lidzbarski and translated with commentary by Ochser in 1905. The *Diwan*, a priestly ritual, was published by Euting (1904), but the *Asfar Malwāshe*, an astrological work on the signs of the Zodiac, is not yet published. In recent years finds of Nasoræan inscriptions on pottery have added to our knowledge of their popular superstitions (Pognon, "Une incantation en Mandäische", Paris, 1892; "Inscriptions Mand.", Paris, 1898-9; Lidzbarski, "Ephem. f. Sem. Epigr.", Giessen, 1900).

These sources show Nasoræanism to be a form of Gnosticism which stands towards late Babylonian polytheism somewhat as Neo-Platonism stands towards the Greek and Roman Pantheon. It is an attempt to allegorize the ancient myths as being phases of man's creation and salvation, though Nasoræanism never rids itself of fantastic Eastern imagery. Probably through Nabatæan commerce these southern Babylonians came into contact with the Jews of the east of the Jordan and developed a worship of St. John the Baptist. Their daily baptism is however earlier than St. John's practice and is probably the cause of their belief regarding St. John rather than the effect of it. They likewise absorbed a great deal of Indian and Parsee philosophy till they developed their doctrine of the Light-King, which is similar to the Manichæan concept of the universe, though without an absolutely rigid dualism. No religion therefore bears a nearer resemblance to Nasoræanism than that of Mani, who himself was an eastern Baptist in his youth. Finally, through contact with the monotheism of Jews, Christians, Mohammedans, and later Parsees, they gradually drifted towards the acceptance of one God. Their worship of the Light-King is one of singular beauty and elevation. Their æonology is extremely intricate; the æons are called by the mystical name *Utra* (ܘܬܪܐ) which means: Riches or Potencies; Hebrew (עֲשָׂר) *Esra*. It will suffice to mention a few prominent ideas. *Pira Rabba* is the source, origin, and container of all things. The meaning of *Pira* (פִּירָא) is uncertain; of various suggested meanings, perhaps that of "Fruit" (Hebr. פֶּרִי) is the most likely. This "Fruit" is like the Indian "Golden Egg", the transcendental and unconscious "Fullness of Being" out of which all things develop; it is the seed of the fig tree of the Gnostic Docetæ (q. v.); it is the *βῆλος* of the Valentinians. This *Pira Rabba* is possessed and filled by the *Mânâ Rabbâ*: the Great Spirit, the Great Illustrious One, the Great Splendour or Majesty. From the *Mânâ Rabbâ* emanates the First Life, who prays for companionship and progeny, whereupon the Second Life, the *Utra Mkayyema* or World-constituting Æon, the Architect of the Universe, comes into being. This divine architect gives forth a number of æons, who with his permission intend to erect the universe. This however displeases the First Life at whose request the *Mânâ Rabbâ* produces as surveyor or foreman of the architect's æons the *Mandâ d'Hayye* or *γνῶσις ῥῆς ζωῆς* the Personified Knowledge of Life i. e. the friend and counsellor of the First Life.

This *Mandâ de Hayye* is the Christ of the Nasoræans after whom they are called and around whom all their religious ideas group themselves. As god of order he has to battle with the æons of chaos and thus realize the divine idea in the world. The whole is a bold and obvious allegory: *Marduk* is sent by his father *Ea* to do battle with the powers of *Tiamat*.

This female monster of chaos Nasoræans called the Holy Ghost, the Deceiver (spirit is feminine in Aramaic) or Ruha, no doubt to spite the Christians. This Ruha has a son called Ur, the prince of devils. Manda de Hayye conquers him and throws him into chains. Unfortunately while Gabriel the Apostle and Petahiel are beginning to create a good world, Ur escapes and begets with Ruha the seven planets, the twelve signs of the Zodiac, and the five elements. A truce is called and Petahiel amicably shares the creation of the world with the sons of Ur and Ruha. The lifeless body of Adam is created, but the "Image of God" is without motion. With the help of Abel, Seth, Enos, and Adakas there is breathed into him the spirit of life. The seven planets, however, and the twelve signs of the Zodiac constitute an evil influence in the world, which is continually being overcome by the Manda de Hayye. With the doctrine of the Light-King a considerable modification of æonology was introduced, but the main outline remained the same. The Light-King, the Father of the æons, begets Manda de Hayye or Protanthropos, Adam as the First man. This Manda de Hayye becomes incarnate in Hibil the Glorious or Hibil Ziva (היביל זיבא). Kessler pointedly remarks that if Manda is the Christ then Hibil is the Jesus Christ of Nasoræanism. Hibil's descents into Hades play a great rôle in their theology. Hibil is the Saviour and the Prophet of man. He is Marduk attempting to displace Jesus of Nazareth. A last emanation of the Light-King was John the Baptist, who with Hibil, Seth, and Enos are brethren of the Manda de Hayye. Frequent mention is made of heavenly Jordans, being streams of living waters from the transcendental realm of light. Hibil Ziva was baptized in 360,000 of them before his descent to the nether world.

III. DISCIPLINE AND RITUAL.—The Nasoræans strongly repudiate all ideas of celibacy and asceticism; they have a true Semitic contempt for the unmarried and repeatedly inculcate the precept "increase and multiply". They reject all fasting and self-denial as useless and unnatural, and if they observed the Mohammedan fasts at least in outward appearance it was only to avoid trouble and persecutions. They are the reverse of Manichæans; there may be much evil in this world but man is bound to make the best of it. No wonder Mani left them. They observe no distinctions of food, except that blood and things strangled are forbidden them, also all food prepared by strangers, and even food bought in the market, must be washed. They have no special hours for prayer except that they must only pray when it is light, no prayer is heard as long as it is dark. Not the Mohammedan Friday, or the Jewish Sabbath, but the Christian Sunday is their weekly holyday. This, however, is not a conscious imitation of the Christians, whose "Carpenter-god" they hate as a son of the devil. The religious observance of other holidays seems of more recent origin, though no doubt their civil observance, as in the case of New Year's day (first day of Wintermonth; their months have thirty days with five intercalary days to make a solar year), is ancient enough, being a festival of ancient Babylonia. They observe Ascension day (of Hibil Ziva returning from Hades) on the eighteenth of first Springmonth, the Great Baptismal Festival on the intercalary days, the Feast of the Egyptians apparently drowned in the Red Sea under Pharaoh (they were not really drowned, but escaped and were the forefathers of the Nasoræans), and a few other feasts. They possessed a hierarchical priesthood to whom they paid a profound veneration. Their patriarch is the Raah Amma, chief of the people, but they seem but rarely to have had such a dignitary; legend says only one before and one after John the Baptist. A kind of bishops, priests, and deacons form the hierarchy; they are called Ganzivra, Tarmidha, and Shecanda, or Treas-

urer, Disciple, and Messenger. The ordination to the priesthood is preceded by a so-called retreat of sixty days during which the candidate submits to many quaint rules and baptisms. The Shecanda is only an assistant, but the priest's privilege is the power to baptize; the bishop is the administrator of the community. They possess three great sacramental rites, Masbutha or baptism; Pehta and Mabuha or communion, really morsel (bread) and draught (water); and Kusta or troth, a handshake and plighting of troth. Baptism, always in flowing or living water of rivers and brooks, is the greatest of all the rites. Children are baptized as soon as they can bear total immersion. Self-baptism is frequent; the priest when baptizing used originally the formula: Thou art signed with the sign of life: The Name of the Life and the Manda de Hayye is named over thee. Baptism takes place on Sunday and on many other occasions when forgiveness of sin is required. It is followed by a kind of anointing with moist sesame. Communion is given in thin unleavened cakes kept in the priest's house and a handful of water. Kushta is a solemn sign of fellowship with brother Nasoræans. "Brethren of the flesh pass away, Kushta brethren remain forever", says the proverb. The history of Nasoræanism is practically unknown. The Genza contains a Book of Kings of a pseudo-historical character, but the utter confusion of their historical reminiscences makes it difficult to find a kernel of truth. The Nasoræans were lost to history till Ignatius a Jesu brought the news of their existence. They have been a prominent religion, as they were classed with Christians and Jews by the Mohammedans. It is often held that they once actually dwelt in Palestine near the Jordan and immigrated into Chaldea. Their bitter hatred of all that is Jewish or Christian (for Moses is a false prophet, Jesus, the Great Deceiver, whom Enos justly brings to the cross), together with their extensive use of Biblical names, would lead one to believe that though their "theology" is Indian-Babylonian they were once historically connected with Jewish Christians.

Natal, VICARIATE APOSTOLIC OF.—The history of the Catholic Church in South Africa goes back to 1660, when a French bishop and a few priests were saved from the wreck of the *Marichal* near the Cape of Good Hope. But they were only allowed to land, and no permission was given them to minister to the few Catholics who were already in Cape Town. It was not until 1803 that a Catholic priest was permitted to say Mass in Cape Colony. Fathers Joannes Lansink, Jacobus Melissen, and Lambertus Prinsen landed at Cape Town in 1803; the following year they were expelled. Pius VII by letters Apostolic dated 8 June, 1818, appointed the Rt. Rev. Edward Bede Slater, O.S.B., the first vicar Apostolic of the Cape of Good Hope and the neighbouring islands, Mauritius included. Bishop Slater on his way to Mauritius in 1820, left Rev. Fr. Scully at Cape Town in charge of the Catholics. In 1826 Rev. Theodore Wagner became resident priest. He was succeeded by Rev. E. Rishton in 1827. On 6 June, 1837, Gregory XVI established the Vicariate of the Cape of Good Hope, separate from Mauritius, and from that time Cape Colony has had its own bishops.

South Africa, comprising the country between Cape Agulhas and the tenth degree of south latitude, and

between the tenth and fortieth degrees of east longitude, was too much for one bishop. On 30 July, 1847, Pius IX established a new vicariate in the eastern portion of Cape Colony. This new vicariate included first the eastern district of Cape Colony, Natal, and the Orange Free State (Orange River Colony since the late South African war). The same pontiff on 15 November, 1830 separated Natal and the Orange Free State from the Eastern Vicariate. The first bishop appointed by Rome to take charge of the Eastern Vicariate was the Rt. Rev. Aidan Devereaux, D.D. He was consecrated bishop at Cape Town, 27 December, 1847 by the Right Rev. Dr. Griffith. When Pius IX erected the Vicariate of Natal, on 15 November, 1830, the area of the new vicariate comprised all the portion of South Africa extending outside the then existing boundaries of Cape Colony. The first vicar Apostolic was the Right Rev. Dr. Allard, O.M.I. He landed at Port Natal with five missionaries of the same French order. The name of this colony dates from Vasco da Gama, the Portuguese voyager, who sighted its headlands on Christmas Day, 1497, which suggested the name of *Terra Natalis*. In 1760 the Dutch had a trading settlement at the site of the present harbour of Durban, speedily abandoned; and more than a hundred years passed before Natal was again visited by Europeans.

After several wars between Dutch, British, and natives, Natal was declared a British colony in 1843. Nine years later, Dr. Allard and his five companions landed on the African shores. Till that time, no priest had been residing in Natal. The country had been occasionally visited by a priest from Cape Colony. The first missionary who ministered to the Catholics of Natal was Rev. Father Murphy, sent by Bishop Devereaux. Its area is about 35,371 square miles, and it is bounded on the north by Transvaal Colony and Portuguese East Africa; on the east by the Indian Ocean; on the south by Cape Colony (Pondoland); and on the west by Cape Colony (Griqualand East), Basutoland, and Orange River Colony from which it is separated by the Drakensberg Mountains. At the time of the advent of the first missionaries, the white element of the population was almost insignificant. Agriculture was practically unknown. Industry, at present a source of wealth, was altogether ignored.

The Catholic population was then composed of about two hundred in Durban and three hundred in Pietermaritzburg; it comprised only the white element, immigrants from England and especially from Ireland. The native population, scattered all over Natal, Zululand, and the Transkei, which districts formed also a portion of the Vicariate of Natal, was altogether uncivilized. The agents of the London Missionary Society had organized some missionary work for the civilization of natives. But they came out rather as officials of the Government, and therefore were not altogether ready to go through the hardships of missionary life. Besides the Europeans and natives, there was the scattered Dutch population. Natives and Dutch were not prepared to receive the Catholic faith. Among the former, superstitions, a sickening immorality, and polygamy, and among the latter, prejudices, and hatred against the Church of Rome, rendered for many years all the efforts of the missionaries apparently fruitless. However disheartening was the result of their work, the pioneers remained at their post. For seven years they had not the consolation of registering one soul for the Catholic Church, yet the intrepid and courageous Dr. Allard wanted to push further his expeditions against paganism. He founded a new mission exclusively for the natives, to whom the missionaries wished to devote themselves altogether, and he called the new mission St. Michael. Here they were destined to battle against many obstacles, privation of the necessities of life,

difficulty of communication, and poverty, which drove the missionaries to the verge of starvation.

The advent of new missionaries enabled Dr. Allard to found missions as far as Basutoland. Religious increase was slow, owing to the small number of missionaries and the degradation of the population. Communication was extremely slow and difficult, and was generally either by wagons drawn by oxen, or on horseback; during the rainy season travel was very dangerous, owing to the swollen rivers. Amid such hardships and privations Dr. Allard felt that his life was drawing to a close. He retired to Rome, where he died soon after. Under his successor, Rt. Rev. Dr. Charles Jolivet, O.M.I. appointed 30 Nov., 1874, the Vicariate of Natal has made rapid progress in the way of Christianity and civilization. New missions were founded all over this immense vicariate, and new chapels and schools for Europeans and natives were opened. Many obstacles which in the beginning had rendered the missionary work very difficult were removed. Communication became easier, owing to the new railways and roads laid out across the country by the Government of Natal. Missionary work has been of late years carried on amongst the natives on a very large scale, owing to the advent of some Trappists into the Colony of Natal, who afterwards were organized into the "Congregation of the Missionaries of Mariannhill". They have devoted themselves entirely to the evangelization of the natives, and as statistics show, their efforts and labours have been fully rewarded. The late Anglo-Boer war hampered much the missionary work in this vicariate, but the consequences of this war have practically disappeared. Through the treaty agreed to by the British and the Boers, the Districts of Utrecht, Vryheid, and Wakkerstroom were ceded to Natal and have been added to this vicariate, which now comprises the three above-mentioned districts, Natal proper, Transkei, Swaziland, and Zululand.

The present bishop (1910) is Rt. Rev. Henri Delalle, O.M.I., appointed in 1904. The white population of the vicariate is estimated to be about 100,000; natives, Indians, and Malays, 1,000,000; the Catholic population is 25,737 (whites, 7458; natives, 15,227; coloured, 3052). Priests: Oblates of Mary Immaculate, 38; Missionaries of Mariannhill, 46; secular priests: Europeans, 4, natives, 3. There is a seminary, with eleven theological students. Lay brothers: Oblates of Mary Immaculate, Europeans, 4, native, 1; Missionaries of Mariannhill, 305; Marist Brothers, 7. Number of churches, 69; missions, 49. Number of schools: for whites, 24, pupils, 653; for natives, 62, pupils, 1864; for coloured, 10, pupils, 472; most of the schools are conducted by nuns. Orders of women: Sisters of the Precious Blood, 324; Sisters of the Holy Cross, 55; Sisters of Nazareth, 12; Sisters of the Holy Family, 92; Dominicans, 138; Augustinians, 67; Franciscans, 12; Sisters of Kermaria, 18. Two schools for whites, 4 sanatoria for whites and natives, and 1 orphanage for coloured children are under the management of the Augustinian Sisters; and a house for orphans and aged is under the care of the Sisters of Nazareth House, with about 260 inmates. At the Bluff the Sisters of the Holy Family have an orphanage for European children; they have a novitiate at Bellair, with 10 novices. The Dominican Sisters have their mother-house at Oakford, and have also schools at Noodsberg, Genezzano, Dundee, and Newcastle. At Ladysmith and Pietermaritzburg, there are 2 hospitals, and 2 sanatoria of the Augustinian Sisters.

Besides the numerous boarding-schools established in different parts of the vicariate, there are many parochial schools, some of which are under the control of the Government, and receive a subsidy proportioned to the number of pupils.

A. LANGOUET.

Natal Day.—Both the form *natalis* (so. *dies*) and *natalicium* were used by the Romans to denote what we call a birthday, i. e. the anniversary of the day when a man was born. Also the Greek words *γενεα* and *γενέθλιος* were similarly employed. But in both Greek and Latin a certain extension of this primitive use seems to have taken place even in pre-Christian times. In Latin *natalis* apparently came, at least sometimes, to mean little more than "anniversary" and it was used of the accession day of the emperor as well as of his birthday. Moreover we know that the games celebrated on an emperor's birthday during his life, were often continued after his apotheosis upon the anniversary of his birthday as if he were still living. In Greek *γενεα* came to be frequently used in connexion with the annual commemoration of a dead person by sacrifices and other rites (cf. Herodotus IV, 26): "This commemoration is said to have taken place not upon the anniversary of the day of death but upon the actual birthday of the defunct person (C. I. G. 3417, and Rhode, "Psyche", 4th ed., I, 235). When, therefore, the Christians of Smyrna about 150 A. D. write to describe how they took up the bones of St. Polycarp "which are more valuable than precious stones and finer than refined gold, and laid them in a suitable place, where the Lord will permit us to gather ourselves together, as we are able, in gladness and joy and to celebrate the birthday of his martyrdom" (*ἐπετελεῖν τὴν τοῦ μαρτυρίου αὐτοῦ ἡμέραν γενέθλιον*), it is not easy to say how far they were influenced by pre-existing pagan usages. This phrase "the birthday of his martyrdom" certainly seems to indicate the commemoration of the day on which he died, and all the subsequent history of the Church confirms the practice of keeping this as the usual feast of any saint or martyr. None the less, knowing as we do that the Greeks also commonly celebrated what they called *γενεα*, (commemorative sacrifices), on the anniversary of the death of parents, it would seem that the faithful of the early Church did little more than christianize a pagan custom. This they accomplished, first by offering the holy sacrifice of the Mass in honour of their deceased brethren instead of the blood or flesh of animal victims, and secondly by giving to this commemoration of a true believer's passage to another life the name *γενέθλιος*, or in Latin *natalis*, rather than to the day upon which he had been born into this world.

One cannot however entirely eliminate the doubt whether at the introduction of Christianity *γενέθλιος* and *natalis* had not already come to mean little more than "anniversary" or "commemoration rite". Tertullian says "oblationes pro defunctis pro nataliciis annua die facimus" (De Corona, cap. 3), which seems to mean "we offer Masses for the dead on their anniversary as a commemoration rite". Similarly the Chronographer of 354 notes in his calendar against 22 February, "VIII Kal. Martias Natale Petri de cathedra"; where *natale* clearly signifies anniversary rather than birthday. Indeed where we find the Fathers emphasizing the etymology of the word, their language rather suggests that they expected the primary meaning of "birthday" to pass unnoticed. In any case the sense of anniversary alone fits a wide range of phrases which meet us in the calendars and other documents of the fifth, sixth, and seventh centuries. Avitus of Vienne (d. 518) and Eligius of Noyon (d. c. 650) both refer to Maundy Thursday under the name "*natalis calicis*" (the commemoration of the chalice), a reference, of course, to the institution of the Blessed Sacrament at the Last Supper, and the feast appears under the same name in the calendar of Polemius Silvius of 448. Again in the Leonian Sacramentary we have the phrase "in natali episcoporum", which the context shows to mean the anniversary of a bishop's consecration (cf. Probost, "Die ältesten

röm. Sacramentarien", 124 and 247, and Paulinus of Nola, "Ep. 20"), while the Gelasian Sacramentary uses such expressions as "natale consecrationis diaconi", etc. So also in the Hieronymian Martyrologium (c. 590), besides the constantly recurring *natale* applied to the festivals of martyrs we have, e. g. on 2 Aug., "In Antiochia natalis reliquiarum Stephani protomartyris et diac." None the less a certain stress was often laid in Christian sermons and in mortuary inscriptions upon the idea that the day of a man's death was his birthday to a new life. Thus St. Ambrose (Serm. 57, de Depos. St. Eusebii) declares that "the day of our burial is called our birthday (*natalis*), because, being set free from the prison of our crimes, we are born to the liberty of the Saviour", and he goes on "wherefore this day is observed as a great celebration, for it is in truth a festival of the highest order to be dead to our vices and to live to righteousness alone." And we find such inscriptions as the following

PARENTE FILIO MERCURIO FECE
RUNT QUI VIXIT ANN V ET MENSES VIII
NATUS IN PACE ID FEBR

Where "natus in pace" clearly refers to eternal rest. So again Origen had evidently some similar thought before him when he insists that "of all the holy people in the Scriptures, no one is recorded to have kept a feast or held a great banquet on his birthday. It is only sinners (like Pharaoh and Herod) who make great rejoicings over the day on which they were born into this world below" (Origen, "in Levit.", "Hom. VIII", in Migne P. G., XII, 495). Naturally a certain amount of confusion resulted from this use of the same word *natalis* sometimes to signify natural birth, sometimes the passage to a better life. The former was consequently often distinguished as "*natale genuinum*", "*natale de nativitate*", the latter as "*natale passionis*" or "*de passione*", sometimes abbreviated as N. P.

Natalis Alexander. See ALEXANDER, NATALIS.

Natchez, DIOCESE OF (NATCHESIENSIS) established 28 July, 1837, comprises the State of Mississippi. Catholic missionary work in this territory began with the expeditions of Marquette, La Salle, and Iberville. Iberville planted a colony in the home of the Natchez tribe, and erected there Fort Rosalie, on a site within the present city of Natchez. Capuchin, Jesuit, and secular priests laboured in this field, having missions at Biloxi, Natchez, and Yazoo. Early in the history of the missions, Fathers St. Cosme and Foucault, seculars, were martyred by the Indians, as were the Jesuits Du Poisson, Souart, and Senat. In 1787 three priests from Salamanca, Fathers McKenna, White, and Savage, settled at Natchez and erected promising missions there and in the vicinity. When the territory passed from Spain to the United States, these missions were practically abandoned. Much valuable property was lost to the Church, and the efforts made to recover it were in vain. For many years the Catholics of Natchez depended upon chance visits of priests.

The first Bishop of Natchez, John Mary Joseph Chanche, was b. 4 Oct., 1795, at Baltimore, whither his parents had fled from San Domingo. He joined the Sulpicians, and was president of Mount St. Mary's when appointed bishop. He was consecrated 14 March, 1841. Arriving at Natchez, he met there the only priest in the state, Father Brogard, who was there but temporarily. Taking up the rôle of a simple missionary, he began to collect the Catholics and organize a diocese. In 1842 he laid the corner stone of the present beautiful cathedral, and opened an acad-

Though not of the Jewish race, it is probable that the Nathineans learned and practised the Jewish religion. Nehemias (II Esd., x, 28) classes them with those who were separated from the people to serve the law of God, but according to the Talmud they were a despised class and were debarred from contracting marriage with Jewish women. They were carried into captivity with the others by Nabuchodonosor, and according to Esdras, 612 of them (including those called "the children of the servants of Solomon") returned to Palestine: 392 with Zorobabel (I Esd., ii, 43-58; II Esd., vii, 47-60), and 220 with Esdras eighty years later (I Esd., viii, 20). After the return the Nathineans lived most likely as they had previously under the monarchy, some in the levitical cities (I Esd., ii, 70; II Esd., vii, 73), during the periods when they were not detailed for service in the Temple, the others in Jerusalem, where, as Nehemias informs us (II Esd., iii, 26, xi, 21), they inhabited the Ophel quarter, i. e. in the southeast part of the city, and near the gate leading to the fountain now known as the fountain of the Virgin. From this they drew the water of which copious use was made in the sacrificial and other sacred functions. They had officers chiefly chosen from among their own ranks (II Esdr., xi, 21; cf. I Esd., ii, 43; II Esd., vii, 47). Like the priests and levites they were exempted from taxation by the Persian rulers (I Esd., vii, 24). No mention or trace of the Nathineans appears in the New Testament.

JAMES F. DRISCOLL.

National Union, CATHOLIC YOUNG MEN'S.—This association was organized on 22 February, 1875, at a meeting held in Newark, New Jersey, at the call of Very Rev. George H. Doane, who became its first president. It includes about one hundred organizations, representing an estimated aggregate of about 30,000 persons and extends as far west as Mankato, Minnesota. Its objects are the furtherance of practical unity, the spiritual, intellectual, moral, and physical advancement of Catholic youth, and the development of better citizens and Catholics. The means principally relied upon are: the conscientious practice and profession, individually and collectively, of the Catholic religion; the establishment and promotion of Catholic young men's associations, libraries, reading-rooms, and gymnasiums; fraternal unity between all organizations aiming in whatever way at the promotion of the Union's objects; mutual assistance and enlightenment; maintenance and conduct of an athletic league giving special attention to boys of the parochial schools; dissemination of selected courses in reading among Catholic literary circles; courses of lectures to Catholic young men's associations, and securing to organizations of the National Union the privilege of having their own members received as guests by the other organizations of the Union. Originally, delegates met annually, and did little in the interim but enlist the co-operation of other organizations in its work. At the present time, it is engaged in various works, which are conducted largely through diocesan unions performing the National Union's functions within their respective districts.

In 1878 the National Union inaugurated the movement for obtaining appointments of a greater number of Catholic chaplains to the army and navy—a movement which was entirely successful. At about the same time, it began the agitation to secure recognition of the religious rights of the Indians. At the convention of 1879, the establishment of coloured literary societies, free night-schools, the fostering of a more general activity among young men in teaching Sunday-school, and the establishment of a lecture bureau were among the questions discussed; by 1883

much had been done along these lines. In 1883 the Third Plenary Council of Baltimore, in the Pastoral Letter of the Bishops and Archbishops, says of the work of the National Union: "We consider as worthy of particular encouragement associations for the promotion of healthful social union among Catholics, and especially those whose aim is to guard our Catholic young men against dangerous influences, and to supply them with the means of innocent amusement and mental culture. And in order to acknowledge the great amount of good that the Catholic Young Men's National Union has already accomplished, to promote the growth of the Union, and to stimulate its members to greater efforts in the future, we cordially bless their aims and endeavours, and we recommend the Union to all our Catholic young men."

The Catholic Summer School at Plattsburg, New York, is a direct outgrowth of the National Union, plans for its establishment having been discussed and approved at the conventions, and carried into effect by Warren E. Mosher, the secretary of the National Union at the time, and the founder of the Summer School. The National Union has also furthered the cause of education by contributing to the endowment funds of the Catholic University of America.

At the convention of 1906, held in New York City, a committee was appointed to prepare a plan of reorganization, which plan was reported and adopted at the convention of 1907 held at Elizabeth, New Jersey. Under the original organization it had always been required that the president and first vice-president should be clergymen; this was now changed, the various departments of the Union were organized on a business basis, the athletic work was systematized by establishing the Catholic Amateur Athletic League, a branch of the National Union with complete control over all athletic affairs of the Union, and a complete and efficient literary and lecture system was instituted.

It was only in this year that a proper plan was devised for the continuation of the activity of the Union between conventions. The reorganization also created the office of the spiritual director, who is practically the senior officer of the National Union, and is supreme in all matters affecting faith and morals. The National Union has always been conducted by voluntary effort, but its activities have now grown to such an extent that they require an efficient salaried force, for which purpose an adequate endowment fund is now being raised.

W. C. SULLIVAN.

Nativity of the Blessed Virgin Mary, FEAST OF THE.—The earliest document commemorating this feast comes from the sixth century. St. Romanus, the great ecclesiastical lyricist of the Greek Church, composed for it a hymn (Card. Pitra, "*Hymnogr. Græca*", Paris, 1876, 199) which is a poetical sketch of the apocryphal Gospel of St. James. St. Romanus was a native of Emesa in Syria, deacon of Berytus and later on at the Blachernæ church in Constantinople, and composed his hymns between 536-556 (P. Maas in "*Byzant. Zeitschrift*", 1906). The feast may have originated somewhere in Syria or Palestine in the beginning of the sixth century, when after the Council of Ephesus, under the influence of the "Apocrypha", the cult of the Mother of God was greatly intensified, especially in Syria. St. Andrew of Crete in the beginning of the eighth century preached several sermons on this feast (Lucius-Anrich, "*Anfänge des Heiligenkultus*", Tübingen, 1906, 468). Evidence is wanting to show why the eighth of September was chosen for its date. The Church of Rome adopted it in the seventh century from the East; it is found in the Gelasian (seventh cent.) and the Gregorian (eighth to ninth cent.) Sacramentaries. Sergius I (687-701) prescribed a litany and procession for this feast (P.

L., cxxviii, 897 sqq.). Since the story of Mary's Nativity is known only from apocryphal sources, the Latin Church was slow in accepting this oriental festival. It does not appear in many calendars which contain the Assumption, e. g. the Gotha-Gallican, that of Luxeuil, the Toledan Calendar of the tenth century, and the Mozarabic Calendar. The church of Angers in France claims that St. Maurilius instituted this feast at Angers in consequence of a revelation about 430. On the night of 8 Sept., a man heard the angels singing in heaven, and on asking the reason, they told him that they were rejoicing because the Virgin was born on that night (*La fête angevine* N. D. de France, IV, Paris, 1864, 188); but this tradition is not substantiated by historical proofs. The feast is found in the calendar of Sonnatius, Bishop of Reims, 614-31 (Kellner, "Heortology", 21). Still it cannot be said to have been generally celebrated in the eighth and ninth centuries. St. Fulbert, Bishop of Chartres (d. 1028), speaks of it as of recent institution (P. L., cxli, 320, sqq.); the three sermons he wrote are the oldest genuine Latin sermons for this festival (Kellner, "Heortology", London, 1908, 230). The octave was instituted by Innocent IV (a. 1243) in accordance with a vow made by the cardinals in the conclave of the autumn of 1241, when they were kept prisoners by Frederick II for three months. In the Greek Church the *apodosis* (solution) of the feast takes place 12 Sept., on account of the feast and the solemnity of the Exaltation of the Cross, 13 and 14 Sept. The Copts in Egypt and the Abyssinians celebrate Mary's Nativity on 1 May, and continue the feast under the name of "Seed of Jacob" 33 days (Anal. Juris Pont., xxi, 403); they also commemorate it on the first of every month (priv. letter from P. Baeteman, C. M., Alikiena). The Catholic Copts have adopted the Greek feast, but keep it 10 Sept. (Nilles, "Kal. man." II, 696, 706).

LUCIUS-ANRICH, *Anfänge des Heilgenkultus* (Tübingen, 1904); HOLWECK, *Festi Mariani* (Freiburg, 1894), 118 sqq.

FREDERICK G. HOLWECK.

Naturalism is not so much a special system as a point of view or tendency common to a number of philosophical and religious systems; not so much a well-defined set of positive and negative doctrines as an attitude or spirit pervading and influencing many doctrines. As the name implies, this tendency consists essentially in looking upon nature as the one original and fundamental source of all that exists, and hence in attempting to explain everything in terms of nature. Either the limits of nature are also the limits of existing reality, or at least the first cause, if its existence is found necessary, has nothing to do with the working of natural agencies. All events, therefore, find their adequate explanation within nature itself. But, as the terms *nature* (q. v.) and *natural* are themselves used in more than one sense, the term *naturalism* is also far from having one fixed meaning. (I) If nature is understood in the restricted sense of physical, or material, nature, naturalism will be the tendency to look upon the material universe as the only reality, to reduce all laws to mechanical uniformities, and to deny the dualism of spirit and matter. Mental and moral processes will be but special manifestations of matter rigorously governed by its laws. (II) The dualism of mind and matter may be admitted, but only as a dualism of modes or appearances of the same identical substance. Nature includes manifold phenomena and a common substratum of the phenomena, but for its actual course and for its ultimate explanation, it requires no principle distinct from itself. In this supposition, naturalism denies the existence of a transcendent cause of the world and endeavours to give a full account of all processes by the unfolding of potencies essential to the universe under laws that are necessary and eternal. (III) Finally, if the existence of a transcendent First Cause, or personal God, is admitted as the only satisfactory explanation of the

world, Naturalism claims that the laws governing the activity and development of irrational and of rational beings are never interfered with. It denies the possibility, or at least the fact, of any transitory intervention of God in nature, and of any revelation and permanent supernatural order for man.

These three forms are not mutually exclusive; what the third denies the first and the second, a fortiori, also deny; all agree in rejecting every explanation which would have recourse to causes outside of nature. The reasons of this denial—i. e., the philosophical views of nature on which it is based—and, in consequence, the extent to which explanations within nature itself are held to suffice, vary greatly and constitute essential differences between these three tendencies.

I. Materialistic Naturalism asserts that matter is the only reality, and that all the laws of the universe are reducible to mechanical laws. What theory may be held concerning the essence of matter makes little difference here. Whether matter be considered as continuous or as composed of atoms distant from one another, as being exclusively extension or as also endowed with an internal principle of activity, or even as being only an aggregate of centres of energy without any real extension (see *ATOMISM*; *DYNAMISM*; *MECHANISM*), the attitude of Naturalism is the same. It claims that all realities in the world, including the processes of consciousness from the lowest to the highest, are but manifestations of what we call matter, and obey the same necessary laws. While some may limit their materialistic account to nature itself, and admit the existence of a Creator of the world, or at least leave this question open, the general tendency of Materialism is towards Atheism and exclusive Naturalism. Early Greek philosophers endeavoured to reduce nature to unity by pointing to a primordial element out of which all things were composed. Their views were, implicitly at least, Animistic or Hylozoistic rather than Materialistic, and the vague formative function attributed to the *Nous*, or rational principle, by Anaxagoras was but an exception to the prevailing naturalism. Pure mechanism was developed by the Atomists (Democritus, Epicurus, Lucretius), and the soul itself was held to be composed of special, more subtle, atoms. In the Christian era materialism in its exclusive form is represented especially by the French school of the latter half of the eighteenth century and the German school of the latter half of the nineteenth century. Since matter is the only reality, whatever takes place in the world is the result of material causes and must be explained by physical antecedents without any teleology. Life is but a complex problem of physics and chemistry; consciousness is a property of matter; rational thought is reduced to sensation, and will to instinct. The mind is a powerless accompaniment or epiphenomenon of certain forms or groupings of matter, and, were it suppressed altogether, the whole world would still proceed in exactly the same way. Man is a conscious automaton whose whole activity, mental as well as physiological, is determined by material antecedents. What we call the human person is but a transitory phase in the special arrangement of material elements giving rise to special mental results; and it goes without saying that in such a system there is no room for freedom, responsibility, or personal immortality.

II. Pantheism in its various forms asserts that God, the First Reality, World-Ground, or Absolute, is not transcendent and personal, but immanent in the world, and that the phenomena of nature are only manifestations of this one common substance. For the Stoics, He is the immanent reason, the soul of the world, communicating everywhere activity and life. According to Scotus Eriugena, "God is the essence of all things, for He alone truly is" (De divisione nature, III); nature includes the totality of beings and is divided into (1) uncreated and creating nature, i. e., God

as the origin of all things, unknowable even to Himself; (2) created and creating nature, i. e., God as containing the types and exemplars of all things; (3) created and not-creating nature, i. e., the world of phenomena in space and time, all of which are participations of the Divine being and also *theophanies*, or manifestations of God; (4) neither created nor creating nature, i. e., God as the end of all things to whom all things ultimately return. Giordano Bruno also professes that God and nature are identical, and that the world of phenomena is but the manifestation of the Divine substance which works in nature and animates it. According to Spinoza, God is the one substance which unfolds itself through attributes, two of which, extension and thought, are known to us. These attributes manifest themselves through a number of modes which are the finite determinations of the infinite substance. As absolute substance, God is *natura naturans*; as manifesting himself through the various modes of phenomena, he is *natura naturata*. To-day Monism reproduces essentially the same theories. Mind is not reduced to a property, or epiphenomenon, of matter, but both matter and mind are like parallels; they proceed together as phenomena or aspects of the same ultimate reality. What is this reality? By some, explicitly or implicitly, it is rather conceived as material, and we fall back into Materialism; by others it is claimed to be nearer to mind than to matter, and hence result various idealistic systems and tendencies; by others, finally, it is declared to be strictly unknown and unknowable, and thus Monistic Naturalism comes into close contact with Agnosticism (q. v.).

Whatever it may be ultimately, nature is substantially one; it requires nothing outside of itself, but finds within itself its adequate explanation. Either the human mind is incapable of any knowledge bearing on the question of origins, or this question itself is meaningless, since both nature and its processes of development are eternal. The simultaneous or successive changes which occur in the world result necessarily from the essential laws of nature, for nature is infinitely rich in potencies whose progressive actualization constitutes the endless process of inorganic, organic, and mental evolution. The evolution and differentiation of the one substance according to its own laws and without the guiding agency of a transcendent intelligence is one of the basic assumptions of Monistic and Agnostic Naturalism. Nor is it possible to see how this form of Naturalism can consistently escape the consequences of Materialistic Naturalism. The supernatural is impossible; at no stage can there be any freedom or responsibility; man is but a special manifestation or mode of the common substance, including in himself the twofold aspect of matter and consciousness. Moreover, since God, or rather "the divine", as some say, is to be found in nature, with which it is identified, religion can only be reduced to certain feelings of admiration, awe, reverence, fear, etc., caused in man by the consideration of nature, its laws, beauties, energies, and mysteries. Thus, among the feelings belonging to "natural religion", Haeckel mentions "the astonishment with which we gaze upon the starry heavens and the microscopic life in a drop of water, the awe with which we trace the marvellous working of energy in the motion of matter, the reverence with which we grasp the universal dominance of the law of substance throughout the universe" ("Die Welträthsel", Bonn, 1899, V, xviii, 396-97; tr. McCabe, New York, 1900, 344).

III. For those who admit the existence of a transcendent First Cause of the universe, naturalism consists essentially in an undue limitation of God's activity in the world. God is only Creator, not Providence; He cannot, or may not, interfere with the natural course of events, or He never did so, or, at least, the fact of His ever doing so cannot be established. Even if the soul of man is regarded as spiritual and

immortal, and if, among human activities, some are exempted from the determinism of physical agents and recognized to be free, all this is within nature, which includes the laws governing spirits as well as those governing matter. But these laws are sufficient to account for everything that happens in the world of matter or of mind. This form of naturalism stands in close relation with Rationalism and Deism. Once established by God, the order of nature is unchangeable, and man is endowed by nature with all that is required even for his religious and moral development. The consequences are clear: miracles, that is, effects produced by God himself and transcending the forces of nature, must be rejected. Prophecies and so-called miraculous events either are explainable by the known, or hitherto unknown, laws of nature or, if they are not thus explainable, their happening itself must be denied, and the belief in their reality attributed to faulty observation. Since, for religious and moral, as well as for scientific truths, human reason is the only source of knowledge, the fact of a Divine Revelation is rejected, and the contents of such supposed revelation can be accepted only in so far as they are rational; to believe in mysteries is absurd. Having no supernatural destiny, man needs no supernatural means—neither sanctifying grace as a permanent principle to give his actions a supernatural value nor actual grace to enlighten his mind and strengthen his will. The Fall of Man, the mysteries of the Incarnation and the Redemption, with their implications and consequences, can find no place in a Naturalistic creed. Prayers and sacraments have only natural results explainable on psychological grounds by the confidence with which they inspire those who use them. If man must have a religion at all, it is only that which his reason dictates. Naturalism is directly opposed to the Christian Religion. But even within the fold of Christianity, among those who admit a Divine Revelation and a supernatural order, several naturalistic tendencies are found. Such are those of the Pelagians and Semipelagians, who minimize the necessity and functions of Divine grace; of Baius, who asserts that the elevation of man was an exigency of his nature; of many sects, especially among Liberal Protestants, who fall into more or less radical Rationalism; and of others who endeavour to restrict within too narrow limits the divine agency in the universe.

IV. GENERAL CONSIDERATIONS.—From the fundamental principles of Naturalism are derived some important consequences in æsthetical, political, and ethical sciences. In æsthetics Naturalism rests on the assumption that art must imitate nature without any idealization, and without any regard for the laws of morality. Social and political Naturalism teaches that "the best interests of public society and civil progress require that in the constitution and government of human society no more attention should be given to religion than if there were no religion at all, or at least that no distinction should be made between true and false religion" (Pius IX, Encycl., "Quanta cura", 8 Dec., 1864). Leo XIII lays it down that "the integral profession of the Catholic Faith is in no way consistent with naturalistic and rationalistic opinions, the sum and the substance of which is to do away altogether with Christian institutions, and, disregarding the rights of God, to attribute to man the supreme authority in society" (Encycl., "Immortale Dei", 1 Nov., 1885). Moreover, like individual organisms, social organisms obey fatal laws of development; all events are the necessary results of complex antecedents, and the task of the historian is to record them and to trace the laws of their sequences, which are as strict as those of sequences in the physical world.

In ethics, the vague assumption that nature is the supreme guide of human actions may be applied in many different ways. Already the principle of the

Stoics, formulated first by Zeno, that we must live consistently or harmoniously (*τὸ ὁμολογουμένως ἔχειν*), and stated more explicitly by Cleanthes as the obligation to live in conformity with nature (*τὸ ὁμολογουμένως τῇ φύσει ἔχειν*) gave rise to several interpretations, some understanding nature exclusively as human nature, others chiefly as the whole universe. Moreover as man has many natural tendencies, desires, and appetites, it may be asked whether it is moral to follow all indiscriminately; and when they are conflicting or mutually exclusive, so that a choice is to be made, on what ground must certain activities be given the preference over the others? Before the Stoics, the Cynics, both in theory and in practice, had based their rules of conduct on the principle that nothing natural can be morally wrong. Opposing customs, conventions, refinement, and culture, they endeavoured to return to the pure state of nature. Rousseau, likewise, looks upon the social organization as a necessary evil which contributes towards developing conventional standards of morality. Man, according to him, is naturally good, but becomes depraved by education and by contact with other men. This same theme of the opposition of nature and culture, and the superiority of the former, is a favourite one with Tolstoi. According to Nietzsche, the current standards of virtue are against nature, and, because they favour the poor, the weak, the suffering, the miserable, by commending such feelings as charity, compassion, pity, humility, etc., they are obstacles in the way of true progress. For the progress of mankind and the development of the "Superman", it is essential to return to the primitive and natural standard of morality, which is energy, activity, strength, and superiority; the most powerful are also the best.

If ethical naturalism is considered in its relation with the three philosophical views explained above, it sometimes means only the rejection of any duties based on a Divine Revelation, and the assumption that the only source of right and wrong is human reason. Generally, however, it means the more radical tendency to treat moral science in the same manner as natural science. There is freedom nowhere, but absolute necessity everywhere. All human actions, as well as physical events, are necessary results of antecedents that are themselves necessary. The moral law, with its essential distinction of right and wrong conduct, is, not an objective norm, but a mere subjective result of associations and instincts evolved from the experience of the useful and agreeable, or of the harmful and painful, consequences of certain actions. It is, nevertheless, a motive that prompts to act in certain directions, but the effectiveness of which is strictly determined by the degree of its intensity in a given individual compared with the resistance it encounters on the part of antagonistic ideas. Thus, the science of ethics is not normative: it does not deal with laws existing antecedently to human actions, and which these ought to obey. It is genetic, and endeavours to do for human actions what natural science does for physical phenomena, that is, to discover, through an inference from the facts of human conduct, the laws to which it happens to conform.

It is impossible to state in detail the attitude of the Catholic Church towards the assumptions, implications, and consequences of Naturalism. Naturalism is such a wide and far-reaching tendency, it touches upon so many points, its roots and ramifications extend in so many directions, that the reader must be referred to the cognate topics treated in other articles. In general it can only be said that Naturalism contradicts the most vital doctrines of the Church, which rest essentially on Supernaturalism. The existence of a personal God and of Divine Providence, the spirituality and immortality of the soul, human freedom and responsibility, the fact of a Divine Revelation, the existence of a supernatural order for man, are so many

fundamental teachings of the Church, which, while recognizing all the rights and exigencies of nature, rises higher, to the Author and Supreme Ruler of nature.

Natural Law. See LAW, NATURAL.

Natural Right. See RIGHT.

Nature etymologically (Latin *natura* from *nasci*, to be born, like the corresponding Greek *φύσις* from *φύειν*, to bring forth) has reference to the production of things, and hence generally includes in its connotation the ideas of energy and activity. It will be convenient to reduce to two classes the various meanings of the term nature according as it applies to the natures of individual beings or to nature in general.

I. In an individual being, especially if its constitutive elements and its activities are manifold and complex, the term nature is sometimes applied to the collection of distinctive features, original or acquired, by which such an individual is characterized and distinguished from others. Thus it may be said it is the nature of one man to be taller, stronger, more intelligent, or more sociable than another. This meaning, however, is superficial; in philosophical terminology and even in ordinary language, nature refers to something deeper and more fundamental. These features are manifestations of a man's nature; they are not his nature. Nature properly signifies that which is primitive and original, or, according to etymology, that which a thing is at birth, as opposed to that which is acquired or added from external sources. But the line that divides the natural from the artificial cannot be drawn with precision. Inorganic beings never change except under the influence of external agencies, and in the same circumstances, their mode of activity is uniform and constant. Organisms present a greater complexity of structure, power of adaptation, and variety of function. For their development out of a primitive germ they require the co-operation of many external factors, yet they have within themselves the principle of activity by which external substances are elaborated and assimilated. In any being the changes due to necessary causes are called natural, whereas those produced by intentional human activity are called artificial. But it is clear that art supposes nature and is but a special adaptation of natural aptitudes, capacities, or activities for certain æsthetic or useful purposes. Stars, rivers, forests, are works of nature; parks, canals, gardens, and machines are works of art. If necessary conditions are realized, where the seed falls a plant will grow naturally. But the seed may be placed purposely amid certain surroundings, the growth of the plant may be hastened, its shape altered, and, in general, the result to be expected from natural activities may be modified. By training the aptitudes of an animal are utilized and its instincts adapted for specific ends. In such cases the final result is more or less natural or artificial according to the mode and amount of human intervention.

In scholastic philosophy, nature, essence, and substance are closely related terms. Both essence and substance imply a static point of view and refer to constituents or mode of existence, while nature implies a dynamic point of view and refers to innate tendencies. Moreover, substance is opposed to accidents, whereas we may speak of the nature and essence not only of substances but also of accidents like colour, sound, intelligence, and of abstract ideals like virtue or duty. But when applied to the same

substantial being, the terms substance, essence, and nature in reality stand only for different aspects of the same thing, and the distinction between them is a mental one. Substance denotes the thing as requiring no support, but as being itself the necessary support of accidents; essence properly denotes the intrinsic constitutive elements by which a thing is what it is and is distinguished from every other; nature denotes the substance or essence considered as the source of activities. "Nature properly speaking is the essence (or substance) of things which have in themselves as such a principle of activity (Aristotle, "Metaphysics", 1015a, 13). By a process of abstraction the mind arises from individual and concrete natures to those of species and genera.

A few special remarks must be added concerning human nature. This expression may mean something concrete, more or less different in various individuals, or more generally something common to all men, i. e., the abstract human nature by which mankind as a whole is distinguished from other classes of living beings. In both cases it is conceived as including primitive and fundamental characteristics, and as referring to the source of all activities. Hence nature, as the internal principle of action, is opposed in the first place to violence and coercion which are external principles of action and prevent the normal play of human faculties. It is opposed also, but less strictly, to education and culture which at times may be the checking of natural tendencies, at times also their development and perfection. Education, physical and mental, is not a primitive endowment; it must be acquired and is built upon nature as on its foundation. In this sense habit has been termed a second nature. But although education is due largely to external causes and influences acting on the mind and the organism, from another point of view it is also the unfolding of innate aptitudes, and hence partly natural.

As between nature in general and art, so between human nature and education there is no clear dividing line. Natural is also frequently contrasted with conventional; language, style, gestures, expressions of feelings, etc., are called more or less natural. This opposition becomes more acute in the theories of Hobbes and Rousseau who lay stress on the antithesis between the primitive or natural state of man and the present social condition due to the contract by which men agreed to surrender their rights into the hands of the common authority.

From the theological point of view the distinctions between nature and person and between the natural and the supernatural orders are of primary importance. The former arose from the dogma of the Trinity, i. e., of one Divine Nature in three persons, and chiefly from that of the Incarnation i. e., of the two Natures, Divine and human, in the one Divine Person in Christ. The Human Nature in Christ is complete and perfect as nature, yet it lacks that which would make it a person, whether this be something negative, as Scotists hold, namely the mere fact that a nature is not assumed by a higher person, or, as Thomists assert, some positive reality distinct from nature and making it incommunicable.

The faculties of man are capable of development and perfection, and, no matter what external influences may be at work, this is but the unfolding of natural capacities. Even artificial productions are governed by the laws of nature, and, in man, natural activities, after they are perfected differ not in kind but only in degree, from those that are less developed. The supernatural order is above the exigencies and capacities of all human nature. It consists of an end to be reached, namely, the intuitive vision of God in heaven—not the mere discursive and imperfect knowledge which is acquired by the light of reason—and of the means to attain such an end, namely, a

principle which must be added to natural faculties so as to uplift them and make them capable of knowing and reaching this higher destiny. More specifically it includes an enlightenment of the intellect by a positive revelation of God manifesting man's supernatural end and the conditions for obtaining it; it also implies for every individual the indispensable help of Divine grace both actual, by which God illumines and strengthens human faculties, and sanctifying, by which human nature is elevated to a higher mode of activity. Hence theologians oppose the state of pure nature in which God could have placed man, to the supernatural state to which in fact man was raised.

II. Nature is frequently taken for the totality of concrete natures and their laws. But here again a narrower and a broader meaning must be distinguished. Nature refers especially to the world of matter, in time and space, governed by blind and necessary laws, and thus excludes the mental world. Works of nature, opposed to works of art, result from physical causes, not from the actual adaptation by human intelligence. This signification is found in such expressions as natural history, natural philosophy, and in general, natural science, which deal only with the constitution, production, properties, and laws of material substances. Sometimes also nature is all-inclusive, embracing mind as well as matter; it is our whole world of experience, internal as well as external. And frequently nature is looked upon as a personified abstraction, as the one cause of whatever takes place in the universe, endowed with qualities, tendencies, efforts, and will, and with aims and purposes which it strives to realize.

The problems to which the philosophical study of nature has given rise are numerous. All however centre around the question of the unity of nature: Can all the beings of the world be reduced to one common principle, and if so what is this principle? The first Greek philosophers, who were almost exclusively philosophers of nature, endeavoured to find some primitive element out of which all things were made; air, water, fire, and earth were in turn or all together supposed to be this common principle. The problem has persisted through all ages and received many answers. Aristotle's primary matter, for instance, is of the same nature in all things; and to-day ether, or some other substance or energy is advocated by many as the common substratum of all material substances. After static unity, dynamic unity is looked for, that is, all the changes that take place in the universe are referred to the same principle. Dynamism (q. v.) admits forces of various kinds which, however, it tries to reduce to as small a number as possible, if not to only one form of energy manifesting itself in different ways. Mechanism (q. v.) holds that everything is explainable by the sole assumption of movement communicated from one substance to another. Teleological views give to final causes a greater importance, and look upon the ends of various beings as subordinated to the one end which the universe tends to realize.

If nature includes both mental and physical phenomena what are the relations between these two classes? On this point also the history of philosophy offers many attempts to substitute some form of Monism for the Dualism of mind and matter, by reducing mind to a special function of matter, or matter to a special appearance of mind, or both to a common substratum.

Finally, is nature as a whole self-sufficient, or does it require a transcendent ground as its cause and principle? Is the *natura naturans* one and the same with the *natura naturata*? By some these expressions are used in a pantheistic sense, the same substance underlies all phenomena; by others the *natura naturans*, as first cause, is held to be really distinct from the *natura naturata*, as effect. This is the question of the existence

and nature of God and of his distinction from the world. Here the question of the possibility of miracles is suggested. If nature alone exists, and if all its changes are absolutely necessary, everything takes place according to a strict determinism. If, on the contrary, God exists as a transcendent, intelligent, and free cause of nature and its laws, not only nature in all its details depends ultimately on God's will, but its ordinary course may be suspended by a miraculous intervention of the First Cause. (See ARTS; NATURALISM; SUPERNATURAL; GRACE.)

C. A. DUBRAY.

Naturism, the term proposed by Réville to designate the worship of nature. It differs from Naturalism, which is not a religion, but a system of atheistic philosophy, and from natural religion, which sets forth those truths about God and man attainable by the native power of human reason and forming the prolegomena to Revelation, e. g., the existence of God, the spiritual and immortal nature of the human soul, the moral order. As a theory of religion Naturism exhibits three phases: I. Ethnographic Naturism. II. Philosophic Naturism. III. Science-Naturism.

I. ETHNOGRAPHIC NATURISM.—According to Réville, Naturism is the primitive form of religion, the basis and source of all existing forms. This is the thesis of comparative mythology, which is said to reveal a primitive nature worship. Its foundation is a twofold assumption: (1) the philosophic assumption of evolution, which maintains that man is a development by slow and successive stages from the animal; hence the corollary advanced by Spencer and Thomas as the first principle in the evolutionary history of religion, viz., that primitive man was a creature of emotion, not of intelligence which is the product of more advanced culture; (2) the ethnographic assumption that primitive man existed in the savage state, a condition and mode of life akin to that prevailing among the non-civilized races of to-day, e. g., Tylor, Lubbock, Tiele, Réville, and Spencer.

The core and essence of nature-worship is that nature is animated throughout. In the conception of animated nature, Réville is in touch with de Broessee and Comte, who claim that Fetishism is the primitive religion and by Fetishism understand the primitive tendency to conceive external objects as animated by a life analogous to that of man. He differs from Tylor, who specifies the cause of the animation, e. g., spirits or souls, and from Comte in holding that the primitive animation in its initial stage is not Fetishism, but becomes so when in process of development the spirit or soul is distinguished from the object. Thus with Réville, the Animism of Tylor and Spencer is the intermediate link between Naturism and Fetishism. Tylor, however, considers nature-worship as the connecting bond between Fetishism and Polytheism, yet admits that the stages of this process defy any more accurate definition. Giddings follows Tylor in holding that religious ideas are of two groups: animistic interpretation of the finite, and animistic interpretation of the infinite ("Induct. Sociol.", New York, 1901). In like manner Blackmar teaches that nature-worship was nothing more than spirit-worship localized in the various objects of nature (Elem. of Sociology, New York, 1905). On the other hand Guyan calls Naturism, Physiolatry, of which zoolatry, i. e., worship of animals, is a department (The Non-Religion of the Future, New York, 1907). Hadden holds that primitive folk do not draw a sharp distinction between things animate and inanimate (The Study of Man, New York, 1898). Jastrow says that the savage and primitive man does not differentiate between such an

object of nature as the sun and its personification as a being possessing life in some form, and teaches that it is an axiom of primitive man's science to ascribe life to all things (The Study of Religion, London, 1902). Schrader says the common basis of the ancient Indo-European religion was a worship of nature, and appeals to linguistics which shows that the ancient Aryans designated objects perceived as doing something, e. g., the rain rains, the fire burns ("Prehistoric Antiquities of the Aryan Peoples", tr. by Jevons, London, 1890). Hence the discovery of the soul or spirit as distinct from the object is the origin of Animism. This theory is sometimes called personification of natural forces, but only in the sense that nature is conceived as living, as vital with creative and preservative powers. Personification, in the strict sense of investing material things with the attributes of a person is far above the power of early man and appears only in later forms of developed belief. Hence, according to Réville, there is first the naïve cult of natural objects as possessing life and in some way supposed to influence man; this is followed by Animism and Fetishism; and finally a third stage known as the natural mythologies founded on the dramatization of nature, e. g., the historic polytheisms of China, Egypt, Babylonia, of the Teutonic, Greek, Latin, and Vedic races.

Primitive man faces the world about him in childlike wonder. The succession of the seasons, of night and day, of storm and cloud, the growth of living things, exhibit nature in constant and varied changes. He views natural phenomena as the effects of causes beyond his comprehension and control. Conscious of his own agency, though unable yet to distinguish soul from the parts of the body, he attributes agency like his own to the objects which surround him. Awe and delight possess him. Having no idea at all of God, writes Keary, he makes the things themselves gods by worshipping them ("Early Relig. Develop." in Nineteenth Cent., Aug., 1878). Hence Brinton writes that nature is known to man only as a force which manifests itself in change (The Religious Sentiment, New York, 1876). Ratzel explains this craving for causality in an animistic sense as tending to vivify all the higher phenomena of nature by attributing to them a soul, and applies the word Polytheism to all religions of the lower grades ("Hist. of Mankind", tr. Butler, London, 1896). With Crawley the phenomena of change exhibits a vital principle analogous to man's own and this principle of life vaguely conceived by primitive man but strongly felt is the origin of religion; in a later stage of development Vitalism passes into Animism (The Tree of Life, London, 1905). Shaw says the difference between Naturism and Spiritism is largely a difference of emphasis, because neither can be excluded from the interpretation of a primitive which as yet has made no sharp separation between subject and object. Hence the worshipper of nature seems to ally himself with external objects which, as he surveys them anthropopathically, serve as a support and mirror of his own fleeting fancies. These natural objects are further conceived by primitive man as either friendly or inimical to him. In the particular view of Fetishism the physical and psychical further appears. Thus Shaw in the primitive Naturism resulting from the contact of man with the phenomena of the external world, attempts to reconcile the psychological theories of fear as set forth by Hume, Clodd, Tiele, Deinker, and of desire either natural with Brinton or morbid by Feuerbach.

Pfleiderer holds that nature is animated throughout, that this view was just as natural for the childlike fancy of the primitive man as it is still to-day for children and poets. According to him this animation of nature is not to be explained by saying that the primitive man only compared natural phenomena

with living beings or even that he thought of them as a domicile or operation of spirits of human origin. Such a view would suppose a definite distinguishing of the sense element and of the supersensible element; but this distinction only appeared later, whereas, for the original mythological notion, the sense element and the subject that was active in it was still conceived as one. He says the real sources of religion are external nature and the soul of man; for the prehistoric belief in spirits, out of which developed the belief in God, cannot yet be properly called religion; it only contained the germs of religion. Tylor teaches animation of nature, but, as with him the soul or spirit animates material objects, nature-worship is ranged under the concept of Fetishism. De la Saussaye objects to this view on the ground that nature-worship bears the strongest impress of originality, and therefore is not a phase of Fetishism, which is not original. Darwin seems to combine the ascription of life to natural objects, dreams, and fears (*Descent of Man*, I, p. 65). Thomas says that, while theoretically separable, magic religion, belief in ghosts and in nature-worship practically run into one another and become inseparably mingled; therefore it is idle to attempt to establish a priority in favour of any one of them (*Social Origins*, Chicago, 1909).

De la Saussaye confesses that it is equally difficult to determine the limits of nature-worship in the opposite direction. The classification of religions shows how wide an area it covers. Thus Tiele divides the religions of the world into nature-religions and ethical religions, and holds that the latter developed from the former. Caird keeps the same division, but uses the terms "objective" and "subjective", and says they unite in Christianity. Jastrow objects to the classification of Tiele, that the higher nature-religions contain ethical elements. Hegel holds the primitive religion was an immediate nature-religion, which betrays its features in various primitive peoples and in a more advanced form in Chinese, Pali, and Sanscrit cults. The transition from the lowest stage to the next higher, according to him, is effected by means of the Persian dualism, the Phœnician religion of pain, and the Egyptian religion of mystery. De la Grassière (*Des religions comparées*, Paris, 1899) says Naturism is at the origin of religions. He distinguishes a lesser Naturism and a greater Naturism. The lesser Naturism passes into Animism, which in turn develops into Fetishism, Idolatry, and Anthropomorphism. With its earlier forms the object is adored in its concrete reality; at a later period, the soul or spirit is separated from the object and becomes the real object of worship. Lesser Naturism embraces the primitive gods, e. g., those which personify the woods, mountains, and rivers. It has many forms, e. g., worship of animals as in Greek and Egyptian mythology, worship of trees, e. g., laurels of Apollo, myrtle of Venus, worship of groves as with Druids, worship of stones, water, springs, lakes, mountains, the elements. Hence it embraces the mythologic naiads, fauns, dryads, fairies, and sirens.

Greater Naturism refers to vast gatherings of objects and especially heavenly bodies, e. g., sun, moon, stars. This he says is the basis of the Vedic religion, e. g., Varuna, i. e., heaven at night, Mitri, i. e., heaven at day, Indra, i. e., rain, Agni, i. e., fire, and survives in Sabæism. This Naturism is at the origin of Greek and Latin mythology, e. g., Zeus, i. e., the Heaven, Aurora, i. e., the dawn, Apollo, i. e., light, Hephæstos, i. e., fire, and the worship of mother earth. Tiele holds that the religions of the Redskins and negroes are just as much nature religions as the Babylonian, the Vedic, and Greek, though he admits a great difference exists between the former and the latter. Von Hartmann designates the lowest stage of religion as "naturalistic henotheism". Jastrow holds that man's consciousness of his own weakness in the con-

templation of the overwhelming strength of nature furnishes the motive for seeking support from certain powers of nature and to accomplish this he must make them favourably disposed to him. He says this theory can be variously put, hence can furnish a starting point for pessimistic views, e. g., Von Hartmann, and of optimistic views of man's position in the universe, and it appeals to minds in sympathy with religion as to those, e. g., Feuerbach, who regard religion as an illusion.

Thus Naturism teaches that man originally was destitute of religion, and that ignorant awe in face of natural forces was the cause of his earliest faith. But this theory cannot be accepted. (1) Its basis, viz., that man has evolved from an animal state, is false. "We know now", writes Max Müller "that savage and primitive are very far indeed from meaning the same thing" (*Anthrop. Relig.*, 150). Talcott Williams shows the necessity of revising and limiting the confidence with which the modern savage has been used to explain a nobler past (*Smithsonian Report of 1896*). Müller and Kuhn refute Mannhardt and Meyer by showing that popular beliefs of modern folk-lore are fragments of a higher mythology. (2) It does not explain how man gained the predicate *God*, which is the real problem of religion. Jastrow says mere personification of nature lacks a certain spiritual element which appears to be essential to the rise of a genuine religious feeling in man. Hence, he adds, Müller postulated "the preception of the Infinite" (*Hibbert Lectures*, 1878), and Tiele appeals to "man's original unconscious innate sense of infinity" (*Elem. of the Scien. of Rel.*, II, 233). Thus Fairbairn says, "the constitutive element is what mind brings to nature, not what nature brings to mind" (*Studies in the Philos. of History and Religion*, New York, 1876).

(3) The theory is defective, for it does not explain all the facts of early religious consciousness. If nature were the only source of religion, man would express his ideas of God in terms drawn from nature alone. Now the science of language shows that primitive man expresses his idea of God: (a) In terms drawn from physical nature, e. g., Dyaus Pitar of the Indo-Europeans; Zeus pater of the Greeks; Jupiter of the Latins; Tieu, i. e., heaven, of the Chinese; the Persian Dæva; the Celtic Dia from the Sanscrit root Div, i. e., to shine. (b) By moral and metaphysical concepts: thus, e. g., Jahweh, i. e., the one who is; Ahura, i. e., the living one; El, i. e., the powerful shown in Elohim, Allah, Babylonian; Shaddai, i. e., the mighty; Bel, i. e., the lord; Molech, i. e., king; Adonai, i. e., lord. Such concepts are found with barbarous peoples, e. g., Unkululu of the Zulus, i. e., father; Papang of the Australian, i. e., father; the Mongolian Teng-ri and Hunnish Tang-li, i. e., lord of the sky. Furthermore the earliest Indo-European conception of God is Dyaus Pitar, i. e., the heaven-father. Hence the idea of pater-nity is characteristic of their primitive consciousness. Such a concept is too sublime and elevated to be explained on the principles of Naturism; which is utterly unable to account for the second class of terms. (4) The main support for the theory of Naturism is the Vedic religion. It is true that traces of nature-religion are found in the Vedas. But to say that the Vedic gods are nothing more than nature personified or that nature-worship is the primitive type of Indian religion is to betray the superficial observer. The moral and spiritual conceptions are older than the physical faith. That the ancient Aryans viewed nature as active is not ground to hold that for this reason they worshipped nature. We express ourselves after this fashion in ordinary conversation. The great truth shown by the Vedas is the fact of degeneracy.

II. PHILOSOPHIC NATURISM.—This phase is based on the philosophic unity of animated nature. The ancient cosmogonies represent the efforts of the hu-

man mind to attain a unity amid the multiplicity of external things. In the Stoic conception of God as the soul of the world is set forth a Naturism which satisfies the intellectual craving for unity and gives scope to the exercise of the religious emotions. Hence it was that these philosophers could look with indulgent tolerance upon the religious practices of the common people. The basic principle with both was the same, e. g., the worship of animated nature. To the cultured Roman this principle was conceived as a philosophic unity; to the ordinary mind it was viewed in manifold forms and activities which were the source and explanation of their countless nature-deities. Pantheism in its various forms exhibits the same thought. This is especially true of modern Pantheistic theories. The substance of Spinoza, the synthesis of Fichte, the identity of Schelling, the absolute idea of Hegel is at basis the same conception. Its religious significance is twofold: (a) the more spiritual and metaphysical form appears in Neo-Hegelianism which teaches the unity of human and Divine consciousness. This reflects the nature-philosophy of Hegel which exhibits the idea, i. e., God in its finitude. (b) The idealistic Naturism is shown in the writings of the Romantic school, e. g., Goethe, Shelley, Wordsworth, Coleridge, and attains its full expression in Transcendentalism. To Emerson as to Goethe, God was the soul of the world. Emerson seems to consider religion as the delight which springs from a harmony of man and nature. Emerson taught that the universe is composed of nature and the soul, and by nature means all the *not me*, i. e., physical nature; art, other man, and his own body. Hence in germ the worship of humanity is contained in Emerson's teaching, just as it is latent in Neo-Hegelianism, and appears in the Hegelian evolution of the idea, i. e., the Absolute of God, when viewed from its human side, i. e., as a human process.

III. SCIENCE-NATURISM.—This is the religion of the science-philosophy and appears under two forms: (a) The religion of humanity was first presented in systematic form by Comte, and contains the principles of the humanitarian theories so prevalent a generation ago. God does not exist or at least cannot be known, therefore mankind calls forth the sole and supreme expression of our veneration and service. (b) Cosmic religion, a title invented by Fiske, and designated the homage of reason to forces of nature or the awe of phenomena which suggest mysterious and destructive power. Spencer speaks of the emotion resulting from the contemplation of the unknowable into which as into a mystery all cosmical questions resolve. Fiske develops this thought and makes the essence of religious emotion very largely consist in the sense of mystery. To Fiske the unknowable manifests itself in a world of law and is yet conceived to be in itself something beyond these manifestations. Hence worship is ever the dark side of the shield of which knowledge is the bright side. Thus Matthew Arnold's definition of religion as morality touched by emotion becomes with Tyndall poetry and emotion in face of matter instinct with mind. Cosmism, according to Fiske, is, however, more than a mere sentiment. He says the fundamental principle of religion is obedience to the entire requirements of nature. This is righteousness, just as sin is a wilful violation of nature's laws.

Science-Naturism finds its most complete delineation in Seeley's "Natural Religion". He uses the term "Natural Religion" in contrast with the supernatural. In rejecting supernaturalism and submitting to science is presented a theology to which, he says, all men do actually agree, viz., nature in God, and God a mere synonym for nature. Hence there is no power beyond or superior to nature nor anything like a cause of nature. Whether we say God or prefer to say nature, the important thing is that our minds are filled with the sense of a power, to all appearance

infinite and eternal, a power to which our own being is inseparably connected, in the knowledge of whose ways alone is safety and well-being, in the contemplation of which we find a beatific vision. Religion begins with nature-worship which in its essence is admiration of natural objects and forces. But natural mythology has given place to science, which sees mechanism where will, purpose, and love had been suspected before and drops the name of God, to take up instead the less awful name of Nature. Nature is a name comprehending all the uniform laws of the universe as known in our experience. It is the residuum that is left after the elimination of everything supernatural, and comprehends man with all his thoughts and aspirations not less than the forms of the material world.

Here, according to Seeley, we have the kernel of Christianity and the purified worship of natural forms, i. e., the higher paganism. He holds that this is not Pantheism, for not the individual forms of nature are the objects of worship, but nature considered as a unity. Art and science as well as morality, form the substance of religion, hence culture is the essence of religion and its fruit is the higher life. Thus religion, in his view, in the individual is identified with culture, in its public aspect is identified with civilization. For Seeley the Church is the atmosphere of thought, feeling, and belief that surrounds the State; it is in fact its civilization made more or less tangible and visible. His universal Church is universal civilization. And as culture is a threefold devotion to beauty, goodness, and truth, so the term civilization expresses the same threefold religion, shown on a larger scale in the characters, institutions, and customs of nations. (Cf. ANIMISM; DEITY; FETISHISM; TOTEMISM; TRANSCENDENTALISM.)

JOHN T. DRISCOLL.

Nausea (latinized from the German GRAU), FREDERIC, Bishop of Vienna, b. c. 1480 at Waischenfeld (*Blancampium*) in Franconia; d. 6 Feb., 1552, at Trent. He was the son of a wagonmaker and received his early education at Bamberg and probably at Nuremberg under John Cochläus; with Paul of Schwartzenberg, canon of Bamberg, he pursued humanistic, juristic, and theological studies at Pavia, Padua, and later at Siena, there obtaining degrees in Law and Divinity. Cardinal Lorenzo Campeggio, Archbishop of Bologna and papal legate in Germany, employed him as secretary and as such Nausea was at the Diet of Nuremberg (1524), at the convention of Ratisbon, at the Diet of Ofen, and for a time at Rome. In 1525 he accepted the parish of St. Bartholomew at Frankfurt-on-the-Main and the dignity of canon, but was soon obliged to leave on account of the intrigues of the Lutherans who even excited popular riots against him. He came to Aschaffenburg and (1526) to Mainz as preacher of the cathedral. He attended the Diet of Speier (1529) and was chosen counsellor and preacher (1534) at the court of King Ferdinand. On 5 Feb., 1538, he was named coadjutor to John Faber, Bishop of Vienna, succeeding him in 1541. Nausea laboured zealously for the reunion of the Lutherans with the Catholics, and together with other prelates, asked Rome to permit the clergy to marry and the laity to

use the communion cup. He also advised Cologne or Ratisbon as the place for holding the General Council. He was prevented from being present at the opening of the Council of Trent by contrary orders from the king, but met Paul III at Parma (1546) and there gave to him his "Sylvæ Synodales". When the Council was reopened at Trent in 1551 Nausea was present, taking an active part in its deliberations, especially on the Sacraments. Only a short attendance was granted him, for he died there of a fever. His body was brought to Vienna and buried in the cathedral. In the Acts of the Council Nausea is praised for his great knowledge, his exemplary virtues, and his ecclesiastical convictions (Theiner, "Acta genuina Conc. Trid.", I, Zagreb, 1874, 652). Among his writings are: "Distichs" on the works of Lactantius; "Ars Poetica"; sermons and homilies on evangelical virtues, the Sacrifice of the Mass, the Blessed Virgin Mary, the life of a true Christian; "Catechismus cath." (Cologne, 1543); "Pastoralium inquisitionum elenchitres" (Vienna, 1547); "On the Resurrection of Christ and of the dead" (Vienna, 1551); etc. For full list see Metzner.

FRANCIS MERSHMAN.

Navajo Indians, numbering about 20,000, constitute the largest group of Indians belonging to the Athapaskan or Déné stock. Other groups of the same stock are the Apaches (Ndé), Lipanes (Lipa Ndé), Hupas of California, and various Déné tribe inhabiting British Columbia and Alaska (see DÉNÉS). This points to a migration of the Navajos, centuries ago, from the extreme north. They themselves have a vague tradition of "Diné Nahodloni", i. e., "other Navajos", living far away. According to their myths they emerged from lower worlds somewhere in the San Juan Mountains in south-western Colorado. At present they occupy an extensive reservation in the north-east corner of Arizona and the north-west corner of New Mexico; but many of them live beyond its borders, especially towards the south. Formerly their habitat extended somewhat farther to the north-east.

They are first mentioned in the writings of Zarate-Salmerón in 1626, as Apaches de Nabaju. In 1630, a Franciscan, Alonzo Benavides, in his Memorial to the King of Spain mentions the "Province of the Apaches of Navajo" and adds that "these of Navajo are very great farmers, for that is what *Navajo* signifies—great planted fields". Consequently the word "Navajo" may be derived from the Spanish *nava* meaning "plain, or field". The Navajos call themselves Diné, that is, people. Benavides then mentions the treaty of peace he concluded between the Navajo and Pueblo Indians at Santa Clara in 1630. Previous to this date, as Benavides states, and subsequently, till 1862, an almost continuous guerilla warfare existed between the Navajo and the Pueblo Indians and Mexicans. The number of Navajo captives in Mexican families in 1862 has been estimated at between 1500 and 3000. In 1846 Colonel Doniphan made an expedition into the Navajo country, in 1849 Colonel Washington, in 1854 General Sumner. In 1859 war again broke out, and in 1860 the Navajos attacked Fort Defiance. Colonel Miles and Colonel Bonneville and General Canby made campaigns against them. When the Rebellion broke out and the Texans made their invasion, all the troops were withdrawn from the Navajo country, whereupon the Navajos rode over the country rough-shod. In 1862 General Carleton sent Colonel Kit Carson with a force against the Navajos. He subdued them, and, mainly by killing their stock and destroying their crops, forced them through starvation to surrender, whereupon about

7300 were transferred to Fort Sumner in south-eastern New Mexico. About 1500 never surrendered; about 400 fled from Fort Sumner to their old homes. On 1 June, 1868, General Sherman concluded a treaty with them by which they were permitted to return.

Ever since they are a peaceful, pastoral people, living by, with, and off their flocks of sheep and goats. Though the arid character of their country—good for grazing purposes only—forces them to lead a nomadic life, yet most of the families have one abode for their main home, generally in a well-watered valley, where they raise corn, beans, potatoes, melons, oats, alfalfa, etc. The Navajo women weave the renowned Navajo blankets, noted for their durability, beauty and variety of design, and careful execution, whilst a number of the men are clever silversmiths, making silver necklaces, belts, bracelets, wristlets, rings, buttons, etc., of rare beauty, out of Mexican silver dollars. They have always been self-supporting. They have little of the sullen, reticent disposition attributed to Indians generally; and are cheerful, friendly, hospitable, and industrious. Their government is democratic; there is no chief of the whole tribe, and their local chiefs are men of temporary and ill-defined authority, whose power depends largely upon their, personal influence, their eloquence, and their reputation for wisdom and justice. The tribe is divided into about 58 clans or *gentes*, grouped under several original or nuclear clans. Exogamous marriages with Mexicans, Utes, Apaches, but more especially with the neighbouring Pueblo Indians, captured or enslaved and eventually adopted into the tribe, are responsible for a number of clans. In consequence there is nothing like a pronounced or a prevailing Navajo type. Every variety of form and figure can be found among them. Marriage is contracted early in life. Polygamy and divorce are still prevalent. Their marriage ceremony is only permissible at the marriage of a virgin. The vices of abortion, infanticide, race suicide, are practically unknown among them.

The elaborate system of pagan worship, expressed in chants, sacrifices, sand paintings, dances, ceremonies, some of which last nine days, make the Navajo appear intensely religious. Though they have no conception of one supreme being, their anthropomorphic deities are numerous and strikingly democratic. The ideas of heaven and hell being unknown to them, they believe in a hereafter consisting in a life of happiness with the peoples of the lower worlds. They are firm believers in witchcraft and charms. Their pathology is largely mythological. Diseases are attributed to evil beings, to malign influences of enemies, and to various occult agencies. Their remedies are largely magical and constitute an integral part of their religion. The superstitions, ceremonies, and customs are diligently kept alive by an extraordinary large number of medicine-men who wield a powerful influence among them. Though Protestant missionaries have been among the Navajos since the early eighties, and have at present (1910) eleven different missions, an hospital, and three small schools, the number of their adherents is very insignificant.

After the unsuccessful attempt of Fray Penavides in 1630 to Christianize the Navajos, Padre Menchero, in 1746, induced several hundred to settle at Cebolleta, now a Mexican town north of Laguna; but the enterprise soon came to an end. In 1749 Padre Menchero made another attempt, re-establishing the Cebolleta mission and founding another at Encinal, now a Laguna village; but on 24 June, 1750, the Indians abandoned them to return to their wilderness. On 13 October, 1897, the Franciscans of Cincinnati Ohio, accepted the Navajo mission at the request of Mgr. Stephan, Director of the Bureau of Catholic Indian Missions, and of Mother Drexel. The missionaries took charge at St. Michael's, Arizona, on 7

October, 1898. On 3 December, 1902, an industrial boarding-school for the Navajos, erected by Mother Drexel, was opened at St. Michael's, and has since been conducted by her community, the Sisters of the Blessed Sacrament. At present (1910) the school is attended by 150 Navajo pupils. A branch mission was established at Chin Lee, Arizona, in 1905, and a chapel built at Lukachukai, Arizona. 231 children and adults have been baptised at St. Michael's, and 78 have made their first Holy Communion. The way has been prepared; the Navajos are well-disposed towards the Catholic missionaries and give founded hopes for an abundant harvest of souls.

Much attention has been given by the Franciscans to the study and construction of the Navajo language. In 1910 they published "An Ethnologic Dictionary of the Navajo Language", and also "A Navajo English Catechism of Christian Doctrine for the Use of Navajo Children"; other works are in preparation.

ANSELM WEBER.

Navarre.—The territory formerly known as Navarre now belongs to two nations, Spain and France, according as it lies south or north of the Western Pyrenees. Spanish Navarre is bounded on the north by French Navarre, on the north-east by the Province of Huesca, on the east and south-east by the Province of Saragossa, on the south by the province of Logroño, and on the west by the Basque Provinces of Guipuzcoa and Alava. It lies partly in the mountainous region of the Pyrenees and partly on the banks of the Ebro; in the mountains dwell the Basques; in the south, the Spaniards. It is made up of 269 communes in the five districts of Pamplona, Aoi, Estella, Tafalla, and Tudela, Pamplona being the capital. French, or Lower, Navarre (Basse-Navarre) belongs to the Department of Basses-Pyrénées, and forms the western part of the Arrondissement of Mauléon and the Cantons of Hasparren and Labastide-Clairance in the Arrondissement of Bayonne. It borders on Béarn to the north, on Soule to the east, on the Pyrénées to the south and south-west, on Labourd to the west and north-west, and extends over the districts of Arberoue, Mixe, Ostabarés, Ossés, Baigorry, Cize. The principal city, Donajouna, or St.-Jean-Pied-de-Port, stands on the River Nive, in the Arrondissement of Mauléon.

HISTORY.—The history of the two divisions of the country is identical until the year 1512, when Spanish Navarre was conquered by Ferdinand the Catholic, the northern part remaining French. Little is known of the earliest history of the country, but it is certain that neither the Romans nor the Visigoths nor the Arabs ever succeeded in permanently subjugating the inhabitants of the Western Pyrenees, who had always retained their own language. The capture of Pamplona by Charlemagne in 778 was not a lasting victory: in the same year the Basques and Navarrese defeated him at the Pass of Roncesvalles. In 806 and 812, Pamplona seems to have been again taken by the Franks. When, however, the Frankish emperors, on account of difficulties at home, were no longer able to give their attention to the outlying borderlands of their empire, the country, little by little, entirely withdrew from their allegiance, and about this time began the formation of a dynasty which soon became very powerful. The first King of Pamplona of this

dynasty was Eneco Arista (839), his elder brother, García Semen, having received as a dukedom Vasconia, the original Navarre. After the death of Eneco Arista (852), the two territories were united and Semen García, the eldest son of the Count of Alavaria, was chosen king. In 860, the united Pamplonese and Navarrese gave the Crown to the son of Arista, García II Eneco, who zealously defended his country against the encroachments of Islam, but was killed at Aybar (882) in a battle against the Emir of Cordova. He was succeeded by his eldest son Fortun García, who was held a prisoner for fifteen years by the infidels, and who, after a reign of twenty-two years, became a monk at Leyra, the oldest convent in Navarre, to which no less than seventy-two other convents were subject.

The choice of the Navarrese now fell upon his son Sancho García I, surnamed Abarca (905-925), who fought against the Moors with repeated success and joined Ultra-Puertos, or Basse-Navarre, to his own dominions, extending its territory as far as Najera. As a thank-offering for his victories, he founded, in 924, the convent of Albelda. Before his death, all Moors had been driven from the country. His successor, García Sanchez (925-70), surnamed El Temblón (the Trembler), who had the support of his energetic and diplomatic mother Teurda, likewise engaged in a number of conflicts with the Moors. Under the sway of his son, Sancho el Mayor (the Great—970-1033), the country attained the greatest prosperity in its history. He seized the country of the Pisuerga and the Cea, which belonged to the Kingdom of Leon, conquered Castile, and ruled from the boundaries of Galicia to those of Barcelona. At his death, he unfortunately divided his possessions among his four sons, so that the eldest, García, received Navarre, Guipuzcoa, Vizcaya, and small portions of Béarn and Bigorre; Castile and the lands between the Pisuerga and the Cea went to Fernando; to Gonzalo were given Sobrarbe and Ribagorza; the Countship of Aragon was allotted to the youngest son Ramiro. The country was never again united: Castile was permanently joined to Leon, Aragon enlarged its territory, annexing Catalonia, while Navarre could no longer extend its dominions, and became in a measure dependent upon its powerful neighbours. García III (1035-54) was succeeded by Sancho III (1054-76), who was murdered by his brothers.

In this period of independence the ecclesiastical affairs of the country reached a high state of development. Sancho the Great was brought up at Leyra, which was also for a short time the capital of the Diocese of Pamplona. Beside this see, there existed the Bishopric of Oca, which was united in 1079 to that of Burgos. In 1035 Sancho the Great re-established the See of Palencia, which had been laid waste at the time of the Moorish invasion. When, in 1045, the city of Calahorra was wrested from the Moors, under whose dominion it had been for more than three hundred years, a see was also founded here, which in the same year absorbed that of Najera and, in 1088, that of Alaba, the jurisdiction of which covered about the same ground as that of the present diocese of Vitoria. To Sancho the Great, also, the See of Pamplona owed its re-establishment, the king having, for this purpose, convoked a synod at Leyra in 1022 and one at Pamplona in 1023. These synods likewise instituted a reform of ecclesiastical life with the above-named convent as a centre.

After the murder of Sancho III (1076), Alfonso VI, King of Castile, and Sancho Ramirez of Aragon, ruled jointly in Navarre; the towns south of the Ebro together with the Basque Provinces fell to Castile, the remainder to Aragon, which retained them until 1134. Sancho Ramirez (1076-94) and his son Pedro Sanchez (1094-1104) conquered Huesca; Alfonso el Batallador (the Fighter—1104-1134), brother of Pedro Sanchez,

secured for the country its greatest territorial expansion. He wrested Tudela from the Moors (1114), reconquered the entire country of Bureba, which had been lost to Navarre in 1042, and advanced into the Province of Burgos; in addition, Roja, Najera, Logroño, Calahorra, and Alfaro were subject to him, and, for a short time, Bayonne, while his ships-of-war lay in the harbour of Guipuzcoa. As he died without issue (1134), Navarre and Aragon separated. In Aragon, Alfonso's brother Ramiro became king; in Navarre, García Ramirez, a grandson of Sancho the Great, who was obliged to surrender Rioja to Castile in 1136, and Taragona to Aragon in 1157, and to declare himself a vassal of King Alfonso VII of Castile. He was utterly incompetent, and at various times was dependent upon the revenues of churches and convents. His son, Sancho García el Sabio (the Wise—1150-94), a patron of learning, as well as an accomplished statesman, fortified Navarre within and without, gave charters (*fueros*) to a number of towns, and was never defeated in battle. The reign of his successor, the last king of the race of Sancho the Great (1194-1234), Sancho el Fuerte (the Strong), was more troubled. He appropriated the revenues of churches and convents, granting them instead important privileges; in 1198 he presented to the See of Pamplona his palaces and possessions in that city, this gift being confirmed by Pope Innocent III on 29 January, 1199. While he was absent in Africa, whither he had been induced to go on an adventurous expedition, the Kings of Castile and Aragon invaded Navarre, and as a consequence, the Provinces of Alava and Guipuzcoa were lost to him.

The greatest glory of Sancho el Fuerte was the part he took in the battle of Las Navas de Tolosa (1212), where, through his valour, the victory of the Christians over the Calif En-Nasir was made decisive. When in 1234 he died in retirement (*el Encerrado*), the Navarrese chose to succeed him Thibault de Champagne, son of Sancho's sister Blanca, who, from 1234 to 1263, made of his Court a centre where the poetry of the Troubadours was welcomed and fostered, and whose reign was peaceful. His son, Theobald II (1253-70), married Isabel, the second daughter of St. Louis of France, and accompanied the saint upon his crusade to Tunis. On the homeward journey, he died at Trapani in Sicily, and was succeeded by his brother, Henry I, who had already assumed the reins of government during his absence, but reigned only three years (1271-74). His daughter Juana not yet being of age, the country was once more invaded from all sides, and the queen mother, Blanca, sought refuge with her daughter at the court of Philip the Bold of France, whose son, Philip the Fair, had already married Juana in 1284. In 1276, at the time of the negotiations for this marriage, Navarre passed under French dominion, and, until 1328, was subject to Kings Philip the Fair (d. 1314), Louis X Hutin (1314-16), his brother, Philip the Tall (1316-22), and Charles the Fair (1322-28). As Charles died without male issue, and Philip of Valois became King of France, the Navarrese declared themselves independent and called to the throne Joanna II, daughter of Louis Hutin, and her husband Philip of Evreux (1328-1343), surnamed the Wise. Joanna waived all claim to the throne of France and accepted for the counties of Champagne and Brié those of Angoulême, Longueville, and Mortain.

Philip devoted himself to the improvement of the laws of the country, and joined King Alfonso XI of Castile in battle against the Moors (1343). After the death of his mother (1349), Charles II assumed the reins of government (1349-87), and, on account of his deceit and cruelty received the surname of the Wicked. His eldest son, on the other hand, Charles III, surnamed the Noble, gave the land once more a peaceful and happy government (1387-1425), exerted his

strength to the utmost to lift the country from its degenerate condition, reformed the government, built canals, and made navigable the tributaries of the Ebro flowing through Navarre. As he outlived his sons, he was succeeded by his daughter Blanca (1425-42) and her husband John II (1429-79), son of Ferdinand I of Aragon. As John II ruled Aragon in the name of his brother, Alfonso V, he left his son, Don Carlos (Charles), in Navarre, only with the rank of governor, whereas Blanca had designed that Charles should be king. In 1450, John II himself repaired to Navarre, and, urged on by his ambitious second wife, Juana Enriquez of Castile, endeavoured to obtain the succession for their son Fernando (1452). As a result a violent civil war broke out, in which the powerful family of the Agramontes supported the king and queen, and that of the Beaumonts, called after their leader, the chancellor, John of Beaumont, espoused the cause of Charles; the highlands were on the side of the prince, the plains on that of the king. The unhappy prince was defeated by his father at Aybar, in 1451, and held a prisoner for two years, during which he wrote his famous Chronicle of Navarre, the source of our present knowledge of this subject. After his release, he sought in vain the assistance of King Charles VII of France and of his uncle Alfonso V of Naples; in 1460 he was again imprisoned at the instigation of his step-mother, but the Catalonians rose in revolt at this injustice, and he was again liberated and named governor of Catalonia. He died in 1461, without having been able to reconquer his kingdom; he named as his heir his sister Blanca, who was, however, immediately imprisoned by John II, and died in 1464.

Her claim descended to her sister Leonor, Countess of Foix and Béarn, and, after her death and that of John II, which occurred almost simultaneously, to her grandson, Francis Phœbus (1470-83). His daughter Catharine, who, as a minor, remained under the guardianship of her mother, Madeleine of France, was sought by Ferdinand the Catholic as a bride for his eldest son; but she gave her hand (1494) to the French Count of Perigord, Jean d'Albret, a man of vast possessions. Nevertheless, Ferdinand the Catholic did not relinquish his long-cherished designs on Navarre. As Navarre refused to join the Holy League against France, declared itself neutral, and would have prevented the passage through the country of Ferdinand's troops, the latter sent his general Don Fabrique de Toledo to invade Navarre in 1512. Jean d'Albret fled, and Pamplona, Estella, Olita, Sangüessa, and Tudela were taken. As the royal House of Navarre and all opponents of the Holy League were under the ban of the Church, the Navarrese declared for Ferdinand, who took possession of the kingdom on 15 June, 1515. Lower Navarre—the part of the country lying north of the Pyrenees—he generously left to his enemies.

Lower, or French, Navarre, received from Henry, the son of Jean d'Albret, a representative assembly, the clergy being represented by the Bishops of Bayonne and Dax, their vicars-general, the parish priest of St-Jean-Pied-de-Port, and the priors of Saint-Palais, d'Utziat and Haramples. When, in 1589, its administration was united with that of France, it was still called a kingdom. After Henry IV, the kings of France bore also the title King of Navarre. The Basque language is still spoken in most of the provinces.

In the field of historical research, the most distinguished investigators have been, for Spanish Navarre, Moret and other Jesuit scholars, one of their pupils, Ferreras, and the Augustinian M. Risco; for French Navarre, the Benedictines, de Marca, and others. CHAPPUIS, *Histoire du royaume de Navarre* (Paris, 1590; 1616); FAYT, *Histoire de Navarre* (Paris, 1612); GALLAND, *Mémoires sur la Navarre* (Paris, 1648); DE MARCA, *Histoire de Béarn* (Paris, 1640); OIHENART, *Notitia utriusque Vasconie* (Paris, 1656); MORET, *Investigaciones historicas del reino de Navarra* (Pamplona, 1655); IDEM, *Annales del reino de Navarra* (5 vols., Pamplona, 1684-95; 12 vols., Tolosa, 1890-92); FERRERAS, *La Historia de España* (Madrid, 1700-27); RISCO, *La Vasconia en España Sa-*

grada, XXXII (Madrid, 1779); YANQUAS Y MIRANDA, *Crónica de los reyes de Navarra* (Pamplona, 1843); IDEM, *Historia compendiada del reino de Navarra* (S. Sebastian, 1832); IDEM, *Diccionario de las antigüedades de Navarra* (Pamplona, 1840-43); BASCLES DE LAGRÈSE, *La Navarre française* (Paris, 1881); BLADÉ, *Les Vascons espagnols* (Agen, 1891); BOISSONADE, *Histoire de la réunion de la Navarre à la Castille* (Paris, 1893); JAURGAIN, *La Vasconie* (Pau, 1898—); RUANO PRIETO, *Anecdotin del Reino de Navarra en tiempo del Rey Católico* (Madrid, 1899); ARIGITA y LACA, *Colección de documentos para la historia de Navarra* (Pamplona, 1900).

Navarro, ANDREW L. See NEW GUINEA, VICARIATE APOSTOLIC OF.

Navarrete, DOMINGO FERNÁNDEZ, Dominican missionary and archbishop, b. c. 1610 at Peñaflor in Old Castile; d. 1689 at Santo Domingo. He received the religious habit about 1630 and on completing his studies was offered the chair of Thomistic theology in several Spanish universities. He preferred, however, to devote his life to the conversion of the heathen, and in 1646 with twenty-seven of his brethren left his native land and proceeding by way of Mexico, arrived in the Philippine Islands, 23 June, 1648. He taught theology in the Dominican University of St. Thomas, Manila. In 1657 with several of his brethren he went to China and, after learning the language, took up missionary labour chiefly in the province of Fo-kien. The persecution which broke out in 1665 brought disaster to the missions. Forbidden to preach, he occupied himself with writing, hoping by this means to spread and confirm the faith. Being hampered too much he went in 1673 as prefect of the Dominican mission to Rome to lay before the authorities there the question of Chinese Rites which had reached an acute stage between the Jesuits on one side and the Dominicans and Franciscans on the other (see CHINA). He was highly esteemed by Innocent XI, who wished to make him bishop of the Chinese missions. He refused the honour, but on his return to Spain in 1677 the pope, at the suggestion of Charles II, forced him to accept the Archbishopric of Santo Domingo, where he laboured with zeal and fidelity till his death. While on the question of Chinese Rites he was opposed to the Jesuits, sometimes attacking them very severely; in his diocese he entertained the highest regard for them. In his letters to the viceroy and to the king, requesting them to permit the fathers of the Society to establish a college in his residential city, he pays them a glowing tribute.

Among his principal works may be mentioned "Tratados históricos, políticos, éticos y religiosos de la monarquía de China" (Madrid, 1676); "Catechismus, lingua sinica", 2 vols; "De mirabilibus Dei nominibus, lingua sinica", 2 vols; "Præceptor ethnicus ex optimis quibusque Sinensium libris extractus, et ex eorumdem sententiis concinnatus, lingua sinica."

JOSEPH SCHROEDER.

Navarrete, JUAN FERNÁNDEZ, a Spanish painter, b. at Logroño, 1526 and died at Segovia, 1579 (at Toledo, February, 1579 or 28 March, 1579?). He is called *el Mudo* (the mute) because he lost his hearing when a child of three and, in consequence, his power of speech. His parents, who were well to do and perhaps of noble birth placed him with the Hieronymite monks of Estrella where Fray Vicente, a gifted brother, was his first teacher in art. Navarrete's talents were early discovered because he made all his wants known through rapid and vigorous black and white sketches. He may have been a pupil of Becerra, Spain's great fresco painter, but it is certain that he went when a youth to the great Italian centres of art and under Titian in Venice acquired that technique and knowledge of colour which earned him the name of "the Spanish Titian". He returned to Spain a painter of repute, and travelled extensively in his native country, leaving works from his hand in her

important cities. In 1568 he was made painter to Philip II, received a salary of two hundred ducats, "besides just payment for his work", and was commissioned to decorate the Escorial. In 1575 he completed a "Nativity" wherein are three dominant lights; one from St. Joseph's candle, one from the glory above, and the most radiant of all from the divine Child as in Correggio's "Notte". In one "Holy Family" he painted such strange accessories, a cat, a dog, and a partridge, that the king made him promise never again to put "such indecorous things in a holy picture". Though called the Spanish Titian, Navarrete was not an imitator of any Italian; he was an original and he painted rapidly, freely, and spontaneously. His composition, especially in groups of figures, was masterly and was excelled only by that of Velázquez. "He spoke by his pencil with the *bravura* of Rubens without his coarseness". Navarrete's work greatly influenced the development of Spanish art and after his death Lope de Vega wrote: "No countenance he painted was dumb". Despite the artists' infirmity he was an agreeable companion, played cards, read, and wrote much, was broad-minded and generous. When his patron ordered Titian's "Last Supper" to be cut because it was too large for a place in the refectory of the Escorial, it was el Mudo who protested most. In the refectory at Estrella, where he received his first instruction in painting are some of Navarrete's best pictures. The following works may be mentioned: "Holy Family", at Weimar; "St. John in Prison", at St. Petersburg; "St. Jerome", in the Escorial; "Holy Family", in the Escorial.

STIRLING-MAXWELL, *Annals of the Artists of Spain* (London, 1891); VIARDOT, *Les Musées d'Espagne, d'Angleterre et de Belgique* (Paris, 1843); FORD, *Handbook for Travelers in Spain* (London, 1847).

LEIGH HUNT.

Navarrete, MARTÍN FERNÁNDEZ DE, a Spanish navigator and writer, b. at Avalos (Logroño), 8 November, 1765; d. at Madrid, 8 October, 1844. He received his early education partly in his native town and partly at the seminary of Vergara. At the age of fifteen he entered the navy and a little later in 1782 served with distinction in the unsuccessful operations against Gibraltar. Through overwork, he became broken down in health and was compelled to withdraw from active service for a time; but during this period of enforced rest, he devoted himself to historical research and in 1789 was commissioned by the Minister of Marine to search the national archives and to gather all documents and data in connexion with the maritime history of Spain. He devoted three years to this work, and among the documents he discovered were the diaries of the first and third voyages of Columbus. War having been declared between Spain and France, he rejoined the navy in 1792 and took part in the siege of Toulon. Shortly after this he was promoted to the grade of captain in the navy. He was then placed under the orders of Captain General Langara of the Department of Cádiz with whom he afterwards served in various capacities when the latter was made Minister of Marine. While in the Marine Office, he brought about many improvements and reforms, among them the planning and organizing of the hydrographical office of which he afterwards became the head (1823). In 1808, he resigned his government charges and retired from public life rather than recognize the claims of Joseph Bonaparte who had been seated upon the Spanish throne. In 1814, he was made secretary of the Academy of St. Ferdinand, and from 1824 until his death, was a director of the Academy of History. Several times he was elected to represent his province as senator, but his career in the senate was not a brilliant one. Most of Navarrete's writing is historical. His best work, and the one which gives him his reputation, is "Colección de

los viajes y descubrimientos que hicieron por mar los españoles desde el fin del siglo XV" (Madrid, 1825-37). This was published at government expense, and has been widely read and quoted. Among his other works is an excellent life of Cervantes, published in 1819 in connexion with an edition of "Don Quijote" brought out by the Spanish Academy; "Colección de documentos inéditos" written in collaboration with others; "Disertación sobre la historia de la náutica;" and "Biblioteca marítima española". The last two were published after his death, in 1846 and 1851 respectively.

VENTURA FUENTES.

Nave, architecturally the central, open space of a church, west of the choir or chancel, and separated therefrom by a low wall or screen. It is divided from the side aisles by columns, shafts, or piers, is roofed with timber or vaulted in masonry, and usually rises above the level of the aisle roofs to provide high windows for lighting. Colloquially, the term is used to indicate that portion of a church reserved for worshippers, and including the central and side aisles, crossing transepts. The name is derived from the Latin *navis*, a ship, possibly with some reference to the "ship of St. Peter" or the Ark of Noah. The norm of all subsequent developments, whether early Christian, Byzantine, Norman, Medieval, or Renaissance, is to be found in the Roman basilica, with its wide, central area, and its aisles and galleries separated therefrom by columns and arches supporting the upper walls, pierced by windows, and the timber roof. During the third and fourth centuries the apse, which in the classical examples immediately terminated the central open space, was pushed back and separated from the nave proper by a transverse nave or transept; later the junction of nave, transept, and apse (now prolonged into a deep choir or chancel) was surmounted by a dome, or tower, the space below being called the crossing, while the simple system of equal supports equally spaced was for a time abandoned for the alternating system. Simultaneously the upper walls were increased in height, the aisles vaulted in masonry, then the nave itself, the solids were reduced to a minimum in favour of windows that tended ever to increase in size, the space above the aisle vaults and their sloping roofs was arcaded and thrown open to the nave, a complete system of buttresses was devised and perfected, and the complete Gothic nave came into existence (see GOTHIC ARCHITECTURE). Except in the smallest churches the nave was flanked by an aisle on each side, sometimes (e. g. in Bourges Cathedral) by double aisles. Occasionally, as in the Jacobean churches of the thirteenth century, there were two naves side by side, of equal dimensions and separated by screens; occasionally also, particularly in Germany and Flanders, nave and aisles were of equal height. The standard type, however, was that of the lofty nave with arcade, triforium, and clerestory, flanked by a comparatively low aisle on each side.

In early Christian basilicas the sanctuary was hardly more than a semicircular apse, the transept or transverse nave serving for clergy and choir: little by little the chancel was deepened to accommodate the increasing number of clerics, but the transept and crossing were still shut off from the people's nave. As monasticism developed, more and more of this portion of the church was enclosed, until in many Cistercian abbey churches the entire central space from east to west was reserved. In the south of Europe the enclosed choir still frequently projects far to the west of the crossing; but in France, in the great cathedrals of the Middle Ages, nave, transepts, and crossing were cleared, the choir screen being fixed at the eastern side of the crossing, and this arrangement is, in modern times, almost universal. During the Middle Ages also, the great development of

preaching necessitated an even greater space for the congregation, and as a result the medieval nave increased to vast proportions and was capable of holding crowds that often numbered tens of thousands. Nor were these vast auditoriums reserved exclusively for religious services; in many cases they were unconsecrated, and were used not only for miracle plays, but for many strictly secular purposes. The line between chancel and nave was always very clearly drawn: in England, for example, the parish priest had full authority in the former, and was bound to keep it in repair at his own expense, while the parish itself was responsible for the care and maintenance of the nave.

Nazarene (Ναζαρηνός, *Nazarenus*).—As a name applied to Christ, the word Nazarene occurs only once in the Douai Version, viz. in Matt., ii, 23, where the Vulgate reading is *Nazareus* (Ναζωραῖος). Elsewhere (Matt., xxvi, 71; Mark, i, 24; x, 47; xiv, 67; Luke, iv, 34; John, xviii, 5; Acts, ii, 22 etc.) *Jesus Nazarenus* is uniformly translated "Jesus of Nazareth". In Acts, xxiv, 5 the Christians are spoken of by Tertullus as "the sect of the Nazarenes". The name has obvious reference to Nazareth, the early home of the Saviour, and it is applied to Him in the Gospels only by those who are outside the circle of His intimate friends. In the Acts, however, it is employed by St. Peter and St. Paul, and by the risen Lord Himself, according to Paul's account of his conversion given to the multitude of angry Jews who had attacked him in the Temple (Acts, xxii, 8). In Matt., ii, 23 we read that "coming he dwelt in a city called Nazareth: that it might be fulfilled which was said by the prophets: That he shall be called a Nazarene". No explicit prediction to this effect is found in the recorded O. T. prophecies, and various theories have been advanced to explain the reference. Some would connect the passage with the *netzer* (flower) of Is., xi, 1; others with the *netzure* (dregs, Douai) of Is., xlix, 6, but these interpretations seem far-fetched, to say nothing of other difficulties. That the quality of Nazarite is alluded to by the Evangelist is disproved by the fact that Christ was not a Nazarite, nor is the theory that reference is here made to some lost or merely traditional prophecy supported by any positive proof. No more plausible explanation has been found than the one given by St. Jerome in his "Commentary on St. Matthew", viz. that the mention of the "prophets" in the plural precludes reference to any single passage, and points rather to the general predictions that the Messiah would be despised (cf. John, i, 46).

Nazarenes. See EBIONITES; JUDAIZERS.

Nazareth, SISTERS OF CHARITY OF, founded Dec., 1812, by the Rev. B. J. M. David (see LOUISVILLE, DIOCESE OF). Father David, while establishing his seminary on the farm of St. Thomas, near Bardstown, Nelson County, Kentucky, took charge of the missions among the surrounding Catholic population. Here he found children without instructors, sick, aged, and poor without care. The need of devoted religious women was felt. He found a few young girls willing to consecrate their lives to the service of God and their neighbour. The first to offer herself was Teresa Carrico; Catherine Spalding, her assistant, Harriet Gardiner, and others followed. Very soon six were assembled, and the number continued to in-

crease. All were daughters of pioneer settlers (see *KENTUCKY, Religion*); their zeal and capacity for good works formed their only dower. They taught the children, spun wool or flax, and wove it into cloth out of which they fashioned garments for themselves and for Father David's seminarians, who, on their side, found time in the intervals of study to fell trees, hew logs, and build the seminary and convent. The first log house occupied by the sisters received from Father David the name of Nazareth. This name the mother-house has preserved, and thence the sisters are popularly called "Sisters of Nazareth", being thus distinguished from other Sisters of Charity.

Mother Seton could not spare sisters from Emmitsburg to train the new community, as Bishop Flager had requested, but she sent him the same copy of the Rule of St. Vincent de Paul which he himself had brought her from France, and Father David carefully attended to the training of the novices. In February, 1816, he found the first sisters sufficiently prepared to take the vows. The

little body was fairly organized, and its work was fast extending. Miss Eleanor O'Connell (Sister Ellen), a scholarly woman and experienced teacher, came to them from Baltimore, and to her the early success of the educational work of Nazareth is largely due. The reputation of Nazareth Academy was soon established, and students, even from a distance, crowded the classrooms, although it was not until 1829 that the Legislature of Kentucky granted its charter to the "Nazareth Literary and Benevolent Institution". Sister

Ellen prepared others to assist her, establishing what was virtually a normal school for the sisters, which has been zealously maintained ever since. In 1822 the mother-house was removed to a farm purchased for the purpose near Bardstown. Both the convent church and the academy building were completed in 1825. The sisters, at the same time, never lost sight of their primary work of succouring the sick and the poor. In each of their houses destitute children were cared for. St. Vincent's Orphan Asylum was opened in Louisville, after the cholera epidemic, in 1834. Thenceforth schools, hospitals, and asylums grew apace.

Besides the mother-house, the congregation now has sixteen branch academies and high schools modelled upon it. The sisters teach about 15,000 children in parochial schools, and care for more than 5000 sick in their hospitals and infirmaries. On petition of the present superior, Mother Eutropia McMahon, the congregation received the formal approbation of the Holy See, 5 September, 1910, nearly 98 years after its first foundation.

Besides the historical works referred to under *KENTUCKY* and *LOUISVILLE*, see SPALDING, *Sketches of Kentucky* (1844); BARTON, *Angels of the Battlefield* (1897); *Annals of the Sisters of Charity of Nazareth*; A Brief Historical Sketch of the Sisters of Charity of Nazareth, Kentucky (1908).

MARIE MENARD.

Nazareth, the town of Galilee where the Blessed Virgin dwelt when the Archangel announced to her

the Incarnation of the Word, and where Christ lived until the age of thirty years, unknown, and obedient to Mary and Joseph. In the manuscripts of the New Testament, the name occurs in a great orthographical variety, such as *Nazaret*, *Nazareth*, *Nazaret*, *Nazaret*, and the like. In the time of Eusebius and St. Jerome (*Onomasticon*), its name was *Nazara* (in modern Arabic, *en Nâsirah*), which therefore, seems to be the correct name: in the New Testament we find its derivatives written *Ναζαρεθ*, or *Ναζωραιος*, but never *Ναζαρεταιος*. The etymology of *Nazara* is *nâser*, which means "a shoot". The Vulgate renders this word by *flos*, "flower", in the Prophecy of Isaiah (xi, 1), which is applied to the Saviour. St. Jerome (*Epist.*, xlv, "Ad Marcellam") gives the same interpretation to the name of the town.

Nazareth is situated in the most southerly hills of the Lebanon range, just before it drops abruptly down to the plain of Esdraelon. The town lies in a hollow plateau about 1200 feet above the level of the

ST. MARY'S WELL, NAZARETH

Mediterranean, between hills which rise to an altitude of 1610 feet. The ancient Nazareth occupied the triangular hillock that extends from the mountain on the north, having its point turned to the south. Its north-western boundary is marked by numerous Jewish tombs which have been discovered on the slope of Jebel es Likh. The south-eastern limit is the small valley that descends from the beautiful spring called St. Mary's Well, which was, no doubt, the chief attraction for the first settlers. In the last fifty years the population has increased

rapidly, and amounts at the present day to more than 7000 souls. The modern houses, white and clean, run up all along the hillsides, especially on the north. Spread out in the shape of an amphitheatre, set in a green framework of vegetation, Nazareth offers to the eye a very attractive picture.

HISTORY.—The town is not mentioned in the Old Testament, nor even in the works of Josephus. Yet, it was not such an insignificant hamlet as is generally believed. We know, first, that it possessed a synagogue. Neubauer (*La géographie du Talmud*, p. 190) quotes, moreover, an elegy on the destruction of Jerusalem, taken from ancient Midrashim now lost, and according to this document, Nazareth was a home for the priests who went by turns to Jerusalem, for service in the Temple. Up to the time of Constantine, it remained exclusively a Jewish town. St. Epiphanius (*Adv. Hæreses*, I, ii, hæc., 19) relates that in 339 Joseph, Count of Tiberias, told him that, by a special order of the emperor, "he built churches to Christ in the towns of the Jews, in which there were none, for the reason that neither Greeks, Samaritans, nor Christians were allowed to settle there, viz., at Tiberias, at Diocesarea, or Sepphoris, at Nazareth, and at Capharnaum". St. Paula and St. Sylvia of Aquitaine visited the shrines of Nazareth towards the end of the fourth century, as well as Theodosius about 530; but their short accounts contain no description of its monuments. The Pilgrim of Piacenza saw

there about 570, besides "the dwelling of Mary converted into a basilica", the "ancient synagogue". A little treatise of the same century, entitled "*Liber nominum locorum ex Actis*", speaks of the church of the Annunciation and of another erected on the site of the house "where our Lord was brought up". In 570 Arculf gave Adamnan an interesting description of the basilica of the Annunciation and of the church of the "Nutrition of Jesus".

The toleration which the Moslems showed towards the Christians, after conquering the country in 637, did not last long. Willibald, who visited Nazareth about 725, found only the basilica of the Annunciation, "which the Christians", he says, "often redeemed from the Saracens, when they threatened to destroy it".

However, in 808 the author of the "*Commemoratorium de casis Dei*" found twelve monks at the basilica, and eight at the Precipice, "a mile away from the town". The Greek emperor, John Zimisces, reconquered Galilee from the Arabs in 920, but, five years afterwards, he was poisoned by his eunuchs, and his soldiers abandoned the country. The basilica, finally ruined under the reign of the Calif Hakem (1010), was rebuilt by the crusaders in 1101, as well as the church of the Nutrition, or St. Joseph's House. At the same time the Greeks erected the church of St. Gabriel near the Virgin's Well. The archiepiscopal See of Scythopolis was also transferred to Nazareth. After the disastrous battle of Hattin (1187), the crusaders, with the European clergy, were compelled to leave the town. On 25 March, 1254, St. Louis and Queen Marguerite celebrated the feast of the Annunciation at Nazareth; but nine years later, the Sultan Bibars completely destroyed all the Christian buildings, and Nazareth soon dwindled down to a poor village. In the fourteenth century, a few Franciscan Friars established themselves there, among the ruins of the basilica. They had much to suffer during their stay, and many of them were even put to death, especially in 1385, in 1448, and in 1548, when all the friars were driven out of the country. In 1620 Fakher ed Ddn, Emir of the Druses, allowed them to build a church over the Grotto of the Annunciation; but it was ruined some years later by the Bedouins. The Franciscans nevertheless remained near the sanctuary, and in 1730 the powerful Sheikh Dhafer el Amer authorized them to erect the church which is still to be seen.

SITES.—In the fourth century, local tradition indi-

cated the house of the Virgin at the top of the southern point of the hill, which rises some 30 feet over the plain. The dwelling consisted of a little building with a grotto in the rear. Even now, other dwellings like this are to be found in Nazareth.

INTERIOR, CHURCH OF THE ANNUNCIATION, NAZARETH

Explorations made in 1909, beneath and around the present church, brought to light the whole plan of the ancient basilica of Constantine. It was built from west to east, divided into three naves by two rows of syenite columns, and the grotto was in the north nave. The crusaders followed the same plan, and even kept the two rows of columns; they only added new pillars and gave to the façade, as well as to the apse, the appearance and solidity of a fortress. The Franciscans erected their church across the ancient building, so as to bring the grotto beneath the

choir at the end of the central nave. The crypt was always three or four feet below the pavement of the church. Since 1730 there have been fifteen steps leading down to the Chapel of the Angel, and two more to the Grotto itself. The chapel is the traditional site of the house, properly so-called, of the Virgin; at the north end of it, the mosaic pavement is well preserved, and is adorned with an inscription in Greek letters which undoubtedly dates from the sixth century. A beautiful altar dedicated to the mystery of the Annunciation occupies the Grotto. On the left are two columns of porphyry, certainly placed there in the fourth century.

About 300 paces northeast of the basilica of the Annunciation, "the church of the Nutrition" marked the traditional site of St. Joseph's dwelling, where, after the warning of the Angel (Matt., i, 20), he received Mary his spouse with the ceremonial prescribed by the law for matrimony. After his return from Egypt, Joseph came back to Nazareth and, with the Virgin and the Divine Child, again occupied his own house. There Jesus was brought up and dwelt till he left the town at the beginning of His public life. Two documents of the fourth century allude to this place, and two others of the sixth and seventh mention the church of the Nutrition, built over it. Excavations made in 1909 brought to light the lower layers of a fine church of the twelfth century, from which a staircase hewn in the rock descends to an irregular grotto excavated beneath the sanctuary. Several interesting details answer to the description given by Arculf in 670. The Franciscans are about to rebuild this sanctuary.

The mountain "whereon the city is built" ends in a row of hills that overlook the town. On the south,

Plan of the ancient and of the present CHURCH OF THE ANNUNCIATION AT NAZARETH

Foundations of the ancient church
Plan of the present church

one mile and a half away, the chain of hills terminates abruptly in two precipitous peaks separated by a deep, wild gorge. The western peak is called Jebel el Qaf-sah, "Mount of the Leap", or "of the-Precipice". A monastery built on this mountain, where the Jews would have cast Christ down headlong, was still occupied by eight monks at the beginning of the ninth century. The ruins now to be seen there belong to the convent of the time of the Crusades.

Nazareth. See TARNI AND BARLETTA, DIOCESE OF.

Nazarite (נָזִיר, נָזִיר אֱלֹהִים, consecrated to God), the name given by the Hebrews to a person set apart and especially consecrated to the Lord. Although Nazarites are not unknown to early Hebrew history, the only specific reference to them in the Law is in Num. (vi, 1-21), a legal section of late origin, and embodying doubtless a codification of a long-standing usage. The regulations here laid down refer only to persons consecrating themselves to God for a specified time in virtue of a temporary vow, but there were also Nazarites for life, and there are even indications pointing to the consecration of children to that state by their parents.

According to the law in Num. (vi, 1-21) Nazarites might be of either sex. They were bound to abstain during the period of their consecration from wine and all intoxicating drink, and even from all products of the vineyard in any form. During the same period the hair must be allowed to grow as a mark of holiness. The Nazarite was forbidden to approach any corpse, even that of his nearest relatives, under pain of defilement and consequent forfeiture of his consecration. If through accident he finds himself defiled by the presence of a corpse, he must shave "the head of his consecration" and repeat the operation on the seventh day. On the eighth day he must present himself at the sanctuary with two turtle doves or young pigeons, one of which was offered as a holocaust and the other for sin, and furthermore, in order to renew the lost consecration, it was necessary to present a yearling lamb for a sin offering. At the expiration of the period determined by the vow the Nazarite brought to the sanctuary various offerings, and with symbolical ceremonies including the shaving of the head and the burning of the hair with the fire of the peace offering, he was restored by the priest to his former liberty (Num., vi, 13-21). The meaning symbolized by these different rites and regulations was in part negative, separation from things worldly, and partly positive, viz. a greater fullness of life and holiness indicated by the growth of the hair and the importance attached to ceremonial defilement.

The existence of a class of perpetual Nazarites is known to us through occasional mention of them in the Old Testament writings, but these references are so few and vague that it is impossible to determine the origin of the institution or its specific regulations, which in some respects at least must have differed from those specified in Num. (vi, 1-21). Thus of Samson who is called a "Nazarite of God from his mother's womb" (Judges, xiii, 5), it is merely said that "no razor shall touch his head". No mention is made of abstention from wine etc., though it has been plausibly assumed by many commentators, since that restriction is enjoined upon the mother during the time of her pregnancy. That his quality of Nazarite was considered to be independent of defilement through contact with the dead is plain from the account of his subsequent career and the famous exploits attributed to him. The prophet Samuel is generally reckoned

among the Nazarites for life, but nothing is known of him in that connexion beyond what is inferred from the promise of his mother: "I will give him to the Lord all the days of his life, and no razor shall come upon his head" (I Kings, i, 11). It has likewise been inferred from Jer. (xxxv; cf. IV Kings, x, 15 sqq.) that the Rechabites were consecrated to the Lord by the Nazarite vow, but in view of the context, the protest against drinking wine which forms the basis of the assumption is probably but a manifestation on the part of the clan of their general preference for the simplicity of the nomadic as opposed to the settled life. In a passage of Amos (ii, 11, 12) the Nazarites are expressly mentioned together with the Prophets, as young men raised up by the Lord, and the children of Israel are reproached for giving them wine to drink in violation of their vow. The latest Old Testament reference is in I Mach. (iii, 49, 50), where mention is made of a number of "Nazarites that had fulfilled their days." In the prophecy of Jacob (Gen., xlix, 26), according to the Douay Version, Joseph is called a "Nazarite among his brethren", but here the original word *nazir* should be translated "chief" or "leader" —Nazarite being the equivalent of the defective rendering *nazareus* in the Vulgate. The same remark applies to the parallel passage in Deuteronomy (xxxiii, 16), and also to Lam. (iv, 7), where "Nazarites" (Heb. *nezerim*) stands for "princes" or "nobles".

Nazarites appear in New Testament times, and reference is made to them for that period not only in the Gospel and Acts, but also in the works of Josephus (cf. "Ant. Jud." XX, vi, 1, and "Bell. Jud." II, xv, 1) and in the Talmud (cf. "Mishna", *Nazir*, iii, 6). Foremost among them is generally reckoned John the Baptist, of whom the angel announced that he should "drink no wine nor strong drink". He is not explicitly called a Nazarite, nor is there any mention of the unshaven hair, but the severe austerity of his life agrees with the supposed asceticism of the Nazarites. From Acts (xxi, 23 sqq.) we learn that the early Jewish Christians occasionally took the temporary Nazarite vow, and it is probable that the vow of St. Paul mentioned in Acts, xviii, 18, was of a similar nature, although the shaving of his head in Cenchræ, outside of Palestine, was not in conformity with the rules laid down in the sixth chapter of Numbers, nor with the interpretation of them by the Rabbinical schools of that period. (See Eaton in Hastings, Dict. of the Bible, s. v. Nazarites.) If we are to believe the legend of Hegesippus quoted by Eusebius ("Hist. Eccl.", II, xxiii), St. James the Less, Bishop of Jerusalem, was a Nazarite, and performed with rigorous exactness all the ascetic practices enjoined by that rule of life.

JAMES F. DRISCOLL.

Nazarius, SAINT, fourteenth abbot of the monastery of Lerins, probably sometime during the reign of the Merovingian Clotaire II, 584-629. He successfully attacked the remnants of heathendom on the southern coast of France, overthrew a sanctuary of Venus near Cannes, and founded on its site a convent for women, which was destroyed by the Saracens in the eighth century. His name is inscribed on the calendar of saints of the French Church, on 18 November.

Dict. of Christ. Biog., s. v.; *Gallia Christiana*, ed. PIOLIN, III (Paris, 1876), 1193.

J. P. KIRSCH.

Nazarius, JOHN PAUL, Dominican theologian, b. in 1556 at Cremona; d. in 1645 or 1646 at Bologna. He entered the order at an early age in his native

town and from the beginning was noted for his spirituality and love of study. It is most probable that he studied philosophy and theology at the University of Bologna. He taught with great success in various schools of his order in Italy. In 1592 he was sent by Clement VIII and the General of the Dominicans, Beccaria, to accompany the Apostolic Nuncio to Prague to combat the prevailing heresies. There he spent three years teaching in the *Studium Generale* of the province, lecturing on theology in the university, preaching, and defending the Faith against the errors of the innovators. Returning to Italy in 1596 he became regent of studies in the convent at Milan. The following year the pope appointed him to defend in a public disputation at Chiavenna the Catholic doctrine of the Holy Sacrifice of the Mass against Calvinistic preachers. His learning and eloquence won for him such a triumph that his services were sought in other parts of the country. In 1620 the citizens of Milan chose him as ambassador to the Court of Philip III of Spain to adjust certain matters of importance to Milan; in May, 1622 he represented as definitor the province of Lombardy at the general chapter held at Milan. He spent the close of his life at Bologna where he occupied himself with teaching and writing. Of his works the following are the most important: "Commentaria et Controversiæ in primam partem Summæ S. Thomæ" (Bologna, 1620) and "in tertiam partem Summæ S. Thomæ" (Bologna, 1625); "Opuscula varia theologica et philosophica" (Bologna, 1630) in which are contained the acts of the above mentioned disputation; "De SS. Patrum et doctorum Ecclesiæ auctoritate in doctrina theologica" (Bologna, 1633).

JOSEPH SCHROEDER.

Nazarius and Celsus, SAINTS, Martyrs.—The only historical information which we possess regarding these two saints is the discovery of their bodies by St. Ambrose. Paulinus relates (*Vita Ambrosii*, xxxii-xxxiii) that Ambrose, at some time within the last three years of his life, after the death of the Emperor Theodosius (d. 395), discovered in a garden outside the walls of Milan the body of St. Nazarius, with severed head and still stained with blood, and that he caused it to be carried to the Basilica of the Apostles. In the same garden Ambrose likewise discovered the body of St. Celsus, which he caused to be transported to the same basilica. Obviously a tradition regarding these martyrs was extant in the Christian community of Milan which led to the finding of the two bodies. A later legend, without historical foundation, places the martyrdom of these witnesses to the faith during the persecution of Nero, and describes with many details the supposed journeyings of St. Nazarius through Gaul and Italy. He is also brought into relation with the two martyrs Gervasius and Protasius. Paulinus says distinctly (l. c.) that the date on which Nazarius suffered martyrdom is unknown. The discourse eulogizing the two saints, attributed to St. Ambrose (*Sermo* IV, in P. L., XVII, 715 sqq.), is not genuine. St. Paulinus of Nola speaks in praise of St. Nazarius in his *Poema* xxvii (P. L., LXI, 658). A magnificent silver reliquary with interesting figures, dating from the fourth century, was found in the church of San Nazaro in Milan (Venturi, "Storia dell' arte italiana", I, Milan, 1901, fig. 445-49). The feast of the two martyrs, with that of Sts. Victor and Innocent, is on 28 July.

J. P. KIRSCH.

Nazarius and Companions, SAINTS. In the Roman Martyrology and that of Bede for 12 June mention is made of four Roman martyrs, Basilides, Cyrinus, Nabor, and Nazarius, who suffered death under Diocletian. Their names were taken from the "Martyrologium Hieronymianum", in the Berne MS. of which (ed. De Rossi-Duschesne, *Acta SS.*, Nov. II [77]) we read: Romæ, via Aurelia miliario V, Basileidis, Tribuli, Nagesi, Magdaletis, Zabini, Aureli, Cirini, Nabori, Nazari, Donatellæ, Secundæ. The second name in the list, Tribulus, is derived from a place-name, Tripoli, as is evident from the *Echternach MS.*, and those following it have also an African origin. In an ancient itinerary to the graves of the Roman martyrs (De Rossi, "Roma Sotterranea", I, 183) mention is made of a mortuary chapel of a martyr Basilides on the Via Aurelia; he is another Roman saint whose feast is on 10 June. The group of three Roman saints, Cyrinus, Nabor, Nazarius, to which was added later Basilides, has in the "Sacramentarium Gelasianum" (ed. Wilson, Oxford, 1894, 174-5) its special form of invocation in the Canon of the Mass. The date and the circumstances of the deaths of these Roman martyrs are unknown. The bones of Saint Nazarius and Nabor were transferred by Bishop Chrodegang of Metz to his diocese (Mon. Germ. Hist., Script., II, 268).

Nazianzus, titular metropolitan see of Cappadocia Tertia. Nazianzus was a small town the history of which is completely unknown. It is the modern village of Nenizi east of Ak-Serai (formerly Archelaïs), in the villayet of Koniah, but has sometimes been wrongly identified with Diocæsarea. At the beginning of the fourth century Nazianzus was suffragan to Cæsarea; under Valens it formed part of Cappadocia Secunda, the metropolis of which was Tyana. Later it depended on Cappadocia Tertia and on Moccusus, and finally became a metropolitan see under the Emperor Diogenes. In 1370 it was united to the metropolitan See of Cæsarea. Up to the year 1200, fourteen of its bishops are known. Its name is inseparably connected with its illustrious doctor and poet-bishop, St. Gregory.

S. PÉTRIDES.

Neale, LEONARD, second Archbishop of Baltimore, b. near Port Tobacco, Charles County, Maryland, 15 Oct., 1746; d. at Georgetown, D. C., 18 June, 1817. He was a descendant of Captain James Neale, the founder of the family in America, who settled in Maryland as early as 1642. At twelve Leonard was sent to the Jesuit College at St. Omers in French Flanders. Thence he went to Bruges, and later to Liège, where he was ordained a Jesuit priest. On the suppression of the Society of Jesus, Father Neale, together with the English Jesuits, repaired to England, where he engaged in pastoral work for four years, but in response to his petition for a foreign mission, he was assigned to Demarara, in British Guiana, South America, where he laboured from 1779-83. Discouraged by the slow improvement of the people, and with health impaired by the climate, he set sail for America in January, 1783, arriving in Maryland in April, associating himself with his former Jesuit brethren of the Society of Jesus, among them the Rev. John Carroll. During the yellow fever epidemic in Philadelphia, in 1793, the two priests of that city were stricken, and Father Neale gladly took their place. For nearly six years he remained there, acting as vicar-general to the then

Bishop Carroll of Baltimore. During the second visitation of the yellow fever to Philadelphia in 1797-8, he was overtaken by the dread disease.

In 1798 Bishop Carroll called Father Neale from Philadelphia to succeed Rev. Dr. Dubourg in the presidency of the college at Georgetown. He acted in the dual capacity of president and tutor for several years and under his guidance the institution was developed from an academy into a college in 1801. The venerable Bishop Carroll had some time previous to this applied to Rome to name Father Neale as his coadjutor. He was consecrated by Bishop Carroll in 1800, but remained as President of Georgetown until 1806 when he was succeeded by the Rev. Father Molyneux.

Upon the death of Archbishop Carroll on 3 December, 1815, Bishop Neale succeeded him and received the pallium from Pius VII the following year. Already nearly seventy years old, he lived most of the time at Georgetown in quiet and retirement, but when his duties as the highest dignitary of the Church in the United States called him to Baltimore, he was remarkably energetic for one of his age and feeble health. While in Philadelphia, Father Neale had made the acquaintance of Miss Alice Lalor, through whose aid he started a small school conducted by three ladies, which was destined to be the seed of a great religious order of female teachers in America. This school was broken up by the ravages of yellow fever, but the project was revived by Bishop Neale who requested Miss Lalor with another lady from Philadelphia to come to Georgetown. They associated themselves with the Order of St. Clare, or Poor Clares. In 1805, on the death of their Abbess, the Poor Clares returned to Europe, selling their convent property to Bishop Neale, who conveyed it to Miss Lalor and her associates, whom he permitted to enter into simple vows in 1813. After his accession to the See of Baltimore, the archbishop petitioned Pius VII for the regular establishment of a monastery of the Order of the Visitation of the Blessed Virgin Mary at Georgetown, which request was readily granted.

His health failing, Archbishop Neale applied to Rome to have Bishop Cheverus of Boston associated with him in governing the Diocese of Baltimore with right of succession. But Bishop Cheverus objected, proposing instead that a coadjutor be appointed with right of succession. To this the archbishop agreed, and Rev. Ambrose Maréchal was selected by Archbishop Neale, who proposed his name to the Holy See. By a brief of Pius VII, dated 24 July, 1817, Father Maréchal was appointed coadjutor with right of succession, under the title of Bishop of Stauropolis *in partibus infidelium*, but before the arrival of the brief the venerable archbishop had already died.

J. PRESTON W. MCNEAL.

Nebo, MOUNT (Heb. נֶבֹו; LXX.: *Ναβῶ*), a mountain of the Abarim (q. v.) range east of Jordan and the Dead Sea, from which Moses surveyed the Promised Land (Deut., xxxii, 49), and where he died (*ibid.*, xxxiv, 1, 5). The same is probably mentioned in the wanderings in Num., xxxiii, 47: "And departing from Helmondeblathaim, they came to the mountains of Abarim over against Nabo" (Heb. Nebo), though here the reference may be to the town (see NABO). The location of Mount Nebo is doubtful. A comparison of Deut., iii, 27 (cf. Num., xxvii, 12) with Deut., xxxii, 49 indicates that the "top of Phasga" and Nebo were variant names referring to the same spot. Difficulty arises in that from no point of the Abarim range does it seem possible to behold all the territory mentioned in Deut., xxxiv, 1-3, especially if the "furthestmost sea" means the Mediterranean, as in Deut., xi, 24. By some Nebo is identified

with the modern Jebel Neba, an oblong ridge on an elevated plateau five miles south-west of Hesebon, 2700 feet above sea level.

JAMES F. DRISCOLL.

Nebraska, meaning in English, "shallow water", occupies geographically a central location among the states of the Union and is a part of the Louisiana territory, purchased from France in 1803. It is bounded on the north by South Dakota; on the east by the Missouri River, which separates it from Iowa, and the north-west corner of Missouri; on the south by Kansas and Colorado; and on the west by Colorado and Wyoming. It has an area of 76,840 square miles. The surface of the state is mainly an undulating plain with a gradual upgrade from south-east to north-west of about 2300 feet. It is drained by several streams, the principal being the Platte, which is formed by the junction of two forks rising in the Rocky Mountains and flowing east through the centre of the state to the Missouri, and receives many tributaries in its course. The Niobrara flows north to the Missouri, and the Republican in the south empties into the Kansas River. Except at certain seasons, all these rivers are shallow. The population by the census of 1910 is 1,192,214. The climate is exceptionally fine. The mountain breezes sweep over the plains and owing to the splendid drainage, the atmosphere, purged of all malaria, is dry and exhilarating. The annual mean temperature is about 48° Fahrenheit; in winter, 22° and in mid-summer, 75°. The winters are comparatively short and the summers free from excessive heat and humidity.

RESOURCES.—Nebraska may be described as altogether an agricultural state, being practically without minerals. Deposits of coal have been discovered only in very small quantities. Building stone of the limestone varieties is also found, but not extensively. Excepting in the north-west where there is a barren tract, known as the Bad Lands, rich in fossil remains, the soil is a deep, rich loam, exceedingly fertile. Professor Aughey in "Nebraska, Its Advantages, Resources," etc., says "One of the most remarkable deposits, and most valuable for agricultural purposes, in the world, prevails over three fourths of the surface of Nebraska. It is known as the lacustrine or loess deposit". Beneath this there is a porous subsoil which enables Nebraska to stand a drought much longer than any of the bordering states. The report of the monetary value of Nebraska's farm output for 1909 is extraordinary, when we recollect how recently this territory was part of the desert and so designated on the maps. The accompanying table is taken from the carefully prepared report of H. M. Bushnell's Trade Review, published in Lincoln.

The report covering the manufactures of Nebraska for 1908, issued in August, 1909, by the State Bureau of Labour and Statistics, gives the amount of capital invested as \$90,593,659, and the year's output at \$160,232,792. The total value of all leased land, in 1909, embracing 34,419,471 acres, was \$1,015,040,225. For 1909, the total valuation of all property in the state exclusive of railroads, was \$1,722,197,270; the

SEAL OF NEBRASKA

valuation of railroads being \$274,044,325. The means of communication is almost exclusively by railroads, of which there are 6105 miles in operation.

Corn	169,179,137 bushels	\$93,048,450
Wheat	50,313,600 "	43,659,174
Oats	59,653,479 "	23,801,000
Hay	6,900,269 tons	59,258,912
Alfalfa	1,971,770 "	23,661,140
Horses		24,513,630
Cattle		26,375,812
Hogs		33,179,177
Barley, rye, and cane	4,047,964 bushels	3,796,977
Potatoes	7,386,497 "	5,096,972
Poultry products		18,732,438
Dairy products		36,745,000
Minor crops, beets, fruit, etc.		10,650,000
Total		\$402,579,085

EDUCATION AND RELIGION.—Educational facilities are exceptionally good. The State University, founded 15 February, 1869, enjoys a high reputation as an institute of learning, especially in all technical branches of science. The professors and teaching staff number 250 persons, with an attendance of 3611 students. The appropriation for actual expenses for the two years ending 31 March, 1911, amounts to \$1,238,000. There are 6930 public schools, of which 103 are normal training high schools. The total expenditure for schools for year ending 13 July, 1908, was \$6,416,342. Of this amount, \$4,032,610, was divided in salaries among 10,355 teachers. Catholic education is well provided for. Besides Creighton University, there are one college for boys, fifteen convent boarding schools for girls, and, including some district schools, practically Catholic, there are one hundred and four parochial schools with an attendance of 10,714 pupils. Of these, nine are accredited to the State University, and three are recognized by the state for normal training work. Of non-Catholic educational institutions, the principal are: Wesleyan University (Methodist), and Coter University (Christian), both near Lincoln; Bellevue College (Presbyterian) near Omaha; Doane College (Congregational) at Crete; Brownell College (Episcopalian) at Omaha. Other institutions under state control include one penitentiary, one reform school, two industrial homes, three insane asylums, one Home for the Friendless, one institute for the feeble-minded, one hospital for crippled and deformed children, one institute for the blind, one for the deaf and dumb, two homes for soldiers and sailors. Catholic institutions include four hospitals (Omaha, Lincoln, Columbus, and Grand Island), managed by the Sisters of St. Francis; two orphan asylums, containing 210 inmates; a reformatory for women, managed by the Sisters of the Good Shepherd; one Industrial and Reform school. The Methodists and Presbyterians have each a hospital at Omaha.

The Constitution of Nebraska guarantees complete freedom of worship and equal rights to men of every creed, but recognition is given to the pre-eminence of Christianity. While there is no law specially directed against blasphemy, there is a statute against profanity which imposes a fine of twenty-five cents for each offence on all over fourteen years who profanely swear by the name of God, Jesus Christ, or the Holy Ghost (sec. 242, Proc. Crim. Code Neb.). The observance of Sunday by abstention from all unnecessary labour is enforced by state and local ordinances with reasonable strictness, an exemption being made in favour of those who, by a precept of their religion, observe the seventh instead of the first day of the week. Oaths are administered by raising the right hand and calling God to witness; where conscientious convictions interpose, an affirmation can be made instead. Both houses of the legislature are opened with prayer by a chaplain, appointed to hold office during the session. Statutory law exempts the priest from revealing

communications made under seal of the confessional without the consent of the informant (sec. 323, Civil Code, Neb.). Christmas Day is the only religious holiday recognized as such by law.

Ecclesiastical property, by diocesan statute, is vested in the bishop as trustee, but there is no civil statute so ordaining. Under secs. 4193-4, "Corporations, 1909, Nebraska Civil Code", each parish can organize and incorporate in the manner provided: "The chief, or presiding or executive officer of the religious bodies, sects, and denominations mentioned in the first section of this act, may, at such place in this state as he may appoint for the purpose, convene a meeting of himself and some other officer subordinate to himself, but having general jurisdiction throughout the state or part of the state aforesaid, and the priest, minister or clergyman of the proposed church, parish or society, and at least two laymen, residents within the limits thereof, of which the said chief, etc. shall be president and one of the other persons present shall be secretary." These five persons shall then adopt articles of incorporation and shall have power to name the church or parish, decide the manner in which it shall contract and be bound for debts, or convey, encumber or charge the property, regulate succession of members, fill vacancies, name time corporation is to last and decide by what officers its affairs shall be conducted. Under this last clause the diocesan regulation can be adopted as the rule under which the affairs of the parish shall be conducted. If the five persons neglect to file articles of incorporation for the parish, the diocesan regulation investing the property in the bishop, as trustee, has no recognition from the civil law, and without a supplementary action in amendment, a transfer of the property by the bishop, as trustee, will be defective in title. If the five persons, at the time of the organization of the parish, adopted the diocesan rule and then filed articles of incorporation, the action of the bishop, as trustee, would be legal. Otherwise, the neglect to incorporate obstructs the operation of the diocesan statute. Churches, parochial schools, and charitable institutions are exempt from taxation, and clergymen are also exempt from personal taxes and are not liable to military or jury service. Catholic priests have free access to all state institutions and their courteous treatment has been a rule without exception.

The status of the Bible in the public schools has been the subject of contention, but the decisions of the Supreme Court are not very clear and seem contradictory. In 1899, a teacher in a Gage County school obtained permission from the local school board to have religious exercises during school hours. The reading of the Bible was a feature of the exercises. One Daniel Freeman, a free-thinker, whose children attended the school, objected. The question was referred to the state superintendent who decided against Freeman. In the meantime Freeman began an action at law in the Gage County District Court; the decision was against him. The case was appealed to the Supreme Court and the judgment of the lower court was reversed. Commissioner Ames decided that the reading of the Bible in the public schools was a breach of the Constitution. In this opinion, Commissioners Duffie and Albert coincided. Judge Sedgwick coincided on the ground that the instruction was sectarian. Judge Holcomb also coincided as to the particular case, but held that, excepting its use for sectarian purposes, the reading of the Bible was discretionary with the school authorities (State of Nebraska, *ex rel.* Daniel Freeman *v.* John Scheve, *et al.*, Vol. LXV, page 853). A motion for rehearing was filed 21 January, 1903, and Chief-Justice Sullivan, while overruling the motion for a rehearing, gave the opinion, that "The section of the Constitution which provided that no sectarian instruction shall be allowed in any school or institution supported in whole or in part by the public

funds set apart for educational purposes cannot, under any canon of construction with which we are acquainted, be held to mean that neither the Bible nor any part of it, from Genesis to Revelation, may be read in the educational institutions fostered by the state. We do not wish to be understood as either countenancing or discountenancing the reading of the Bible in the public schools. Even where it is an irritant element, the question, whether its legitimate use shall be continued or discontinued, is an administrative and not a judicial question; it belongs to the school authorities and not the courts. The motion for a rehearing is overruled and the judgment heretofore rendered is adhered to" (ibid., p. 887).

MARRIAGE AND DIVORCE.—Subject to procuring a civil licence, marriage can be legally performed by every judge and justice of the peace and every preacher of the Gospel authorized by the usages of the Church to which he belongs. Decrees of divorce are given for the following causes: adultery; imprisonment for three years or more; wilful desertion for two years; habitual drunkenness; extreme cruelty; wanton neglect to support wife. The state was getting an unenviable notoriety for the facility of securing divorces, and many outsiders were taking advantage of it. To stop this, amendatory enactments were passed by the legislature of 1909. At present, no divorce can be granted for any cause unless petitioner has had one year's actual residence in the state immediately before bringing suit and shall then have a *bona-fide* intention of making his or her permanent home in Nebraska—unless the marriage was solemnized in the state and the parties shall have resided therein from the time of marriage to the filing of petition. No person shall be entitled to a divorce for any cause arising outside of the state unless petitioner or defendant shall have resided within the state at least two years next before bringing suit for divorce, with a *bona-fide* intention of making his or her permanent home in Nebraska. No divorce shall be granted where collusion seems to have existed between the parties or where both have been guilty of the same misconduct. No person shall be entitled to a divorce unless defendant shall have been personally served with a process, if within the state, or with personal notice duly proved and appearing of record, if outside the state. After three months of reasonable search after filing petition, court may authorize notice by publication. Decree becomes operative and final only at expiration of six months. In 1909 there were 1807 divorces. In the same period there were 10982 marriages.

LIQUOR LAWS.—Liquor laws are strict and well enforced. The manufacture or sale of intoxicating liquor is forbidden in many of the smaller towns and cities, and notably in Lincoln, the capital. Where the trade is licensed, it is under the system known as high licence and subject to the operation of the Slocumb Law, the most effective law ever passed for a severe regulation of the liquor traffic under the licence system. Under its provisions, treating is a misdemeanor subject to fine; selling to minors is punished by severe penalties, and the saloon-keeper and those on his bond are liable to a maximum of \$5,000 damages at the suit of any woman whose husband has been allowed to become a habitual drunkard by frequenting the saloon-keeper's place of business. By statute passed during the legislature of 1909, saloons can sell liquor only between the hours of 7 A. M. and 8 P. M. on week days. Sunday trading is forbidden and the law rigidly enforced.

HISTORY.—(1) *Civil.*—Up to 1541 the history of Nebraska is a blank. In that year it is claimed that Francisco Vasquez de Coronado led a party of Spaniards in search for the fabled Kingdom of Quivera, supposed to be a land of boundless wealth. It is claimed that he reached 40° N. Lat., which is the south boundary line of Nebraska. This is disputed

and critics claim that he did not come further north than a point in Kansas, near Junction City. In 1662 another attempt to reach Quivera is said to have been made under command of Don Diego, Count of Penelosa, and accompanied by Father Nicholas de Freytas who wrote an elaborate and detailed account of the expedition. It is claimed Penelosa reached the Platte, where he found a very populous city belonging to Quivera. As it was burned in one night, it could have been but a large Indian village. Penelosa returned to Mexico in June, 1662. Not much credence is given to the story of Penelosa. In 1673 Spain claimed all the trans-Mississippi region, but ten years later La Salle asserted the sovereignty of France. In 1762 the French relinquished all this territory to Spain, but it was receded to France in 1800; finally in 1803 under the name of Louisiana Territory, it passed by purchase into the possession of the United States. In many American works the statement is made, that the first white men to visit and give a description of Nebraska were Lewis and Clark. This is incorrect. The sixth volume of Pierre Margry's "Découvertes et Etablissements des Français dans l'Amérique" (Paris, 1856), now in the library of the State Historical Society, contains the records of several expeditions to the regions between the Mississippi and the Missouri and further west. Among them is the original report of the journey of Pierre and Paul Mallet and their companions across Nebraska on a mission to Santa Fé to open up trade facilities with the Spaniards of New Mexico. The Mallets were French Canadians and their companions were Philippe Robitaille, Louis Morin, Michel Beslot, Joseph Bellecourt, also Canadians, and Jean David, a native of France.

The report reads: "To understand the route taken by these Canadians to discover New Mexico, it is well to know that it is 100 leagues from the village of the Illinois [Indians] to those of the Missouri on the river of that name; 80 leagues from there to the Canzes [Kansas]; 100 leagues from the Kansas to the Octootates [Otoes] and 60 from there to where the river of the Animahas [Omahas] empties into the Missouri [Omaha Creek in the north-east of Nebraska]". This nation is located at the mouth of the river of their name and it was there the discoverers took their starting-point, 29 May, 1739. All who had hitherto attempted to reach New Mexico thought they could find it at the sources of the Missouri, and with that idea had gone up as far as the Ricaras [Indians], more than 150 leagues above the Panis [Pawnees], with whom they confound or include the Omahas or Panimahas. The discoverers, on the advice of some of the aborigines, took an entirely different direction and leaving the Pawnees took a route across the country, retracing their steps almost parallel with the Missouri. On 2 June, they met with a river which they called the Plate [Platte] and, seeing that it did not diverge from the route they had mapped out, they followed up its right bank for about 25 leagues when they found it made a fork with the river of the Padocas which empties itself at this point. Three days after that, on 13 June, they crossed to the left bank of said river. On the fifteenth and sixteenth they continued across the country and on the seventeenth they fell upon another river which they named Des Costes Blanches. During these three days, they crossed a country of plains where they found barely enough wood to make fires and it appears from their Journal that these plains extended all the way to the mountains near Santa Fé. On the sixteenth they camped on the banks of another river which they crossed and named Rivière Aimable. On the nineteenth they crossed another river which they called Rivière des Soucis. On the twentieth they struck the Rivière des Canzes. This river was probably not the Kansas but the Arkansas River. In any case, both are south of the Nebraska state line, making it clear that these French Canadian Catholics,

Pierre and Paul Mallet, crossed Nebraska in a south-westerly direction in 1739 on their way to Santa Fé and gave an authentic account of the territory sixty-five years before Lewis and Clark visited it.

Subsequent to that date, many French Canadians and French creoles of Louisiana made their homes in Nebraska; they were hunters and trappers connected with the fur-trading expeditions, who married Indian women and lived under the protection of the tribes with which they had become related. When allotting land to the Indians, the government set aside a tract in the south-east part of the state called the "Half-Breed Tract", the French Canadians who had married squaws settled on this land. Among these were Charles Rouleau, Henry Fontenelle, and Michel Barada, who had towns named after them. Sarpy county is also called after a French creole, named Louis Sarpy. As late as 1846, Nebraska had practically no other population than the Omahas, Otoes, Poncas, Pawnees, and Sioux. In that year occurred the Mormon *hegira* and a temporary settlement in the desert was made by them at Florence, near Omaha, lasting for about a year, until they moved on to Utah. The first permanent white settlers came in the train of the '49 rush to California, and on 30 May, 1854, Nebraska was organized as a territory with an area of 351,558 square miles, reaching from 40° N. lat. to the British boundary line, and west from the Missouri to the Rocky Mountains. This was finally cut down to the present area of the state. The creation of the Kansas and Nebraska territories was the cause of the bitter quarrel between the slavery and anti-slavery parties and ultimately led to the secession of the southern states. On 1 March, 1867, President Johnson proclaimed Nebraska a state of the Union, adding the thirty-seventh star to the American flag. After the Civil War, many of the discharged soldiers secured grants of Nebraska land under the Homestead Law. They were followed by men who worked in the construction of the Union Pacific and Burlington railroads and who bought up the land donated to the railroad companies. There was a steady inflow of immigrants and land-seekers until the visitation of the grasshopper plague in 1874, when many settlers became discouraged and left the state. But the rush for land was on, the grasshoppers were forgotten, and an increasing stream of immigration poured in. There are no statistics to indicate the nationality of foreign-born immigrants, but the Germans are the most numerous, followed by the Scandinavians, Irish, Bohemians, and British in the order named. In late years Italians have become an immigrating element, but not to any considerable extent. Although the first to enter the state, French Canadian immigrants are not numerous.

CATHOLIC IMMIGRATION.—While many Catholics were among the immigrants subsequent to 1849, there was no attempt at Catholic colonization until 1855, when Father Tracy induced a number of Irish families to settle in Dakota County, where their descendants constitute the wealthiest and most prominent people in that section. In 1874 General O'Neill, with eighteen Irish Catholics from Boston, colonized a tract in Holt County; they were followed by others, and a town was laid out which they named O'Neill. O'Neill is now one of the most progressive cities north of the Platte and the centre of a prosperous Catholic community. In 1877 some of those who went to Holt County with General O'Neill, dissatisfied with the outlook there, took up land in Greeley County. In compliment to Bishop James O'Connor of Omaha, General O'Neill named his first town site, O'Connor. The town was subsequently moved to where the church and convent of O'Connor now stand, while the present county seat, Greeley Center, was built half a mile north of the original site. A colonization company was formed and a tract of land was secured

by Bishop O'Connor, John Fitzgerald, William Quan, and William J. Onahan of Chicago, and others, and sold at \$2 per acre to Irish colonists from Massachusetts and Pennsylvania. This is now a very prosperous Catholic section embracing the thriving towns of Greeley Center, Spalding, and Scotia, and comprising a wealthy farming population. Land purchased by the colonists at \$2 per acre is appraised in 1910 at from \$60 to \$100 per acre. Besides these organized colonies, many Irish Catholic families drifted into Nebraska during the years preceding 1874. During that period there was also a comparatively large immigration of German Catholics, but without any regular effort at colonization. The Germans followed in the wake of the Catholic priest. Platte County is almost entirely populated by German Catholics, the immigration being largely due to the efforts of Father Ambrose, O.F.M., the first Franciscan pastor in that section. In Cedar County, there are eight large parishes of German Catholics, who were induced to settle in that district during the same period by the late Father Daxascher, the first pastor of St. Helena in that county. South of the Platte there are also several well-to-do German settlements, but no distinct colonies. There is an Austrian settlement at Bellwood in Buffalo County. Bohemian Catholics are quite numerous north and south of the Platte. The Catholic immigrants of all nationalities who settled on the land have prospered in a measure beyond their most sanguine expectations. A pleasing feature in regard to Catholic settlement in Nebraska is the frequent inter-marriages between the young people of different races, especially between the Irish and German elements.

Catholics hold prominent positions in the political, social, and industrial life of the community, though Nebraska has not yet had a Catholic Governor. Prominent among the benefactors and builders of the state have been Edward and John Creighton, founders of Creighton University and other beneficial institutions in Omaha. John Fitzgerald of Lincoln was also a generous benefactor to Catholic works, religious and educational, in this and other cities. John A. McShane represented the then First Nebraska district in Congress in 1886 and in 1888 was the unsuccessful candidate for governor in opposition to General John M. Thayer. Constantine J. Smythe was attorney-general of the state from 1897 to 1901. The present state treasurer is Lawson G. Brian. Many Catholics have represented congressional districts; the first district, which includes the capital, is now (1910) represented by John A. Maguire. In all cases where Catholics have held public offices, their records have been most creditable.

(2) *Ecclesiastical History.*—Ecclesiastically, Nebraska was first under the jurisdiction of the Franciscan Bernard Boil, Provincial of the Franciscans in Spain, according to the Bull of Alexander VI, dated 25 June, 1493. Theoretically, it became part of the ecclesiastical jurisdiction of Spain until 1682, when it passed over to the spiritual domain of the Bishop of Quebec. In 1776 it became subject to the Diocese of Havana, Cuba. After the recession of the Louisiana territory to France, the French exercised jurisdiction until 1805, when the territories embraced in the Louisiana Purchase passed to the spiritual rule of Bishop Carroll of Baltimore. In 1815 the region was transferred to the Bishop of New Orleans, and in 1827 to the Bishop of St. Louis. In 1850 the territory became part of the "Vicariate Apostolic of the territory east of the Rocky Mountains"; this vicariate embraced all the territory from the Missouri River to the Rocky Mountains and from the south boundary of Kansas to the British line. Rt. Rev. John B. Miegge, S. J., was appointed vicar-Apostolic. In 1857 Kansas was cut off and the Vicariate of Nebraska was erected. This vicariate was further reduced to the territories of Nebraska and Wyoming, and in 1885 the

State of Nebraska became the Diocese of Omaha, with the then vicar-Apostolic, Rt. Rev. James O'Connor, as its first bishop. In 1887 all that part of Nebraska, south of the Platte and of the south fork of the Platte, was erected into the Diocese of Lincoln, with Rt. Rev. Thomas Bonacum as its first bishop. The Catholic population of Nebraska is estimated at a slight increase over 117,058, the figures given in Wiltzius's Directory for 1910. The coloured and Indian Catholics included are too few to be worthy of special enumeration. For the last week in September, 1909, the following figures were given as the numerical strength of the various non-Catholic denominations in Nebraska: Methodists, 64,352; Lutherans, 59,485; Presbyterians, 23,862; Disciples (Christians), 19,613; Baptists, 17,939; Congregationalists, 16,629; Episcopalians, 6,903 (communicants); United Brethren, 6,086; all other Protestants, 19,657.

Nebuchadnezzar. See NABUCHODONOSOR.

Necessity, in a general way denotes a strict connexion between different beings, or the different elements of a being, or between a being and its existence. It is therefore a primary and fundamental notion, and it is important to determine its various meanings and applications in philosophy and theology.

In Logic, the Schoolmen, studying the mutual relations of concepts which form the matter of our judgments, divided the judgments or propositions into judgments in necessary matter (*in materia necessaria*), and judgments in contingent matter (*in materia contingenti*). (Cf. S. Thom., I Perihermen. lect. xiii.) The judgments in necessary matter were known as *propositiones per se*; they are called by modern philosophers "analytic", "rational", "pure", or "a priori" judgments. The *propositio per se* is defined by the Schoolmen as one the predicate of which is either a constitutive element or a natural property of the subject. Such is the case with primary truths, metaphysical, and mathematical principles. (Cf. S. Thom., "In I Anal.", lect. x and xxxv; "de Anima", II, lect. xiv.) It is by ignoring the last part of this definition and arbitrarily restricting the concept of analytic judgments to those of which the predicate is a constitutive element of the subject, that Kant invented the false notion of synthetic-a priori judgments.

Considered under its metaphysical aspect, being in its relation to existence is divided into *necessary* and *contingent*. A necessary being is one of which the existence is included in and identical with its very essence. The different beings which we observe in our daily experience are subject to beginning, to change, to perfection, and to destruction; existence is not essential to them and they have not in themselves the reason of their existence; they are contingent. Their existence comes to them from an external efficient cause. It is from the real existence of contingent beings that we arrive at the notion and prove the existence of a necessary being—one that produces them but is not produced, one whose existence is its own essence and nature, that is at the same time eternal, all-perfect, infinite, viz., God (see CONTINGENCY). And so in relation to existence, God alone is absolutely necessary; all other beings are contingent.

When we consider the divers beings, not from the point of view of existence, but in relation to their constitution and activity, necessity may be classified as *metaphysical*, *physical*, and *moral*. *Metaphysical necessity* implies that a thing is what it is, viz., it has the elements essential to its specific nature. It is a

metaphysical necessity for God to be infinite, man rational, an animal a living being. *Metaphysical necessity* is absolute. *Physical necessity* exists in connexion with the activity of the material beings which constitute the universe. While they are contingent as to their existence, contingent also as to their actual relations (for God could have created another order than the present one), they are, however, necessarily determined in their activity, both as to its exercise and its specific character. But this determination is dependent upon certain conditions, the presence of which is required, the absence of one or the other of them preventing altogether the exercise or normal exercise of this activity. The laws of nature should always be understood with that limitation: all conditions being realized. The laws of nature, therefore, being subject to physical necessity are neither absolutely necessary, as materialistic Mechanism asserts, nor merely contingent, as the partisans of the philosophy of contingency declare; but they are conditionally or hypothetically necessary. This hypothetical necessity is also called by some *consequent necessity*. *Moral necessity* is necessity as applied to the activity of free beings. We know that men under certain circumstances, although they are free, will act in such and such a way. It is morally necessary that such a man in such circumstances act honestly; it is morally necessary that several historians, relating certain facts, should tell the truth concerning them. This moral necessity is the basis of moral certitude in historical and moral sciences. The term is also used with reference to freedom of the will to denote any undue physical or moral influence that might prevent the will from freely choosing to act or not act, to choose one thing in preference to another. The derivatives, necessitation and necessitarianism, in their philosophical signification express the doctrine that the will in all its activity is invariably determined by physical or psychical antecedent conditions (see DETERMINISM; FREE WILL).

In theology the notion of necessity is sometimes applied with special meaning. Theologians divide necessity into *absolute* and *moral*. A thing is said to be absolutely necessary when without it a certain end cannot possibly be reached. Thus revelation is absolutely necessary for man to know the mysteries of faith, and grace to perform any supernatural act. Something is said to be morally necessary when a certain end could, absolutely speaking, be reached without it, but cannot actually and properly be reached without it, under existing conditions. Thus, we may say that, absolutely speaking, man as such is able to know all the truths of the natural order or to observe all the precepts of the natural law; but considering the concrete circumstances of human life in the present order, men as a whole cannot actually do so without revelation or grace. Revelation and grace are morally necessary to man to know sufficiently all the truths of the natural law (cf. S. Thom., "Sum. Theol.", P. Ia., Q. 1, a 1; "Contra Gentil.", I, iv).

Again, in relation to the means necessary to salvation theologians divide necessity into *necessity of means* and *necessity of precept*. In the first case the means is so necessary to salvation that without it (absolute necessity) or its substitute (relative necessity), even if the omission is guiltless, the end cannot be reached. Thus faith and baptism of water are necessary by a necessity of means, the former absolutely, the latter relatively, for salvation. In the second case, necessity is based on a positive precept, commanding something the omission of which, unless culpable, does not absolutely prevent the reaching of the end.

MERCIER, *Ontologie* (Louvain, 1902), ii, 3; RICKABY, *First Principles of Knowledge* (London, 1902), I, v; IDEM, *General Metaphysics* (London, 1901), I, iv.

GEORGE M. SAUVAGE.

Neckam (NECHAM), ALEXANDER OF, English scholar; b. in Hertfordshire, 1157; d. at Kempsey, Worcestershire, 1217. His first studies were in the abbey school of St. Albans; his higher courses began in Paris, in the school of Petit Pons. In 1180 he commenced his career as teacher with great success, his comprehensive knowledge of philosophy and of theology, and his Latin style, both in prose and verse, attracting many students to his lectures. Returning to England in 1186, he was first appointed teacher at Dunstable, and afterwards at St. Albans. After joining the Augustinian Order, he was chosen, in 1213, Abbot of Cirencester.

Neckam was a prolific writer on various subjects, but his works are, for the most part, still in manuscript. He wrote a grammar, commentaries on Scripture and the works of Aristotle, theological treatises, and sermons. He also translated the Fables of Æsop into elegiac verse. Only two of his works, however, have been printed: the "De naturis rerum" and the poem "De laudibus divinæ sapientiæ" (ed. Th. Wright in Rolls Series). In the former he discusses the heavens, the stars, the atmosphere, the earth, water, and living organisms. Neckam is the first European author to mention the mariners' compass.

J. P. KIRSCH.

Necrologies, or, as they are more frequently called in France, *obituaires*, are the registers in which religious communities were accustomed to enter the names of the dead—notably their own deceased members, their associates, and their principal benefactors—with a view to the offering of prayers for their souls. The institutions which maintained such necrologies differed almost as much as the form in which the entries were made. There are necrologies connected with cathedral chapters, others (and those the most numerous) belonging to monasteries and religious houses, others to colleges, such as, e. g. the Sorbonne (in Molinier et Longnon, "Obituaires", I, 737-52), others to collegiate churches, others again to parishes, while, as for the registers themselves, some are drawn up in the form of marginal entries in martyrologies or calendars, others form a book apart, but arranged according to the days of the month, others again are mere disorderly lists of names, which seem to have been written down just as they were sent in, or as occasion arose. Not less diversified are the names by which these registers were known. Perhaps the commonest was *martyrologium*, because they often took the form of mere additions to the martyrologium, or list of martyrs and saints commemorated on each day. We find also *necrologium*, *memoriale mortuorum*, or *memoriale fratrum*, *mortuologium*, *liber obituum*, and, more rarely, *obituarium*, sometimes, owing to its connexion with the calendar, *calendarium*, sometimes, because the monastic rule was commonly bound up in the same book, *liber regulæ* or simply *regula*, sometimes, from the occasion when it was read aloud, *liber capituli* (chapter book), sometimes, in reference to the entries of the names of benefactors, *liber fundationum*, or *liber benefactorum*. Also, although Molinier seems to contest this usage ("Les Obituaires français", p. 22), such a collection of names, consisting largely of benefactors, was occasionally called *liber vitæ* (book of life).

No better description of the purposes served by these lists and of the spirit which animated the whole institution of necrologies can be found than that contained in the preface to the Winchester book of the eleventh century known as the "Hyde Register". In spite of its length, it deserves to be quoted entire: "Behold, in the name of God Almighty and of our Lord Jesus Christ and of His most Holy Mother, the

ever-stainless Virgin Mary, and also of the twelve holy Apostles by whose teaching the world is rendered glorious in the true faith, to whose honour this Minster, which is called the New Minster in distinction to the old monastery hard by, there are set down here in due order the names of brethren and monks, of members of the household also [*familiariorum* (sic)], or of benefactors living and dead, that by the perishable memorial of this writing they may be written in the page of the heavenly book, by the virtue of whose almsdeeds this same family, through Christ's bounty, is fed. And let also the names of all those who have commended themselves to its prayers and its fellowship be recorded here in general, in order that remembrance may be made of them daily in the sacred celebration of the Mass or in the harmonious chanting of psalms. And let the names themselves be presented daily by the subdeacon before the altar at the early or principal Mass, and as far as time shall allow let them be recited by him in the sight of the Most High. And after the oblation has been offered to God by the right hand of the cardinal priest who celebrates the Mass, let the names be laid upon the holy altar during the very mysteries of the sacred Mass and be commended most humbly to God Almighty; so that as remembrance is made of them upon earth [*sicut eorum memoria agitur in terris*—a phrase from the Ordinarium Missæ], so in the life to come, by His indulgence who alone knows how they stand or are hereafter to stand in His sight, the glory of those who are of greater merit may be augmented in Heaven and the account of those who are less worthy may be lightened in His secret judgments. Be ye glad and rejoice that your names are written in Heaven, through Jesus Christ our Lord, to whom with God the Eternal Father and the Holy Ghost, there remains all honour, power, and glory for ever and ever. Amen."

This account is particularly interesting, because, although the laying of the necrology upon the altar during Mass afterwards fell into disuse, and the names were read in chapter instead of in choir, still the extract clearly shows that the book of obituaries had its origin in the old "diptychs" (see ДИПТИХИ), or tableta, upon which were formerly entered the names which were read out by the priest at the Commemoration of the Living and the Commemoration of the Dead in the Canon of the Mass. So far as can be seen, the recitation of the names of the defunct bishops in the diptychs was later on represented by the reading of the martyrologium proper, while the commemoration of benefactors and other deceased was retained in the form of a necrology. It will be remembered that in the everyday Requiem Mass (*missa quotidiana defunctorum*) of our Missals, the priest is first directed to pray "pro defunctis episcopis seu sacerdotibus", next "pro fratribus, propinquis et benefactoribus", and lastly "pro omnibus fidelibus defunctis". This corresponds to the classification here, viz. of those included in the martyrologium, those named in the necrology, and those not specially mentioned at all. The entry of the names of the dead in the register of a monastery or other religious institution, and the consequent participation in the prayers and good works of all its members, was a privilege which, from the eighth century onward, was greatly coveted. Such mutual rights of the insertion of the names of deceased brethren in each other's necrologies was a constant subject of negotiation between different abbeys, etc., and at a somewhat later date it became the custom for monasteries to send messengers with "mortality rolls" (*rotuli*) requesting the promise of prayers which were to be entered on the roll and engaging the senders to pray for the deceased brethren of the monasteries who rendered them this service. (But for this see ROTULI.)

Although the entries in the extant necrologies of monasteries and cathedrals are generally of the brief-

est possible character, only the day of the month, and not the year, being indicated, still in indirect ways these lists of names have been regarded as of considerable importance both for philological and historical purposes. A large number have been published in Germany, France, England, and other countries.

MOLINIER, *Les Obituaires Français au moyen âge* (Paris, 1890); ERNER, *Die klösterlichen Gebetsverbrüderungen bis zum Ausgang des karolingischen Zeitalters* (Ratisbon, 1890), 130-54; DELISLE, *Relevés des Morts du IX^e au X^e siècle* (Paris, 1886). Several volumes of Necrologies have been printed in the quarto series of the *Mon. Germ. Hist.*, and four or more volumes of French Necrologies have been issued in the *Recueil des Historiens de la France* by LONGNON and MOLINIER (Paris, 1902—). The first volume of the last-named collection contains an excellent bibliography of printed French Necrologies, pp. xxxvii to lxxvi. A bibliography of German necrologies will be found in the sixth edition of WATTENBACH, *Deutschlands Geschichtsquellen*.

HERBERT THURSTON.

Necromancy (νεκρός, "dead," and μαντεία, "divination") is a special mode of divination (q. v.) by the evocation of the dead. Understood as nigromancy (niger, black), which is the Italian, Spanish, and old French form, the term suggests "black" magic or "black" art, in which marvellous results are due to the agency of evil spirits, while in "white" magic they are due to human dexterity and trickery. The practice of necromancy supposes belief in the survival of the soul after death, the possession of a superior knowledge by the disembodied spirit, and the possibility of communication between the living and the dead. The circumstances and conditions of this communication—such as time, place, and rites to be followed—depend on the various conceptions which were entertained concerning the nature of the departed soul, its abode, its relations with the earth and with the body in which it previously resided. As divinities frequently were but human heroes raised to the rank of gods, necromancy, mythology, and demonology are in close relation, and the oracles of the dead are not always easily distinguished from the oracles of the gods.

I. NECROMANCY IN PAGAN COUNTRIES.—Along with other forms of divination and magic, necromancy is found in every nation of antiquity, and is a practice common to paganism at all times and in all countries, but nothing certain can be said as to the place of its origin. Strabo (Geogr., XVI, ii, 39) says that it was the characteristic form of divination among the Persians. It was also found in Chaldea, Babylonia, and Etruria (Clemens Alex., "Protrepticum", II, in Migne, P. G., VIII, 69; Theodoret, "Græcarum affectionum curatio", X, in P. G., LXXXIII, 1076). Isaiah (xix, 3) refers to its practice in Egypt, and Moses (Deuter., xviii, 9-12) warns the Israelites against imitating the Chanaanite abominations, among which seeking the truth from the dead is mentioned. In Greece and Rome the evocation of the dead took place especially in caverns, or in volcanic regions, or near rivers and lakes, where the communication with the abodes of the dead was thought to be easier. Among these, νεκρομαντεία, ψυχρομαντεία, or ψυχομαντεία, the most celebrated were the oracle in Thesprotia near the River Acheron, which was supposed to be one of the rivers of hell, another in Laconia near the promontory of Tænarus, in a large and deep cavern from which a black and unwholesome vapour issued, and which was considered as one of the entrances of hell, others at Aornos in Epirus and Heraclea on the Propontis. In Italy the oracle of Cumæ, in a cavern near Lake Avernus in Campania, was one of the most famous.

The oldest mention of necromancy is the narrative of Ulysses' voyage to Hades (Odyssey, XI) and of his evocation of souls by means of the various rites indicated by Circe. It is noteworthy that, in this instance, although Ulysses' purpose was to consult the shade of Tiresias, he seems unable to evoke it alone; a number of others also appear, together or successively.

As parallel to this passage of Homer may be mentioned the sixth book of Virgil's *Æneid*, which relates the descent of Æneas into the infernal regions. But here there is no true evocation, and the hero himself goes through the abodes of the souls. Besides these poetical and mythological narratives, several instances of necromantic practices are recorded by historians. At Cape Tænarus Callondas evoked the soul of Archilochus, whom he had killed (Plutarch, "De sera numinis vindicta", xvii). Periander, tyrant of Corinth, and one of the seven wise men of Greece, sent messengers to the oracle on the River Acheron to ask his dead wife, Melissa, in what place she had laid a stranger's deposit. Her phantom appeared twice and, at the second appearance, gave the required information (Herodotus, V, xcii). Pausanias, King of Sparta, had killed Cleonice, whom he had mistaken for an enemy during the night, and in consequence he could find neither rest nor peace, but his mind was filled with strange fears. After trying many purifications and expiations, he went to the *psychopompeion* of Phigalia, or Heraclea, evoked her soul, and received the assurance that his dreams and fears would cease as soon as he should have returned to Sparta. Upon his arrival there he died (Pausanias III, xvii, 8, 9; Plutarch, "De sera num. vind.", x; "Vita Cimonis", vi). After his death, the Spartans sent to Italy for psychagogues to evoke and appease his manes (Plutarch, "De sera num. vind.", xvii). Necromancy is mixed with oneiromancy in the case of Elysium of Terina in Italy, who desired to know if his son's sudden death was due to poisoning. He went to the oracle of the dead and, while sleeping in the temple, had a vision of both his father and his son who gave him the desired information (Plutarch, "Consolatio ad Apollonium", xiv).

Among the Romans, Horace several times alludes to the evocation of the dead (see especially *Satires*, I, viii, 25 sq.). Cicero testifies that his friend Appius practised necromancy (Tuscul. quæst., I, xvi), and that Vatinius called up souls from the netherworld (in Vatin., vi). The same is asserted of the Emperors Drusus (Tacitus, "Annal.", II, xxviii), Nero (Suetonius, "Nero", xxxiv; Pliny, "Hist. nat.", XXX, v), and Caracalla (Dio Cassius, LXXVII, xv). The grammarian Apion pretended to have conjured up the soul of Homer, whose country and parents he wished to ascertain (Pliny, "Hist. nat.", XXX, vi), and Sextus Pompeius consulted the famous Thessalian magician Erichtho to learn from the dead the issue of the struggle between his father and Cæsar (Lucan, "Pharsalia", VI). Nothing certain can be said concerning the rites or incantations which were used; they seem to have been very complex, and to have varied in almost every instance. In the *Odyssey*, Ulysses digs a trench, pours libations around it, and sacrifices black sheep whose blood the shades drink before speaking to him. Lucan (*Pharsalia*, VI) describes at length many incantations, and speaks of warm blood poured into the veins of a corpse as if to restore it to life. Cicero (in Vatin., VI) relates that Vatinius, in connexion with the evocation of the dead, offered to the manes the entrails of children, and St. Gregory Nazianzen mentions that boys and virgins were sacrificed and dissected for conjuring up the dead and divining (Orat. I contra Julianum, xcii, in P. G., XXV, 624).

II. NECROMANCY IN THE BIBLE.—In the Bible necromancy is mentioned chiefly in order to forbid it or to prove those who have recourse to it. The Hebrew term 'ōbōth (sing., 'ōbh) denotes primarily the spirits of the dead, or "pythons", as the Vulgate calls them (Deut., xviii, 11; Isa., xix, 3), who were consulted in order to learn the future (Deut., xviii, 10, 11; I Kings, xxviii, 8), and gave their answers through certain persons in whom they resided (Levit., xx, 27; I Kings, xxviii, 7), but is also applied to the persons themselves who were supposed to foretell events under

the guidance of these "divining" or "pythonic" spirits (Levit., xx, 6; I Kings, xxviii, 3, 9; Isa., xix, 3). The term *yidde 'onim* (from *yada*, "to know"), which is also used, but always in conjunction with *'obôth*, refers either to knowing spirits and persons through whom they spoke, or to spirits who were known and familiar to the wizards. The term *'obôth* signifies both "a diviner" and "a leathern bag for holding water" (Job—xxxii, 19—uses it in the latter sense), but scholars are not agreed whether we have two disparate words, or whether it is the same word with two related meanings. Many maintain that it is the same in both instances, as the diviner was supposed to be the recipient and the container of the spirit. The Septuagint translates *'obôth*, as diviners, by "ventriloquists" (*ἐνταρρυμῶντες*), either because the translators thought that the diviner's alleged communication with the spirit was but a deception, or rather because of the belief common in antiquity that ventriloquism was not a natural faculty, but due to the presence of a spirit. Perhaps, also, the two meanings may be connected on account of the peculiarity of the voice of the ventriloquist, which was weak and indistinct, as if it came from a cavity. Isaiah (viii, 19) says that necromancers "mutter" and makes the following prediction concerning Jerusalem: "Thou shalt speak out of the earth, and thy speech shall be heard out of the ground, and thy voice shall be from the earth like that of the python, and out of the ground thy speech shall mutter" (xxix, 4). Profane authors also attribute a distinctive sound to the voice of the spirits or shades, although they do not agree in characterizing it. Homer (Iliad, XXIII, 101; Od., XXIV, 5, 9) uses the verb *ρῥίσειν*, and Statius (Thebais, VII, 770) *stridere*, both of which mean "to utter a shrill cry"; Horace qualifies their voice as *triste et acutum* (Sat., I, viii, 40); Virgil speaks of their *vox exigua* (Æneid, VI, 492) and of the *gemitus lacrymabilis* which is heard from the grave (op. cit., III, 39); and in a similar way Shakespeare says that "the sheeted dead did squeak and gibber in the Roman streets" (Hamlet, I, i).

The Moasic Law forbids necromancy (Levit., xix, 31; xx, 6), declares that to seek the truth from the dead is abhorred by God (Deut., xviii, 11, 12), and even makes it punishable by death (Levit., xx, 27; cf. I Kings, xxviii, 9). Nevertheless, owing especially to the contact of the Hebrews with pagan nations, we find it practised in the time of Saul (I Kings, xxviii, 7, 9), of Isaiah, who strongly reproves the Hebrews on this ground (viii, 19; xix, 3; xxxix, 4, etc.), and of Manasse (IV Kings, xxi, 6; II Par., xxxiii, 6). The best known case of necromancy in the Bible is the evocation of the soul of Samuel at Endor (I Kings, xxviii). King Saul was at war with the Philistines, whose army had gathered near that of Israel. He "was afraid and his heart was very much dismayed. And he consulted the Lord, and he answered him not, neither by dreams, nor by priests, nor by prophets" (5, 6). Then he went to Endor, to a woman who had "a divining spirit", and persuaded her to call the soul of Samuel. The woman alone saw the prophet, and Saul recognized him from the description she gave of him. But Saul himself spoke and heard the prediction that, as the Lord had abandoned him on account of his disobedience, he would be defeated and killed. This narrative has given rise to several interpretations. Some deny the reality of the apparition and claim that the witch deceived Saul; thus St. Jerome (In Is., iii, vii, 11. in P. L., XXIV, 108; in Ezech., xiii, 17, in P. L., XXV, 119) and Theodoret, who, however, adds that the prophecy came from God (In I Reg., xxviii, QQ. LXIII, LXIV, in P. G., LXXX, 589). Others attribute it to the devil, who took Samuel's appearance; thus St. Basil (In Is., viii, 218, in P. G., XXX, 497), St. Gregory of Nyssa ("De pythonissa, ad Theodos, episc. epist.", in P. G., XLV, 107-14), and Tertullian (De anima, LVII, in P. L., II, 794). Others, finally,

look upon Samuel's apparition as real; thus Josephus (Antiq. Jud., VI, xiv, 2), St. Justin (Dialogus cum Tryphone Judæo, 105, in P. G., VI, 721), Origen (In I Reg., xxviii, "De Engastrimytho", in P. G., XII, 1011-1028), St. Ambrose (In Luc., i, 33, in P. L., XV, 1547), and St. Augustine, who finally adopted this view after having held the others (De diversis quæst. ad Simplicianum, III, in P. L., XL, 142-44; De octo Dulcitii quæst., VI, in P. L., XL, 162-65; De cura pro mortuis, xv, in P. L., XL, 606; De doctrina christiana, II, xxiii, in P. L., XXXIV, 52). St. Thomas (Summa, II-II, Q. clxxiv, a. 5, ad 4^{um}) does not pronounce. The last interpretation of the reality of Samuel's apparition is favoured both by the details of the narrative and by another Biblical text which convinced St. Augustine: "After this, he [Samuel] slept, and he made known to the king, and showed him the end of his life, and he lifted up his voice from the earth in prophecy to blot out the wickedness of the nation" (Ecclus., xli, 23).

III. NECROMANCY IN THE CHRISTIAN ERA.—In the first centuries of the Christian era the practice of necromancy was common among pagans, as the Fathers frequently testify (see, e. g., Tertullian, "Apol.", xxiii, P. L., I, 470; "De anima", LVI, LVII, in P. L., II, 790 sqq.; Lactantius, "Divinae institutiones", IV, xxvii, in P. L., VI, 531). It was associated with other magical arts and other forms of demoniacal practices, and Christians were warned against such observances "in which the demons represent themselves as the souls of the dead" (Tertullian, De anima, LVII, in P. L., II, 793). Nevertheless, even Christians converted from paganism sometimes indulged in them. The efforts of Church authorities, popes, and councils, and the severe laws of Christian emperors, especially Constantine, Constantius, Valentinian, Valens, Theodosius, were not directed specifically against necromancy, but in general against pagan magic, divination, and superstition. In fact, little by little the term necromancy lost its strict meaning and was applied to all forms of black art, becoming closely associated with alchemy, witchcraft, and magic. Notwithstanding all efforts, it survived in some form or other during the Middle Ages, but was given a new impetus at the time of the Renaissance by the revival of the neo-Platonic doctrine of demons. In his memoirs (translated by Roscoe, New York, 1851, ch. xiii) Benvenuto Cellini shows how vague the meaning of necromancy had become when he relates that he assisted at "necromantic" evocations in which multitudes of "devils" appeared and answered his questions. Cornelius Agrippa ("De occulta philosophia", Cologne, 1510, tr. by J. F., London, 1651) indicates the magical rites by which souls are evoked. In recent times, necromancy, as a distinct belief and practice, reappears under the name of spiritism, or spiritualism (see SPIRITISM).

The Church does not deny that, with a special permission of God, the souls of the departed may appear to the living, and even manifest things unknown to the latter. But, understood as the art or science of evoking the dead, necromancy is held by theologians to be due to the agency of evil spirits, for the means taken are inadequate to produce the expected results. In pretended evocations of the dead, there may be many things explainable naturally or due to fraud; how much is real, and how much must be attributed to imagination and deception, cannot be determined, but real facts of necromancy, with the use of incantations and magical rites, are looked upon by theologians, after St. Thomas, II-II, Q. xcvi, aa. iii, iv, as special modes of divination, due to demoniacal intervention, and divination itself is a form of superstition.

C. A. DUBRAY.

Nectarius (Νεκτάριος), Patriarch of Constantinople, (381-397), d. 27 Sept., 397, eleventh bishop of that city since Metrophanes, and may be counted its first patriarch. He came from Tarsus of a senatorial family and was prætor at Constantinople at the time of the second general council (381). When St. Gregory Nazianzen resigned his occupation of that see the people called for Nectarius to succeed him and their choice was ratified by the Council (Socrates, "H. E." V), before August, 381. Sozomen (H. E., VII, 8) adds that Nectarius, about to return to Tarsus, asked Diodorus, Bishop of Tarsus, if he could carry any letters for him. Diodorus, who saw that his visitor was the most suitable person to become Bishop of Constantinople, persuaded Meletius, Bishop of Antioch, to add his name to the list of candidates presented by the council to the emperor. The emperor then, to every one's surprise, chose Nectarius, who was not yet baptized, and in neophyte's robe he was consecrated bishop. Tillemont (*Mémoires*, IX, 486) doubts this story. Soon after Nectarius' election the Council passed the famous third canon giving Constantinople rank immediately after Rome. A man of no very great power, Nectarius had an uneventful reign with which St. Gregory was not altogether pleased ("Ep." 88, 91, 151, etc.; Tillemont, *op. cit.*, IX, 488). Suspected of concessions to the Novatians (Socrates, V, 10; Sozomen, VII, 12), he made none to the Arians, who in 388 burnt his house (Socrates, V, 13). Palsamon says that in 394 he held a synod at Constantinople which decreed that no bishop should be deposed without the consent of several other bishops of the same province (Harduin, I, 955). The most important event, however, is that, according to Socrates (V, 19) and Sozomen (VII, 16), as a result of a public scandal Nectarius abolished the discipline of public penance and the office of penitentiary hitherto held by a priest of his diocese. The incident is important for the history of Penance. Nectarius preached a sermon about the martyr Theodore still extant ("P. G." XXXIX, 1821-40; Nilles "Kalendarium manuale," II, 96-100). He was succeeded by St. John Chrysostom and appears as St. Nectarius in the Orthodox Menæion for 11 October (Nilles, *op. cit.* I, 300; "Acta SS." May, II, 421).

ADRIAN FORTESCUE.

Negligence (Lat. *nec*, not, and *legere*, to pick out), the condition of not heeding. More specifically it is here considered as the omission, whether habitual or not, of the care required for the performance of duties, or at any rate, for their full and adequate discharge. In the teaching of St. Thomas, it is rated not only as a characteristic discernible in the commission of all sins, but also as a special sin in itself. Its particular deformity he judges to be the imputable lack of such solicitude as is here and now demanded for the satisfying of obligations. He therefore assigns prudence as the virtue to which it is directly opposed. What has been said applies also to actions which are not of precept, once it is resolved to undertake them. Negligence, according to St. Thomas, is initially at least a lack of promptness of will, and is quite distinguishable from torpor or slipshodness in execution. It

X.—47

is not commonly esteemed to be more than a venial sin. There are, however, two notable exceptions to this statement: (1) if a person is careless to the point of omitting something which is indispensable for salvation (*de necessitate salutis*), or (2) if the remissness of will be so great as totally to extinguish the love of God in the soul, then the sin committed is obviously grievous. Negligence is a factor to be reckoned with in determining the liability of one who has damaged another in any way. In the court of conscience the perpetrator of damage can only be held responsible and bound to restitution when his action has been attended with moral culpability, i. e. has been done freely and advertently. The civil law exacts the exercise of diligence whose measure is established according to the different subject matter involved. The absence of this degree of care on the part of an agent is assumed by the civil law to be culpable, and is punished with the penalties provided. Thus the common law generally distinguishes three classes of negligence as follows: gross negligence is the failure to employ even the smallest amount of care, such as any person, no matter how heedless, would use for the safeguarding of his own interests; ordinary negligence is the failure to exercise ordinary care, such as a person of ordinary capacity and capable of governing a family would take of his own affairs; slight negligence is the failure to bring to bear a high degree of care, such as very thoughtful persons would maintain in looking after their own interests. The civil law may and does impose the obligation of reparation for harm wrought not only where ordinary and gross negligence are shown, but also at times when only slight negligence is proved to have existed. This obligation holds good likewise in conscience, once the decision of the judge decreeing it has been rendered.

Negroes. See RACE, NEGRO.

Nehemias, BOOK OF, also called the second BOOK OF ESDRAS, is reckoned both in the Talmud and in the early Christian Church, at least until the time of Origen, as forming one single book with Esdras, and St. Jerome in his preface (*ad Dominionem et Rogationum*), following the example of the Jews, still continues to treat it as making one with the Book of Esdras. The union of the two in a single book doubtless has its origin in the fact that the documents of which the Books of Esdras and Nehemias are composed, underwent compilation and redaction together at the hands probably, as most critics think, of the author of Paralipomenon about B. C. 300. The separation of the Book of Nehemias from that of Esdras, preserved in our editions, may in its turn be justified by the consideration that the former relates in a distinct manner the work accomplished by Nehemias, and is made up, at least in great part, from the authentic memoirs of the principal figure. The book comprises three sections: I, i-vi; II, vii-xiii, 3; III, xiii, 4-31. Sections I and III will be treated first, and section II, which raises special literary problems, will be discussed at the end.

SECTION I: i-vi, (1) comprises the account, written by Nehemias himself, of the restoration of the walls of Jerusalem. Already in the reign of Xerxes (B. C. 485-66), and especially during the first half of the reign of Artaxerxes I (B. C. 465-24), the Jews had attempted, but with only partial success, to rebuild the walls of their capital, a work, up to then, never sanctioned by the Persian kings (see I Esd., iv, 6-23). In consequence of the edict of Artaxerxes, given in I Esd., iv, 18-22, the enemies of the Jews at Jerusalem forcibly stopped the work (*ibid.*, 23) and pulled down a part of what had already been accomplished. (2) With these events the beginning of the Book of Nehemias is con-

nected. Nehemias, the son of Helchias, relates how, at the court of Artaxerxes at Susa where he fulfilled the office of the king's cup-bearer, he received the news of this calamity in the twentieth year of the king (Neh., i), and how, thanks to his prudence, he succeeded in getting himself sent on a first mission to Jerusalem with full powers to rebuild the walls of the Jewish capital (Neh., ii, 1-8). This first mission lasted twelve years (v, 14; xiii, 6); he had the title of *Pehah* (v, 14; xii, 26) or *Athersatha* (viii, 9; x, 1). It had long been the opinion of most historians of Israel that the Artaxerxes of Nehemias was certainly the first of that name, and that consequently the first mission of Nehemias fell in the year B. C. 445. The Aramaic papyri of Elephantine, recently published by Sachau, put this date beyond the shadow of a doubt. For in the letter which they wrote to Bahohim, Governor of Judea, in the seventeenth year of Darius II (B. C. 408), the Jewish priests of Elephantine say that they have also made an application to the sons of Sanaballat at Samaria. Now Sanaballat was a contemporary of Nehemias, and the Artaxerxes of Nehemias, therefore, was the predecessor, and not the successor, of Darius II.

(3) On his arrival at Jerusalem, Nehemias lost no time; he inspected the state of the walls, and then took measures and gave orders for taking the work in hand (ii, 9-18). Chapter iii, a document of the highest importance for determining the area of Jerusalem in the middle of the fifth century B. C., contains a description of the work, carried out at all points at once under the direction of the zealous Jewish governor. The high priest *Eliasib* is named first among the fellow workers of Nehemias (iii, 1). To bring the undertaking to a successful termination the latter had to fight against all sorts of difficulties. (4) First of all, the foreign element had great influence in Judea. The Jews who had returned from captivity almost a century before, had found the country partly occupied by people belonging to the neighbouring races, and being unable to organize themselves politically, had seen themselves reduced, little by little, to a humiliating position in their own land. And so, at the time of Nehemias, we see certain foreigners taking an exceedingly arrogant attitude towards the Jewish governor and his work. Sanaballat the Horonite, chief of the Samaritans (iv, 1, 2), Tobias the Ammonite, Goessel the Arabian, claim to exercise constant control over Jewish affairs, and try by all means in their power, by calumny (ii, 19), scoffs (iv, 1 ff), threats of violence (iv, 7 ff), and craft (vi, 1 ff), to hinder Nehemias' work or ruin him. The reason of this was that the raising up again of the walls of Jerusalem was destined to bring about the overthrow of the moral domination, which for many years circumstances had secured for these foreigners.

(5) The cause of the foreigners was upheld by a party of Jews, traitors to their own nation. The prophet *Noadiah* and other false prophets sought to terrify Nehemias (vi, 14); there were some who, like *Samaia*, allowed themselves to be hired by Tobias and Sanaballat to set snares for him (vi, 10-14). Many Jews sided with Tobias on account of the matrimonial alliances existing between his family and certain Jewish families. Nehemias, however, does not speak of the mixed marriages as if they had been actually forbidden. The father-in-law of Tobias' son, *Mosollam*, the son of *Barachias*, on the contrary, was a fellow worker of Nehemias (vi, 18; iii, 4). The law of Deuteronomy only forbade marriages between Jews and Chanaanites (Deut. vii, 1, 3). (6) Difficulties of a social nature, the result of the selfish treatment of the poor by the rich, who misused the common distress for their own ends, likewise called for the energetic intervention of Nehemias (v). On this occasion Nehemias recalls the fact that previous governors had practised extortion, while he was the first to show himself disin-

terested in the discharge of his duties (v, 15 ff). (7) In spite of all these difficulties the rebuilding of the wall made rapid progress. We learn from vii, 15, that the work was completely finished within fifty-one days. Josephus (*Ant.*, V, 7, 8) says that it lasted two years and four months, but his testimony, often far from reliable, presents no plausible reason for setting aside the text. The relatively short duration of the work is explained, when we consider that Nehemias had only to repair the damage wrought after the prohibition of Artaxerxes (I Esd., iv, 23), and finish off the construction, which might at that moment have been already far advanced [see above (1)].

SECTION III: xiii, 4-31. After the expiration of his first mission, Nehemias had returned to Susa in the thirty-second year of Artaxerxes (B. C. 433; xiii, 6). Some time after, he was charged with a fresh mission to Judea, and it is with his doings during this second mission that xiii, 4-31 is concerned. The account at the beginning seems mutilated. Nehemias relates how, at the time of his second arrival at Jerusalem, he began by putting an end to the abuses which Tobias, the Ammonite, supported by the high priest *Eliasib*, was practising in the temple in the matter of the depository for the sacred offerings (xiii, 4-9). He severely blames the violation of the right of the Levites in the distribution of the tithes, and takes measures to prevent its occurrence in future (xiii, 10-14); he insists on the Sabbath being strictly respected even by the foreign merchants (xiii, 15-22). Finally he dealt severely with the Jews who were guilty of marriages with strange wives, and banished a grandson of *Eliasib* who had married a daughter of Sanaballat (xiii, 23-28). To this son-in-law of Sanaballat is generally attributed the inauguration of the worship in the temple of *Garizim*. It is plain that Nehemias' attitude during his second mission with regard to mixed marriages differs greatly from his attitude at the beginning of his first stay at Jerusalem [see section I, (5)].

SECTION II: vii-xiii, 3, (1) contains accounts or documents relating to the work of politico-social and religious organization effected by Nehemias, after the walls were finished. Here we no longer have Nehemias speaking in the first person, except in vii, 1-5, and in the account of the dedication of the walls (xii, 31, 37, 39). He relates how, after having rebuilt the walls, he had to proceed to erect houses, and take measures for bringing into the town a population more in proportion to its importance as the capital (vii, 1-5; cf. *Ecclus.*, xlix, 15). (2) He gives (vii, 5 ff.) the list of the families who had returned from captivity with Zorobabel. This list is in I Esd., ii. It is remarkable that in the Book of Nehemias, following on the list we find reproduced (vii, 70 ff.) with variants, the remark of I Esd., ii, 68-70 about the gifts given towards the work of the temple by Zorobabel's companions, and the settlement of these latter in the country; and again that Neh., viii, 1 resumes the narrative in the very words of I Esd., iii. This dependence is probably due to the redactor, who in this place gave a new form to the notes supplied him by the Jewish governor's memoirs which also explains the latter's being spoken of in the third person, Neh., viii, 9. (3) There is a description of a great gathering held in the seventh month under the direction of Nehemias (viii, 9-12) at which *Esdra* reads the Law (viii, 13). They then kept the feast of *Tabernacles* (viii, 13-18). When this feast is over, the people gather together again on the twenty-fourth day of the seventh month (ix, 1 ff.) to praise God, confess their sins, and to bind themselves by a written covenant faithfully to observe their obligations. Chapter X after giving the list of the subscribers to the covenant, sets forth the obligations, which the people bind themselves to fulfil; in particular the prohibition of mixed marriages (verse 30); the keeping of the Sabbath, especially in their

treatment of foreign merchants (verse 31), the yearly tribute of a third part of a sicle for the Temple (verse 32), and other measures to ensure the regular celebration of sacrifices (verses 33-34), the offering of the first-fruits and of the first born (verses 35-37), and the payment and the distribution of the tithes (verses 35-39). After chapter x it is advisable to read xii, 43-xiii, 1-3; the appointment of a commission for the administration of things brought to the Temple, and the expulsion of foreigners from among the community. Chapter xi, 1, 2, recalls the measures taken to people Jerusalem; verses 3-36 give the census of Jerusalem and of the other towns as Nehemias' measures left it. In chapter xii, 27-43, we have the account of the solemn dedication of the walls of Jerusalem; Esdras the scribe is mentioned as being at the head of a group of singers (verse 35). The list in xii, 1-26, has no connexion whatever with the events of this epoch.

(4) The proceedings set forth in viii-x are closely connected with the other parts of the history of Nehemias. The obligations imposed by the covenant, described in x, have to do with just the very matters with which Nehemias concerned himself most during his second stay (see above, section III). The regulation concerning the providing of the wood for the altar (x, 34) is recalled by Nehemias in xiii, 31, and the very words used in x, 39 (end of verse), we find again in xiii, 11. The covenant entered into by the people during Nehemias' first mission was broken in his absence. At the time of his second mission he put down the abuses with severity. For instance, the attitude he takes towards mixed marriages is quite different from his attitude at the beginning of his first stay [see above section I (5); section III]. This change is explained precisely by the absolute prohibition pronounced against these marriages in the assembly described in ix-x. The view has been put forward that viii-x gives an account of events belonging to the period of the organization of worship under Zerobabel, the names of Nehemias (viii, 9; x, 1) and Esdras (viii, 1 ff.) having been added later. But there was certainly sufficient reason for the reorganization of worship in the time of Nehemias (cf. the Book of Malachias and Neh., xiii). Others on the contrary would regard Neh., viii-x, as the sequel to the narrative of I Esdras, ix-x, and they likewise hold that Nehemias' name has been interpolated in Neh., viii, 9, and x, 1. This theory is equally untenable. It is true that in the Third Book of Esdras (the Greek I Esdras) the narrative of Neh., viii, is reproduced immediately after that of Esdras, ix-x; but the author of the third Book of Esdras was led to do this by the fact that Neh., viii, presents his hero as reader of the Law. He has moreover preserved (III Esd., ix, 50) the information of Neh., viii, 9, about the intervention of the Athersatha (Nehemias), Esdras' superior, which clearly proves that this account does not refer to the epoch when Esdras had returned to Jerusalem entrusted by the king with full powers for the administration of the Jewish community. See, moreover, the following paragraph.

(5) According to our view the return of Esdras with his emigrants and the reform effected by him (I Esd., vii-x) ought, chronologically, to be placed after the history of Nehemias, and the Artaxerxes, in the seventh year of whose reign Esdras returned to Jerusalem, is Artaxerxes II (B. C. 405-358). As a matter of fact, Esdras finds the wall of Jerusalem rebuilt (I Esd., ix, 9), Jerusalem well populated (x, 1 ff.), the Temple treasure under proper management (viii, 29 ff.), Jonathan, son of Eliashib, high priest (x, 6; cf. Neh., xii, 23, Hebrew text), and the unlawfulness of mixed marriages recognized by every one (ix, 1 ff.). The radical reform, which Esdras introduced in this matter without being troubled by foreigners who still held the upper hand at the time of Nehemias' first coming, definitively put an end to the abuse in question which

had proved rebellious to all preventive measures (x). The political and social situation described in the first six chapters of Nehemias [see above, section I (4), (5), (6)], the religious situation to which the proceedings of the gathering in Neh., x, bear witness [see above, section II (3)], do not admit of being explained as immediately following after the mission of Esdras, who particularly, in virtue of the king's edict, disposed of very valuable resources for the celebration of worship (I Esd., vii, viii, 25 ff.). Esdras is again entirely unnoticed in Neh., i-vi, and in the list of the subscribers to the covenant (x, 1 ff.). He is mentioned in Neh., viii, 1 ff., and in xii, 35, as fulfilling subordinate functions. Considering the singular number of the verbs in Neh., viii, 9, 10, it is probable that in the former of these two verses "Esdras and the Levites" being named as part of the subject of the phrase is due to a later hand. At the epoch of Nehemias, therefore, Esdras was at the beginning of his career, and must have gone a little later to Babylonia, whence he returned at the head of a band of emigrants in the seventh year of Artaxerxes II (B. C. 398). (6) Many critics have maintained that in Neh., viii, we have the history of the first promulgation of the "Priestly Code" by Esdras, but the narrative in question does not authorize such an interpretation. Esdras was probably still a very young man at this time, and all he does is to read the Law before the assembled people. It is quite true that in I Esd., vii, there is made mention in the royal edict of the Law of his God which Esdras has in mind (verse 14), but besides the fact that we hold the events related in I Esd., vii, to be posterior to Neh., viii [see above (5)], these words must not be understood literally of a new document of which Esdras was the bearer. In the same terms mention is made of the wisdom of his God which Esdras has in mind (verse 25), and in this same passage it is supposed that Esdras' compatriots already know the Law of their God.

A. VAN HOONACKER.

NEHER, STEPHAN JAKOB, church historian; b. at Ebnat, 24 July, 1829; d. at Nordhausen, 7 Oct., 1902. His family were country people of Ebnat, a village in the district of Neresheim in Württemberg, and upon the conclusion of his studies in the gymnasium Neher devoted himself to the study of theology in the University of Tübingen. After his ordination, he laboured as pastor of Dorfmerkingen, then of Zöbingen, and finally of Nordhausen (in the district of Ellwangen, Württemberg). In addition, Neher devoted himself throughout his life to intellectual pursuits, principally to canon law and church history, giving his attention, in the latter study, chiefly to the two branch sciences of ecclesiastical geography and ecclesiastical statistics, in which he accomplished great results. In his first considerable work, which appeared in 1861, he deals with the topic of the privileged Altar (*altare privilegiatum*). In 1864 he published the first volume of his great and carefully planned work, "Kirchliche Geographie und Statistik", which comprises three volumes (Ratisbon, 1864-68). It was, for that day, a most important work, indispensable to historians. Its author was one of the first in modern times to recognize the importance of this branch of church history, collecting with great care material often very difficult to procure, and arranging it systematically. His book on the celebration of two Masses by a priest

on the same day pertains to canon law, and it bears the title: "Die Bination nach ihrer geschichtlichen Entwicklung und nach dem heutigen Recht" (Ratisbon, 1874). After 1878 Neher edited the statistical "Personalkatalog" of his own diocese of Rottenburg, and was one of the principal contributors to the second edition of the *Kirchenlexikon* of Wetzer and Welte. For this work he wrote no fewer than 235 articles, or greater parts of articles. Their content is chiefly matter relating to church history, or to ecclesiastical statistics; his best articles are those relating to the latter subject; those of purely historical interest are often imperfect.

J. P. KIRSCH.

Nélaton, AUGUSTE, famous French surgeon; born in Paris, 17 June, 1807, d. there 21 Sept., 1873. He made his medical studies in Paris, graduating in 1836 with a thesis on tuberculous affections of bones. All his subsequent university career was passed at Paris. After the publication of his "Traité des tumeurs de la mamelle" he became *agrégé* in 1839. In 1851 he became professor of clinical surgery with a thesis which attracted wide attention and was translated into German the following year. As a member of the surgical staff of the St. Louis Hospital, he devised a number of original surgical procedures and operations, was the first to suggest the ligature of both ends of arteries in primary and secondary hemorrhage, and developed several phases of plastic surgery. The Nélaton probe with the porcelain knob, which he invented, was successfully used by him in Garibaldi's case, in 1862, to locate a bullet in the ankle joint. Some of his suggestions with regard to operations were important advances in abdominal and pelvic surgery. He was, lastly, noted as a great teacher of surgery and a consummate operator.

Pagel, the German historian of medicine, in his "Biographical Dictionary of Prominent Physicians of the Nineteenth Century", says of Nélaton: "He was a man of very clear judgment, of ripe experience, of solid wisdom, and deservedly occupies a place as one of the greatest of French surgeons of the nineteenth century." In 1863 he was elected a member of the Paris Academy of Medicine and in 1867 of the French Institute of Science, and became Senator of the French Empire in 1868. His fame as a writer on surgery rests upon his "Elements of Surgical Pathology" (5 vols., Paris, 1854-60). The last volume was completed with the collaboration of A. Jamin. In 1867 Nélaton had an important share in preparing the "Report on The Progress of Surgery in France".

J. J. WALSH.

Nemore, JORDANUS (JORDANIS) DE, the name given in MSS. of the thirteenth and fourteenth centuries to a mathematician who in the Renaissance period was called Jordanus Nemorarius. A number of his works are extant, but nothing is known of his life. It is customary to place him early in the thirteenth century. Emile Chasles, the geometrician, concluded from a study of the "Algorismus Jordani" that its author lived not later than the twelfth century. In the fourteenth century the English Dominican Nicolas Triveth, in a chronicle of his order, attributed the "De ponderibus Jordani" and the "De lineis datis Jordani" to Jordanus Saxo, who, in 1222, succeeded St. Dominic as master general of the Friars Preachers. Since then, the identity of Jordanus Saxo with Jordanus Nemorarius has been accepted by a great many authors; it seems difficult to maintain this opinion, however, as the Dominican superior general never adds *de Nemore* to his name, and the mathematician never calls himself Saxo. The literal translation of

Jordanus de Nemore (Giordano of Nemi) would indicate that he was an Italian. Jordanus had a great vogue during the Middle Ages. In the "Opus Majus", under "De communibus naturæ", Roger Bacon quotes his "De ponderibus", as well as a commentary which had been written on it at that period. Thomas Bradwardine and the logicians who succeeded him in the school of Oxford likewise make a great deal of use of the writings of Jordanus. During the Renaissance his "De ponderibus" powerfully influenced the development of the science of statics.

The treatises composed by Jordanus de Nemore are: (1) "Algorismus", a theory of the elementary operations of arithmetic. An "Algorithmus demonstratus Jordani" was printed at Nuremberg in 1534, by Petreius for Johannes Schöner. The "Algorithmus" reproduced an anonymous MS. found among the papers of Regiomontanus. It was erroneously attributed to Jordanus, and had really been composed in the thirteenth century by a certain Magister Gernardus (Duhem in "Bibliotheca mathematica", 3rd series, VI, 1905, p. 9). The genuine "Demonstratio Algorismi" of Jordanus, which E. Chasles had already examined, has been rediscovered by M. A. A. Björnbo (G. Eneström in "Bibliotheca mathematica", 3rd series, VII, 1906, p. 24), but is still unpublished. (2) "Elementa Arismetica": this treatise on arithmetic, divided into *distinctiones*, was printed at Paris in 1496 and in 1514, to the order of Lefèvre d'Étaples, who added various propositions to it. (3) "De numeris datis", published in 1879 by Treutlein ("Zeitschr. Math. Phys.", XXIV, suppl., pp. 127-66) and again in 1891 by Maximilian Curtze (ibid., XXXVI, "Histor. liter. Abtheilung", pp. 1-23, 41-63, 81-95, 121-138). (4) "De triangulis".—Jordanus himself gave this treatise the name of *Philotechnes* (Duhem in "Bibliotheca mathematica", 3rd series, V, 1905, p. 321; "Archiv für die Geschichte der Naturwissenschaften und der Technik", I, 1909, p. 88). It was published by M. Curtze ("Mittheil. der Copernicusvereins für Wissenschaft und Kunst", VI—Thorn, 1887). (5) "Planispherium".—This work on map-drawing gives, for the first time, the theorem: The stereographic projection of a circle is a circle. It was printed by Valderus, at Basle, in 1536, in a collection containing the cosmographical works of Ziegler, Proclus, Berosius, and Theon of Alexandria, and the "Planisphere" of Ptolemy. (6) "De Speculis", a treatise on catoptics, still unedited. (7) "De ponderibus", or better, "Elementa super demonstrationem ponderis", a treatise on statics, in nine propositions, still unpublished, seems to have been composed as an introduction to a fragment on the Roman balance attributed to one Charistion, contemporary and friend of Philo of Byzantium (second century, B. C.). This fragment has survived under two forms: (a) a Latin version directly from the Greek, entitled "De canonio"; (b) a ninth-century commentary by the Arab mathematician Thābit ibn Kurrah, translated into Latin by Gerard of Cremona.

Most of the propositions of the "De ponderibus Jordani" are gravely erroneous. But the last offers a remarkable demonstration of the principle of the lever, introducing the method of virtual work for the first time in mathematical history. Towards the end of the fourteenth century, or the beginning of the fifteenth, an anonymous author expanded the demonstrations in Jordanus's treatise; in this enlarged form, the treatise, combined with the "De canonio", is found in many MSS. under the title "Liber Euclidis de ponderibus". There is also an anonymous commentary on the "De ponderibus", based on ideas apparently borrowed from Aristotle's "Questiones mechanice". This Aristotelean commentary is mentioned by Roger Bacon in his "Opus majus"; together with an enlarged edition of the "Liber Euclidis de ponderibus", it was printed at Nuremberg, in 1533, by

Johannes Petreius, under the direction of Petrus Apianus, under the title "*Liber Jordani Nemorarii, viri clarissimi, de ponderibus*". In the thirteenth century an anonymous author undertook to write a preamble to a fragment on mechanics, this fragment being of Hellenic origin, and, apparently, later than Hero of Alexandria. For this purpose he resumed Jordanus's work, correcting, however, its errors in mechanics. The method of virtual work, employed by Jordanus to justify the law of equilibrium of the straight lever, supplies this anonymous writer with some admirable demonstrations for the law of equilibrium of the bent lever and for the apparent weight of a heavy body on an inclined plane. This preamble is found in many manuscripts, with the Hellenic fragment. In 1554 it was cynically plagiarized by Niccolò Tartaglia in his "*Questi et inventioni diverse*"; the manuscript text, found in Tartaglia's papers, was published at Venice, in 1565, by Antius Trojanus, under the title: "*Jordani Opusculum de ponderositate, Nicolai Tartaleæ studio correctum*" (A Brief Work of Jordanus, on Ponderosity, carefully corrected by Niccolò Tartaglia).

PIERRE DUHEM.

Nemrod, or **NIMROD** (נִמְרֹד) of uncertain signification, LXX Νεμρώδ), the name of a descendant of Chus (Cush), son of Cham (Ham), represented in Gen., x, 8-12, as the founder of the Babylonian empire and as a mighty hunter before the Lord. This last may be taken in the strict sense—hunter of wild beasts, for such we know the Babylonian princes to have been; or in the sense of warrior, the original word *gibbor* having the meaning "hero". The name of Nemrod has not yet been discovered among those found in the cuneiform inscriptions, and the attempts made by Assyriologists to identify him with historical or legendary personages known to us through these sources rest on more or less plausible conjectures. Thus by some scholars (Delitsch, Hommel, P. Haupt, etc.) he is identified with Gilgamesh, the hero of the Babylonian epic. The latter, whose name appears frequently in the inscriptions, and who is often represented in the act of strangling a lion, is described in the poem as a powerful prince who subdues the monster ox-faced man Eabani and makes him his companion, after which he triumphs over the tyrant Humbaba, and slays a monster sent against him by the deities, Anu and Ishtar. Like the Biblical Nemrod he reigns over the city of Erech (Douai, Arach), but the texts fail to mention the other towns enumerated in Gen., x, 10, namely: Babylon, Achad, and Channe (Calneh). For the philological reasons underlying this hypothesis see Vigouroux, s. v., and Hastings, s. v. Nimrod. Sayce less plausibly identifies Nemrod with the Kassite king, Nazi-Murutas, and T. Pinches (in Hastings) considers him to be the same as Marduk, the great Babylonian deity. In Genesis, x, 11, we read: "Out of that land came forth Assur, and built Ninive . . ." This rendering of the Vulgate seems preferable to that of the Revised Version: "Out of that land he (Nimrod) went forth into Assyria and builded Nineveh." Be that as it may, we know from other sources that Assyria with its capital Nineveh was at first a Babylonian colony, and it may be said to have been founded by Nemrod in the sense that it was a development of the power and civilization of Chaldea. A great number of Oriental legends grew up around the meagre Biblical data concerning Nemrod. Thus with probable reference to the supposed root of the name (מרד *marad*, "he revolted"), he is credited with having instigated the building of the tower of Babel and of being the author of Babylonian idolatry. Another legend is

to the effect that Abraham having refused to worship the statue of Nemrod was cast into a fiery furnace. A trace of this legend appears in II Esd., ix, 7, where the translator of the Vulgate renders the original "Ur of the Chaldees" (from which the Lord called Abraham), by "fire of the Chaldeans". It was only natural that the renown of Nemrod as a builder should have caused his name to be connected with nearly all of the principal mounds and ruins to be found in Mesopotamia.

JAMES F. DRISCOLL.

Neocæsarea, a titular see, suffragan of Hierapolis in the Patriarchate of Antioch, sometimes called Cæsarea, as in "*Georgii Cyprii Descriptio orbis romani*" (ed. Gelzer, 1882). Among its bishops were Paul, whose hands were burned by order of Licinius and who attended the Council of Nicæa in 325 (Theodoret, "*Hist. eccl.*", I, VII); Meletius, opposed to the Council of Ephesus in 431; Patricius (451) and John (553). In the sixth-century "*Notitia episcopatum*" of Anastasius (Echos d'Orient, Paris, X, 145) this see is mentioned as a suffragan of Hierapolis. According to Procopius (*De Edificiis* II, 9), Justinian accomplished great things there. Neocæsarea was a fort on the Euphrates, not far from Zeugma. Chabot thinks its site was the actual ruins of Balkiz (La frontière de l'Euphrate de Pompée à la conquête arabe, Paris, 1907, 278 sq.).

LE QUIEN, *Oriens christianus*, II (Paris, 1741), 947; GELZER, *Georgii Cyprii Descriptio orbis romani* (Leipzig), 151; CHABOT, *Journal asiatique*, II (Paris, 1900), 279 sq.

S. VAILHÉ.

Neocæsarea, a titular see of Pontus Polemoniæ, at first called Cabira, one of the favourite residences of Mithridates the Great, who built a palace there, and later of King Polemon and his successors. Pompey made it a city and gave it the name of Diopolis, while Pythodoris, widow of Polemon, made it her capital and called it Sebaste. It is not known precisely when it assumed the name of Neocæsarea mentioned for the first time in Pliny, "*Hist. Nat.*", VI, III, 1, but judging from its coins, one might suppose that it was during the reign of Tiberius. It became the civil and religious metropolis of Pontus. We know that about 240, when Gregory Thaumaturgus was consecrated bishop of his native city, Neocæsarea had but seventeen Christians and that at his death (270) it counted only seventeen pagans. In 315 a great council was held there, the acts of which are still extant. In 344 the city was completely destroyed by an earthquake (Hieronymus, "*Chron.*", anno 2362), meeting a similar fate in 499 (Theodorus Lector, II, 54). During the Middle Ages the Mussulmans and Christians disputed the possession of Neocæsarea, and in 1063 a Seljuk general, Melik-Ghazi, whose tomb is still visible, captured and pillaged it; later, in 1397, it passed, together with the whole district, under the sway of the Ottomans. Being early placed at the head of an ecclesiastical province, Neocæsarea had four suffragan sees about 640 ("*Ecthesis*" of pseudo-Epiphanius, ed. Gelzer, 539), retaining them until the tenth century, when Trebizond obtained its independence and, by degrees, the other three suffragans were suppressed. In 1391 the Archdiocese of Neocæsarea was confided to the metropolitan of Trebizond (Miklosich and Müller, "*Acta*", II, 154). About 1400 there was, however, a regular metropolitan (op. cit., II, 312) and there is still, but he resides at Ordou. Among the twenty-seven bishops of this city mentioned by Le Quien, the most noted are St. Gregory Thaumaturgus and St. Thomas, a martyr of the ninth century. Neocæsarea, now called Niksar, is a small city of 4000 inhabitants in the sanjak of Tokat and the vilayet of

Sivas, with a Greek and an Armenian church, both of which are schismatic.

SMITH, *Dictionary of Greek and Roman Geography* (London, 1870), I, 462, II, 418, s. v. *Cabira et Neocæsarea*; LE QUIEN, *Oriens christianus*, I (Paris, 1741), 499-508; CUNNET, *La Turquie d'Asie*, I (Paris, 1892), 733-35; CUMONT, *Studia Pontica* (Brussels, 1906), 259-273.

S. VAILLÉ.

Neophyte (*νεόφυτος*, the newly planted, i. e. incorporated with the mystic Body of Christ), a term applied in theology to all those who have lately entered upon a new and higher state or condition of life, e. g. those who have begun the ecclesiastical life, or have joined a religious order. More particularly is it used of those who, lately converted from heathenism, have, by the sacrament of Baptism, been transplanted into the higher life of the Church. From very early times there have been prohibitions against neophytes in this last sense being promoted too quickly to Holy Orders and to positions of responsibility in the Church. Thus the Council of Nicea in its second canon lays down rules on this subject, on the ground that some time is necessary for the state of a Catechumen and for fuller probation after baptism; for the Apostolic decree is clear which says, "Not a neophyte, lest being puffed up with pride, he fall into the judgment of the devil" (1 Tim., iii, 6). The period which should elapse after conversion before promotion is not fixed but (Bened. XIV, "De syn.", vii, 65-6) is left to the discretion of the bishop and will vary with the individual case. (See DIVORCE, sub-title *Pauline Privilege*.)

BENEDICT XIV, *De Syn. Dioc.*, Lib. XIII, cap. xi; FERRARIUS, *Prompta Bibliotheca*, s. v.; MIGNÉ, *Dictionnaire de Discipline Ecclésiastique*, s. v.; *Corpus Juris Canon.*, and in general the *Manuals of Moral Theology*.

ARTHUR S. BARNES.

Neo-Platonism, a system of idealistic, spiritualistic philosophy, tending towards mysticism, which flourished in the pagan world of Greece and Rome during the first centuries of the Christian era. It is of interest and importance, not merely because it is the last attempt of Greek thought to rehabilitate itself and restore its exhausted vitality by recourse to Oriental religious ideas, but also because it definitely entered the service of pagan polytheism and was used as a weapon against Christianity. It derives its name from the fact that its first representatives drew their inspiration from Plato's doctrines, although it is well known that many of the treatises on which they relied are not genuine works of Plato. It originated in Egypt, a circumstance which would, of itself, indicate that while the system was a characteristic product of the Hellenic spirit, it was largely influenced by the religious ideals and mystic tendencies of Oriental thought.

To understand the neo-Platonic system in itself, as well as to appreciate the attitude of Christianity towards it, it is necessary to explain the two-fold purpose which actuated its founders. On the one hand, philosophical thought in the Hellenic world had proved itself inadequate to the task of moral and religious regeneration. Stoicism, Epicureanism, Eclecticism and even Scepticism had each been set the task of "making men happy", and each had in turn failed. Then came the thought that Plato's idealism and the religious forces of the Orient might well be united in one philosophical movement which would give definiteness, homogeneity, and unity of purpose to all the efforts of the pagan world to rescue itself from impending ruin. On the other hand, the strength and, from the pagan point of view, the aggressiveness of Christianity began to be realized. It became necessary, in the intellectual world, to impose on the Christians by showing that Paganism was not entirely bankrupt, and, in the political world, to rehabilitate the official polytheism of the State by furnishing an interpretation of it, that should be acceptable in philosophy. Speculative Stoicism had reduced the gods to personifications of

natural forces; Aristotle had definitely denied their existence; Plato had sneered at them. It was time, therefore, that the growing prestige of Christianity should be offset by a philosophy which, claiming the authority of Plato, whom the Christians revered, should not only retain the gods but make them an essential part of a philosophical system. Such was the origin of neo-Platonism. It should, however, be added that, while the philosophy which sprang from these sources was Platonic, it did not disdain to appropriate to itself elements of Aristoteleanism and even Epicureanism, which it articulated into a Syncretic system.

I. **FORERUNNERS OF NEO-PLATONISM.**—Among the more or less eclectic Platonists who are regarded as forerunners of the neo-Platonic school, the most important are Plutarch, Maximus, Apuleius, Ænesidemus, Numenius. The last-mentioned, who flourished towards the end of the second century of the Christian era, had a direct and immediate influence on Plotinus, the first systematic neo-Platonist. He taught that there are three gods, the Father, the Maker (Demiurges), and the World. Philo the Jew (see PHILO JUDÆUS), who flourished in the middle of the first century, was also a forerunner of neo-Platonism, although it is difficult to say whether his doctrine of the mediation of the Logos had a direct influence on Plotinus.

II. **Ammonius Saccas**, a porter on the docks at Alexandria, is regarded as the founder of the neo-Platonic school. Since he left no writings, it is impossible to say what his doctrines were. We know, however, that he had an extraordinary influence over men like Plotinus and Origen, who willingly abandoned the professional teachers of philosophy to listen to his discourses on wisdom. According to Eusebius, he was born of Christian parents, but reverted to paganism. The date of his birth is given as 242.

III. **Plotinus**, a native of Lycopolis in Egypt, who lived from 205 to 270 was the first systematic philosopher of the school. When he was twenty-eight years old he was taken by a friend to hear Ammonius, and thenceforth for eleven years he continued to profit by the lectures of the porter. At the end of the first discourse which he heard, he exclaimed: "This man is the man of whom I was in search." In 242 he accompanied the Emperor Gordian to Mesopotamia, intending to go to Persia. In 244 he went to Rome, where, for ten years, he taught philosophy, counting among his hearers and admirers the Emperor Gallienus and his wife Salonina. In 263 he retired to Campania with some of his disciples, including Porphyry, and there he died in 270. His works, consisting of fifty-four treatises, were edited by Porphyry in six groups of nine. Hence they are known as the "Enneads". The "Enneads" were first published in a Latin translation by Marsilius Ficinus (Florence, 1492); of recent editions the best are Breuzer and Moser's (Oxford, 1855), and Kirchoff's (Leipzig, 1856). Parts of the "Enneads" are translated into English by Taylor (London, 1787-1817).

Plotinus' starting-point is that of the idealist. He meets what he considers the paradox of materialism, the assertion, namely, that matter alone exists, by an emphatic assertion of the existence of spirit. If the soul is spirit, it follows that it cannot have originated from the body or an aggregation of bodies. The true source of reality is above us, not beneath us. It is the One, the Absolute, the Infinite. It is God. God exceeds all the categories of finite thought. It is not correct to say that He is a Being, or a Mind. He is over-Being, over-Mind. The only attributes which may be appropriately applied to Him are Good and One. If God were only One, He should remain forever in His undifferentiated unity, and there should be nothing but God. He is, however, good; and goodness, like light, tends to diffuse itself. Thus, from the One, there emanates in the first place Intellect (*Nóos*), which is the image of the One, and at the same time a

partially differentiated derivative, because it is the world of ideas, in which are the multiple archetypes of things. From the intellect emanates an image in which there is a tendency to dynamic differentiation, namely the World-Soul, which is the abode of forces, as the Intellect is the abode of Ideas. From the World-Soul emanate the Forces (one of which is the human soul), which by a series of successive degradations towards nothing become finally Matter, the non-existent, the antithesis of God. All this process is called an emanation, or flowing. It is described in figurative language, and thus its precise philosophical value is not determined. Similarly the One, God, is described as light, and Matter is said to be darkness. Matter, is, in fact, for Plotinus, essentially the opposite of the Good; it is evil, and the source of all evil. It is unreality and wherever it is present, there is not only a lack of goodness but also a lack of reality. God alone is free from Matter; He alone is Light; He alone is fully real. Everywhere there is partial differentiation, partial darkness, partial unreality; in the Intellect, in the World-Soul, in Souls, in the material universe. God, the reality, the spiritual, is, therefore, contrasted with the world, the unreal, the material. God is noumenon, everything else is appearance, or phenomenon.

Man, being composed of body and soul, is partly, like God, spiritual, and partly like matter, the opposite of spiritual. It is his duty to aim at returning to God by eliminating from his being, his thoughts, and his actions, everything that is material and, therefore, tends to separate him from God. The soul came from God. It existed before its union with the body; its survival after death is, therefore, hardly in need of proof. It will return to God by way of knowledge, because that which separates it from God is matter and material conditions, which are only illusions or deceptive appearances. The first step, therefore, in the return of the soul to God is the act by which the soul, withdrawing from the world of sense by a process of purification (*katharsis*), frees itself from the trammels of matter. Next, having retired within itself, the soul contemplates within itself the indwelling intellect. From the contemplation of the Intellect within, it rises to a contemplation of the Intellect above, and from that to the contemplation of the One. It cannot, however, reach this final stage except by revelation, that is, by the free act of God, Who, shedding around Him the light of His own greatness, sends into the soul of the philosopher and saint a special light which enables it to see God Himself. This intuition of the One so fills the soul that it excludes all consciousness and feeling, reduces the mind to a state of utter passivity, and renders possible the union of man with God. The ecstasy (*ekstasis*) by which this union is attained is man's supreme happiness, the goal of all his endeavour, the fulfilment of his destiny. It is a happiness which receives no increase by continuance of time. Once the philosopher-saint has attained it, he becomes confirmed, so to speak, in grace. Henceforth forever, he is a spiritual being, a man of God, a prophet, and a wonder-worker. He commands all the powers of nature, and even bends to his will the demons themselves. He sees into the future, and in a sense shares the vision, as he shares the life, of God.

IV. *Porphry*, who in beauty and lucidity of style excels all the other followers of Plotinus, and who is distinguished also by the bitterness of his opposition to Christianity, was born A. D. 233, probably at Tyre. After having studied at Athens, he visited Rome and there became a devoted disciple of Plotinus, whom he accompanied to Campania in 263. He died about the year 303. Of his work "Against the Christians" only a few fragments, preserved in the works of the Christian Apologists, have come down to us. From these it appears that he directed his attack along the lines of what we should now call historical criticism of the

Old Testament and the comparative study of religions. His work "De Antro Nympharum" is an elaborate allegorical interpretation and defence of pagan mythology. His *Ἀποφαι* (Sentences) is an exposition of Plotinus's philosophy. His biographical writings included "Lives" of Pythagoras and Plotinus in which he strove to show that these "god-sent" men were not only models of philosophic sanctity but also *thaumaturgoi*, or "wonder-workers", endowed with theurgic powers. The best known of all his works is a logical treatise entitled *ἑρμηνεία*, or "Introduction to the Categories of Aristotle". In a Latin translation made by Boethius, this work was very widely used in the early Middle Ages, and exerted considerable influence on the growth of Scholasticism. It is, as is well known, a passage in this "Isagoge" that is said to have given occasion to the celebrated controversy concerning universals in the eleventh and twelfth centuries. In his expository works on the philosophy of Plotinus, Porphyry lays great stress on the importance of theurgic practices. He holds, of course, that the practices of asceticism are the starting-point on the road to perfection. One must begin the process of perfection by "thinning out the veil of matter" (the body), which stands between the soul and spiritual things. Then, as a means of further advancement, one must cultivate self-contemplation. Once the stage of self-contemplation is attained, further progress towards perfection is dependent on the consultation of oracles, divination, bloodless sacrifices to the superior gods and bloody sacrifices to demons, or inferior powers.

V. *Iamblichus*, a native of Syria, who was a pupil of Porphyry in Italy, and died about the year 330, while inferior to his teacher in power of exposition, seemed to have a firmer grasp of the speculative principles of neo-Platonism and modified more profoundly the metaphysical doctrines of the school. His works bear the comprehensive title "Summary of Pythagorean Doctrines". Whether he or a disciple of his is the author of the treatise "De Mysteriis Ægyptiorum" (first pub. by Gale, Oxford, 1678, and afterwards by Parthey, Berlin, 1857), the book is a product of his school and proves that he, like Porphyry, emphasized the magic, or theurgic, factor in the neo-Platonic scheme of salvation. As regards the speculative side of Plotinus's system, he devoted attention to the doctrine of emanation, which he modified in the direction of completeness and greater consistency. The precise nature of the modification is not clear. It is safe, however, to say that, in a general way, he forestalled the effort of Proclus to distinguish three subordinate "moments", or stages, in the process of emanation.

While these philosophical defenders of neo-Platonism were directing their attacks against Christianity, representatives of the school in the more practical walks of life, and even in high places of authority, carried on a more effective warfare in the name of the school. Hierocles, pro-consul of Bithynia during the reign of Diocletian (284-305), not only persecuted the Christians of his province, but wrote a work, now lost, entitled "The discourse of a Lover of Truth, against the Christians", setting up the rival claims of neo-Platonic philosophy. He, like Julian the Apostate, Celsus (q.v.), and others, was roused to activity chiefly by the claim which Christianity made to be, not a national religion like Judaism, but a world-wide, or universal, religion. Julian sums up the case of philosophy against Christianity thus: "Divine Government is not through a special society (such as the Christian Church) teaching an authoritative doctrine, but through the order of the visible universe and all the variety of civic and national institutions. The underlying harmony of these is to be sought out by free examination, which is philosophy" (Whittaker, "Neo-Platonists", p. 155). It is in the light of this principle of public policy that we must view the attempt of Iamblichus to furnish a

systematic defence of Polytheism. Above the One, he says, is the Absolutely First. From the One, which is thus itself a derivative, comes intellect, which, as the Intellectual and the Intelligible, is essentially dual. Both the Intellectual and the Intelligible are divided into triads, which are the superterrestrial gods. Beneath these and subordinate to them, are the terrestrial gods whom he subdivides into three hundred and sixty celestial beings, seventy-two orders of sub-celestial gods, and forty-two orders of natural gods. Next to these are the semi-divine heroes of mythology and the philosopher-saints such as Pythagoras and Plotinus. From this it is evident that neo-Platonism had by this time ceased to be a purely academic question. It had entered very vigorously into the contest waged against Christianity. At the same time, it had not ceased to be the one force which could claim to unify the surviving remnants of pagan culture. As such, it appealed to the woman-philosopher Hypatia, whose fate at the hands of a Christian mob at Alexandria, in the year 422, was cast up as a reproach to the Christians (see CYRIL OF ALEXANDRIA). Among the contemporaries of Hypatia at Alexandria was another Hierocles, author of a commentary on the Pythagorean "Golden Verses".

VI. *Proclus*, the most systematic of all the neo-Platonists, and for that reason known as "the scholastic of neo-Platonism," is the principal representative of a phase of philosophic thought which developed at Athens during the fifth century, and lasted down to the year 529, when, by an edict of Justinian, the philosophical schools at Athens were closed. The founder of the Athenian school was Plutarch, surnamed the Great (not Plutarch of Chæronea, author of the "Lives of Illustrious men"), who died in 431. His most distinguished scholar was Proclus, who was born at Constantinople in 410, studied Aristotelean logic at Alexandria, and about the year 430 became a pupil of Plutarch at Athens. He died at Athens in 485. He is the author of several Commentaries on Plato, of a collection of hymns to the gods, of many works on mathematics, and of philosophical treatises, the most important of which are: "Theological Elements," *στοιχειώσις θεολογική*, printed in the Paris ed. of Plotinus's works); "Platonic Theology" (printed, 1618, in a Latin translation by Æmiliius Portus); shorter treatises on Fate, on Evil, on Providence, etc., which exist only in a Latin translation made by William of Moerbeke in the thirteenth century. These are collected in Cousin's edition, "Procli Opera", Paris, 1820-25. Proclus attempted to systematize and synthesize the various elements of neo-Platonism by means of Aristotelean logic. The cardinal principle on which his attempt rests is the doctrine, already foreshadowed by Iamblichus and others, that in the process of emanation there are always three subordinate stages, or moments, namely the original (*μὴν*), emergence from the original (*πρόοδος*), and return to the original (*ἐπιστροφή*). The reason of this principle is enunciated as follows: the derived is at once unlike the original and like it; its unlikeness is the cause of its derivation, and its likeness is the cause, or reason, of the tendency to return. All emanation is, therefore, serial. It constitutes a "chain" from the One down to the antithesis of the One, which is matter. By the first emanation from the One come the "henades", the supreme gods who exercise providence over worldly affairs; from the henades comes the "triad", intelligible, intelligible-intellectual, and intellectual, corresponding to being, life, and thought; each of these is, in turn, the origin of a "hebdomad", a series corresponding to the chief divinities of the pagan pantheon: from these are derived "forces", or "souls", which alone are operative in nature, although, since they are the lowest derivatives, their efficacy is least. Matter, the antithesis of the One, is inert, dead, and can be the cause of nothing except imper-

fection, error, and moral evil. The birth of a human being is the descent of a soul into matter. The soul, however, may ascend, and redescend in another birth. The ascension of the soul is brought about by asceticism, contemplation, and the invocation of the superior powers by magic, divination, oracles, miracles, etc.

VII. *The Last Neo-Platonists*.—Proclus was the last great representative of neo-Platonism. His disciple, Marinus, was the teacher of Damascius, who represented the school at the time of its suppression by Justinian in 529. Damascius was accompanied in his exile to Persia by Simplicius, celebrated as a neo-Platonic commentator. About the middle of the sixth century John Philoponus and Olympiodorus flourished at Alexandria as exponents of neo-Platonism. They were, like Simplicius, commentators. When they became Christians, the career of the School of Plato came to an end. The name of Olympiodorus is the last in the long line of scholars which began with Speusippus, the disciple and nephew of Plato.

VIII. *Influence of Neo-Platonism*.—Christian thinkers, almost from the beginning of Christian speculation, found in the spiritualism of Plato a powerful aid in defending and maintaining a conception of the human soul which pagan materialism rejected, but to which the Christian Church was irrevocably committed. All the early refutations of psychological materialism are Platonic. So, too, when the ideas of Plotinus began to prevail, the Christian writers took advantage of the support thus lent to the doctrine that there is a spiritual world more real than the world of matter. Later, there were Christian philosophers, like Nemesius (flourished c. 450), who took over the entire system of neo-Platonism so far as it was considered consonant with Christian dogma. The same may be said of Synesius (Bishop of Ptolemais, c. 410), except that he, having been a pagan, did not, even after his conversion, give up the notion that neo-Platonism had value as a force which unified the various factors in pagan culture. At the same time there were elements in neo-Platonism which appealed very strongly to the heretics, especially to the Gnostics, and these elements were more and more strongly accentuated in heretical systems; so that St. Augustine, who knew the writings of Plotinus in a Latin translation, was obliged to exclude from his interpretation of Platonism many of the tenets which characterized the neo-Platonic school. In this way, he came to profess a Platonism which in many respects is nearer to the doctrine of Plato's "Dialogues" than is the philosophy of Plotinus and Proclus. The Christian writer whose neo-Platonism had the widest influence in later times, and who also reproduced most faithfully the doctrines of the school, is the Pseudo-Dionysius (see DIONYSIUS, THE PSEUDO-AREOPAGITE). The works "De Divinis Nominibus", "De hierarchia cœlesti", etc., are now admitted to have been written at the end of the fifth, or during the first decades of the sixth, century. They are from the pen of a Christian Platonist, a disciple of Proclus, probably an immediate pupil of that teacher, as is clear from the fact that they embody, not only Proclus's ideas, but even lengthy passages from his writings. The author, whether intentionally on his part, or by some mistake on the part of his readers, came to be identified with Dionysius who is mentioned in the Acts of the Apostles as a convert of St. Paul. Later, especially in France, he was further identified with Dionysius the first Bishop of Paris. Thus it came about that the works of the Pseudo-Areopagite, after having been used in the East, first by the Monophysites and later by the Catholics, became known in the West and exerted a widespread influence all through the Middle Ages. They were translated into Latin by John Scotus Eriugena about the middle of the ninth century, and in this form were studied and commented on, not only by mystic writers, such as the Victorines, but also by the typical representatives of

Scholasticism, such as St. Thomas Aquinas. None of the later scholastics, however, went the full length of adopting the metaphysics of the Pseudo-Areopagite in its essential principles, as did John Scotus Eriugena in his "De divisione nature".

After the suppression of the Athenian school of philosophy by Justinian in 529, the representatives of neo-Platonism went, as we have seen, to Persia. They did not remain long in that country. Another exodus, however, had more permanent consequences. A number of Greek neo-Platonists who settled in Syria carried with them the works of Plato and Aristotle, which, having been translated into Syriac, were afterwards translated into Arabic, Hebrew, and Latin, and thus, towards the middle of the twelfth century, began to re-enter Christian Europe through Moorish Spain. These translations were accompanied by commentaries which continued the neo-Platonic tradition commenced by Simplicius. At the same time a number of anonymous philosophical works, written for the most part under the influence of the school of Proclus, some of which were ascribed to Aristotle, began to be known in Christian Europe, and were not without influence on Scholasticism. Again, works like the "Fons vitæ" of Avicenna, which were known to be of Jewish or Arabian origin, were neo-Platonic, and helped to determine the doctrines of the scholastics. For example, Scotus's doctrine of *materia primo-prima* is acknowledged by Scotus himself to be derived from Avicenna. Notwithstanding all these facts, Scholastic philosophy was in spirit and in method Aristotelean; it explicitly rejected many of the neo-Platonic interpretations, such as the unity of the Active Intellect. For this reason all unprejudiced critics agree that it is an exaggeration to describe the whole Scholastic movement as merely an episode in the history of neo-Platonism. In recent times this exaggerated view has been defended by M. Picavet in his "Esquisse d'une histoire comparée des philosophies médiévales" (Paris, 1907).

The neo-Platonic elements in Dante's "Paradiso" have their origin in his interpretation of the scholastics. It was not until the rise of Humanism in the fifteenth century that the works of Plotinus and Proclus were translated and studied with that zeal which characterized the Platonists of the Renaissance. It was then, too, that the theurgic, or magic, elements in neo-Platonism were made popular. The same tendency is found in Bruno's "Eroici Furori", interpreting Plotinus in the direction of materialistic Pantheism. The active rejection of Materialism by the Cambridge Platonists in the seventeenth century carried with it a revival of interest in the neo-Platonists. An echo of this appears in Berkeley's "Sirius", the last phase of his opposition to materialism. Whatever neo-Platonic elements are recognizable in the transcendentalists, such as Schelling and Hegel, can hardly be cited as survivals of philosophical principles. They are rather inspirational influences, such as we find in Platonizing poets like Spenser and Shelley.

WILLIAM TURNER.

Neo-Pythagorean Philosophy.—The ethico-religious society founded by Pythagoras, which flourished especially in Magna Græcia in the fifth century B. C., disappears completely from history during the fourth century, when philosophy reached the zenith of its perfection at Athens. Here and there, however,

there appears a philosopher who reverts to the Pythagorean doctrine of numbers, and in a general way manifests the tendency of the school towards religious ethics and the practices of asceticism. Beginning with the middle of the first century B. C., a more systematic attempt was made to restore the speculative philosophy of the Pythagoreans and combine it with the practice of astrology and sorcery. The first of these systematic neo-Pythagoreans was Figulus, a Roman philosopher who lived at Alexandria about the middle of the first century B. C., and was a friend of Cicero. Other Romans also contributed to the movement, the chief of whom were Vatinius and the Sextians. It was, however, at Alexandria that the most influential of the neo-Pythagoreans taught. In the second and third centuries of the Christian era, the philosophers of the school became, so to speak, apostles of the cult, and travelled throughout the Roman Empire. The names most prominently associated with this active philosophical campaign are those of Moderatus of Gades, Apollonius of Tyana, Nicomachus of Gerasa, Numenius, and Philostratus. Like the neo-Platonists (see NEO-PLATONISM), the neo-Pythagoreans definitely placed their philosophy at the disposal of the pagan opponents of Christianity. Their original aim—to save the pagan world from moral and social ruin by the introduction of the religious element into philosophy and into conduct—was, of course, conceived without any reference to the claims of Christianity. But as soon as the Christian religion came to be recognized as a factor in the intellectual and political life of the Roman Empire, philosophy, in the form of Neo-Pythagoreanism, made active campaign against the Christians, proclaimed its own system of spiritual regeneration, and set up in opposition to Christ and the Saints the heroes of philosophical tradition and legend, especially Pythagoras and Apollonius of Tyana.

SPECULATIVE SYSTEM.—The neo-Pythagoreans were methodical eclectics. They admitted into their speculative system not only the traditional teachings of the Pythagorean school but also elements of Platonism, Aristoteleanism, and Stoicism. Besides, they derived from Oriental religions with which they were in contact at Rome as well as at Alexandria, a highly spiritual notion of God. There was, naturally, very little coherence in a system developed from principles so divergent. Neither was there agreement in the school even in respect of fundamental tenets. Nevertheless, it may, in general, be said that the school placed God, the supremely spiritual One, at the head of all reality. This, of course, was Oriental in its origin. Next, they interpreted the Pythagorean doctrine in a Platonic sense, when they taught that numbers are the thoughts of God. Thirdly, borrowing from Stoicism, they went on to maintain that numbers, emanating as forces from the divine thoughts, are, not indeed the substance of things, but the forms according to which things are fashioned. From Aristotle they borrowed the doctrine that the world is eternal and that there is a distinction between terrestrial and celestial matter. Their cosmology, in spite of this Aristotelean influence, is dominated to a great extent by the belief that the stars are deities and that the powers of air, earth, and sky are demons.

ETHICS AND RELIGION.—In their theory of conduct the neo-Pythagoreans attach great importance to personal asceticism, contemplation, and the worship of a purely spiritual deity. At the same time, it is an essential part of their ethical system that freedom from the trammels of matter and final union with God are to be obtained only by invoking the aid of friendly spirits and God-sent men and by thwarting the efforts of malign demons. This latter principle led to the practice of magic and sorcery and eventually to a good deal of charlatanry. The principle that the friendly spirits and the souls of God's special messengers aid

men in the struggle for spiritual perfection led to the practice of honouring and even deifying the heroes of antiquity and the representatives of wisdom such as Pythagoras and Apollonius. With this purpose in view the philosophers of this school wrote "Lives" of Pythagoras which are full of fabulous tales, stories in which more than natural wisdom, skill, and sanctity are attributed to the hero. They did not hesitate to invent where exaggeration failed to accomplish their aim, so that they gave only too much justification to the modern critic's description of their biographical activity as representing the "Golden Age of Apocryphal literature". In this spirit and with this purpose in view Philostratus, about the year A. D. 220, wrote a "Life of Apollonius" which is of special importance because, while it is not a professed imitation of the Gospels, it was evidently written with a view of rivalling the gospel narrative. Apollonius was born at Tyana in Cappadocia four years before the Christian era. At an early age he devoted himself under various masters, to the study of philosophy and the practice of asceticism. After the five years of silence imposed by the rule of Pythagoras, he began his journeys. Throughout Asia Minor he travelled from city to city teaching the doctrines of the sect. Then he journeyed to the far East in search of the wisdom of the magi and the brahmins, and, after his return, took up once more the task of teaching. Later he went to Greece, and thence to Rome, where he lived for a time under the emperor Nero. In 69 he was at Alexandria, where he attracted the attention of Vespasian. Summoned to Rome by Domitian, he was cast into prison, but escaped to Greece, and died two years later. The place of his death is variously given as Ephesus, Rhodes, and Crete. Into the framework of these facts Philostratus weaves a tissue of alleged miraculous events, prophecies, visions, and prodigies of various kinds. It is important to remark in criticism of Philostratus's narrative, that he lived one hundred years after the events which he describes. Moreover, according to Philostratus's own account, Apollonius did not lay claim to divine prerogatives. He believed that the "virtue" which he possessed was to be attributed to his knowledge of Pythagorean philosophy and his observance of its prescriptions. He held as a general principle that anyone who attained the same degree of wisdom and asceticism could acquire the same power. The parallel, therefore, which was drawn between his extraordinary deeds and the miracles narrated in the Gospels does not stand the verdict of criticism. Our Lord claimed to be God, and appealed to His miracles as a proof of His divinity. Apollonius regarded his own powers as natural. Finally, it should be remembered that the Pythagorean biographers openly acknowledged "the principle of permitting exaggeration and deceit in the cause of philosophy" (Newman). The "Lives" of Pythagoras and Apollonius are to be judged by the standards of fiction and not by the canons of historical criticism. Among those who, overlooking this distinction, have tried to make capital against Christianity out of this class of Pythagorean literature are Lord Herbert and Blount, mentioned in Newman's essay on Apollonius, and Jean de Castillon, who was instigated by Frederick the Great.

Philostratus's *Life of Apollonius*, and the *Letters* ascribed to the latter were published in PHILOSTRATUS, *Opera Omnia* (Leipzig, ed. OLSARIUS, 1709); *Ibid.* (ed. KAYSER, 1870-71); the works of NICOMACHUS of GERA were included in IAMBlichus, *Theologia Arithmetica* (ed. AET, Leipzig, 1817); ZELLER, *Philosophie der Griechen*, III, 2 (3rd ed., Leipzig, 1881), 79 ff.; NEWMAN, *Historical Sketches*, I (London, 1882), 301 ff.; TURNER, *History of Philosophy* (Boston, 1903), 204 ff.

WILLIAM TURNER.

Neo-Scholasticism.—THE NAME AND ITS MEANING.—Neo-Scholasticism is the development of the Scholasticism of the Middle Ages during the latter half of the nineteenth century. It is not merely the resus-

citation of a philosophy long since defunct, but rather a restatement in our own day of the *philosophia perennis* which, elaborated by the Greeks and brought to perfection by the great medieval teachers, has never ceased to exist even in modern times. It has sometimes been called neo-Thomism partly because St. Thomas Aquinas in the thirteenth century gave to Scholasticism among the Latins its final form, partly because the idea has gained ground that only Thomism can infuse vitality into twentieth century scholasticism. But Thomism is too narrow a term; the system itself is too large and comprehensive to be expressed by the name of any single exponent.

This article will deal with the elements which neo-Scholasticism takes over from the past; the modifications which adapt it to the present; the welcome accorded it by contemporary thought and the outlook for its future; its leading representatives and centres; its bibliography.

I. TRADITIONAL ELEMENTS. — Neo-Scholasticism seeks to restore the fundamental organic doctrines embodied in the Scholasticism of the thirteenth century. It claims that philosophy does not vary with each passing phase of history; that the truth of seven hundred years ago is still true to-day, and that if the great medieval thinkers—Aquinas, Bonaventure, and Duns Scotus—succeeded in constructing a sound philosophical system on the data supplied by the Greeks, especially by Aristotle, it must be possible, in our own day, to gather from the speculation of the Middle Ages the soul of truth which it contains. These essential conceptions may be summarized as follows:

(1) God, pure actuality and absolute perfection, is substantially distinct from every finite thing: He alone can create and preserve all beings other than Himself. His infinite knowledge includes all that has been, is, or shall be, and likewise all that is possible.

(2) As to our knowledge of the material world: whatever exists is itself, an incommunicable, individual substance. To the core of self-sustaining reality, in the oak-tree for instance, other realities (accidents) are added—size, form, roughness, and so on. All oak-trees are alike, indeed are identical in respect of certain constituent elements. Considering this likeness and even identity, our human intelligence groups them into one species and again, in view of their common characteristics, it ranges various species under one genus. Such is the Aristotelean solution of the problem of universals (q. v.). Each substance is in its nature fixed and determined; and nothing is farther from the spirit of Scholasticism than a theory of evolution which would regard even the essences of things as products of change.

But this statism requires as its complement a moderate dynamism, and this is supplied by the central concepts of act and potency. Whatsoever changes is, just for that reason, limited. The oak-tree passes through a process of growth, of becoming: whatever is actually in it now was potentially in it from the beginning. Its vital functions go on unceasingly (accidental change); but the tree itself will die, and out of its decayed trunk other substances will come forth (substantial change). The theory of matter and form is simply an interpretation of the substantial changes which bodies undergo. The union of matter and form constitutes the essence of concrete being, and this essence is endowed with *existence*. Throughout all change and becoming there runs a rhythm of finality; the activities of the countless substances of the universe converge towards an end which is known to God; finality, in a word, involves optimism.

(3) Man, a compound of body (matter) and of soul (form), puts forth activities of a higher order—knowledge and volition. Through his senses he perceives concrete objects, e. g. *this* oak; through his intellect he knows the abstract and universal (*the* oak). All our intellectual activity rests on sensory function; but

through the active intellect (*intellectus agens*) an abstract representation of the sensible object is provided for the *intellectus possibilis*. Hence the characteristic of the idea, its non-materiality, and on this is based the principal argument for the spirituality and immortality of the soul. Here, too, is the foundation of logic and of the theory of knowledge, the justification of our judgments and syllogisms.

Upon knowledge follows the appetitive process, sensory or intellectual according to the sort of knowledge. The will (*appetitus intellectualis*) in certain conditions is free, and thanks to this liberty man is the master of his destiny. Like all other beings, we have an end to attain and we are morally obliged, though not compelled, to attain it.

Natural happiness would result from the full development of our powers of knowing and loving. We should find and possess God in this world since the corporeal world is the proper object of our intelligence. But above nature is the order of grace and our supernatural happiness will consist in the direct intuition of God, the beatific vision. Here philosophy ends and theology begins.

II. ADAPTATION TO MODERN NEEDS.—The neo-Scholastic programme includes, in the next place, the adaptation of medieval principles and doctrines to our present intellectual needs. Complete immobility is no less incompatible with progress than out-and-out relativism. *Vita in motu*. To make Scholasticism rigid and stationary would be fatal to it. The doctrines revived by the new movement are like an inherited fortune; to refuse it would be folly, but to manage it without regard to actual conditions would be worse. With Dr. Ehrhard one may say: "Aquinas should be our beacon, not our boundary" ("Der Katholicismus und das zwanzigste Jahrh. im Lichte der Kirchlichen Entwicklung der Neuzeit", Stuttgart, 1902, 252). We have now to pass in review the various factors in the situation and to see in what respect the new Scholasticism differs from the old and how far it adapts itself to our age.

(1) *Elimination of False or Useless Notions*.—Neo-Scholasticism rejects the theories of physics, celestial and terrestrial, which the Middle Ages grafted on the principles, otherwise sound enough, of cosmology and metaphysics; e. g. the perfection and superiority of astral substance, the "incorruptibility" of the heavenly bodies, their external connexion with "motor spirits", the influence of the stars on the generation of earthly beings, the four "simple" bodies, etc. It further rejects those philosophical theories which are disproved by the results of investigation; e. g. the diffusion of sensible "species" throughout a medium and their introduction into the organs of sense. Even the Scholastic ideas that have been retained are not all of equal importance; criticism and personal conviction may retrench or modify them considerably, without injury to fundamental principles.

(2) *Study of the History of Philosophy*.—The medieval scholars cultivated the history of philosophy solely with a view to its utility, i. e. as a means of gathering the deposit of truth contained in the writings of the ancients and, especially, for the purpose of refuting error and thus emphasizing the value of their own doctrine. Modern students, on the contrary, regard every human fact and achievement as in itself significant, and accordingly they treat the history of philosophy in a spirit that is more disinterested. With this new attitude, neo-Scholasticism is in full sympathy; it does its share in the work of historical reconstruction by employing critical methods; it does not attempt to condense the opinions of others into a syllogism and refute them with a phrase, nor does it commend the practice of putting whole systems into a paragraph or two in order to annihilate them with epithet or invective. Neo-Scholasticism, however, does not confine its interest to ancient and medieval philosophy; its

chief concern is with present-day systems. It takes issue with them and offsets their theories of the world by a synthesis of its own. It is only by keeping in touch with actual living thought that it can claim a place in the twentieth century and command the attention of its opponents. And it has everything to gain from a discussion in which it encounters Positivism, Kantism, and other forms or tendencies of modern speculation.

(3) *Cultivation of the Sciences*.—The need of a philosophy based on science is recognized to-day by every school. Neo-Scholasticism simply follows the example of the Aristotelean and medieval philosophy in taking the data of research as the groundwork of its speculation. That there are profound differences between the Middle Ages and modern times from the scientific point of view, is obvious. One has only to consider the multiplication of the sciences in special lines, the autonomy which science as a whole has acquired, and the clear demarcation established between popular views of nature and their scientific interpretation. But it is equally plain that neo-Scholasticism must follow up each avenue of investigation, since it undertakes, as Aristotle and Aquinas did, to provide a synthetic explanation of phenomena by referring them to their ultimate causes and determining their place in the universal order of things; and this undertaking, if the synthesis is to be deep and comprehensive, presupposes a knowledge of the details furnished by each science. It is not possible to explain the world of phenomena while neglecting the phenomena that make up the world. "All that exists, as contemplated by the human mind, forms one large system or complex fact. . . . Like a short-sighted reader, its eye pores closely, and travels slowly, over the awful volume which lies open for its inspection. . . . These various partial views or abstractions . . . are called sciences . . . they proceed on the principle of a division of labour. . . . And further the comprehension of the bearings of one science on another, and the use of each to each, and the location of them all, with one another, this belongs, I conceive, to a sort of science distinct from all of them, and in some sense, a science of sciences, which is my own conception of what is meant by philosophy" (Newman, "Idea of a University", Discourse III, iii, iv, 44 sqq.).

There is, of course, the pedagogical problem; how shall philosophy maintain its control over the ever-widening field of the various sciences? In reply, we may cite the words of Cardinal Mercier, a prominent leader in the neo-Scholastic movement: "As a matter of fact", he declares, "the difficulty is a serious one, and one may say in general terms, that it is not going to be solved by any one man. As the domain of fact and observation grows larger and larger, individual effort becomes less competent to survey and master it all: hence the necessity of co-operative effort to supply what is lacking in the work of isolated investigators; hence too the need of union between the synthetic mind and the analytic, in order to secure, by daily contact and joint action, the harmonious development of philosophy and science". ("La philosophie néo-scholastique" in "Revue néo-scholastique", 1894, 17).

(4) *Innovations in Doctrinal Matters*.—Once it turned its attention to modern fashions of thought, neo-Scholasticism found itself face to face with problems of which medieval philosophy had not the slightest suspicion or at any rate did not furnish a solution. It had to bear the brunt of conflict between its own principles and those of the systems in vogue, especially of Positivism and Criticism. And it had to take up, from its own point of view, the questions which are favourite topics of discussion in the schools of our time. How far then, one may ask, has neo-Scholasticism been affected by modern thought? First of all, as to metaphysics: in the Middle Ages its claim to va-

lidity met with no challenge, whereas, in the twentieth century, its very possibility is at stake and, to defend it against the concerted attack of Hume and Kant and Comte, the true significance of such concepts as being, substance, absolute, cause, potency, and act must be explained and upheld. It is further needful to show that, in a very real sense, God is not unknowable; to rebut the charges preferred by Herbert Spencer against the traditional proofs of God's existence; to deal with the materials furnished by ethnography and the history of religions; and to study the various forms which monism and immanentism nowadays assume.

Cosmology can well afford to insist on the traditional theory of matter and form, provided it pay due attention to the findings of physics, chemistry, crystallography, and mineralogy, and meet the objections of atomism and dynamism, theories which, in the opinion of scientific authority, are less satisfactory as explanations of natural phenomena than the hylomorphism (q. v.) of the Scholastics. The theory also of qualities, once the subject of ridicule, is nowadays endorsed by some of the most prominent scientists. In psychology especially the progressive spirit of neo-Scholasticism makes itself felt. The theory of the substantial union of body and soul, as an interpretation of biological, psychical, and psycho-physiological facts, is far more serviceable than the extreme spiritualism of Descartes on the one hand and the Positivism of modern thinkers on the other. As Wundt admits, the results of investigation in physiological psychology do not square either with materialism or with dualism whether of the Platonic or of the Cartesian type; it is only Aristotelean animism, which brings psychology into connexion with biology, that can offer a satisfactory metaphysical interpretation of experimental psychology ("Grundzüge d. physiol. Psychologie", II, 540). So vigorous indeed has been the growth of psychology that each of its offshoots is developing in its own way: such is the case with criteriology, aesthetics, didactics, pedagogy, and the numerous ramifications of applied psychology. Along these various lines, unknown to medieval philosophy, neo-Scholasticism is working energetically and successfully. Its criteriology is altogether new: the older Scholasticism handled the problem of certitude from the deductive point of view; God could not have misshaped the faculties with which He endowed the mind in order that it might attain to knowledge. Neo-Scholasticism, on the other hand, proceeds by analysis and introspection; it states the problem in the terms which, since Kant's day, are the only admissible terms, but as against the Kantian criticism it finds the solution in a rational dogmatism. Its aesthetics holds a middle course between the extreme subjectivism of many modern thinkers who would reduce the beautiful to a mere impression, and the no less extreme objectivism which the Greeks of old maintained. It is equally at home in the field of experimental psychology which investigates the correlation between conscious phenomena and their physiological accompaniments; in fact, its theory of the substantial union of body and soul implies as its corollary a "bodily resonance" corresponding to each psychical process.

The laws and principles which the modern science of education has drawn from experience find their adequate explanation in neo-Scholastic doctrine; thus, the intuitive method, so largely accepted at present as an essential element in education, is based on the Scholastic theory that nothing enters the intellect save through the avenue of sense. In the study of ethical problems, neo-Scholasticism holds fast to the vital teachings that prevailed in the thirteenth century, but at the same time it takes into account the historical and sociological data which explain the varying application of principles in successive ages. In view of contemporary systems which, on a purely experimental basis, attempt to set aside all moral impera-

tives and ideas of value, it is necessary to insist on the older concepts of good and evil, of finality and obligation—a need which is easily supplied by neo-Scholastic ethics. As to logic, the most perfect part of Aristotle's great constructive work and therefore that which has been least modified in the course of time, its positions still call for defence against the objections of writers like Mill, who regard the syllogism as a "solemn farce". Accordingly, with due consideration for modern modes of thinking, neo-Scholasticism adapts the teaching of the Middle Ages to actual conditions. Even as regards the relations between philosophy and religion, there are important changes to note. For the medieval mind in the Western world, philosophy and theology were identical until about the twelfth century. In the thirteenth the line of demarcation was clearly drawn, but philosophy was still treated as the preliminary training for theology. This is no longer the case; neo-Scholasticism assigns to philosophy a value of its own as a rational explanation of the world, on a par in this respect with Positivism and other systems; and it welcomes all who are bent on honest research, whether their aim be purely philosophical or apologetic.

Parallel with these modifications are those which affect the pedagogical phase of the movement. The methods of teaching philosophy in the thirteenth century were too closely dependent on the culture of that age; hence they have been replaced by modern procedures, curricula, and means of propagation. It would be ill-advised to wrap neo-Scholastic doctrine in medieval envelopes, e. g. to write books on the plan of the theological "Summæ" or the "Quodlibetal Questions" that were current in the thirteenth century. Without at all lessening its force, syllogistic demonstration gains in attractiveness when its essential characteristics are retained and clothed about with modern forms of presentation. In this connexion, the use of living languages as a means of exposition has obvious advantages and finds favour with many of those who are best qualified to judge.

III. APPRECIATION.—By interesting itself in modern questions, interpreting the results of scientific research and setting forth its principles for thorough discussion, neo-Scholasticism has compelled attention: it has to be reckoned with. Among non-Catholics, many leaders of thought have frankly acknowledged that its methods and doctrines deserve to be examined anew. Men like Boutroux admit that Aristotle's system may well serve as an offset to Kantism and evolution (Aristote, *Etudes d'histoire et de philosophie*, Paris, 1901, 202). Paulsen ("Kant der Philosoph des Protestantismus" in "Kantstudien", 1899) and Eucken ("Thomas von Aquino u. Kant, Ein Kampf zweier Welten", loc. cit., 1901) declare that neo-Thomism is the rival of Kantism and that the conflict between them is the "clash of two worlds". Harnack ("Lehrbuch d. Dogmengesch.", III, 3rd. ed., 327), Seeberg ("Realencyklopädie f. Prot. Theol." s. v. "Scholastik") and others protest against those who underrate the value of scholastic doctrine.

Among Catholics, Neo-Scholasticism gains ground day by day. It is doing away with Ontologism, Traditionalism, the Dualism of Günther, and the exaggerated Spiritualism of Descartes. It is free from the weaknesses of Pragmatism and Voluntarism, systems in which some thinkers have vainly sought the reconciliation of their philosophy and their faith. Neo-Scholasticism has a character of permanence as truth itself has; but it is destined in its development to keep up with scientific progress. Like everything that lives, it must advance; arrested growth would mean decay.

IV. THE LEADERS AND THEIR WORK.—The Neo-Scholastic movement was inaugurated by such writers as Sanseverino (1811-65) and Cornoldi (1822-92) in Italy; Gonzalez (1831-92) in Spain; Kleutgen (1811-83) and Stöckl (1823-95) in Germany; de San (1832-

1904), Dupont, and Lepidi in Belgium; Farges and Dornet de Vorges (1910) in France, who with other scholars carried on the work of restoration before the Holy See gave it solemn approval and encouragement. Pius IX, it is true, in various letters, recognized its importance; but it was the encyclical "Æterni Patris" of Leo XIII (4 Aug., 1879) that imparted to neo-Scholasticism its definitive character and quickened its development. This document sets forth the principles by which the movement is to be guided in a progressive spirit, and by which the medieval doctrine is to take on new life in its modern environment. "If," says the pope, "there be anything that the Scholastic doctors treated with excessive subtlety or with insufficient consideration, or that is at variance with well founded teachings of later date, or is otherwise improbable, we by no means intend that it shall be proposed to our age for imitation. . . . We certainly do not blame those learned and energetic men who turn to the profit of philosophy their own assiduous labours and erudition as well as the results of modern investigation; for we are fully aware that all this goes to the advancement of knowledge."

In Italy, the movement was vigorous from the start. The Accademia di San Tommaso, founded in 1874, published, up to 1891, a review entitled "La Scienza Italiana". Numerous works were produced by Zigliara (1833-93), Satolli (1839-1909), Liberatore (1810-92), Barberis (1847-96), Schiffrini (1841-1906), de Maria, Talamo, Lorenzelli, Ballerini, Matussi, and others. The Italian writers at first laid special emphasis on the metaphysical features of Scholasticism, without paying sufficient attention to the sciences or to the history of philosophy. Recently, however, this situation has undergone a change which promises excellent results.

From Italy the movement spread into the other European countries and found supporters in Germany such as Kleutgen, Stöckl, the authors of the "Philosophia Lacensis", published at Maria Laach by the Jesuits (Pesch, Hontheim, Cathrein), Gutberlet, Commer, Willmann, Kaufmann, Glossner, Grabmann, and Schneid. These scholars have made valuable contributions to the history of philosophy, especially that of the Middle Ages. Stöckl led the way with his "Geschichte d. Philosophie des Mittelalters" (Mainz, 1864-66). Ehrle and Denifle (q. v.) founded in 1885 the "Archiv für Literatur u. Kirchengesch. d. Mittelalters", and the latter edited the monumental "Charakterium" of the University of Paris. In 1891, Von Hertling and Bäumker began the publication of their "Beiträge zur Gesch. d. Phil. des Mittelalters".

Belgium has been particularly favoured. Leo XIII established (1891) at Louvain the "Institut de philosophie" for the special purpose of teaching the doctrine of St. Thomas together with history and the natural sciences. The Institute was placed in charge of Mgr (now Cardinal) Mercier whose "Cours de philosophie" has been translated into the principal languages of Europe.

In France, besides those already mentioned, Vallet, Gardair, Fonsegrive, and Piat have taken a prominent part in the movement; in Holland (Amsterdam) de Groot; in Switzerland (Freiburg), Maadonnet; in Spain, Orti y Lara, Urráburu. Gómez Izquierdo; in Mexico, Garcia; in Brazil, Santroul; in Hungary, Kiss and Peci; in England, Clarke, Maher, John Rickaby, Joseph Rickaby, Boedder (Stonyhurst Series); in the United States, Coppens, Poland, Brother Chrysostom, and the professors at the Catholic University (Shanahan, Turner, and Pace).

Neo-Scholasticism has been endorsed by four Catholic Congresses: Paris (1891); Brussels (1895); Freiburg (1897); Munich (1900). A considerable number of reviews have served as its exponents: "Divus Thomas" (1879-1903); "Rivista Italiana di filosofia neo-scholastica" (Florence, since 1900); "Annales de Philoso-

phie Chrétienne" (Paris, since 1830); "Revue néo-scholastique de Philosophie" (Louvain, since 1894); "Revue de Philosophie" (Paris, since 1900); "Revue des Sciences philosophiques et théologiques" (Kain, Belgium, since 1907); "Revue Thomiste" (Paris, since 1893); "Philosophisches Jahrbuch für Philosophie und spekulative Theologie" (Paderborn, since 1887); "St. Thomas Blätter" (Ratisbon, since 1888); Bölcséleti-Folyóirat (Budapest, since 1886); "Revista Lulliana" (Barcelona, since 1901); "Cienzia Tomista" (Madrid, since 1910). In addition to these, various periodical publications not specially devoted to philosophy have given neo-Scholasticism their cordial support.

Various commentaries on the Encyclical Æterni Patris: VAN WEDDINGEN, *L'Encyclique de S.S. Leo XIII et la restauration de la philosophie chrétienne* (Brussels, 1880); SCHNEID, *Die Philosophie des hl. Thomas und ihre Bedeutung für die Gegenwart* (Würzburg, 1881); ROYCE, *Pope Leo's philosophical movement and its relations to modern thought in Rec. Cath. Pedag.* (1903); MERCIER, *Les origines de la philosophie contemporaine* (2nd ed., Louvain, 1908); DE WULF, *Scholasticism old and new, an introduction to scholastic philosophy, medieval and modern*, tr. M. DE WULF.

Nephtali (A. V., NAPHTALI), sixth son of Jacob and Bala (Gen., xxx, 8). The name is explained (ibid.) by a paranomasia which causes no small perplexity to commentators. Modern interpreters, following Simonis and Gesenius, translate it "Wrestlings of God have I wrestled [D. V., "God hath compared me"] with my sister, and I have prevailed." According to this rendering, *Nephtali* would mean "my wrestling", or simply "wrestling". Pseudo-Jonathan, commenting on Gen., xlii, 21, tells us Nephtali was the first to announce to Jacob that Joseph was alive; in another passage of the same Targum, Nephtali is mentioned among the five whom Joseph presented to Pharaoh (Gen., xlvii, 2). According to the apocryphal "Testament of the twelve Patriarchs", he died in his one hundred and thirty-second year and was buried in Egypt. These details, however, are unreliable; in point of fact, we know nothing with certainty beyond the fact that he had four sons: Jaziel, Guni, Jeser, and Sallem (Gen., xlii, 24; Num., xxvi, 48 sqq.; I Par., vii, 13).

THE TRIBE OF NEPHTALI counted 53,400 men "able to go forth to war" (Num., i, 42), being thus the sixth in importance among the tribes of Israel. The second census brought it down to the eighth place, and reported only 45,400 warriors (Num., xxvi, 48-50). During the wanderings of the Israelites in the desert, the tribe of Nephtali, under the command first of

Ahira, and later on of Phedael, was always united with the tribes of Dan and Aser. When spies were sent from the desert of Pharan to view the land of Chanaan, Nahabi, the son of Vapei, represented the tribe in the expedition (Num., xiii, 15). The territory allotted to Nephtali in Chanaan lay to the extreme north of Palestine, and was bounded (Jos., xix, 33-34) on the north by the River Leontes (*Nahr el-Qasimiyeh*), on the east by the course of the Jordan as far as 12 miles south of the Sea of Galilee, on the west by the tribes of Aser and Zabulon; and on the south by that of Issachar. Including some of the finest land in Palestine, "it invites the most slothful to take pains to cultivate it" (Joseph., "Bell. Jud.", III, iii, 2). Naturally, the Chanaanites of that district were most unwilling to give up their rich possessions; the Book of Judges possibly even implies that the Hebrews could not overcome the natives (i, 33); in fact, foreigners were at all times numerous in that neighbourhood, called on that account "Galilee of the Gentiles" (Isa., ix, 1; IV Kings, xv, 29). Finally, they banded together under Jabin and Sisara to drive the Israelites out of the land. How this confederacy was defeated by Barac, a man of Cedus, with the warriors of Zabulon and of his own tribe, called together by Debora, to the glory of Nephtali, needs not be recounted here (Judges, iv, v). Again, with Gideon, warriors of Nephtali took part in the pursuit of the Madianites (Judges, vii, 23), and sent to David at Hebron a contingent of 1000 captains and 37,000 men "furnished with shield and spear" (I Par., xii, 34). And the men of Nephtali, according to Josephus, guarding the "Entrance of Emath", the key to northern Palestine, were "inured to war from their infancy" ("Bell. Jud.", loc. cit.).

CHARLES L. SOUVAY.

Nepi and Sutri (NEPESIN ET SUTRIN), united sees of the province of Rome, central Italy, in the Ciminian region. Nepi is situated on a hill of tufa, and is surrounded by great walls; its cathedral, which occupies the site of an ancient temple of Jupiter, contains paintings by Titian, Perugino, and Zuccari; the communal palace was begun by Vignola, and the fort was built by Peter Louis Farnese. There still exist at Nepi the ruins of an amphitheatre and of ancient baths, from which several statues in the Vatican museum were taken, among these the one in basalt of King Nectanabis I, with an Egyptian inscription. Nepete and Sutrium, as these cities were called, belonged to the Faliscans, who called the Romans to their assistance when the Etruscans invaded them; the invaders (389, 311, 310), after twice defeating the Romans, went beyond the Ciminian forest to attack the Etruscans in Etruscan territory; wherefore, Livy calls these towns "claustra Etruriæ"; in 382, they became Latin colonies. In the Gothic War Nepi was one of the last strongholds of the Goths. The town was sacked by the Lombards in 569, and then fell into decadence. In the eighth century, however, it became the seat of Tuto, a Lombard *dux*, known for his interference in the papal election of 768. In the struggle between the emperors and the popes, Nepi was imperialist during the reigns of Alexander II, Nicholas II, Gregory VII, and Innocent II; on the other hand, in 1160, it fought against the commune of Rome, and in 1244, was besieged by Frederick II. A feudal possession, first of the prefects of Vico, and then of the Orsini, of the Colonnas, and of Cesar Borgia, from 1537 to 1545, it was erected into a duchy in favour of Peter Louis Farnese; and when the latter was transferred to Parma, Nepi returned to immediate dependence on the Holy See. In 1798 the French set fire to

the cathedral and to the episcopal palace, in which last edifice valuable archives were lost. The existence of an early Christian cemetery witnesses the great antiquity of the Church of Nepi, which venerates, as its evangelizer, St. Ptolemaeus, who, it is claimed, was a disciple of the Apostles. In 419, Eulalius, competitor of Pope St. Boniface I, was made Bishop of Nepi; Bishop Paulus was sent as visitor to Naples by St. Gregory the Great; Bishop Stephanus, in 868, was one of the presidents and papal legates of the Council of Constantinople against Photius. The sees of Nepi and Sutri were united in 1435.

Sutri is placed, like a hanging garden, upon a steep hill on the Cassian Way; the ancient town occupied two hills connected by a bridge, and its walls, built of great tufa rocks, are yet to be seen. In the neighbourhood, there are many Etruscan tombs; the ancient amphitheatre, hewn out of the solid rock, is a remarkable work. The cathedral is of the thirteenth century, modernized by frequent alterations. Santa Maria della Grotta is an interesting church. The history of Sutri in antiquity resembles that of Nepi, for Sutri also was taken by the Lombards in 569, but was retaken by the exarch Romanus; Luitprand likewise took the town in 726, but in the following year restored it to "St. Peter". As the city is on the Cassian Way not far from Rome, it was, as a rule, the last halting-place of the German emperors on their way to the city, and sometimes they received there the papal legate. Two famous synods were held at Sutri, one in 1046, at which Sylvester II was deposed, and resigned the tiara; the other in 1059, was held against Benedict IX. Here also the agreement of 1111 between Paschal II and the emperor Henry V was concluded. In 1120, the antipope Gregory VIII withdrew to Sutri, and was besieged there by Calixtus II; he was finally delivered up to the pope by the Sutrians (1121). After this, the possession of the city was frequently contested by the Guelph counts of Anguillara and the Ghibelline prefects of Vico, especially in 1264. Sutri was contained in the Duchy of Nepi. This town also has an ancient Christian cemetery where the body of St. Romanus was found, who is the patron of the city; the cathedral possesses a statue of him by Bernini. Among the martyrs of Sutri is St. Felix (about 275). The first bishop of known date was Eusebius (465); other bishops were Martinus, or Marinus, who was sent as ambassador to Otho I in 963; Benedictus, who, in 975, became Pope Benedict VII; the famous Bishop Bonitho (Bonizo), historian of the Gregorian epoch, who was driven from his diocese by the anti-papal faction and later was made Bishop of Piacenza. The diocese was united to Nepi under Bishop Luke de Tartaris (1345); under Pomponius Cesi (1519), who became a cardinal, the cemetery of St. Savinilla was discovered; Michael Ghislieri (1556) became Pope St. Pius V; Joseph Chianti (1701) founded the seminary; Camillus Simeoni (1782) was exiled by the French and became a cardinal. In the territory of this diocese is the city of Braciano on the lake of the same name (*lacus Sabazius*); it is believed by some to be the ancient *Forum Claudii*, the bishop of which was at the council of Pope Melchiades in 303; others identify the *Forum Claudii* with Oriolo, which is in the Diocese of Viterbo. The united sees of Nepi and Sutri are immediately dependent upon Rome; they have 31 parishes, with 42,000 inhabitants, 13 religious houses of men, and 13 of women, 10 of which maintain schools.

CAPPILLETTI, *Le Chiese d'Italia*, V; RANCHIACI, *Memorie storiche della città di Nepi*, etc. (Todi, 1845-47); NISPI-LANDI, *L'antica città di Sutri* (Rome, 1887).

U. BENTIGNI.

Nepveu, FRANCIS, writer on ascetical subjects, b. at St. Malo, 29 April, 1639; entered the novitiate of the Society of Jesus 12 October, 1654, when but fifteen years old. Successively professor of Grammar, of Humanities and Rhetoric for six years, and of Philos-

ophy for eight years, he was afterwards employed in the government. In 1679 he was made superior at Nantes; in 1684 rector at Vannes; in 1694 and 1700 rector at Orleans; in 1697 at Rouen; in 1704 at Rennes where he was director of retreats until his death, 17 February, 1708. Father Nepveu, described as a man of great zeal and intelligence, wrote voluminously on ascetical subjects, and some of his works have gone through many editions, having been translated into various languages. Among his more important works are numbered the following: "De l'amour de Notre Seigneur Jésus-Christ, et des Moyens de l'acquérir" (Nantes, 1684), has gone through no less than fourteen editions in France, selections from it were printed in the "Petite Bibliothèque Chrétienne", issued by A. Vromont, Brussels, 1893, and it has been translated into German, Italian (six editions), Spanish, Flemish, Polish, and English, ed. by the Rev. Henry J. Coleridge, S.J. and issued by Burns and Oates, 1869; "Retraite selon l'esprit et la méthode de Saint Ignace" (Paris, 1677, 514 pp.), also numbers fourteen editions of the original and translations have been made into German, Spanish, Flemish, Italian, and six editions in Latin; "Méthode facilitée d'oraison, réduite en pratique" (Nantes), went through more than twelve editions in French and was several times issued in Spanish; "Pensées et Réflexions Chrétiennes pour tous les jours de l'année" (4 vols., Paris, 1695), had eighteen French editions, the latest by Guyot, Paris, 1850, 640 pp., and went through some eleven editions in foreign languages; "L'esprit du Christianisme ou la Conformité du Chrétien avec Jésus-Christ" (Paris, 1700, 380 pp.), went through twenty-four editions, and three editions of extracts therefrom appeared in Belgium, also translated into foreign languages, ten editions coming out in Italian. A full list of Father Nepveu's works, which numbered nearly a score, may be had in the authorities cited below.

SOMMERVOGEL, *Bibliothèque de la Compagnie de Jésus*, V, 1626; DE BACKER, *Bibliothèque des Écrivains de la Compagnie de Jésus*, first series, 509.

EDWARD F. GARESCHE.

Nereus and Achilleus, Domitilla and Pancratius, SAINTS AND MARTYRS.—The commemoration of these four Roman saints is made by the Church on 12 May, in common, and all four are named in the Proper of the Mass as martyrs. The old Roman lists, of the fifth century, and which passed over into the Martyrologium Hieronymianum, contained the names of the two martyrs Nereus and Achilleus, whose grave was in the Catacomb of Domitilla on the Via Ardeatina; in the same calendar was found the name of St. Pancratius, whose body rested in a catacomb of the Via Aurelia. The notice in the more complete version given by the Berne Codex, runs as follows: "IIII id. Maii, Romæ in cæmeterio Prætextati natale Nerei et Achillei fratrum, et natale sci. Pancrati via Aurelia miliario secundo" (On 12 May at Rome in the cemetery of Prætextatus [an evident error for Domitilla] the natal day of Nereus and Achilleus, and the natal day of St. Pancratius, on the Aurelian Way at the second milestone"; ed. de Rossi-Duchesne, *Acta SS.*, Nov., II, [59]). In the invocation of the Mass for their feast, in the "Sacramentarium Gelasianum", the names of Nereus and Achilleus alone are mentioned, and this is because only their invocation in the Mass was entered in the collection, the feast of St. Pancratius being celebrated in the church built over his grave on the Via Aurelia. In the Mass of his festival, the formula of which is unknown to us, his name, without doubt, was alone mentioned. In the fourth and following centuries there was celebrated on 12 May in both places, at the grave of Saints Nereus and Achilleus on the Via Ardeatina, and at that of St. Pancratius on the Via Aurelia, a special votive Mass. The Itineraries of the graves of the Roman martyrs, written in the seventh century, are

unanimous in their indication of the resting-place of these saints (de Rossi, "Roma sotterranea", I, 180-83). The church which was erected in the fourth century over the grave of St. Pancratius, stands today in somewhat altered style. The legend describing the martyrdom of the saint is of later origin, and not reliable historically; it is probable that he was put to death in the persecution of Valerian (257-58) or in that of Diocletian (304-06).

The church built over the grave of Sts. Nereus and Achilleus in the Via Ardeatina, is of the latter part of the fourth century; it is a three-naved basilica, and was discovered by de Rossi in the Catacomb of Domitilla. Amongst the numerous objects found in the ruins were two pillars which had supported the *giborium* ornamented with sculptures representing the death of the two saints by decapitation; one of these pillars is perfectly preserved, and the name of Achilleus is carved upon it. There was also found a large fragment of a marble slab, with an inscription composed by Pope Damasus, the text of which is well-known from an ancient copy. This oldest historical mention of the two saints (Weyman, "Vier Epigramme des hl. Papstes Damasus", Munich, 1905; de Rossi, "Inscriptiones christianæ", II, 31; Ihm, "Damasii epigrammata", Leipzig, 1895, 12, no. 8) tells how Nereus and Achilleus as soldiers were obedient to the tyrant, but suddenly being converted to Christianity, joyfully resigned their commission, and died the martyr's death; as to the date of their glorious confession we can make no inference. The acts of these martyrs, legendary even to a romantic degree, have no historical value for their life and death; they bring no fewer than thirteen different Roman martyrs into relation, amongst them even Simon Magus, according to the apocryphal Petrine Acts, and place their death in the end of the first and beginning of the second centuries. These Acts were written in Greek and Latin; according to Achelis (see below) the Greek was the original text, and written in Rome in the sixth century; Schaefer (see below) on the other hand holds the Latin to have been the older version, and seeks to prove that it emanated from the first half of the fifth century; so remote a date is improbable, and the sixth century is to be preferred as the source of the Acts. According to these legends Nereus and Achilleus were eunuchs and chamberlains of Flavia Domitilla, a niece of the Emperor Domitian; with the Christian virgin they had been banished to the island of Pontia, and later on beheaded in Terracina. The graves of these two martyrs were on an estate of the Lady Domitilla near the Via Ardeatina, close to that of St. Petronilla.

The author of this legend places the two saints quite differently from Pope Damasus, in his poem: as Nereus and Achilleus were buried in a very ancient part of the catacomb of Domitilla, built as far back as the beginning of the second century, we may conclude that they are among the most ancient martyrs of the Roman Church, and stand in very near relation to the Flavian family, of which Domitilla, the foundress of the catacomb, was a member. In the Epistle to the Romans, St. Paul mentions a Nereus with his sister, to whom he sends greetings (Rom. xvi, 15), perhaps even the martyr was a descendant of this disciple of the Apostle of the Gentiles. Owing to the purely legendary character of these Acts, we cannot use them as an argument to aid in the controversy as to whether there were two Christians of the name of Domitilla in the family of the Christian Flavian, or only one, the wife of the Consul Flavius Clemens (see FLAVIA DOMITILLA). As to other martyrs of the name Nereus, who are especially noted in the old martyrologies as martyrs of the faith in Africa, or as being natives of that country (e.g., in the Martyrologium Hieronymianum, 11 May, 15 or 16 October, 16 Nov.) though there is one of the name in the present Roman Martyrology under date of 16 Oct., nothing more is known.

J. P. KIRSCH.

Neri, ANTONIO, Florentine chemist, b. in Florence in the sixteenth century; d. 1614, place unknown. We have but few details of his life; Dr. Merret, an English physician, who translated his work only fifty years after its first publication, states in his preface that he could find no account whatever of the author. It is known however that he was a priest and devoted to the study of chemistry: he travelled somewhat extensively in Italy and Holland, and during these journeys gained a great deal of information concerning the manufacture of glass and its treatment for various purposes. This knowledge he gave to the world in his book "*L'Arte Vetraria*", which for a long time formed the basis of most other works on this subject. It is a book rich in detail, giving the then known methods of making glass, of colouring it, and of imitating precious stones. The original work has appeared in three editions: Florence, 1612; Florence, 1661; and Milan, 1817. In 1662 Merret translated it into Latin, adding to it notes and a commentary of his own: this was published at Amsterdam in 1668 and again in 1681. It was translated into German by Johann Kunckel, who published a revised and enlarged edition of it in 1689. About a century later there appeared the French edition, "*Art de la Verrerie de Neri, Merret et Kunckel*", etc., "*Traduits de l'Allemand par M. D****" (Paris, 1752).

EDWARD C. PHILLIPS.

Nerinckx, CHARLES, missionary priest in Kentucky, founder of the Sisters of Loretto at the Foot of the Cross, b. in Herfelingen, Belgium, 2 Oct., 1761; d. at Ste. Genevieve, Mo., 12 August, 1824. He was the eldest of the fourteen children of Dr. Sebastian Nerinckx and Petronilla Langendries. He studied at Enghien and Gheel, made his philosophy at Louvain, and entered the theological seminary of Mechlin in 1781. Ordained in 1785, he became vicar at the cathedral of Mechlin, where he was noted for his zeal among the working classes. In 1794 he obtained the pastoral charge of Everberg-Meerbeke, where the devotion to the spiritual interest of his people developed that deep love for children which later characterized his missionary labours in America. During his incumbency he wrote several theological treatises the manuscripts of which are still preserved in the parish archives. The French Directoire resented his activity and ordered his arrest, but he eluded the *gens d'armes* (1797) and for four years was in hiding at the Hospital of Dendermonde, where he continued his ministry amid continual dangers. He came to America in 1804, Bishop Carroll assigning him to Kentucky in 1805. The district given to his charge was over two hundred miles in length and covered nearly half the State. He lived in the saddle; every year of his apostolate was marked by the organization of a new congregation or the building of a church. Of all the missionaries who worked in that field none deserves so well the title of "Apostle of Kentucky". His direction of souls was so efficient

and enlightened that to this very day the grandchildren of his penitents are still prominently known for the earnestness of their faith and the solidity of their virtue. His well-deserved fame reached Baltimore and Bishop Carroll induced the Holy See to appoint him Bishop of New Orleans, but Father Nerinckx refused the honour. The Catholic education of children was his most cherished work and to secure its permanency he founded the Congregation of the Sisters of Loretto in 1812. He crossed the ocean twice to secure help and labourers for the missions; he thus became instrumental in bringing from Belgium the first Jesuits who settled in the West, notably Father De Smet and Bishop Van de Velde. He brought to America a number of paintings which are to this day the most valuable art treasures of the Diocese of Louisville. Persecution was not wanting to him, and for the sake of peace he went to Missouri in 1824, intending to consecrate the last years of his life to the Indians, but death overtook him at Ste. Genevieve. His mortal remains were brought back to Loretto. The Sisters erected a marble statue of their founder at the mother-house in 1910.

CAMILLUS P. MAES.

Nero, 54-68, the last Roman emperor of the Julian-Claudian line, was the son of Domitius Ahenobarbus and Julia Agrippina, niece of Emperor Claudius. After the violent death of his first wife, Valeria Messalina, Emperor Claudius married Julia, adopted her son Nero and gave him in marriage his own daughter, Octavia. Nero's mother had a mind to commit any crime to put him on the throne, and to prepare him for this station she had L. Annaeus Seneca appointed his tutor, and caused the freedman Afranius Burrus, a rough but experienced soldier, to be made commander of the Prætorian guard. These men were the advisers and chief supporters of Nero on his becoming emperor, after the sudden death of Claudius. Nero was born in Antium on 15 December, A. D. 37, and was seventeen years old when he became emperor. He believed himself to be a great singer and poet. All the better dispositions of his nature had been stifled by his sensuality and moral perversity. Agrippina had expected to be a partner of her son in the government, but owing to her autocratic character, this lasted only a short time. The first years of Nero's reign, under the direction of Burrus and Seneca, the real holders of power, were auspicious in every way. A series of regulations either abrogated or lessened the hardships of direct taxation, the arbitrariness of legislation and provincial administration, so that Rome and the empire were delighted, and the first five years of Nero's government were accounted the happiest of all time, regarded by Trajan as the best of the imperial era.

Under Claudius, the Armenians and Parthians had revolted, and the proconsul had been unable to uphold the prestige of the Roman arms. Seneca advised Nero to assert his rights over Armenia, and Domitius Corbulo was recalled from Germany and Britain to go with fresh troops to Cappadocia and Galatia, where he stormed the two Armenian capitals, Artaxata and Tigranocerta in A. D. 59 and made his headquarters in the city of Nisibis. King Tivdates was dethroned, and Tigranes, Nero's favourite, made vassal in his stead. But the position of Tigranes was insecure, and Vologeses, King of the Parthians, who had previously retired from Armenia and given hostages to the Romans, rekindled the war, defeated the new proconsul Patus, and forced him to capitulate. Corbulo again took command and recognized Tivdates as king on condition that he should lay down his crown before the image of Nero, and acknowledge his lordship over Armenia as granted by Nero; this so flattered the

emperor that, ascending the rostrum in the Forum Romanum, he himself placed the crown on the head of Tivيدات. At the same time a dangerous war broke out in Britain. Strong camps and forts had been built there in the first years of Nero's reign, and the proconsul, Suetonius Paulinus, had undertaken here, as had Corbulo in the past, to extend the frontiers of the Roman conquests. With the native population complaining of excessive taxation, conscription, the avarice of Roman officials, came suddenly the summons of the heroic Queen of the Iceni, Boadicea, bidding her tribes to free themselves from Roman tyranny (A. D. 61). The procurator, Decianus Catus, had driven this noble woman to despair by his odious and cruel greed; and when this oppression and the shame of her own and her daughter's violation became known to her people and the neighbouring tribes, their wrath and hopes for revenge alone beset them. The Roman camps were destroyed, the troops surprised and slain, and more than 70,000 colonists paid the penalty of their oppression by the loss of home and life. London was burned to the ground, and the proconsul, Suetonius Paulinus, came but slowly to the help of the remaining colonists from his incursion upon the island of Mona. On his arrival was fought the battle of Deva (Dee), in which Britain succumbed to Roman discipline, and was again subjugated with the aid of fresh troops from Germany.

After the death of Claudius, Agrippina had caused to be poisoned her old enemy Narcissus, the protector of Britannicus, and Junius Silanus, because of his Julian kinship. Pallas, the powerful finance minister, and her most valiant adherent, was deprived of his office, and her personal influence in the government constantly lessened. That she might regain her power, she courted the neglected Octavia, and sought to make the impotent Britannicus a rival of her son; this induced Nero to order the murder of Britannicus, who was poisoned at a banquet amidst his own family and friends, Burrus and Seneca both consenting to the crime. When Nero had seduced Poppæa Sabina, the wife of his friend Salvius Otho, she resented playing the rôle of concubine and aspired to that of empress. This brought about a crisis between son and mother, for with all her vices Agrippina had never lacked a certain external dignity, and had expressed in her conduct the sentiment of imperial power. Now when through hatred of Poppæa she undertook to protect the interests of Octavia, to whom indeed Nero owed his throne, the son determined to rid himself of his mother. He invited her to a pleasure party at Baia, and the ship which was to convey her out to sea was so constructed as to sink at a given order. This attempt having miscarried, he ordered that she should be clubbed to death in her country house, by his freedmen (A. D. 59). The report was then spread abroad that Agrippina had sought the life of her son, and Seneca so dishonoured his pen as to write to the senate a brief condemning the mother. One man alone of all the Senate had the courage to leave his seat when this letter was read, Thrasea Pætus the philosopher. Burrus dying in A. D. 62, left Seneca no longer able to withstand the influence of Poppæa and of Sophonius Tigellinus, Prefect of the Prætorian guards. He retired into private life, and new crimes were conceived and effected.

Sulla and Plautus, great-nephews of Augustus, being in exile, were beheaded by Nero's command, and his marriage with Octavia being annulled, she was banished to Campania. The populace resented deeply the maltreatment of Octavia, and the tumults which occurred in consequence served only to increase the fear and hatred of Poppæa. Octavia was sent to the island of Pandataria, and there beheaded. Poppæa now assumed the title of Augusta, her image was stamped upon the coin of the Roman State, and her opponents were murdered by dagger or poison. Nero

with his mates rioted by night through the city, attacking men, assaulting women, and filled the vacant positions at the imperial Court from the dregs of the city. In the civic administration extravagance was unbounded, in the court luxury unbridled. Financial deficits grew over night; the fortunes of those who had been condemned at law, of freedmen, of all pretenders by birth filled the depleted exchequer, and the coin was deliberately debased. All efforts to stem these disasters were vain, and the general misery had reached its highest, when in A. D. 64 occurred the terrible conflagration which burnt entirely three, and partly seven, of the fourteen districts into which Rome was divided. The older authors, Tacitus and Suetonius, say clearly, and the testimony of all later heathen and Christian writers concurs with them, that Nero himself gave the order to set the capital on fire, and that the people at large believed this report. Nero was in Antium when he heard that Rome was in flames, he hastened thither, and is said to have ascended the tower of Mæcenæ, and looking upon the sea of flame in which Rome lay engulfed, to have sung on his lyre the song of the ruin of Ilium.

In place of the old city with its narrow and crooked streets, Nero planned a new residential city, to be called Neronia. For six days the fire ravaged the closely built quarters, and many thousands perished in the flames; countless great works of art were lost in the ruins. Informers, bribed for the purpose, declared that the Christians had set Rome on fire. Their doctrine of the nothingness of earthly joys in comparison with the delights of immortal souls in heaven was an enduring reproof to the dissolute emperor. There began a fierce persecution throughout the empire, and through robbery and confiscation the Christians were forced to pay in great part for the building of the new Rome. In this persecution Saints Peter and Paul were martyred in Rome in A. D. 67. Broad streets and plazas were planned by the imperial architects; houses of stone arose where before stood those of lime and wood; the *Domus aurea*, enclosed in wonderful gardens and parks, in extent greater than a whole former town-quarter astonished men by its splendour and beauty. In order to compass the colossal expenditures for these vast undertakings, the temples were stripped of their works of art, of their gold and silver votive offerings, and justly or unjustly the fortunes of the great families confiscated. The universal discontent thus aroused resulted in the conspiracy of Calpurnius Piso. The plot was discovered, and the conspirators and their families and friends condemned to death. Amongst the most noted of them were Seneca, Lucan, Petronius, and the Stoic Thrasea Pætus, of whom Tacitus said that he was virtue incarnate, and one of the few whose courage and justice had never been concealed in presence of the murderous Cæsar. Poppæa too, who had been brutally kicked by her husband, died, with her unborn child soon after. Finally the emperor started on a

EMPEROR NERO
Vatican Museum, Rome

pleasure tour through lower Italy and Greece; as actor, singer, and harp player he gained the scorn of the world; he heaped upon his triumphal chariots the victor-crowns of the great Grecian games, and so dishonoured the dignity of Rome that Tacitus through respect for the mighty ancestors of the Cæsar would not once mention his name.

Outbreaks in the provinces and in Rome itself now presaged the approaching overthrow of the Neronian tyranny. Julius Vindex, Proconsul of Gallia Lugdunensis, with the intent of giving Gaul an independent and worthy government, raised the banner of revolt, and sought an alliance with the Proconsuls of Spain and the Rhine Provinces. Sulpicius Galba, Proconsul of Hispania Tarraconensis, who was ready for the change, agreed to the plans presented to him, declared his fealty to Nero ended, and was proclaimed emperor by his own army. L. Verginius Rufus, Proconsul of Upper Germany, was offered the principate by his troops, and led them against the usurper Vindex. In a battle at Vesontio (Besançon) Vindex was defeated, and fell by his own sword. In Rome the prætorians dazzled by the exploits of Galba deserted Nero, the Senate declared him the enemy of his country, and sentenced him to the death of a common murderer. Outlawed and forsaken, he committed suicide in the house of one of his freedmen, June, A. D. 68. At once and everywhere Sulpicius Galba was accepted as emperor. The sudden disappearance of Nero, whose enemies had spread the report that he had fled to the East, gave rise to the later legend that he was still living, and would return to sit again upon the imperial throne.

KARL HOEBER.

Nerses I-IV, Armenian patriarchs.—**NERSES I.**, surnamed the Great, d. 373. Born of the royal stock, he spent his youth in Cæsarea where he married Sanducht, a Mamikonian princess. After the death of his wife, he was appointed chamberlain to King Arshak of Armenia. A few years later, having entered the ecclesiastical state, he was elected *catholicos*, or patriarch, in 353. His patriarchate marks a new era in Armenian history. Till then the Church had been more or less identified with the royal family and the nobles; Nerses brought it into closer connexion with the people. At the Council of Ashtishat he promulgated numerous laws on marriage, fast days, and Divine worship. He built schools and hospitals, and sent monks throughout the land to preach the Gospel. Some of these reforms drew upon him the king's displeasure, and he was exiled, probably to Edessa. Upon the accession of King Bab (369) he returned to his see. Bab proved a dissolute and unworthy ruler and Nerses forbade him entrance to the church. Under the pretence of seeking a reconciliation, Bab having invited Nerses to his table poisoned him.

NERSES II, said to have been born at Aschdarag in Bagrevand, was patriarch from 548 to 557. He was a Jacobite Monophysite (cf. Ter-Minassiantz, 163-64). Under him was held the Second Council of Tvin or Dovin (554).

NERSES III of Ischkan, surnamed Schinogh, "the church builder", was elected patriarch in 641; d. 661. He lived in days of political turmoil. The Armenians had to choose between the Greeks and the Persians, and their new conquerors, the Arabs. Nerses remained friendly to the Greeks, whilst the military chiefs sided with the Arabs. Constans II (642-48) hastened into Armenia to punish the rebels and subject them to the Greek Church. Nerses and a number of bishops went forth to meet him, and declared they accepted the Council of Chalcedon. Disagreement with the satrap Theodorus compelled Nerses to withdraw from the administration of the patriarchate from 652 to 658.

NERSES IV surnamed Kliaentsi from the place of his birth, and Schnorkhali, "the Gracious", from the elegance of his writings, b. at Hromela, Cilicia; d. 1173. He was educated by his grand uncle, Patriarch Gregory Vkaiazer and afterwards by the *varlabed*, or doctor of theology, Stephen Manuk. Having been consecrated bishop by his brother, Patriarch Gregory III, he was sent to preach throughout Armenia. He was present at the Latin Council of Antioch in 1141 and was elected patriarch in 1166. Nerses, together with Emperor Manuel Comnenus, laboured hard to unite the Greek and Armenian Churches. The union, however, was never consummated, the majority of the bishops remaining obstinate. Nerses is regarded as one of the greatest Armenian writers. His prose works include: "Prayers for every hour of the day" (Venice, 1822); his "Synodal letter" and five "Letters" to Manuel Comnenus (tr. Latin by Capelleti, Venice, 1833). He wrote in verse: "Iesu Orti", a Bible history; an "elegy" on the capture of Edessa; a "History of Armenia"; two "Homilies", and many hymns. In the "Iesu Orti", the elegy on Edessa, and the first letter to Manuel Comnenus, we find testimonies to the primacy of the Bishop of Rome.

A. A. VASCHALDE.

Nerses of Lambron, b. 1153 at Lambron, Cilicia; d. 1198; son of Oschin II, prince of Lambron and nephew of the patriarch, Nerses IV. Nerses was well versed in sacred and profane sciences and had an excellent knowledge of Greek, Latin, Syriac, and probably Coptic. Ordained in 1169, he was consecrated Archbishop of Tarsus in 1176 and became a zealous advocate of the union of the Greek and Armenian Churches. In 1179 he attended the Council of Hromela, in which the terms of the union were discussed; his address at this council is considered a masterpiece of eloquence and style. The union was decided upon but never consummated owing to the death of Emperor Manuel Comnenus in 1180. Manuel's successors abandoned the negotiations and persecuted the Armenians, who dissatisfied with the Greeks now turned to the Latins. Leo II, Prince of Cilicia, desirous to secure for himself the title of King of Armenia, sought the support of Celestine III and of Emperor Henry VI. The pope received his request favourably, but made the granting of it dependent upon the union of Cilicia to the Church of Rome. He sent Conrad, Archbishop of Mayence, to Tarsus, and the terms of union having been signed by Leo and twelve of the bishops, among whom was Nerses, Leo was crowned King of Armenia, 6 January, 1198. Nerses died six months afterwards, 17 July. Nerses is justly regarded as one of the greatest writers in Armenian literature. He deserves fame as poet, prose writer, and translator. He wrote an elegy on the death of his uncle, Nerses IV, and many hymns. His prose works include his oration at the Council of Hromela (tr. Italian by Aucher, Venice, 1812; tr. German by Neumann, Leipzig, 1834); Commentaries on the Psalms, Proverbs, Ecclesiastes, Wisdom, and the Minor Prophets; an explanation of the liturgy; a letter to Leo II and another to Uskan, a monk of Antioch; and two homilies. He translated into Armenian the Rule of St. Benedict; the "Dialogues" of Gregory the Great; a life of this saint; and the letters of Lucius III and Clement III to the patriarch, Gregory. From the Syriac he trans-

lated the "Homilies" of Jacob of Serugh and, probably from the Coptic, the "Life of the Fathers of the Desert". Some writers ascribe to him an Armenian version of a commentary of Andreas of Caesarea on the Apocalypse. Nerses in his original writings frequently refers to the primacy and infallibility of the pope.

Nesqually. See SEATTLE, DIOCESE OF.

Nestorius and Nestorianism.—I. THE HERESARCH.—Nestorius, who gave his name to the Nestorian heresy, was b. at Germanicia, in Syria Euphratensis (date unknown); d. in the Thebaid, Egypt, c. 451. He was living as a priest and monk in the monastery of Euprepus near the walls, when he was chosen by the Emperor Theodosius II to be Patriarch of Constantinople in succession to Sisinnius. He had a high reputation for eloquence, and the popularity of St. Chrysostom's memory among the people of the imperial city may have influenced the Emperor's choice of another priest from Antioch to be court bishop. He was consecrated in April, 428, and seems to have made an excellent impression. He lost no time in showing his zeal against heretics. Within a few days of his consecration Nestorius had an Arian chapel destroyed, and he persuaded Theodosius to issue a severe edict against heresy in the following month. He had the churches of the Macedonians in the Hellespont seized, and took measures against the Quartodecimans who remained in Asia Minor. He also attacked the Novatians, in spite of the good reputation of their bishop. Pelagian refugees from the West, however, he did not expel, not being well acquainted with their condemnation ten years earlier. He twice wrote to Pope St. Celestine I for information on the subject. He received no reply, but Marius Mercator, a disciple of St. Augustine, published a memoir on the subject at Constantinople, and presented it to the emperor, who duly proscribed the heretics. At the end of 428, or at latest in the early part of 429, Nestorius preached the first of his famous sermons against the word *Theotokos*, and detailed his Antiochian doctrine of the Incarnation. The first to raise his voice against it was Eusebius, a layman, afterwards Bishop of Dorylæum and the accuser of Eutyches. Two priests of the city, Philip and Proclus, who had both been unsuccessful candidates for the patriarchate, preached against Nestorius. Philip, known as Sidetes, from Side, his birthplace, author of a vast and discursive history now lost, accused the patriarch of heresy. Proclus (who was to succeed later in his candidature) preached a flowery, but perfectly orthodox, sermon, yet extant, to which Nestorius replied in an extempore discourse, which we also possess. All this naturally caused great excitement at Constantinople, especially among the clergy, who were clearly not well disposed towards the stranger from Antioch. St. Celestine immediately condemned the doctrine. Nestorius had arranged with the emperor in the summer of 430 for the assembling of a council. He now hastened it on, and the summons had been issued to patriarchs and metropolitans on 19 Nov., before the pope's sentence, delivered through Cyril of Alexandria, had been served on Nestorius (6 Dec.). At the council Nestorius was condemned, and the emperor, after much delay and hesitation, ratified its finding. It was confirmed by Pope Sixtus III.

The lot of Nestorius was a hard one. He had been handed over by the pope to the tender mercies of his rival, Cyril; he had been summoned to accept within ten days under pain of deposition, not a papal definition, but a series of anathemas drawn up at Alexandria under the influence of Apollinarian forgeries. The whole council had not condemned him, but only

a portion, which had not awaited the arrival of the bishops from Antioch. He had refused to recognize the jurisdiction of this incomplete number, and had consequently refused to appear or put in any defence. He was now thrust out of his see by a change of mind on the part of the feeble emperor. But Nestorius was proud: he showed no sign of yielding or of coming to terms; he put in no plea of appeal to Rome. He retired to his monastery at Antioch with dignity and apparent relief. His friends, John of Antioch and his party, deserted him, and at the wish of the Emperor, at the beginning of 433, joined hands with Cyril, and Theodoret later did the same. The bishops who were suspected of being favourable to Nestorius were deposed. An edict of Theodosius II, 30 July, 435, condemned his writings to be burnt. A few years later Nestorius was dragged from his retirement and banished to the Oasis. He was at one time carried off by the Nubians (not the Blemmyes) in a raid, and was restored to the Thebaid with his hand and one rib broken. He gave himself up to the governor in order not to be accused of having fled.

The recent discovery of a Syriac version of the (lost) Greek apology for Nestorius by himself has awakened new interest in the question of his personal orthodoxy. The (mutilated) manuscript, about 800 years old, known as the "Bazaar of Heraclides", and recently edited as the "Liber Heraclidis" by P. Bedjan (Paris, 1910), reveals the persistent odium attached to the name of Nestorius, since at the end of his life he was obliged to substitute for it a pseudonym. In this work he claims that his faith is that of the celebrated "Tome", or letter, of Leo the Great to Flavian, and excuses his failure to appeal to Rome by the general prejudice of which he was the victim. A fine passage on the Eucharistic Sacrifice which occurs in the "Bazaar" may be cited here: "There is something amiss with you which I want to put before you in a few words, in order to induce you to amend it, for you are quick to see what is seemly. What then is this fault? Presently the mysteries are set before the faithful like the mess granted to his soldiers by the king. Yet the army of the faithful is nowhere to be seen, but they are blown away together with the catechumens like chaff by the wind of indifference. And Christ is crucified in the symbol [*κατὰ τὸν τύπον*], sacrificed by the sword of the prayer of the Priest; but, as when He was upon the Cross, He finds His disciples have already fled. Terrible is this fault,—a betrayal of Christ when there is no persecution, a desertion by the faithful of their Master's Body when there is no war" (Loofs, "Nestoriana", Halls, 1905, p. 341).

The writings of Nestorius were originally very numerous. As stated above, the "Bazaar" has newly been published (Paris, 1910) in the Syriac translation in which alone it survives. The rest of the fragments of Nestorius have been most minutely examined, pieced together and edited by Loofs. His sermons show a real eloquence, but very little remains in the original Greek. The Latin translations by Marius Mercator are very poor in style and the text is ill preserved. Batiffol has attributed to Nestorius many sermons which have come down to us under the names of other authors: three of Athanasius, one of Hippolytus, three of Amphilocheus, thirty-eight of Basil of Seleucia, seven of St. Chrysostom; but Loofs and Baker do not accept the ascription. Mercati has pointed out four fragments in a writing of Innocent, Bishop of Maronia (ed. Amelli in "Spicil. Cassin.", I, 1887), and Armenian fragments have been published by Lüdtkke.

II. THE HERESY.—Nestorius was a disciple of the school of Antioch, and his Christology was essentially that of Diodorus of Tarsus and Theodore of Mopsuestia, both Cilician bishops and great opponents of Arianism. Both died in the Catholic Church. Dio-

dorus was a holy man, much venerated by St. John Chrysostom. Theodore, however, was condemned in person as well as in his writings by the Fifth General Council, in 553. In opposition to many of the Arians, who taught that in the Incarnation the Son of God assumed a human body in which His Divine Nature took the place of soul, and to the followers of Apollinarius of Laodicea, who held that the Divine Nature supplied the functions of the higher or intellectual soul, the Antiochenes insisted upon the completeness of the humanity which the Word assumed. Unfortunately, they represented this human nature as a complete man, and represented the Incarnation as the assumption of a man by the Word. The same way of speaking was common enough in Latin writers (*assumere hominem, homo assumptus*) and was meant by them in an orthodox sense; we still sing in the Te Deum: "Tu ad liberandum suscepitur hominem", where we must understand "ad liberandum hominem, humanam naturam suscepisti". But the Antiochene writers did not mean that the "man assumed" (ὁ λεγόμενος ἄνθρωπος) was taken up into one hypostasis with the Second Person of the Holy Trinity. They preferred to speak of *συνάφεια*, "junction", rather than *ένωσις*, "unification", and said that the two were one person in dignity and power, and must be worshipped together. The word *person* in its Greek form *πρόσωπον* might stand for a juridical or fictitious unity: it does not necessarily imply what the word *person* implies to us, that is, the unity of the subject of consciousness and of all the internal and external activities. Hence we are not surprised to find that Diodorus admitted two Sons, and that Theodore practically made two Christs, and yet that they cannot be proved to have really made two subjects in Christ. Two things are certain: first, that, whether or no they believed in the unity of subject in the Incarnate Word, at least they explained that unity wrongly; secondly, that they used most unfortunate and misleading language when they spoke of the union of the Manhood with the Godhead—language which is objectively heretical, even were the intention of its authors good.

Nestorius, as well as Theodore, repeatedly insisted that he did not admit two Christs or two Sons, and he frequently asserted the unity of the *πρόσωπον*. On arriving at Constantinople he came to the conclusion that the very different theology which he found rife there was a form of Arian or Apollinarian error. In this he was not wholly wrong, as the outbreak of Eutychianism twenty years later may be held to prove. In the first months of his pontificate he was implored by the Pelagian Julian of Eclanum and other expelled bishops of his party to recognize their orthodoxy and obtain their restoration. He wrote at least three letters to the pope, St. Celestine I, to inquire whether these petitioners had been duly condemned or not, but he received no reply, not (as has been too often repeated) because the pope imagined he did not respect the condemnation of the Pelagians by himself and by the Western emperor, but because he added in his letters, which are extant, denunciations of the supposed Arians and Apollinarians of Constantinople, and in so doing gave clear signs of the Antiochene errors soon to be known as Nestorian. In particular he denounced those who employed the word *θεοτόκος*, though he was ready to admit the use of it in a certain sense: "Ferri tamen potest hoc vocabulum propter ipsum considerationem, quod solum nominetur de virgine hoc verbum hoc propter inseparabile templum Dei Verbi ex ipsa, non quia mater sit Dei Verbi; nemo enim antiquiorem se parit." Such an admission is worse than useless, for it involves the whole error that the Blessed Virgin is not the mother of the Second Person of the Holy Trinity. It is therefore unfortunate that Loofs and others who defend Nestorius should appeal to the frequency with which he repeated

that he could accept the *θεοτόκος* if only it was properly understood. In the same letter he speaks quite correctly of the "two Natures which are adored in the one Person of the Only-begotten by a perfect and unconfused conjunction", but this could not palliate his mistake that the Blessed Virgin is mother of one nature, not of the person (a son is necessarily a person not a nature), nor the fallacy: "No one can bring forth a son older than herself". The deacon Leo, who was twenty years later as pope to define the whole doctrine, gave these letters to John Cassian of Marseilles, who at once wrote against Nestorius his seven books, "*De incarnatione Christi*". Before he had completed the work he had further obtained some sermons by Nestorius, from which he quotes in the later books. He misunderstands and exaggerates the teaching of his opponent, but his treatise is important because it stereotyped once for all a doctrine which the Western world was to accept as Nestorianism. After explaining that the new heresy was a renewal of Pelagianism and Ebionitism, Cassian represents the Constantinopolitan patriarch as teaching that Christ is a mere man (*homo solitarius*) who merited union with the Divinity as the reward of His Passion. Cassian himself brings out quite clearly both the unity of person and the distinction of the two natures, yet the formula "Two Natures and one Person" is less plainly enunciated by him than by Nestorius himself, and the discussion is wanting in clear-cut distinctions and definitions.

Meanwhile Nestorius was being attacked by his own clergy and simultaneously by St. Cyril, Patriarch of Alexandria, who first denounced him, though without giving a name, in an epistle to all the monks of Egypt, then remonstrated with him personally by letter, and finally wrote to the pope. Loofs is of the opinion that Nestorius would never have been disturbed but for St. Cyril. But there is no reason to connect St. Cyril with the opposition to the heresiarch at Constantinople and at Rome. His rivals Philip of Side and Proclus and the layman Eusebius (afterwards Bishop of Dorylæum), as well as the Roman Leo, seem to have acted without any impulse from Alexandria. It might have been expected that Pope Celestine would specify certain heresies of Nestorius and condemn them, or issue a definition of the traditional faith which was being endangered. Unfortunately, he did nothing of the kind. St. Cyril had sent to Rome his correspondence with Nestorius, a collection of that Patriarch's sermons, and a work of his own which he had just composed, consisting of five books "*Contra Nestorium*". The pope had them translated into Latin, and then, after assembling the customary council, contented himself with giving a general condemnation of Nestorius and a general approval of St. Cyril's conduct, whilst he delivered the execution of this vague decree to Cyril, who as Patriarch of Alexandria was the hereditary enemy both of the Antiochene theologian and the Constantinopolitan bishop. Nestorius was to be summoned to recant within ten days. The sentence was as harsh as can well be imagined. St. Cyril saw himself obliged to draw up a form for the recantation. With the help of an Egyptian council he formulated a set of twelve anathematisms which simply epitomize the errors he had pointed out in his five books "Against Nestorius", for the pope appeared to have agreed with the doctrine of that work. It is most important to notice that up to this point St. Cyril had not rested his case upon Apollinarian documents and had not adopted the Apollinarian formula *μία φύσις σεσαρκωμένη* from Pseudo-Athanasius. He does not teach in so many words "two natures after the union", but his work against Nestorius, with the depth and precision of St. Leo, is an admirable exposition of Catholic doctrine, worthy of a Doctor of the Church, and far surpassing the treatise of Cassian. The twelve anathematisms are less happy,

for St. Cyril was always a diffuse writer, and his solitary attempt at brevity needs to be read in connexion with the work which it summarizes.

The anathematisms were at once attacked, on behalf of John, Patriarch of Antioch, in defence of the Antiochene School, by Andrew of Samosata and the great Theodoret of Cyrus. The former wrote at Antioch; his objections were adopted by a synod held there, and were sent to Cyril as the official view of all the Oriental bishops. St. Cyril published separate replies to these two antagonists, treating Andrew with more respect than Theodoret, to whom he is contemptuous and sarcastic. The latter was doubtless the superior of the Alexandrian in talent and learning, but at this time he was no match for him as a theologian. Both Andrew and Theodoret show themselves captious and unfair; at best they sometimes prove that St. Cyril's wording is ambiguous and ill-chosen. They uphold the objectionable Antiochene phraseology, and they reject the hypostatic union (*ἕνωσις καθ' ὑπόστασιν*) as well as the *φυσικὴ ἕνωσις* as unorthodox and unscriptural. The latter expression is indeed unsuitable, and may be misleading. Cyril had to explain that he was not summarizing or defining the faith about the Incarnation, but simply putting together the principal errors of Nestorius in the heretic's own words. In his books against Nestorius he had occasionally misrepresented him, but in the twelve anathematisms he gave a perfectly faithful picture of Nestorius's view, for in fact Nestorius did not disown the propositions, nor did Andrew of Samosata or Theodoret refuse to patronize any of them. The anathematisms were certainly in a general way approved of by the Council of Ephesus, but they have never been formally adopted by the Church. Nestorius for his part replied by a set of twelve contra-anathematisms. Some of them are directed against St. Cyril's teaching, others attack errors which St. Cyril did not dream of teaching, for example that Christ's Human Nature became through the union uncreated and without beginning, a silly conclusion which was later ascribed to the sect of Monophysites called Actistetes. On the whole, Nestorius's new programme emphasized his old position, as also did the violent sermons which he preached against St. Cyril on Saturday and Sunday, 13 and 14 December, 430. We have no difficulty in defining the doctrine of Nestorius so far as words are concerned: Mary did not bring forth the Godhead as such (true) nor the Word of God (false), but the organ, the temple of the Godhead. The man Jesus Christ is this temple, "the animated purple of the King", as he expresses it in a passage of sustained eloquence. The Incarnate God did not suffer nor die, but raised up from the dead him in whom He was incarnate. The Word and the Man are to be worshipped together, and he adds: *διὰ τὸν φοροῦντα τὸν φορούμενον σέβω* (Through Him that bears I worship Him Who is borne). If St. Paul speaks of the Lord of Glory being crucified, he means the man by "the Lord of Glory". There are two natures, he says, and one person; but the two natures are regularly spoken of as though they were two persons, and the sayings of Scripture about Christ are to be appropriated some to the Man, some to the Word. If Mary is called the Mother of God, she will be made into a goddess, and the Gentiles will be scandalized.

This is all bad enough as far as words go. But did not Nestorius mean better than his words? The Oriental bishops were certainly not all disbelievers in the unity of subject in the Incarnate Christ, and in fact St. Cyril made peace with them in 433. One may point to the fact that Nestorius emphatically declared that there is one Christ and one Son, and St. Cyril himself has preserved for us some passages from his sermons which the saint admits to be perfectly orthodox, and therefore wholly inconsistent with the rest. For example: "Great is the mystery of the gifts! For

this visible infant, who seems so young, who needs swaddling clothes for His body, who in the substance which we see is newly born, is the Eternal Son, as it is written, the Son who is the Maker of all, the Son who binds together in the swathing-bands of His assisting power the whole creation which would otherwise be dissolved." And again: "Even the infant is the all-powerful God, so far, O Arius, is God the Word from being subject to God." And: "We recognize the humanity of the infant, and His Divinity; the unity of His Sonship we guard in the nature of humanity and divinity." It will probably be only just to Nestorius to admit that he fully intended to safeguard the unity of subject in Christ. But he gave wrong explanations as to the unity, and his teaching logically led to two Christs, though he would not have admitted the fact. Not only his words are misleading, but the doctrine which underlies his words is misleading, and tends to destroy the whole meaning of the Incarnation. It is impossible to deny that teaching as well as wording which leads to such consequences is heresy. He was therefore unavoidably condemned. He reiterated the same view twenty years later in the "Bazaar of Heraclides", which shows no real change of opinion, although he declares his adherence to the Tome of St. Leo.

After the council of 431 had been made into a law by the emperor, the Antiochene party would not at once give way. But the council was confirmed by Pope Sixtus III, who had succeeded St. Celestine, and it was received by the whole West. Antioch was thus isolated, and at the same time St. Cyril showed himself ready to make explanations. The Patriarchs of Antioch and Alexandria agreed upon a "creed of union" in 433 (see EUTYCHIANISM). Andrew of Samosata and some others would not accept it, but declared the word *θεοτόκος* to be heretical. Theodoret held a council at Zeugma which refused to anathematize Nestorius. But the prudent Bishop of Cyrus after a time perceived that in the "creed of union" Antioch gained more than did Alexandria; so he accepted the somewhat hollow compromise. He says himself that he commended the person of Nestorius whilst he anathematized his doctrine. A new state of things arose when the death of St. Cyril, in 444, took away his restraining hand from his intemperate followers. The friend of Nestorius, Count Irenæus, had become Bishop of Tyre, and he was persecuted by the Cyrillian party, as was Ibas, Bishop of Edessa (q. v.), who had been a great teacher in that city. These bishops, together with Theodoret and Domnus, the nephew and successor of John of Antioch, were deposed by Dioscorus of Alexandria in the Robber Council of Ephesus (449). Ibas was full of Antiochene theology, but in his famous letter to Maris the Persian he disapproves of Nestorius as well as of Cyril, and at the Council of Chalcedon he was willing to cry a thousand anathemas to Nestorius. He and Theodoret were both restored by that council, and both seem to have taken the view that St. Leo's Tome was a rehabilitation of the Antiochene theology. The same view was taken by the Monophysites, who looked upon St. Leo as the opponent of St. Cyril's teaching. Nestorius in his exile rejoiced at this reversal of Roman policy, as he thought it. Loofs, followed by many writers even among Catholics, is of the same opinion. But St. Leo himself believed that he was completing and not undoing the work of the Council of Ephesus, and as a fact his teaching is but a clearer form of St. Cyril's earlier doctrine as exposed in the five books against Nestorius. But it is true that St. Cyril's later phraseology, of which the two letters to Succensus are the type, is based upon the formula which he felt himself bound to adopt from an Apollinarian treatise believed to be by his great predecessor Athanasius: *μία φύσις τοῦ Θεοῦ λόγον σεσαρκωμένην*. St. Cyril found this formula an awkward one, as his treatment of it shows,

and it became in fact the watchword of heresy. But St. Cyril does his best to understand it in a right sense, and goes out of his way to admit two natures even after the union *ἐν ὁμοίᾳ*, an admission which was to save Severus himself from a good part of his heresy.

That Loofs or Harnack should fail to perceive the vital difference between the Antiochenes and St. Leo, is easily explicable by their not believing the Catholic doctrine of the two natures, and therefore not catching the perfectly simple explanation given by St. Leo. Just as some writers declare that the Monophysites always took *φύσις* in the sense of *ὑπόστασις*, so Loofs and others hold that Nestorius took *ὑπόστασις* always in the sense of *φύσις*, and meant no more by two *hypostases* than he meant by two *natures*. But the words seem to have had perfectly definite meanings with all the theologians of the period. That the Monophysites distinguished them, is probable (see MONOPHYSITES AND MONOPHYSITISM), and all admit they unquestionably meant by *hypostasis* a subsistent nature. That Nestorius cannot, on the contrary, have taken *nature* to mean the same as *hypostasis* and both to mean *essence* is obvious enough, for three plain reasons: first, he cannot have meant anything so absolutely opposed to the meaning given to the word *hypostasis* by the Monophysites; secondly, if he meant *nature* by *ὑπόστασις* he had no word at all left for "subsistence" (for he certainly used *οὐσία* to mean "essence" rather than "subsistence"); thirdly, the whole doctrine of Theodore of Mopsuestia, and Nestorius's own refusal to admit almost any form of the *communicatio idiomatum*, force us to take his "two natures" in the sense of subsistent natures.

The modern critics also consider that the orthodox doctrine of the Greeks against Monophysitism—in fact the Chalcedonian doctrine as defended for many years—was practically the Antiochene or Nestorian doctrine, until Leontius modified it in the direction of conciliation. This theory is wholly gratuitous, for from Chalcedon onwards there is no orthodox controversialist who has left us any considerable remains in Greek by which we might be enabled to judge how far Leontius was an innovator. At all events we know, from the attacks made by the Monophysites themselves, that, though they professed to regard their Catholic opponents as Crypto-Nestorians, in so doing they distinguished them from the true Nestorians who openly professed two hypostases and condemned the word *θεοῦ ἕως*. In fact we may say that, after John of Antioch and Theodoret had made peace with St. Cyril, no more was heard in the Greek world of the Antiochene theology. The school had been distinguished, but small. In Antioch itself, in Syria, in Palestine, the monks, who were exceedingly influential, were Cyrillians, and a large proportion of them were to become Monophysites. It was beyond the Greek world that Nestorianism was to have its development. There was at Edessa a famous school for Persians, which had probably been founded in the days of St. Ephrem, when Nisibis had ceased to belong to the Roman Empire in 363. The Christians in Persia had suffered terrible persecution, and Roman Edessa had attracted Persians for peaceful study. Under the direction of Ibas the Persian school of Edessa imbibed the Antiochene theology. But the famous Bishop of Edessa, Rabbûla, though he had stood apart from St. Cyril's council at Ephesus together with the bishops of the Antiochene patriarchate, became after the council a convinced, and even a violent, Cyrillian, and he did his best against the school of the Persians. Ibas himself became his successor. But at the death of this protector, in 457, the Persians were driven out of Edessa by the Monophysites, who made themselves all-powerful. Syria then becomes Monophysite and produces its Philoxenus and many another writer. Persia simultaneously becomes Nestorian. Of the exiles from Edessa into

their own country nine became bishops, including Barsumas, or Barsaûma, of Nisibis and Acacius of Beit Aramag. The school at Edessa was finally closed in 489.

At this time the Church in Persia was autonomous, having renounced all subjection to Antioch and the "Western" bishops at the Council of Seleucia in 410. The ecclesiastical superior of the whole was the Bishop of Seleucia-Ctesiphon, who had assumed the rank of catholicos. This prelate was Babæus or Babowai (457-84) at the time of the arrival of the Nestorian professors from Edessa. He appears to have received them with open arms. But Barsaûma, having become Bishop of Nisibis, the nearest great city to Edessa, broke with the weak catholicos, and, at a council which he held at Beit Lapat in April, 484, pronounced his deposition. In the same year Babowai was accused before the king of conspiring with Constantinople and cruelly put to death, being hung up by his ring-finger and also, it is said, crucified and scourged. There is not sufficient evidence for the story which makes Barsaûma his accuser. The Bishop of Nisibis was at all events in high favour with King Peroz (457-84) and had been able to persuade him that it would be a good thing for the Persian kingdom if the Christians in it were all of a different complexion from those of the Empire, and had no tendency to gravitate towards Antioch and Constantinople, which were now officially under the sway of the "Henoticon" of Zeno. Consequently all Christians who were not Nestorians were driven from Persia. But the story of this persecution as told in the letter of Simeon of Beit Arsam is not generally considered trustworthy, and the alleged number of 7700 Monophysite martyrs is quite incredible. The town of Tagrit alone remained Monophysite. But the Armenians were not gained over, and in 491 they condemned at Valarsapat the Council of Chalcedon, St. Leo, and Barsaûma. Peroz died in 484, soon after having murdered Babowai, and the energetic Bishop of Nisibis had evidently less to hope from his successor, Balash. Though Barsaûma at first opposed the new catholicos, Acacius, in August, 485, he had an interview with him, and made his submission, acknowledging the necessity for subjection to Seleucia. However, he excused himself from being present at Acacius's council in 484 at Seleucia, where twelve bishops were present. At this assembly, the Antiochene Christology was affirmed and a canon of Beit Lapat permitting the marriage of the clergy was repeated. The Synod declared that they despised vainglory, and felt bound to humble themselves in order to put an end to the horrible clerical scandals which discredited the Persian Magians as well as the faithful; they therefore enacted that the clergy should make a vow of chastity; deacons may marry, and for the future no one is to be ordained priest except a deacon who has a lawful wife and children. Though no permission is given to priests or bishops to marry (for this was contrary to the canons of the Eastern Church), yet the practice appears to have been winked at, possibly for the regularization of illicit unions. Barsaûma himself is said to have married a nun named Mamôé; but according to Mare, this was at the inspiration of King Peroz, and was only a nominal marriage, intended to ensure the preservation of the lady's fortune from confiscation.

The Persian Church was now organized, if not thoroughly united, and was formally committed to the theology of Antioch. But Acacius, when sent by the king as envoy to Constantinople, was obliged to accept the anathema against Nestorius in order to be received to Communion there. After his return he bitterly complained of being called a Nestorian by the Monophysite Philoxenus, declaring that he "knew nothing" of Nestorius. Nevertheless Nestorius has always been venerated as a saint by the Persian Church. One thing more was needed for the

Nestorian Church; it wanted theological schools of its own, in order that its clergy might be able to hold their own in theological argument, without being tempted to study in the orthodox centres of the East or in the numerous and brilliant schools which the Monophysites were now establishing. Barsauma opened a school at Nisibis, which was to become more famous than its parent at Edessa. The rector was Narses the Leprous, a most prolific writer, of whom little has been preserved. This university consisted of a single college, with the regular life of a monastery. Its rules are still preserved (see NISIBIS). At one time we hear of 800 students. Their great doctor was Theodore of Mopsuestia. His commentaries were studied in the translation made by Ibas and were treated almost as infallible. Theodore's Canon of Scripture was adopted, as we learn from "De Partibus Divinae Legis" of Junilius, (P. L., LXVIII, and ed. by Kihn), a work which is a translation and adaptation of the published lectures of a certain Paul, professor at Nisibis. The method is Aristotelean, and must be connected with the Aristotelean revival which in the Greek world is associated chiefly with the name of Philoponus, and in the West with that of Boethius. The fame of this theological seminary was so great that Pope Agapetus and Cassiodorus wished to found one in Italy of a similar kind. The attempt was impossible in those troublous times; but Cassiodorus's monastery at Vivarium was inspired by the example of Nisibis. There were other less important schools at Seleucia and elsewhere, even in small towns.

Barsauma died between 492 and 495, Acacius in 496 or 497. Narses seems to have lived longer. The Nestorian Church which they founded, though cut off from the Catholic Church by political exigencies, never intended to do more than practise an autonomy like that of the Eastern patriarchates. Its heresy consisted mainly in its refusal to accept the Councils of Ephesus and Chalcedon. It is interesting to note that neither Junilius nor Cassiodorus speaks of the school of Nisibis as heretical. They were probably aware that it was not quite orthodox, but the Persians who appeared at the Holy Places as pilgrims or at Constantinople must have seemed like Catholics on account of their hatred to the Monophysites, who were the great enemy in the East. The official teaching of the Nestorian Church in the time of King Chosroes (Khusran) II (died 628) is well presented to us in the treatise "De unione" composed by the energetic monk Babai the Great, preserved in a MS. from which Labourt has made extracts (pp. 280-87). Babai denies that *hypostasis* and *person* have the same meaning. A *hypostasis* is a singular essence (*ousia*) subsisting in its independent being, numerically one, separate from others by its accidents. A *person* is that property of a *hypostasis* which distinguishes it from others (this seems to be rather "personality" than "person") as being itself and no other, so that Peter is Peter and Paul is Paul. As *hypostases* Peter and Paul are not distinguished, for they have the same specific qualities, but they are distinguished by their particular qualities, their wisdom or otherwise, their height or their temperament, etc. And, as the singular property which the *hypostasis* possesses is not the *hypostasis* itself, the singular property which distinguishes it is called "person".

It would seem that Babai means that "a man" (*individuum vagum*) is the *hypostasis*, but not the *person*, until we add the individual characteristics by which he is known to be Peter or Paul. This is not by any means the same as the distinction between nature and *hypostasis*, nor can it be asserted that by *hypostasis* Babai meant what we should call *specific nature*, and by *person* what we should call *hypostasis*. The theory seems to be an unsuccessful attempt to justify the traditional Nestorian formula: two *hypostases* in one person. As to the nature of the union,

Babai falls on the Antiochenes saying that it is ineffable, and prefers the usual metaphors—assumption, in habitation, temple, vesture, junction—to any definition of the union. He rejects the *communicatio idiomatum* as involving confusion of the natures, but allows a certain "interchange of names", which he explains with great care.

The Persian Christians were called "Orientals", or "Nestorians", by their neighbours on the West. They gave to themselves the name of *Chaldeans*; but this denomination is usually reserved at the present day for the large portion of the existing remnant which has been united to the Catholic Church. The present condition of these Uniats, as well as of the branch in India known as "Malabar Christians", is described under CHALDEAN CHRISTIANS. The history of the Nestorian Church must be looked for under PERSIA. The Nestorians also penetrated into China and Mongolia and left behind them an inscribed stone, set up in Feb., 781, which describes the introduction of Christianity into China from Persia in the reign of T'ai-tsung (627-49). The stone is at Chou-Chih, fifty miles south-west of Si-an Fu, which was in the seventh century the capital of China. It is known as "the Nestorian Monument".

Netherlands (Germ. *Niederlande*; Fr. *Pays Bas*), THE.—The Netherlands, or Low Countries, as organized by Charles V, under whom the Burgundian era ended, comprised practically the territory now included in Holland and Belgium, thenceforth known as the Spanish Netherlands. For the previous history of this country see BURGUNDY and CHARLES V. Shorn of the northern provinces by the secession of Holland as the Commonwealth of the United Provinces (1579), the Spanish Netherlands, on their cession to Austria (1713-14) were reduced to the provinces now embraced in Belgium, subsequently called the Austrian Netherlands.

THE SPANISH NETHERLANDS.—When Philip II by the abdication of his father, Charles V (q. v.), became sovereign of the Low Countries and took up the government of the Seventeen Provinces, he found them at

the zenith of their prosperity, as is evident from the description given in 1567 by Luigi Guicciardini in his "Descrittione di tutti i Paesi Bassi" (Totius Belgii descriptio, Amsterdam, 1613).

Few countries were so well governed; none was richer. Antwerp had taken the place of Bruges as commercial metropolis; every day saw a fleet of 500 sea-going craft enter or leave its port. Of Ghent (Gand), his native town, Charles V used to say jocosely: *Je mettrais Paris dans mon Gand* [I could put Paris in my glove (*gant*)]. Luxury, however, corrupted the earlier good morals of the people, and humanism gradually undermined the faith of some in the upper classes. Protestantism too had already effected an entrance, Lutheranism through Antwerp and Calvinism from the French border. The Anabaptists also had adherents. In addition the more powerful of the nobility now hoped to play a more influential part in the government than they had done under Charles V, and were already planning for the realization of this ambition. The situation presented many difficulties, and unfortunately Philip II was not the man to cope with them. He had little in common with his Low-Country subjects. Their language was not his; and he was a stranger to their customs. From the day he quitted the Netherlands in 1559, he never set foot in them again, but governed from far-off Spain. He was despotic, severe, crafty, and desirous of keeping in his own hands all the reins of government, in minor details as well as in matters of more importance, thereby causing many unfortunate delays in affairs that demanded rapid transaction. He was on the whole a most unsuitable ruler in spite of his sincere desire to fulfil the duties of his royal office and the time and pains he consecrated to them.

It must be said in justice that from a religious point of view, he brought about one of the most important events in the history of the Netherlands when he caused the establishment of fourteen new dioceses. The want had long been recognized and the sovereigns, particularly Philip the Good and Charles V, had often thought of this measure. In all the seventeen provinces there were but four dioceses: Utrecht in the north; Tournai, Arras, and Cambrai in the West; and all of them were subject to foreign metropolitans, Utrecht to Cologne and the others to Reims. Moreover the greater part of the country was under the direct jurisdiction of foreign bishops: those of Liège, Trier, Metz, Verdun, etc. Hence arose great difficulties and endless conflicts. The Bull of Pope Paul IV (12 May, 1559) put an end to this situation by raising Utrecht and Cambrai to archiepiscopal rank, and by creating fourteen new sees, one of them, Mechlin, an archbishopric. The others were Antwerp, Ghent, Bruges, Ypres, St-Omer, Namur, Bois-le-Duc (Hertogenbosch), Roermond, Haarlem, Deventer, Leeuwarden, Groningen, and Middelburg. This act, excellent from a religious point of view, gave rise to many complaints. To endow the new sees it was found necessary to incorporate with them the richest abbeys in the country, and in certain provinces these carried the right of voting in the States-General. And this right being for the future exercised through the bishops, the result was that the king who nominated them gained a considerable influence in the Parliament, which had hitherto always acted as a check on the royal power. To aggravate matters, the Protestant faction spread a rumour that the erection of the new bishoprics was but a step towards introducing the Spanish Inquisition into the Netherlands. Lastly the abbeys began to complain of their lost autonomy—the place of the abbot being now occupied by the bishop.

The opposition of the nobles was led by two men, remarkable in different ways. On one hand was the Count of Egmont (see EGMONT, LAMORAL, COUNT OF), the victor at St-Quentin and Gravelines, a brave man, frank and honest, a lover of popularity but weak in

character and lacking in political shrewdness. On the other hand stood William of Nassau, Prince of Orange, surnamed "the Silent", a politician and diplomat of the first rank, filled with ambition which he well knew how to conceal, having no religious scruples, being Catholic, Lutheran, or Calvinist as it suited him, a man who had made the downfall of Spanish rule the one aim of his life. Grouped around these two chiefs were a number of nobles irritated with the Government, many of them deeply involved financially or morally corrupt like the too well-known Brederode. They kept up the agitation and demanded fresh concessions day by day. They insisted upon the recall of the Spanish soldiers, and the king yielded (1561). They demanded more moderate language in the public placard against heresy, and even sent the Count of Egmont to Spain to obtain it (1565); and Egmont, having been flattered and fêted at the Spanish Court, came back convinced that his mission had been successful. Soon, however, royal letters dated from the Forest of Segovia, 17 and 20 October, 1565, brought the king's formal refusal to abate one jot in the repression of heresy.

The irreconcilable attitude of the king created a situation of increasing difficulty for the government of Margaret of Parma. Heresy was spreading every day, and it was no longer confined to the cities but was obtaining a foothold in the smaller towns and even in country places. Protestant preachers, for the most part renegade monks or priests, like the famous Dathenus, assembled the people at "sermons" in which they were exhorted to open war on the Catholic religion. Calvinism, a sect better organized than Lutheranism, became the popular heresy in the Low Countries. It had supporters in every grade of society; and although its members continued to be a small minority, their daring and clever propaganda made them a most dangerous force in presence of the inaction and sluggishness of the Catholics. Stirred up by these Calvinist preachers, Catholic and Protestant nobles formed an alliance which was called *Le Compromis des Nobles*, with the object of obtaining the suppression of the Inquisition. A body of them numbering several hundred came to present a petition to that effect to the regent (5 April, 1566). It is related that as she showed signs of alarm at this demonstration Count de Berlaymont, member of the Council of State and a loyal supporter of the Government, said to her: "*Rassurez-vous, Madame, ce ne sont que des gueux*" (Courage, Madam, they are only beggars). The confederates at once took up the word as a party name, and thus this famous name made its entry into history.

Up to that time the Gueux meant to remain faithful to the king, *jusqu'à la besace* (to beggary), as one of their mottoes had it. They seemed to have been made up of Catholics and Protestants, indiscriminately, who were partisans of religious tolerance; and *Vive les Gueux* was originally the rally-cry of a sort of national party. This, however, was a delusion soon apparent. The Calvinist leaders held the movement in their hands, and did not hesitate when sure of their own strength to disclose its real fanatical opposition to the Catholic Church. Roused and excited by the impassioned appeals of the preachers, the rowdy element of the people perpetrated unheard-of excesses. In the latter part of August, 1566, bands of iconoclasts scoured the country, wrecking and pillaging churches, and in a few days they had plundered four hundred, among them the magnificent cathedral of Antwerp. These crimes opened the eyes of many who up to that time had been too lenient with the sectarians. Public opinion condemned the iconoclastic outrages and sided with the Government, which thus suddenly found its position greatly strengthened. Once more, unfortunately, Philip II was not equal to the occasion. Instead of skilfully profiting by this turn of events to

win back those who were shocked by the violence of the heretics, he looked on all his subjects in the Netherlands as equally guilty, and he swore by his father's soul that he would make an example of them. Against the advice of the regent, despite faithful Granvelle, in spite of the pope, who exhorted him to clemency, he dispatched the Duke of Alva to the Low Countries on a punitive expedition (1567). Straightway William of Orange and the more compromised nobles went into exile. Recklessly and trusting to his past services, the Count of Egmont had refused to follow them. His mistake cost him dear, for Alva caused him and Count de Hornes to be arrested and brought before a sort of court martial which he called the *Conseil des Troubles*, but known more popularly as the *Conseil du Sang* (Blood Tribunal). The accused men, being members of the Golden Fleece, could be punished only by their order; but in spite of this privilege they were judged, condemned, and executed (1568).

When the two counts were arrested, Margaret of Parma resigned her office, and the Duke of Alva was appointed her successor; with him began a system of merciless repression. Blood flowed freely, and all the traditional rights of the people were disregarded; the Spaniard Juan Vargas, chief-justice of the Council of Troubles, replied to complaint of the University of Louvain that its privileges had been violated: *non curamus privilegia vestros*. (We are not concerned with your privileges.) Besides this, heavy taxes, 10 per cent on the sales of chattels, 5 per cent on the sale of real estate, and 1 per cent on all property, completed the popular discontent, and turned even a number of good Catholics against the Government. The Protestants, encouraged by these events, began military operations by land and sea, and the *gueux des bois* (Land-Beggars) and the *gueux de mer* (Water-Beggars) started a guerilla warfare and a campaign of pillage which were soon followed by the more serious attack of the Prince of Orange and his brother, Louis of Nassau. But the Duke of Alva frustrated all their efforts, and when he had repulsed Louis at Jemmingen, and prevented William from crossing the Geete, he caused a statue of himself to be set up at Antwerp representing him crushing under foot the hydra of anarchy. Then just as he thought he had mastered the rebellion, news was brought that on 1 April, 1572, the Water-Beggars had taken the port of Briel. Henceforth in the very heart of the Low Countries they had a point for rally or retreat, and their progress was rapid. In quick succession they captured many towns in Holland and Zealand. These Water-Beggars, under their leader, William de la Marck, Lord of Lummen, were for the most part ruffians devoid of all human feeling. When they took the town of Gorkum they put to death in a most barbarous manner nineteen priests and monks who refused to abjure their Catholic Faith. The Church venerates these brave victims on 9 July, under the title of the Martyrs of Gorkum. About the same time Louis of Nassau took Mons in Hainault, and William of Orange made a second descent on the country with an army of hirelings that committed frightful excesses. But he failed before the superior forces of the Duke of Alva. Mons was recaptured and William once more driven out. Alva then turned his arms against the provinces of the north; Zutphen, Naarden, and Haarlem fell successively into his hands and were treated most shamefully, but contrary to his hopes the rest of the rebel country did not submit.

At last Philip II realized that the duke's mission had failed. Yielding to the entreaty of his most faithful subjects—the bishops and the University of Louvain—he recalled Alva and appointed as his successor Don Luis of Requesens. During his brief regency (1573-75) Don Luis did not succeed in restoring royal authority in the revolted districts, although he showed greater humanity and an inclination to con-

ciliate the disaffected. Nor was he more successful in capturing the town of Leyden which withstood one of the most heroic sieges in history. His death left the country in a state of anarchy.

The Council of State took over the reins of government pending the arrival of the new regent, Don John of Austria, brother of Philip II. It was a favourable moment for the ambitious schemes of William of Orange. Thanks to the intrigues of his agents, the members of the Council of State were arrested and did not regain their freedom till those most attached to the king's interests had been removed and others appointed in their places. This packed council was but a tool of the Prince of Orange, and its first act was to convene the States-General to deal with the affairs of the country, without any reference to the king. On the motion of the Prince of Orange the delegates met at Ghent the representatives of the rebel provinces of Holland and Zealand, where the authority of the prince was still unquestioned, and together they debated a scheme for securing tolerance for all forms of worship until such time as the States-General should have finally decided the matter, also for obtaining the removal of the Spanish troops. During the course of these deliberations an event happened which filled the whole country with fear and horror. The Spanish soldiers, who for a long time had received no pay, mutinied, seized the city of Antwerp, and pillaged it ruthlessly, seven thousand persons perishing during these disorders, which are usually referred to as the Spanish Fury. The provinces no longer hesitated, and their delegates signed the famous Pacification of Ghent on 8 November, 1576.

Thus triumphed the crafty and artful diplomacy of the Prince of Orange. He had succeeded in causing the loyal provinces to vote toleration of worship, while the provinces of Holland and Zealand of which he was master, formally refused to allow within their limits the practice of the Catholic religion. No doubt it was stipulated that this refusal was only provisional, and that the States-General of the seventeen provinces would finally settle the question; but meanwhile Protestantism gained an immense advantage in the Catholic provinces without giving anything in return. Furthermore the prince had taken the precaution to have it stipulated that he should remain admiral and regent of Holland and Zealand, and all these measures were passed in the name of the king whose authority they completely defied.

Such was the situation when the new regent arrived. On the advice of his best friends he ratified by his "Edit perpétuel de Marche en Famenne" (1577) the main clauses of the Pacification of Ghent, which rallied to him a majority of the people. Then he set about establishing his authority, no easy task in face of the unwearying effort of the Prince of Orange to prevent it. When, in order to obtain a reliable stronghold, he seized the citadel of Namur, the States-General, prompted by William of Orange, declared him an enemy of the State and called in as regent Archduke Matthias of Austria, to whom William succeeded in being made lieutenant-general. Don John defeated the army of the States-General at Gembloux, and William made a fresh appeal to foreign Protestants. From all the neighbouring countries adventurers flocked in to fight the Catholic Government. The Calvinists took some of the large cities, Brussels, Antwerp, Ghent, and held them in a state of terror. In the last-named town two of the leaders, Hembyze and Ryhove, gave themselves up to every excess, persecuted the Catholics, and endeavoured to set up a sort of Protestant republic as Calvin had done at Geneva. To crown all these misfortunes, the young regent was carried off by illness in 1578, and all seemed lost for the Catholic religion and the royal authority.

But the eyes of the Catholics were at last opened. Seeing that under pretext of freeing them from Span-

ish tyranny they were being enslaved under Protestantism, they turned from William's party and sought once more their lawful king, in spite of the just complaints they had against his government. This reactionary movement was most marked in the Walloon provinces: Artois, Hainault, and French Flanders in the van; Namur and Luxemburg joining them later. It began as a league among the nobles of these provinces, who styled themselves the Malcontents, and who broke with the States-General to recognize anew the authority of Philip II. It was they who prevented the realization of the great scheme of William of Orange to federate the seventeen provinces in a league of which he was to be the head, and which would ultimately cast off all allegiance to the king. When he saw his great ambition foiled, William contented himself with uniting the northern provinces in the Union of Utrecht (1579), under the name of the United Provinces, and with proclaiming the deposition of Philip II at least within these provinces. To the Malcontents, therefore, is due the credit of saving the royal authority and the Catholic religion in the Belgian provinces.

The new regent, Alessandro Farnese, son of the former regent, Margaret of Parma, grasped the situation admirably. He entered into negotiations with the Malcontents, and reconciled them with the king's government by redressing their grievances; then with their support he set about recovering by force of arms the towns that had fallen into the hands of the Protestants. One after the other they were recaptured, some, like Tournai and Antwerp, only after memorable sieges, till at last Ostend alone of all Belgium remained in Protestant hands. And now the popular regent was preparing for a campaign against the northern provinces, demoralized by the assassination of William of Orange in 1584, when once more Philip II's ill-advised policy ruined everything. Instead of allowing Farnese to continue his military success in the Netherlands, Philip used him as an instrument of wild projects against France and England. At one moment obliged to take part in maritime preparations against England, and at another to cross the frontier in support of the League against Henry IV, Farnese had to leave his task unfinished, and he died in 1592 of a wound received in one of his French expeditions. His death was the greater misfortune for Belgium because Maurice of Nassau, son of William of Orange, and one of the greatest war-captains of the age, was just then coming to the front.

Philip finally saw that a new policy must be tried. He bethought him of separating the Catholic Netherlands from Spain, and of giving the sovereignty to his daughter Isabella and her husband the Archduke Albert of Austria; in the event of their being childless the country was to revert to Spain (1598). This was one of the most important events in the history of Belgium, which thus became once more an independent nation, acquired a national dynasty, and might now hope for the return of former prosperity; that this hope was frustrated was the result of events which defeated the plans of statecraft and the wishes of the new sovereigns.

During the short space of their united reign (1598-1621) Albert and Isabella lavished benefits on the country. Ostend was recaptured from Holland after a three-years' siege which claimed the attention of all Europe, and a truce of twelve years (1609-21) made with the United Provinces was employed to the greatest advantage. The damage done by the religious wars was repaired; more than three hundred churches and religious houses were founded or restored; local customs were codified by the Perpetual Edict of 1611, which has been called the most splendid monument of Belgian law; public education was fostered in every way, and the new sovereigns brought about the founding of many colleges by the protection

they extended to the religious teaching orders. More over they showed themselves generous patrons of science, literature, and art, and protected the interests of commerce and agriculture. Blameless in their private life and deeply pious, they gave an example of virtue on the throne not always to be found there. Unfortunately they died childless, Albert in 1621, Isabella in 1633, and their death put an end to the reviving prosperity of Belgium. Once more the country was drawn into endless wars by Spain, principally against France, and became the battle-field of numerous international conflicts. It was repeatedly despoiled of some of its provinces by Louis XIV, and cruelly plundered by all armies, friendly and hostile, that marched across its plains. The seventeenth century was the most calamitous of its history. Such then was the condition of Belgium until the peace of Utrecht (1713), which followed by that of Rastatt put an end to the long and bloody wars of the Spanish Succession which gave Spain to the Bourbons and handed over the Catholic Low Countries to the Hapsburgs of Austria.

It would be a mistake to suppose that all these calamities, domestic and foreign, had left Belgium entirely unfruitful from the point of view of civilization. Nothing could be more false; though it is a charge often made even in Belgium by writers whose prejudices would fain discover in Catholicism a retarding force for Belgium's progress. The University of Louvain with its forty-two colleges, where Erasmus, Bellarmine, and Justus Lipsius had taught, had always been the centre of orthodoxy, and did not cease even during the sixteenth and seventeenth centuries to manifest great activity, chiefly in the domains of theology and law, which were expounded there by a large number of eminent scholars. Side by side with Louvain stood the University of Douai founded in 1562 by Philip II as a breakwater against heresy, and it also sent forth many famous men. Among the new bishops were men whose fame for learning was only equalled by their well-known piety. It is no doubt true that the controversies of the day have left their mark on the religious life of that period. Thus, Michael Baius, a professor at Louvain, was condemned by Rome for his theories on free will, predestination, and justification, but he retracted in all humility. His teaching came up again in a more pronounced form in a pupil of one of his pupils, Cornelius Jansen, Bishop of Ypres, and it is well known how the "Augustinus", a posthumous work of this prelate, which appeared in 1640, gave rise to what is called Jansenism. Another manifestation of the intellectual and scientific activity of Belgium was the beginning of the celebrated collection known as the "Acta Sanctorum" by the Belgian Jesuits. Héribert Rosweyde drew up the plans for the undertaking, and Father Jan van Bolland began to carry them out, leaving the continuation to his successors, the Bollandists. Amongst these Henschen and Papebroch in the seventeenth century contributed brilliantly to the work which has not yet reached its conclusion.

If, apart altogether from the religious aspect, we would complete the picture of Belgium's culture in the seventeenth century, we have but to recall that art reached its apogee in the Flemish School, of which Rubens was the head, and Van Dyck, Teniers, and Jordans the greatest masters after him. It would thus be easy to prove that the Catholic Low Countries, though caught as in a vise between powerful neighbours and ever in the throes of war, did not give way to despair, but in the days of direst calamity drew from their own bosom works of art and beauty which have served to adorn even our present day civilization.

THE AUSTRIAN NETHERLANDS.—The Treaty of Utrecht opened an era of comparative peace and prosperity for the Catholic Netherlands, but did not bring contentment. The Austrian régime under which the

country was now to exist was that of an absolute monarchy, which by continued encroachments on the traditional privileges of the people, drove them at length to rebellion. It was not merely its absolutism, it was the anti-religious atmosphere of the Government which really aroused the people. The actuating principle of the Government in its dealings with the Catholic Church was that the civil power was supreme and could make rules for the Church, even in purely religious matters. This policy, which is known as Josephinism, from Joseph II, its most thoroughgoing exponent, had prevailed at the Austrian Court from the beginning. It found a theorist of great authority in the famous canonist Van Espen (1646-1728), a professor at the University of Louvain, who justified beforehand all attacks on the liberty of the Church. The opposition between the tendencies of the Government, which threatened alike the national liberties and the rights of the Church, and the aspirations of the Belgian people, devoted alike to religion and liberty, gave rise during the Austrian occupation of the country to endless misunderstandings and unrest. The situation was not, however, uniformly the same. It varied under different reigns, each of which had its own peculiar characteristics.

Under the reign of Charles VI (1713-1740) Belgium quickly learned that she had gained nothing by the changing of her rulers. One of the clauses of the Peace of Utrecht obliged Austria to sign a treaty with the United Provinces, called the Treaty de la Barrière (the Frontier Treaty) entitling the United Provinces to garrison a number of Belgian towns on the French frontier as a protection against attacks from that quarter. This was a humiliation for the Belgians, and it was aggravated by the fact that these garrison troops, who were all Protestants and enjoyed the free exercise of their religion, had many religious quarrels with the Catholic people. Moreover, the United Provinces, controlling the estuary of the Scheldt, had closed the sea against the port of Antwerp since 1585; so that this port which had at one time been the foremost commercial city of the north was now depleted of its trade. This was a fresh injustice to the Catholic Low Countries. To all this must be added the oppressive and ill-advised policy of the Marquess de Prié, deputy for the absent governor-general, Prince Eugene of Savoy. Prié, like another Alva, treated the country with the utmost severity. When the labour guilds of Brussels protested vigorously against the government taxes and tried to assert their ancient privileges, Prié caused the aged François Anneessens, syndic or chairman of one of these guilds, to be arrested and put to death (1719). The citizens of Brussels have never forgotten to venerate the memory of their fellow-townsmen as a martyr for public liberty. The Government compensated the nation by founding the East and West Indian Trading Company of Ostend in 1722. This company, which was enthusiastically hailed by the public, was of immense benefit in the beginning, and promised an era of commercial prosperity. Unfortunately the jealousy of England and of the United Provinces sealed its fate. To win the consent of these two powers to his Pragmatic Sanction, by which he hoped to secure the undisputed succession of his daughter Maria Theresa, the emperor agreed to suppress the Ostend company and once more to close the sea against Belgian trade. His cowardly concessions were of no avail, and at his death in 1740 his daughter was obliged to undertake a long and costly war to maintain her inheritance and Belgium, invaded and conquered by France in 1745, was not restored to the empress till the Peace of Aachen in 1748.

Under the reign of Maria Theresa (1740-80) the Government was in a position to occupy itself peacefully with the organization of the Belgian provinces. On the whole it fostered the material interests of the country, but the principles underlying its religious

policy revealed themselves in measures more and more hostile to the Church. The empress herself was of the opinion that the Church ought to be subject to the State even in religious matters. "The authority of the priesthood", she wrote, "is by no means arbitrary and independent in matters of dogma, worship, and ecclesiastical discipline". The statesmen in her service, imbued as they were with the Voltairean spirit, were zealous in applying those principles. The more famous among them were the Prince of Kaunitz, the Count of Cobenzl, and Mac Neny. On the slightest pretext they constantly stirred up petty and at times ridiculous conflicts with the ecclesiastical authorities, such as forbidding assemblies of the bishops; trying to insist on the relaxing of the Lenten Fast; claiming censorship over breviaries and missals, and going so far as to mutilate copies of them containing the Office of St. Gregory VII; calling in question the jurisdiction of the Church in matrimonial affairs; hindering and interfering in every conceivable way with the work of the religious orders, even busying themselves with the dress worn by the clerics; in a word pursuing a most irritating and malicious policy wherever the Church was concerned. If in spite of all this the name of Maria Theresa is of kindly memory in Belgium, it is because her subjects knew the sincerity of her piety, and her undoubted good-will. They were grateful for this, and believing that for the most part she was unaware of most of the actions of her representatives, they did not place the blame at her door. Moreover the Governor-General of the Austrian Low Countries, Prince Charles of Lorraine, brother-in-law of the empress, was a man of infinite tact, who knew how to moderate what was unpopular in the action of the Government, and even cause it to be forgotten. It was personal esteem for these two royal personages which caused the policy of the Government to be tolerated as long as they lived.

But there came a great change as soon as Joseph II mounted the throne (1780). He was the son of Maria Theresa, a pupil of the philosophers, and, inspired by their teachings, was ever ready to defy and disregard the Church. As was not unusual in his day he held the opinion that the State was the source of all authority, and the source of all civilizing progress. He set himself without delay to apply his policy of "enlightened despotism". Forgetful of his coronation oath to observe the constitutions of the several Belgian provinces he began a career of reform which ended by overturning the existing state of affairs. His first act was to publish in 1781 an edict of toleration, by which Protestants were freed from all civil disabilities, a just measure in itself, and one that might well be praiseworthy, if it were not that, in the light of his subsequent actions it betrayed the dominant idea of his whole reign, namely, hostility to the Catholic Church. The Church, he thought, ought to be a creature of the State, subject to the control and supervision of the civil power. He undertook to realize this ideal by substituting for the Catholic Church governed by the pope a national Church subject to the State, along the lines laid down by Febronius, who had met with many supporters even within the ranks of the clergy. The measures he adopted to enslave the Church were endless. He forbade religious orders to correspond with superiors outside the country; he forbade the bishops to ask Rome for dispensations in matrimonial cases. He tried to gain control of the education of the clergy by erecting a central seminary to which he endeavoured to force the bishops to send their future priests. He interfered with the professors and the teaching of the University of Louvain because he considered them too orthodox. He suppressed as useless all convents of contemplative orders and all pious confraternities, and replaced them by one of his own invention which he grandiloquently called "The Confraternity of the Active Love of our Neighbour". He prohibited all

pilgrimages and the exposition of relics. He limited the number of processions and ordered that all parish festivals (*kermesses*) be kept on the same day. He interfered with the garb of religious and in liturgical questions, and even went so far as to forbid the making of coffins, so as to economize the wood supply. The dead, he thought, ought to be buried in sackcloth. At last his interference in and wanton meddling with ecclesiastical matters won for him the well-deserved sneer of Frederick II, King of Prussia, who called him "My brother, the sacristan".

All these measures had been carried into effect without meeting other opposition than the calm respectful protest of the clergy. But it was quite otherwise when Joseph II was so imprudent as to interfere with civil institutions and, in violation of the most solemn oaths, to lay hands on the liberties of the people. Then the country was thoroughly aroused, there were demonstrations in the public streets, and protests reached the Government from all parts (1787); but Joseph II was stiff-necked, and would not listen to reason. Convinced that force would overcome all opposition, he hurried Count d'Alton with an army into the Low Countries, with orders to restore authority by bloodshed if necessary. Then as a protest against the violence of d'Alton, the provincial states, availing themselves of the rights granted them by the Constitution, refused to vote subsidies for the expenses of the Government, and d'Alton was so ill-advised as to declare the proceedings null and the Constitution abolished. This was a signal for revolution, the only resource left to Belgian liberty. Two committees directed the movement along widely differing lines. The one, under the leadership of a lawyer named Van der Noot, had its headquarters at Breda in the United Provinces, the other under another lawyer, Vonck, at Hasselt in the neighbourhood of Liège. That under Van der Noot, a man of great popularity, looked to the foreign powers for help; the other relied on the Belgians to help themselves, and began recruiting a volunteer army. The one was conservative, almost reactionary, and aimed merely at restoring the *status quo*; the other was eager for reforms such as France was asking, but was faithful to the religion of its fathers and took as its motto *Pro aris et focis*. In their union lay their strength. The volunteer army defeated the Austrians at Turnhout (1789) and forced them step by step to evacuate the country. The bitterness of this defeat killed Joseph II.

The States-General of the country were convened at Brussels and voted that Belgium should be an independent federated republic under the name of the United States of Belgium. Unfortunately the heads of the new Government were novices in statecraft, and differences arose between the Van der Noot party and the followers of Vonck. So that in the following year Leopold II, who had succeeded his father, Joseph II, had the country once more under his authority. He was, however, wise enough to restore it all the privileges it enjoyed prior to the senseless reforms of Joseph II. The Belgians were therefore to all intents once more a free people, and they rejoiced in their freedom until the day when the French invaded their country under the pretext of emancipating them.

For the later history of this territory see BELGIUM.

GODEFROID KURTH.

Netter, THOMAS, theologian and controversialist, b. at Saffron Walden, Essex, England, about 1375; d. at Rouen, France, 2 Nov., 1430; from his birth-place he was commonly called Waldensis. He entered the Carmelite Order in London, and pursued his studies partly there and partly at Oxford, where he took degrees, and spent a number of years in teaching, as may be gathered from the titles of his writings (the actual works being for the greater part lost), which embrace the whole of philosophy, Scripture, Canon Law, and theology, that is, a complete academical course. He was well read in the classics and the ecclesiastical writers known at the beginning of the fifteenth century, as is proved by numerous quotations in his own writings. Only the dates of his ordinations as acolyte and subdeacon are on record, 1394 and 1395. His public life began in 1409, when he was sent to the Council of Pisa, where he is said to have upheld the rights of the council. Back in England he took a prominent part in the prosecution of Wycliffites and Lollards, assisting at the trials of William Tailor (1410), Sir John Oldcastle (1413), William White (1428), preaching at St. Paul's Cross against Lollardism, and writing copiously on the questions in dispute ("De religione perfectorum", "De paupertate Christi", "De Corpore Christi", etc.). The House of Lancaster having chosen Carmelite friars for confessors, an office which included the duties of chaplain, almoner, and secretary and which frequently was rewarded with some small bishopric, Netter succeeded Stephen Patrington as confessor to Henry V and provincial of the Carmelites (1414), while other members of the order held similar posts at the courts of the dukes of York and of Clarence, of Cardinal Beaufort, etc. No political importance seems to have been attached to such positions.

In 1415 Netter was sent by the king to the Council of Constance, where the English nation, though small in numbers, asserted its influence. He must have interrupted his residence at Constance by one, if not several, visits to his province. At the conclusion of the council he, with William Clynt, doctor in Divinity, and two knights, was sent by the English king on an embassy to the King of Poland, the Grand Duke of Lithuania, and the Grand master of the Teutonic Knights. The pope was represented by two Italian bishops, and the emperor by the Archbishop of Milan. The object of the mission was to bring about a mutual understanding and prevent the failure of the papal army against the Hussites. It has been asserted that on this occasion Netter converted Vitort, Grand Duke of Lithuania, to Christianity, and was instrumental in his recognition as king and his subsequent coronation. Although all this is doubtful, it is possible that Netter did exercise some influence during his brief stay in eastern Europe, for he has been styled the Apostle of Lithuania; he also established several convents of his order in Prussia. He returned to England in the autumn of 1420, and devoted the remainder of his life to the government of his province and the composition of his principal work. Fragments of his correspondence lately published throw a light on his endeavours in the former capacity, showing him a strict reformer, yet kind and even tender.

Henry V having died in his arms, he appears to have acted as tutor (rather than confessor) to the infant King Henry VI, whose piety may be attributed, at least in part, to Netter's influence. He accompanied the young king to France in the spring of

1430, and died six months later in the odour of sanctity. Miracles having been wrought at his tomb, the question of the confirmation of his cult is at present (1910) before the Congregation of Rites. Of his numerous works only the "Doctrinale antiquitatum fidei ecclesiæ catholicæ" has permanent value. It is in three parts, the first of which might be termed "De vera religione", the second bears the title "De sacramentis adversus Wiclefistas" etc., and the last "De sacramentalibus". The first two were presented to the pope, who on 8 August, 1427, expressed his satisfaction, encouraging the author to continue his useful and learned undertaking, and communicating to him the text of the Bull condemning the errors of Wyclif "Dudum ab apostolorum". Nevertheless the work, owing to its bulk, would have fallen into oblivion had not some Carmelites, notably Ludovicus de Lyra and John Hottus, discovered it in the library of Paris and secured its publication (1523). It was reprinted at Paris (1532), Salamanca (1557), Venice (1571 and 1757). It is a complete apologia of Catholic dogma and ritual as against the attacks of the Wyclifites, and was largely drawn upon by the controversialists of the sixteenth and seventeenth centuries.

ZIMMERMAN, *Monumenta histor. Carmel.*, I (Lérins, 1907), 442 sqq.

BENEDICT ZIMMERMAN.

Neugart, TRUDPERT, Benedictine historian, b. at Villingen, Baden, 23 February, 1742; d. at St. Paul's Benedictine abbey, near Klagenfurt, Carinthia, Austria, 15 December, 1825. Of middle-class origin Neugart studied in the classical schools of the Benedictine Abbeys of St. George and St. Blasien, entered the order at the latter monastery in 1759, and was ordained priest in 1765; in 1767 he was appointed professor of Biblical languages at the University of Freiburg. In 1770, however, he returned to St. Blasien, where he professed theology. While engaged in this work he published a treatise on penance, "Doctrina de sacramento penitentiae recte administrando" (St. Blasien, 1778). His abbot, Gerbert, had planned the publication of a Church history of Germany on a large scale (*Germania sacra*). In 1780 at his request Neugart began an elaborate research into the history of the Diocese of Constance. On Gerbert's death in 1793, Neugart declined the dignity of abbot but accepted the provostship of Krozingen, near Freiburg, so as to be able to devote himself entirely to historical studies. He published the original charters and documents for the history of the Diocese of Constance in a separate publication, "Codex diplomaticus Alemanniæ et Burgundiæ transjurane intra fines diocesis Constantiensis" (I, St. Blasien, 1791; II, St. Blasien, 1795). With this as a basis he wrote at Krozingen the first instalment of his history of the Diocese of Constance "Episcopatus Constantiensis Alemannicus sub metropoli Moguntina" (part I, vol. I, to the year 1100, St. Blasien, 1803). Soon the abbey of St. Blasien was secularized. Notwithstanding Neugart's efforts for its preservation it was assigned to Baden, and absorbed with all its landed possessions. In 1807 Neugart went to Vienna to negotiate for the settlement of the expelled monks in Austria, and succeeded. The abbot and monks of St. Blasien were granted the Abbey of St. Paul, near Klagenfurt in the valley of the Lavant, suppressed by Joseph II. Here Neugart completed the second volume of his diocesan history extending to 1308, but it was not published until 1862. He then turned his attention to the history of Carinthia and of the Abbey of St. Paul, where he and his companions had found refuge. After his death there appeared his "Historia monasterii Ord. S. Benedicti ad S. Paulum in valle inferioris Carinthiæ Lavantina" (Klagenfurt, 1848, 1854). Several historical treatises and compilations are still in MS. Another work, "Libellus majores maternos Rudolphi I regis exhibens", was edited by Weber (Klagenfurt, 1850).

BADER, *Das ehemalige Kloster St. Blasien auf dem Schwarzwalde und seine Gelehrtenakademie* (Freiburg, 1874), 115-120; HURTER, *Nomenclator* (Innsbruck, 1895), 859 sqq.

J. P. KIRSCH.

Neum (Latin *neuma*, *pneuma*, or *neupma*, from Greek *πνεῦμα*, a breath, or *ρεῦμα*, a nod), a term in medieval music theory. It does not seem to have been used before the eleventh century. From that time it was generally taken in two senses, to denote, first, a kind of melody, second, a notational sign. Guido of Arezzo ("Micrologus", xv) takes it in a third sense, in which he seems to be singular, saying: "As in metrics there are letters and syllables, parts and feet, and verses, so in music there are tones, of which one, two, or three join to make a syllable; of these one or two make a *neuma*, that is a part of the melody; while one or several parts make a distinction (phrase), that is, a suitable place for breathing."

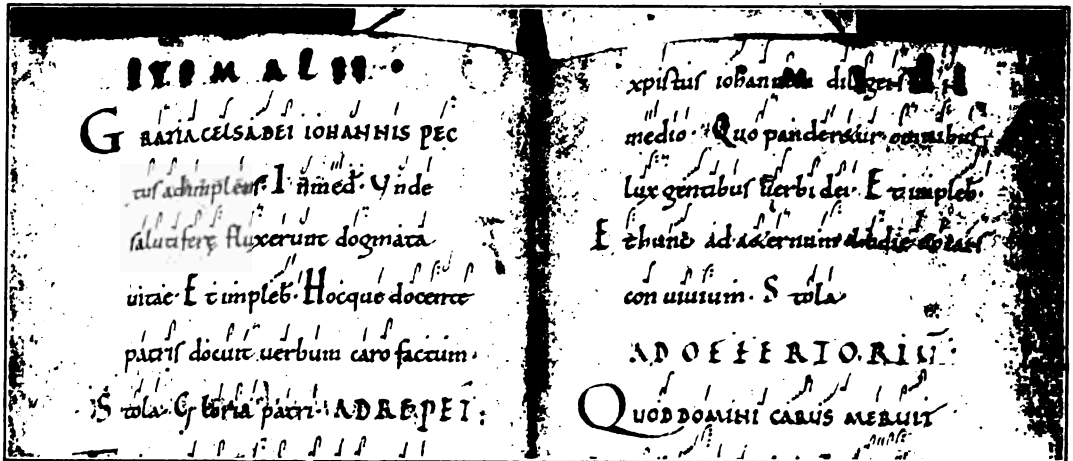

Applied to a melody, the term means a series of tones sung without words, generally on the last vowel of a text. The older name for such a melody is *iubilus*. Thus St. Jerome (In Psalm. xxxii, P. L., XXVI, 915) defines: "That is called *iubilus* which neither in words nor syllables nor letters nor in speech can utter or define how much man ought to praise God". Similarly St. Augustine says (Psalm xcix, P. L., XXXVII, 1272): "He who sings a *iubilus*, does not utter words, but the *iubilus* is a song of joy without words." And again (in Ps. xxxii, P. L., XXXVI, 283): "And for whom is this *iubilatio* more fitting than for the ineffable God?" Finally the following passage from St. Augustine's contemporary, Cassian ("De Cœnobiorum Inst.", II, ii, P. L., XLIX, 77) must remove any doubt as to the use of such *iubili* in the Liturgy. He says of certain monasteries that "they held there should be sung every night twenty or thirty psalms and those, too, prolonged by antiphon melodies, and the joining on of certain modulations."

The usual place of such neums is in responsorial singing (see PLAIN CHANT), especially at the end of the Alleluia which follows the Gradual of the Mass. In the later Middle Ages, however, from about the twelfth century onwards, the custom grew up of adding neums, definite formulae, one for each mode, to the office antiphons, there being special rubrics in the liturgical books as to the days on which they should be sung or not sung. The more important use of the term is that in which it means the signs used in the notation of Gregorian Chant. Akin to this use is the one which applies it to the tones or groups of tones designated by the notational signs. Also in this sense the term cannot be traced farther back than the eleventh century. The names of the various signs, too, seem to date from about the same period. Previously the general name for the notation was *usus*. The names of the single signs varied with time and place. The tables of neums found in several MSS not only differ in the number of names, but also give different names for the same sign, or different signs for the same name. In this article we shall use the names as applied in the Preface to the Gradual recently issued from the Vatican printing establishment.

The neumatic notation of Plain Chant is first met with in MSS of the ninth century and, with slight modifications, is to be seen in liturgical books issued to-day. Whether its use goes much farther back, whether, in particular, St. Gregory the Great employed notation in his typical Antiphonarium, cannot be said with certainty. The fact that at the date of our earliest MSS the insufficiency of the notation was felt, and various efforts were made to supply the defect, would seem to point to an antecedent development of considerable duration. On the other hand the fact that from the beginning we find several families of notation like those of St. Gall and Metz, which,

while agreeing in the main principles, show considerable divergence in matters of detail, would seem to suggest that at the time when these families started, only the fundamental idea had been conceived, while the full development of the whole system took place

Accordingly the fundamental principle is that the rise and fall of the melody are expressed by the signs of the accentus acutus (/) and the accentus gravis (\). The acutus, being drawn upwards, from left to right, indicates a rise in the melody, a higher note; the

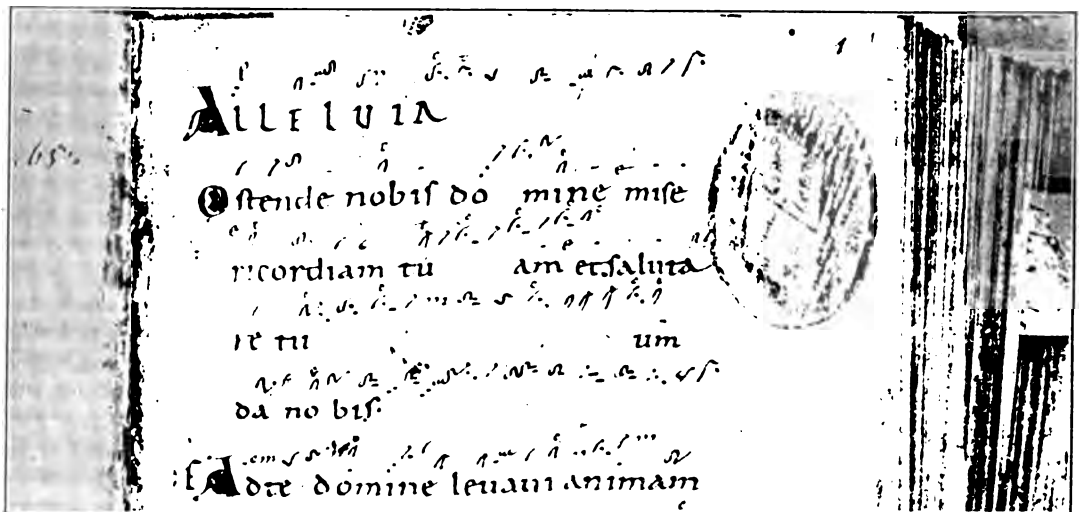

ILL. I.—THE WINCHESTER TROPES (XI CENTURY)
Corpus Christi College, Cambridge, No. 473
(reduced about one-third)

more or less independently at the various centres. Judging by the consideration mentioned first, we should have no difficulty in believing that St. Gregory used neumatic notation in his Antiphonary. In accordance with the second view, however, we should feel inclined to put the beginning of neumatic writing about the eighth century.

As to the origin of the neums students are now on the whole agreed that they are mainly derived from

gravis, being drawn downwards, a fall in the melody, a lower note. From the combination of these two signs there result various group signs: (1) ^, acutus and gravis, a higher note followed by a lower one, a descending group of two notes (clivis); (2) v, gravis and acutus, lower and higher notes (pes or podatus); (3) ~, acutus, gravis, acutus; a group of three notes of which the second is the lowest (porrectus); (4) \, gravis, acutus, gravis; a group of three notes of which the sec-

ILL. II.—CODEX 121 (X-XI CENTURY), EINSIEDELN

the accent marks of the grammarians. In that way, of course, they point back to Greece. From the fact, however, that some of the signs in the developed system look like signs in Byzantine notation, and that some of the names are Greek in origin, some investigators have concluded that the whole system was taken over from Greece. Recently J. Thibaut has defended this theory in a rather fanciful book, "Origine Byzantine de la Notation Neumatique de l'Eglise Latine". But the prevailing opinion is that the neumatic system is of Latin growth.

ond is the highest (torculus); and so on. In these combinations the elements generally preserve their original form pretty clearly, except that the angles are often rounded off, as indicated below. When used singly, the acutus, too, retained its shape fairly accurately and from its shape received the name virga (virgula). The gravis, however, was generally converted into a short horizontal line (—), or a dot (.), or something similar, and hence received the name of punctum. In this form it is also used in an ascending group of three or more notes (scandicus) and in a

similar descending group (/., climacus). More complicated combinations were designated as modifications of the simpler groups. The addition of a lower

8. 

Mus. Ex. 1

note to a group ending with a higher note was indicated by the adjective flexus, the addition of a higher note to a group ending with a lower note, by resupinus.

ILL. III.—MS. 239 (IX-X CENTURY), LAON

Thus even the clivis (more correctly clinis) was at an early period called virga flexa, and the torculus could be considered as a pes flexus. The sign  would be a porrectus flexus, the  a torculus resupinus, etc. Again the placing of several puncta before a sign is expressed by the term præpunctis, their addition after a sign subpunctis. In accordance with that a scandicus is a virga præpunctis; a climacus, a virga subpunctis;  pes subpunctis; , scandicus subpunctis, or, also compunctis, the last-named adjective indicating the addition of punctis before and after.

A special modification of the neum form is that which is called liquescent or semivocal. It consists generally of a shortening, attenuating, or curling of the last stroke. It occurs only at the transition from one syllable to the next and there only in certain circumstances. It is never found when another neum

follows on the same syllable. An analysis of all the cases of liquescence occurring in the MS. Gradual 339 of St. Gall is made in the second volume of the "Paléographie Musicale" (pp. 41 sqq.), where the subject is treated very fully. This analysis shows that by far the largest number of cases (2450 out of 3504) occur when a vowel is followed by two or more consonants the first of which is one of the "liquids" (l, m, n, r) either within a word (like *sanctos*) or through the collocation of two words (as in *te*). A considerable number is found before an explosive dental at the end of a word followed by another word beginning with one or more consonants (317 before t, 48 before d). Forty-nine times it is found before a final s followed by another consonant (e. g. *nobis Domine*) and six times before s in *Israhel*; seventy-three times before g, thirty-two times before two consonants the second of which is j (e. g. *adjutor*), forty-six times before single m, thirty-four times before a single g followed by e or i. One hundred and fifty-nine times on the diphthong au, and two hundred and eighty-eight times before a single j (including one hundred and fifty-three cases on *alleluia*).

It is clear from what has been said, that this liquescence must be connected with the proper pronunciation of the consonants. But as to what it should mean in the rendering, authors are not agreed. Thus the preface to the Vatican Gradual says: "ipsa cogente syllabarum natura, vox de una ad alteram limpidè transiens tunc 'liquescit'; ita ut in ore compressa 'non finiri videatur', et quasi dimidium suæ, non moræ, sed potestatis amittat". This is not easy to translate, but it would seem that the last tone of the liquescent neum should "lose one half, not of its length, but of its strength". The "Paléographie Musicale" on the other hand, says that in the exact pronunciation of certain combinations of consonants an obscure vowel sound enters between them, so that a word like *confundantur* would sound *confundantur*.

and that it is this after-sound which exerts its influence on the tone preceding the first consonant. It is not easy to see why this obscure vowel sound coming after the first consonant should influence the tone preceding it, nor why the consonants should change the dynamic character of the preceding vowel sound. Possibly the nature of the liquid consonants, l, m, n, r, which evidently have given the name to the liquescent neums, would give a more satisfactory explanation. It is well known that these consonants can be sung, that is be prolonged on a definite and varying pitch. It would seem, then, that when one of these consonants follows a vowel, then sometimes the last note on the vowel sound is smoothly fused into the consonantal sound, part of its time value being given to the singing of the liquid or semivocal consonant. This would conveniently apply to the first class of cases

mentioned above, which comprise the large majority of all the cases. Also to the case of single *m* and *j* (or *i*), the latter partaking of the nature of the liquid consonants. It would further apply to the case of *gn*, if we suppose that that combination was pronounced *ny*,

Mus. Ex. 2

and to the case of final *s*, if that consonant was voiced, when it also could be sung. In the case of the diphthong *au* the liquescence would consist in the transition from the first vowel to the second. The remaining cases of double consonants should be explained by analogy, the liquescence consisting simply in the shortening of the vowel sound made for the purpose of distinct pronunciation of the group of consonants without loss of time. This explanation would have the further advantage of being in accordance with the practice of the best choirs that nowadays make a peculiar study of Plain Chant.

Some of the liquescent neums have special names.

Intr. 2.

Mus. Ex. 3

Thus the liquescent *podatus* is called *epiphonus*, the liquescent *clivis*, *cephalicus*, the liquescent *climacus*, *ancus*.

In addition to the neums which are derived from the accents and which form the groundwork of the neumatic system, there is another class which may be taken as indicating special effects. They have, as Wagner has pointed out, as a common feature, the

hook form. In the first place we mention the *strophiscus*, having the shape of a comma (,). When occurring singly, it is called *apostropha*, when doubled, *distropha*; when trebled, *tristropha*. The *apostropha* is generally found at the end of another neum, or followed by a *distropha* at a higher pitch; it is never used as a single note over a syllable. When added to a neum, it is generally represented in the later staff-notation manuscripts at the same pitch as the last note of that neum. But there is reason to believe that originally there was an interval smaller than a semitone between those two notes. The *distropha* and *tristropha* indicate a quick repetition of the same note, possibly again with a minute difference of pitch between the repeated notes.

Akin to the *apostropha* is the *oriscus*, having a shape somewhat like this : 4. *Apostropha* and *oriscus* are sometimes interchanged in different manuscripts. In a few instances the *oriscus*, however, is

ti-ándum ma-

ne mi- se-ricórdi-am tu-

am, et veri-tátem

tu- am * per no-

ctem.

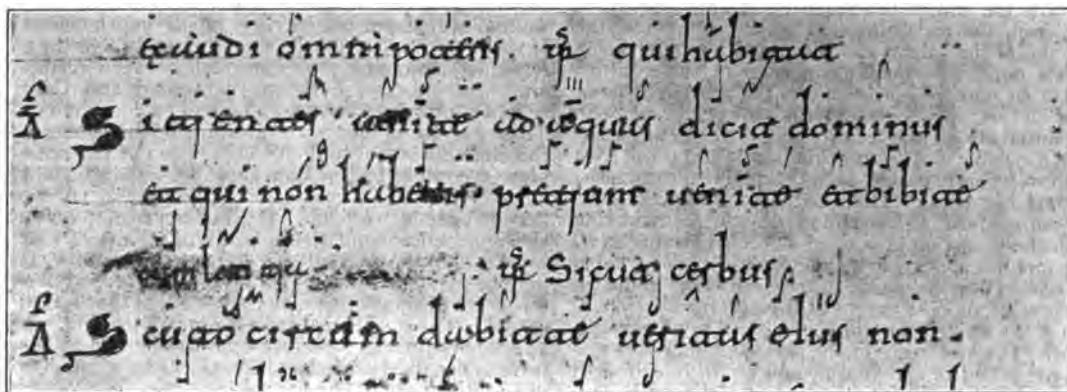

Mus. Ex. 4

found as the single sign over a syllable. The *quilisma* is generally written as a number of hooks open to the right and joined together (*u* , *uu*). It occurs invariably as the middle note in an ascending group and seems to indicate a glide of the voice, being accompanied by a sustaining of the note or group of notes preceding it. The *salicus* is a figure like the *scandicus*, but with the second note in the shape of a hook opening downwards (˘). It seems to indicate a prolongation of the middle note. Sometimes, in staff-notation manuscripts, the first two notes are given at the same pitch. Possibly here again there was a difference of less than a semitone between them. The *pressus* is a kind of combination of a *virga* with added *oriscus* and a *punctum* (˘), *pressus minor*, ˘, *pressus major*). It is generally understood as equivalent to a *clivis* with the first note prolonged as equivalent to a *clivis* with the first note prolonged as equivalent to a *clivis*. Finally to be mentioned is the *trigon*, a combination of three *puncta*, the middle one being higher than the other two (˘). From its shape it would seem to be a kind of *torculus*, but it is often transcribed with the first two notes at the same pitch, suggesting once more a minute interval not expressible in staff notation.

The illustrations which accompany this article are

reproduced, by kind permission of the editors, from the "Paléographie Musicale". Illustration I ("Pal. Mus.", III, pl. 179) represents the type of the Anglo-Saxon neums of the eleventh century. The piece is a trope for the Introit "In medio". The three portions

pes subpunctis, on the last syllable of *salutifera*. The strophicus (on *med*) has here no distinct sign, but is written with the ordinary virga sign. The oriscus, however, is clearly marked. Thus we have a virga with oriscus (also called *franculus*) on the first syl-

ILL. IV.—MOZARABIC LIBER ORDINUM (A. D. 1052)
Library of St. Dominic, Silos

of the Introit itself are merely indicated by the cues *In Med.*, *Et impleb.*, and *Stola*. The signs for the single notes are the plain virga and the round punctum, the former on the last syllable of *iohannis*, the second and third syllables of *adimplens*, etc., the latter on the second syllable of *Gratia*, the second syllable of *Dei*, the first of *iohannis*, etc. In the podatus the *gravis* is a short horizontal stroke, the *acutus* a straight virga joining almost at a right angle; see third syllable of *Gratia*, third of *salutifere*, third of *dogmata*, etc. There is also a second form consisting of a disjointed punctum and virga, see third syllable of *Gloria* (last line on left page), first syllable of *xristus*

ble of *Gratia*, and the full pressus (*virga*, *oriscus*, and *punctum*) on the first syllable of *pectus*, the first of *fluxerunt*, etc. The quilisma is shown on the second syllable of *celsa*, where we first have a punctum, serving as the starting-point, then the triple curve of the quilisma itself, to which the virga stroke, representing the highest note, is attached. We have it again on the second syllable of *impleb.*, where a second virga follows, the whole figure representing the notes *f g a b b*.

A less usual sign is found on the first syllable of *carus* (last line, right page). The quilisma there is followed by a climacus in which the three signs, *acutus* and two graves are joined together: *♩*.

ILL. V.—AQUITANIAN NOTATION (XI CENTURY)
Bibliothèque Nationale, Paris, Fonds latin, No. 1134

(first line of right page), third syllable of *eternum* (fourth line). This is considered as indicating a long form of the podatus. The liquescent form (*epiphonus*) is marked by a rounding of the angle; see second syllable of *iohannis*, third syllable of *fluxerunt*. The *clivis* shows the curved angle, as on second syllable of *pectus*, second and fourth of *salutifere*. The liquescent form (*cephalicus*), somewhat shortened, is seen on the third syllable of *iohannem* (first line on right page). The *torculus* is seen on the first syllable of *adimplens*, first syllable of *docente* (fourth line), etc. On the first syllable of *celsa* we have the *torculus liquescens*, the last *gravis* being shortened. The *porrectus* is easily recognizable on the first syllable of *Stola*. A climacus occurs on the second syllable of *docente* (fourth line) being followed by an *epiphonus*; a

Illustration II ("Paléogr. Mus.", IV, pl. A) is from a MS. written in the monastery of Einsiedeln at the end of the tenth or the beginning of the eleventh century. It belongs to the St. Gall school of notation. The affinity of this school to the Anglo-Saxon is evident. There are, however, a number of peculiarities. First we find a greater variety of signs. Thus the virga appears in two forms, one slightly curved to the right and vanishing at the top, the other straighter and with a thickening at the top. This second variety arises, graphically, from its being drawn downwards, the pen spreading itself a little at the start of the stroke. For the rendering it indicates a longer form of the note. We find the first form on the first syllable of *Ostende*, the fifth of *miserericordiam*, etc., the second on the second syllable of *Ostende* (first sign),

(the first punctum connected with the pes in the manner of a torculus and the second, liquefcent, bent back to the left) on the second syllable of *collaudant* and a porrectus compunctis liquefcent on the last syllable of *filium*. The oriscus is found after the podatus on

it stands for *alle*. The idea of high pitch is expressed by the *f* occurring twice on *domino*. The first time it refers evidently to the rise of the melody to *c*, the second time it probably enjoins a *b* natural instead of *b* flat.

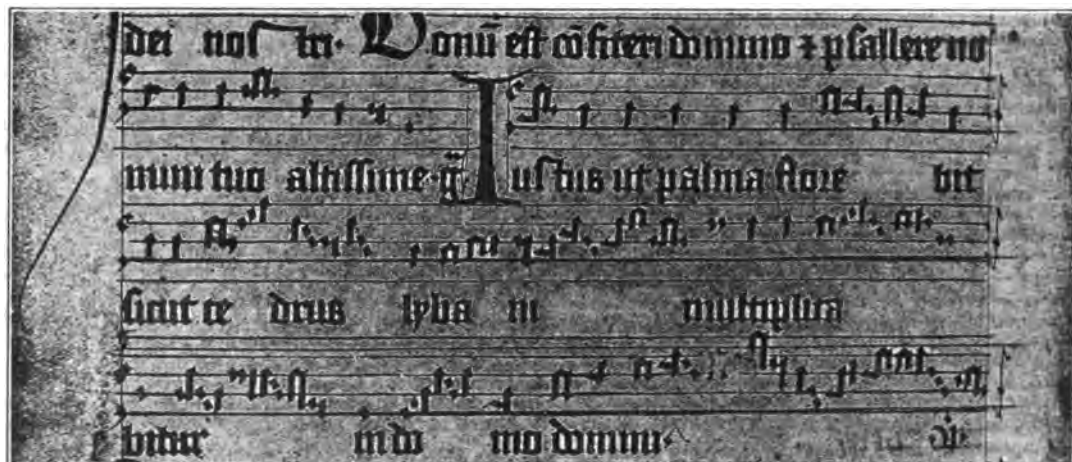

ILL. VII.—MS. 411 (241) (XIV CENTURY)
Bibliothèque Mazarine, Paris

agathæ and the quilisma, consisting of two hooks, on the second syllable of *domino*, the second of *angeli* and the first of *dei*, in each case a porrectus being joined to it.

Another peculiarity of this school is the frequent use of disjoint neumes, all of which indicate a prolongation of the notes. Mention was made of a disjoint podatus in connexion with the first illustration. We find it here on *in* and the first syllable of *celebrantes*. A torculus of this kind is shown in the second syllable of *martyris*. The descending figures are indicated by the puncta placed perpendicularly. Thus we have a clivis on the second syllable of *omnes*, the second

The comparison with the reading of the Vatican will show a close resemblance. We only notice that on *gaudent* and *angeli* the MS. adds a liquefcent note to the podatus and porrectus subbipunctis, and on *celebrantes* has twice a porrectus for the strophic clivis, which suggests that the apostropha (oriscus) was sung slightly higher than the last note of the clivis, as mentioned above.

Illustration IV is taken from an eleventh-century MS. of Silos, written in the Mozarabic notation ("Pal. Mus.", I, pl. II) in order to show that even this is based on the same principles. The usual forms of virga, punctum, podatus, clivis, torculus, porrectus

ILL. VIII.—GOTHIC NEUMS (A. D. 1435)
Cathedral Library, Trier

(before the quilisma) and the third of *domino*, the third of *angeli* (where the lower one got attached to the l), etc.; a climacus on *angeli*, preceding the quilisma.

We note further the use of *litteræ significativæ*. Thus we have the *c* used in the same sense as in the St. Gall school, on *agathæ*. Similarly a *t* appears at the bottom of the illustration under the word *mel*. The *a* on *Gaudeamus* stands here for *augete* and is, therefore, synonymous with the *t*, whereas in St. Gall

will be recognized easily. The other features will be explained with reference to the modern form of the Vatican Gradual. The piece occurs in the Roman Liturgy as Introit of the Saturday after the fourth Sunday of Lent. On the last syllable of *Sitientes* the MS. has a pes subbipunctis, with the puncta joined together, representing the same notes as the staff notation without the pressus. On the first syllable of *venite* the MS. has a clivis instead of the single note of the Roman version, on the second, the punctum and

torculus (placed one over the other) are only graphically different from the pes and clivis. On the first syllable of *equas* a tristopha takes the place of the trigon. On the second syllable of *dicū* the MS. omits the last note of the print. On the second syllable of *dominus* the disjoint punctum and clivis correspond to the conjoint torculus. The second figure on *non* is a liquescent torculus. It begins below with the gravis to which the acutus is attached in the usual manner, but the last, liquescent, gravis is represented by a curve to the left of the acutus. The remaining slight differences are like those already explained.

As has been sufficiently indicated, the neums merely marked the rise or fall of the melody. They gave, in themselves, no clear information as to the exact amount of rise and fall, in other words, they did not mark the intervals. A podatus, e. g., may indicate a second, a third, a fourth or a fifth without change in its form. This may now be accepted as an established fact. The various efforts made from time to time, most recently by Fleischer in his "Neumenstudien", to find interval signification in the neums, have failed completely. It is clear then, that at no time could the melody be read absolutely from the neumatic notation. Rather this served merely as an aid to memory. Nor did the choir sing from the notation. The MS. was only for the choir-master, or at most for the solo singer. The whole body of the Plain Chant melodies had to be committed to memory in the rehearsing room, and we know from contemporary writers that it took a singer several years to become acquainted with all the melodies. In the course of time, as oral tradition began to grow less reliable, a desire was felt to have also the amount of rise or fall fixed. Accordingly we find even at the date of our earliest MSS. the use of letters, added to the neums, to warn the singer here and there as to the intervals, as we have mentioned above. These indications, however, were again merely vague and could not finally satisfy. Various efforts which space forbids us to detail here, were then made to supplement the neumatic notation. All of them, however, were destined to disappear before the introduction of a new principle, which was to distinguish the higher or lower pitch of the tones by the higher or lower position of the notes, grading the distances between the notes in strict accordance with the intervals. Attempts in this direction can be noticed even in the class of MSS. which have been considered up to this. Our example of Metz notation shows pretty clearly an endeavour on the part of the scribe to place the notes according to pitch. The full, systematic carrying out of this idea is found in the tenth century, first in the Lombardic notation, shortly afterwards in the Aquitanian. Illustration V, taken from an eleventh-century Versicular and Prosary from St. Martial in Limoges ("Pal. Mus.", II, pl. 86) belongs to the latter class, which is further characterized by the almost complete disjoining of the neums. There being no clef, the semitones cannot be found from the notation. But apart from that the intervals can be read without difficulty, it being kept in mind that notes placed perpendicularly should be read downwards, as in the Metz notation. A few remarks will suffice to point out the difference between the MS. and the reading of the Vaticana given above. On *palma* the MS. gives a liquescent note, on the first syllable of *adnunciandum* it has a podatus (a c, or d f, as this notation should be read a fifth lower) instead of a single note; in the last, a podatus instead of an epiphonus. The first group on *mane* is the same as in the Vaticana, the lowest mark being a mere blot. In the third group the MS. has a fourth (c g, or f c) instead of a third (b g). After the fifth group there is an omission of the whole passage which in our staff notation example is placed between the two little bars at the end of the second line. Such omissions are not uncommon, it being supposed that

the singer knew frequently-occurring long neumata by heart. The omission is indicated in the MS. by the little perpendicular line. On the first syllable of *misericordiam*, the first two notes of the Vaticana are omitted. At the end of the line we observe the custos, indicating the pitch of the first note of the second line. On *tuam* there is again an omission of a whole group indicated as above. On *veritatem* the fourth dot is an accidental blot. At the end of the second *tuam* the MSS. has a third (f d) instead of a fourth (c g). The final neuma is left incomplete.

This procedure solved in principle the problem of diastematic (interval) notation. For greater convenience, however, scribes soon began to draw horizontal lines which helped to facilitate the correct placing and reading of the notes. It was the work of the Benedictine monk Guido of Arezzo (about 1000) to fix the use of these lines finally in such a way that adjacent lines mark the interval of a third, the intervening note being placed between the two lines. Letters were also affixed to the beginning of the staff to give the alphabetical name of one or several places on the staff and thus to indicate the position of the semitones. Soon c and f were used for this purpose by preference and out of them by a graphic transformation, our present C and F (bass) clefs evolved. Later the letter g was employed, which through the addition of an ornamental flourish developed into the modern violin clef. In the beginning, however, the f and c lines were run over with various colours, or if f fell into space, a coloured line was drawn between the e and g lines.

In the staff thus perfected the neums were written according to the forms that had been previously in use in the various localities, such modifications being introduced as were necessary to mark the exact position of the notes, notably the thickening of the head of the acutus. Illustration VI, taken from a twelfth-century Gradual of St. Evroult ("Pal. Mus.", III, pl. 194), shows the process clearly. It has four dry lines drawn on the parchment, of which the one for f was coloured red, that for c green. The other two lines have the clef letters a and e.

From the thirteenth century the notes began to be written larger, so that they might be read by a number of singers at the same time. The thickening of the strokes at the exact place the notes occupy also became more pronounced. Thus gradually in the Latin countries the type shown in the foregoing illustration evolved which is practically the one adopted in our modern chant books.

Illustration VII ("Pal. Mus.", III, pl. 207 B) is taken from a fourteenth-century plenary Missal belonging to Notre Dame in Paris. In the first line on the right-hand column the group a c b g has been written twice by mistake. Of interest is the disappearance of the quilisma at the end of the final neuma, also the substitution of c for b on *florebit* at the end of the group on *per* (which word is written a little too far to the left).

Illustration VIII ("Pal. Mus.", III, pl. 146) shows the peculiar type of notation which developed in Germany and is called *Hufnagelschrift* (horseshoe-nail writing). The illustration is from a Gradual written at Trier in 1435. There are five black lines, but the f line was coloured red. The illustration shows clearly that a second line was drawn over the first. In the third staff we find the g clef and the red f line drawn in the space between e and g. Melodically the frequent substitutes of c for b is remarkable on *justus*, twice on *florebit*, on *cedrus*, etc.). This is a peculiarity of the German tradition.

For the rhythmic signification of the neums see the article on PLAIN CHANT.

The principal work on the subject is the *Paléographie Musicale*, published in quarterly issues since 1889, first at Solesmes, afterwards at Tournai. An exhaustive list of the earlier literature is given in the preface to the first volume. Supplemental to this are

the publications of the *Plain Song and Medieval Music Society* (London, since 1888). A good hand-book is WAGNER, *Neumenkunde*, second part of his *Einführung in die Gregorianischen Melodien* (Freiburg, 1905). Also, *Gregorian Melodies* by the Benedictines of Stanbrook (London, 1897); FLEISCHER, *Neumen-Studien*, part I (Leipzig, 1895); part II (Leipzig, 1897); part III (Berlin, 1904); MOLITOR, *Deutsche Choral-Wiedergabe*, (Ratisbon, 1904); THIBAUT, *Origine Byzantine de la Notation Neumatique de l'Eglise Latine* (Paris, 1907). On Byzantine notation see also RIEMANN, *Die Byzantinische Notenschrift im 10. bis 13. Jahrhundert* (Leipzig, 1909). On the rhythmical signification of the neumes: MOCQUEREAU, *Le Nombre Musical Gregorian*, I (Tournai, 1908).

H. BEWERUNGE.

Neumann, JOHANN BALTHASAR, b. 1687 at Eger; d. 1753 at Würzburg, master of the rococo style and one of the greatest and most productive artists of the eighteenth century; distinguished as a decorator, but more so as an architect. He came from Eger to Würzburg as a cannon founder, and served chiefly with the French army. After he had travelled to perfect himself as an architect, he followed that profession in southern Germany and on the Rhine, entering into such successful competition with the French masters of the period that de Cotte and Boffrand, who judged his plans for the episcopal palace at Würzburg, afterwards eagerly laid claim to the authorship. While in the service of Prince-Bishop Franz von Schönborn (1719), Neumann laid the cornerstone of the palace (1720). It is ostentatious but habitable, a vast rectangle, 544 ft. by 169 ft., with five well laid out courts and three entrance gates ornamented with pilasters, columns, and balconies. The throne room with the splendid adjoining state apartments, and the court chapel, although not externally remarkable, excel all the rest in sumptuous splendour with an enormous outlay in material and skill. The baroque style of the edifice is here replaced by the most finished decorative rococo. The details are frequently of marvellous beauty; the arrangement, notwithstanding the overcrowding, is not inharmonious, although in combination it is bizarre and whimsical. The rococo artist obviously intends to produce not only picturesque effects, but a demonstration of his unrestricted power over material substances. The interior decorations for a palace built at Bruchsal for another Schönborn, Bishop of Speyer, are magnificent, though simpler. For a third Schönborn he built a castle at Coblenz which was likewise distinguished for immense, harmonious proportions and splendid arrangement. A palace in Werneck is also his work. He completed the designs for palaces in Vienna, Karlsruhe, etc. The cathedral of Speyer, destroyed by the French army, was restored by Neumann with a clever adaptation of the existing conditions. In the façade, which was later removed, he followed the prevailing taste in every detail. In the restoration of the west side of Mainz cathedral he was unsuccessful, and more so with his piecework on the cathedral of Würzburg. In addition to these restorations he built the Pilgrims' church at Vierzehnheiligen, and the collegiate church at Neresheim, both important buildings, with oval spires, vast areas, and stately proportions. They are in rococo style, which is no longer attributed entirely to him. Among his other works are the Dominican church at Würzburg, the family chapel of the Schönborns in the same place, and the church at Gröswenstein. He made numerous designs for parterres, buildings for practical purposes, and objects of handicraft. He was a product of his age, though he towered above it by reason of the unusual artistic talent with which nature had endowed him. More recent times have, within certain limits, justified his choice of style.

G. GIETMANN.

Neumann, JOHN NEPOMUCENE, VENERABLE, fourth Bishop of Philadelphia, Pennsylvania, U. S. A., b. at Prachatitz, Bohemia, 28 March, 1811, erroneously set

down as Good Friday by his biographers; d. at Philadelphia, 5 January, 1860. From childhood he evinced signs of a vocation to the priesthood, and entered the seminary of Budweis in 1831. A profound theologian, thoroughly versed not only in all branches of sacred learning but in the natural sciences as well, particularly in botany, he spoke fluently many Slavic dialects and at least eight modern languages, besides being master of Latin, Greek, and Hebrew. When Bishop of Philadelphia he learned Irish to help the Irish immigrants in his diocese. Finishing his course at the University of Prague with distinction in August, 1835, he returned to Budweis, his native diocese, for ordination. While at the seminary, the letters of Father Baraga, afterwards Bishop of Marquette, Michigan, written to the Leopold Missionary Society, inspired Neumann with the desire of consecrating himself to the American missions. Accordingly, while yet a seminarian he landed in America (2 June, 1836), was adopted, and (25 June, 1836) ordained by Bishop Dubois of New York, who sent him without delay to western New York, where he laboured for four years amid incredible hardships. In 1840 he entered the Redemptorist Congregation, and was the first of its members professed in America, 16 January, 1842. For three years Neumann was superior of the Redemptorists at Pittsburg, where he built the church of St. Philomena and by labours especially among the German-speaking people, won the gratitude and praise of Bishop O'Connor. In 1846 he was made vice-provincial of the Redemptorists in America, and in 1852 at the suggestion of Archbishop Kenrick of Baltimore Pius IX gave Father Neumann a command under obedience to accept the Bishopric of Philadelphia, to which he was consecrated by Archbishop Kenrick at St. Alphonsus, Baltimore, 28 March, 1852. In his solicitude for his flock he visited the larger congregations of his diocese every year and the smaller ones every two years, remaining several days in the country places, preaching, hearing confessions, confirming, visiting, and anointing the sick. He once walked twenty-five miles and back to confirm one boy.

Indefatigable in the cause of education, both ecclesiastical and secular, he raised the standard of study and discipline at the diocesan seminary of St. Charles Borromeo, and founded (1859) an ecclesiastical preparatory college, to this day a credit and a blessing to the great diocese of Philadelphia. One of his first acts was to provide Catholic schools. At his consecration (1852) there were but two parochial schools in Philadelphia; at his death eight years later, their number was nearly one hundred. The boys he entrusted to the Christian Brothers, and the girls to different sisterhoods: St. Joseph, Charity, Immaculate Heart of Mary, Notre Dame of Namur and Notre Dame of Munich. These last he helped to establish firmly in the United States, and befriended in many ways. He introduced the Sisters of the Holy Cross from France to take charge of an industrial school. At the advice of Pius IX he founded the Philadelphia branch of the Sisters of St. Francis, and he was also the staunch

VENERABLE JOHN NEPOMUCENE NEUMANN

Digitized by Google

friend of the Colored Oblate Sisters in Baltimore, whom by his tact and charity he saved from dissolution. In five years he erected fifty churches and completed the exterior of the cathedral. Conspicuous at the First Plenary Council of Baltimore (1852), he was one of the American bishops invited by Pius IX to Rome in 1854 for the definition of the dogma of the Immaculate Conception. Noted for his devotion to the Most Blessed Sacrament, Neumann was the first American bishop to introduce the Forty Hours devotion into his diocese in 1853; he also inaugurated the practice now in vogue in many places of reciting the Litany of the Blessed Virgin and the Rosary before High Mass on Sundays and Holy Days. His remains lie interred in a vault before the altar in the lower chapel of St. Peter's Redemptorist church, Philadelphia. Neumann left no published works except two catechisms of Christian Doctrine, which received the approbation of the First Plenary Council of Baltimore, a Bible history, confraternity manuals, a Latin pamphlet on the Forty Hours, and Acts of the synods held by him every two years. His pastoral letters are remarkable for their solidity, beauty, and unction. On 15 December, 1896, he received the title of Venerable and the authorities of Rome have under consideration the acts of the Process of Beatification.

JOSEPH WISSEL.

Neumayr, FRANZ, preacher, writer on theological, controversial and ascetical subjects, and author of many dramas on sacred themes in Latin, b. at Munich, 17 January, 1697; d. at Augsburg, 1 May, 1765. He entered the Society of Jesus 3 October, 1712, and after his studies in the Society, taught rhetoric and belles lettres for ten years. He then for two years preached on the missions, when he was made director of the celebrated Latin sodality at Munich, a post which he filled with great credit for eleven years. From 1752 to 1763 he preached at the cathedral of Augsburg with extraordinary success. His controversial sermons, directed in a great part against the false teachings of the Lutherans, and in particular against the apostate monk Rothfischer, and Chladonium, were of a solidity of argument that baffled the efforts of his adversaries. Father Neumayr produced a surprising number of volumes: Latin plays for the use of his Latin sodality, which periodically staged such productions for the pleasure and edification of the literary men of Munich; sermons which he had delivered in the pulpit of Augsburg cathedral; works on asceticism, treatises on Rhetoric and Poetry, and some essays on moral theology in defence of the Jesuit system. Some of his Latin plays were republished in his two collections "Theatrum Asceticum" and "Theatrum Politicum". "Theatrum Asceticum, sive Meditationes Sacrae in Theatro Congregationis Latinae de B. V. Mariae, ab Angelo Salutatis exhibitae Monachi verno jejuni tempore ab anno 1739 usque ad annum 1747", 871 pp., Ingolstadt and Augsburg, 1747 (5 editions), contains dramatic renderings of such subjects as the conversion of St. Augustine, devotion to the B. V. Mary, the evil of sin, the fear of God, Divine Mercy and Love. "Theatrum Politicum sive Tragediae ad commendationem Virtutis et Vitiorum detestationem, etc.", Augsburg and Ingolstadt, 1760, 518 pp., contains episodes from the lives of Eutropius, Papinianus, Anastasius, Dicorus, Tobias, and Sara, etc. One amusing title which occurs is "Processus iudicialis contra fures

temporis". These plays, besides numerous others, were published also in separate booklets. On his ascetical writings probably the most famous and most valuable is the excellent little book "Idea Theologiae Asceticae, Scientiam Sanctorum exhibens", a posthumous work first published in Rome by Alexander Monaldi in 1839. It has gone through five editions in Latin and has been translated into various languages. The English edition bears the title: "The Science of the Spiritual Life." He wrote also several works in defence of Probabilism. Of his literary treatises the "Idea Rhetoricae" deals with the precepts and use of Rhetoric; "Idea Poesis" is a similar volume on poetry and in the title he tells us the uses of the art, "Ad Ingeniorum Culturam, Animorum Oblationem ac Morum Doctrinam"—ends which he had very well kept in mind in his own dramatic works. A tribute to Father Neumayr on the occasion of his jubilee in religion styles him: "The Champion of Faith and Good Morals, a Follower and Rival of the great Paul, the Hammer of the Heretics, Physician of Sinners and Oracle of the Just!" His works, as enumerated in *Sommervogel*, number 112 books and pamphlets.

EDWARD F. GARESCHE.

Neusohl, DIOCESE OF (Hung. BESZTERECZBÁNYA; Lat. NEOSOLIENSIS), founded in 1776 by Maria Theresa. Cardinal Peter Pázmány had already contemplated founding four new sees in order to relieve the Archdiocese of Gran; one of these was Neusohl, but this project was dropped in 1636. Instead of four sees, four Jesuit colleges were established in Kassa, Neusohl, Kossy, and Saffron. After the suppression of the Jesuit Order the project of the new diocese was again taken up. On 7 December, 1775, Maria Theresa informed the cathedral chapter of Gran that it had been decided to establish a new see, and asked the chapter to state what revenues would be assigned to it. On 11 January, 1776, the new diocese was founded by royal decision, and on 13 March, the papal decree was made public. Baron Franz Berchtold was named the first bishop (1776-93), and in 1778-85 held the first canonical visitation. His efforts to benefit the diocese materially were unsuccessful, and the great fire of 1782, which destroyed the episcopal residence, had such a bad effect upon the see, that Joseph II contemplated giving it up, and planned the transfer of Berchtold to the See of Gran, but the bishop opposed the plan, as well as that of the union of the diocese with that of Székes or Roszanyó. The seminary, lyceum and the four archdeaneries were founded in the time of Bishop Anton Mackay (1818-23). A diocesan synod was held at Neusohl 21 November, 1821, where the diocesan constitution was drawn up, which is valid to this day. Bishop Joseph-Rudnyciuszky (1844-50) was persecuted by the Austrian Government on account of his political views, and on 20 August, 1846, was arrested and sentenced to six years' imprisonment, and deprived of his episcopal honours. He retracted in 1850, whereupon he was released from prison. Among the more recent bishops Arnold Tpolzi was distinguished. The present bishop is Wolfgang Radnoi. Since 1835 the cathedral chapter possesses its own insignia, and is composed of six members; there are also six titular canons. The diocese has a provost, 112 parishes, and 371 chapels; there are 168 priests and 49 clerics, 2 monasteries and 2 nunneries. In 1902 the Catholic population numbered in all 223,779 souls.

Das katholische Ungarn (Catholic Hungary) (Budapest, 1801): Schematismus diocesis Neosoliensis pro anno 1803.

A. ALDÁSY.

Neutra (NITRIA; NYITRA), DIOCESE OF (NITRIENSIS), in Western Hungary, a suffragan of Gran. The

exact date of its foundation is unknown. Some attribute the foundation to Fridigit, wife of Rosemund, the Marconian chief, in the middle of the fourth century, but without any more evidence than the alleged foundation by Archbishop Wolf of Lorch. Nor is the see a direct continuation of one which existed in Svato-pluk's time and was suffragan of Prag-Potesover; neither is it probable that the saintly King Stephen founded it. The see was probably founded in the time of King Coloman about 1105-07, although St. Ladislaus had it in contemplation, for a royal document still exists, in which he endows the church at Neutra with much property. The church, dedicated to St. Emmeram, was there in the lifetime of St. Stephen, and is supposed to have been endowed by Queen Gisela. Gervasius was the first bishop (1105-14), and was followed by Nicholas (1133). The successors of St. Ladislaus increased the revenues of the see to which the city of Neutra belonged from the middle of the thirteenth century. The cathedral chapter was in all probability established at the same time as the see; but until the seventeenth century very little is known about it. There were only nine canons in the seventeenth century, but the number was increased to ten in 1780. The see shared the fate of the country, the invasion of the Turks, the Hussites, internal quarrels, all of which wrought much mischief, especially the disastrous battle of Mohacs (1526). The see was in time deprived of its revenues which fell into the hands of the laity. Valentine Toorch first had possession of them, and then later Alexius Thurdó, after which the latter's brother, Bishop Franz Thurdó, acquired them, but later on became a Protestant. The Reformation found a foothold in Neutra, owing to the sympathy of certain noble families. Bishop Paul Bornemissos tried to restore the financial conditions of the see, but unsuccessfully; during the wars with the Turks the chapter was obliged to flee and only returned to Neutra in 1607. Bishop Franz Forzach was the first bishop to oppose the spread of the Reformation (1596-1607); his work was carried on by his successors, especially by the Jesuits, who since 1645 worked zealously for the re-establishment of the Catholic religion. In the seventeenth and eighteenth centuries religious orders settled in the diocese. The cathedral as it stands to-day was erected by Ladislaus Erdodyl (1796-36). Among the more famous bishops was August Roskovány (1859-92), famed as a theologian and canonist. Bishop Emmerich Bende has been bishop since 1893; his coadjutor with right of succession is Count William Batthyany. The see includes a part of the counties of Neutra and Trenescen, and is divided into 4 archdeaneries. There are 148 parishes, 237 priests, 194 of whom are parish priests; also 15 religious orders, numbering 145 members, of both sexes. In 1907 the Catholic population numbered 350,398. The cathedral chapter is composed of ten canons, and there are six titular canons, also 3 titular abbots.

A. ÁLDÁSY.

Nevada, a Western state of the United States, bounded on the North by Oregon and Idaho, on the East by Utah and Arizona, and on the South and West by California. It lies between the latitudes of 35° (in its extreme southern point) and 42° north, and between the meridians of 114° and 120° longitude. The extreme length of the state from north to south is 483 miles, while its extreme breadth from east to west is 320 miles. The total area of the state of Nevada is 110,590 square miles.

CLIMATE.—The climate of Nevada is dry, pleasant, and healthful. Summers are, as a rule, very warm, except in the high mountainous districts, while the

winters are generally long and sometimes severe. In late spring and early autumn there prevails a warm westerly wind which has often disastrous effects, as it is generally accompanied by sand storm. The mean temperature in January is 28°, while that of summer is 71°. The average rainfall throughout the year is ten inches, and the greater part of this precipitation comes between the months from December to May.

POPULATION.—The history of the population of Nevada since 1850 presents some of the most interesting figures in the United States Census records.

From the time of the early settlements in 1850-60 to the years of the great mining developments in 1860-1880, the population rapidly increased from a few hundred pioneers to 60,000 people, while after 1885 (demonetization of silver) it declined until the end of the century, and from that time began to increase very rapidly. The figures showing the population of the state since 1860, according to U. S. Census Reports, are significant of these fluctuations: 1860, 6,857; 1870, 42,491; 1880, 62,226; 1890, 45,761; 1900, 42,335; 1910, 81,875.

MINERAL PRODUCTION.—The mineral production of Nevada consists chiefly of gold and silver. For the year 1908 the entire mineral production, consisting chiefly of gold, silver, and a little lead, was valued at \$19,043,820, while in 1909 the gold production alone was valued at \$15,908,400 and that of silver at \$4,657,000, or a total production of \$20,565,400 in gold and silver alone.

AGRICULTURE AND STOCK RAISING.—The agricultural products of Nevada for 1909 were valued thus: wheat, \$1,074,000; oats, \$1,165,000; barley, \$228,000; potatoes, \$459,000; hay, \$5,187,000. From these figures it can be seen that the production of hay is an important one, being greater in 1909 than the entire production of silver. In stock raising the most important industry is that of sheep. In 1909 the entire number of sheep in the state was 1,585,000 and the wool clip amounted to 8,754,720 lbs. Cattle raising is also an important industry.

HISTORY.—The first European to visit what is now the State of Nevada, was, in all probability, the Franciscan Friar Francisco Gárceas. Father Gárceas started from Sonora, in northern Mexico, with Colonel Anza for California in 1775. In this famous journey, Gárceas stopped at the junction of the Gila and Colorado Rivers, in order to explore the surrounding country and establish a mission. No settlements were made or mission founded, but from the account of Father Gárceas' journey as given by Father Pedro Font, who accompanied Gárceas and wrote a fairly complete history of their travels, it seems practically certain that they visited Nevada, which was then, and in fact until 1850-60, a nameless desert. The next to visit Nevada were also Franciscan missionaries. These were Fr. Atanasio Dominiques and Fr. Silvestre Velez de Escalante, who on their journey to Monterey, California, turned to the East, crossed the Colorado River at the 37° parallel, crossed the extreme southern part of what is now Nevada, and proceeded to explore Utah. These friars also merely explored these regions and no settlements were made nor missions established. After these visits of the Franciscans it is very probable that the military expeditions

SEAL OF NEVADA

from New Mexico from time to time reached the Colorado River near Nevada, but we have no record of any expedition having actually crossed over into the territory in question. In 1825, however, Peter Skeen Ogden, an American trapper from the Columbia River in the North-West, accompanied by a few men, started to explore the country to the south-east and reached the river now known as the Humboldt River, in the present State of Nevada, which was in 1825 a nameless country, lying between California (which was then an indefinite stretch of country north of southern California) and New Mexico, which included in 1825, Arizona and parts of Utah and Colorado. All the above territories, with unsettled boundaries on the north and east, belonged to Mexico until the treaty of Guadalupe-Hidalgo in 1848, at the close of the Mexican War, when they were ceded to the United States. Long before these events, however, Utah and Nevada were settled by Americans and even provisional government established. After the explorations of Ogden and his companions, American adventurers, mostly trappers, went to Utah and Nevada, among whom was Kit Carson (then living in Taos, New Mexico), who in company with many others visited the country in 1831, 1833, 1844, 1845. In 1843-44, Fremont with Carson and Godey, conducted various explorations, largely hunting expeditions, into Nevada, and in 1844-45, Elisha Stevens, with a small party, among whom were two women, passed through Nevada on his journey from the Missouri River country to California. This was the first caravan to traverse all this stretch of territory. After the Mexican cession of 1848 and the discovery of gold in California, Nevada was frequently traversed by the gold seekers and other western pioneers on their way to California. Shortly after the signing of the treaty of Guadalupe-Hidalgo, the Mormons who had migrated westward and built the city of Salt Lake, established the State of Deseret, a commonwealth which was to include what is now Utah, Nevada, Arizona, parts of Colorado, Wyoming, Oregon, and California. These Mormons found it profitable business to meet the travellers on their way to California and furnish them provisions. In these trading expeditions they advanced south and west from Salt Lake City, and in 1849, they founded the first settlement in what is now Nevada, near the Carson River. In 1850, Congress organized the territories of Utah (what is now Utah and Nevada), New Mexico (what is now New Mexico and Arizona), and the State of California. The territory now comprised in the State of Nevada was organized as Carson County, Utah, under the political control, therefore, of the Mormons. Congress had fixed the western boundary of the Territory of Utah as the Sierra Nevada. The fact that the Sierra Nevada was continually kept in mind as the barrier between Utah and California, may have given an occasion to call the adjacent territory east of California, Nevada, though the name does not come into prominence until 1860. By 1856, the mines were being strongly developed and American immigration was rapidly settling Carson County. A political conflict between the Mormons and the Gentiles for the control of the governmental affairs of Carson County (which included practically all of what is now Nevada) lasted for several years. In 1865 the citizens of this county, mostly gentiles, petitioned the Government of the United States to be annexed to California or be organized as a separate territory. The Government gave little heed to these demands, and for five years the political struggle raged fiercely between the two factions. Congress at last put an end to these troubles, and in 1861 Carson County, Utah, was organized as the Territory of Nevada. James W. Nye was appointed as the first territorial governor. Three years later a constitutional convention was held, a State constitution adopted, and in 1864 Nevada was admitted as a State, and

H. G. Blaisdel was elected the first governor. During the years 1865-85, the material developments in Nevada made rapid strides, though continually hampered by a heavy debt contracted since the early days of territorial legislatures.

GOVERNMENT.—Nevada was a part of the Territory of Utah from 1850 to 1861, a separate territory from 1861 to 1864, and organized as a State in 1864. The State constitution when first adopted granted numerous privileges to mining interests. While at first this seemed to be an incentive to the development of the rising mining industries, it soon proved to be unfair to the commonwealth at large. A long series of litigations, costly to both sides, ensued between the State and the mine owners, in view of the amendments to the constitution, which struck out all parts which gave special privileges to the mining industry. The State constitution after many amendments is now a safeguard to the State and to the rights of its citizens. At present, Nevada is represented in the United States Congress by two senators and one representative.

EDUCATION.—At the time of the admission of Nevada as a territory in 1861, there was no public-school system and there were no schools. The population of the territory was about 7000-8000 people, but there were only four or five small private schools. An attempt was made to organize a school system in 1861, but beyond the appointment of a superintendent of public instruction and the establishment of a few schools with little or no funds, practically nothing was done until 1864, when Nevada was organized as a State. The number of schools was then eighteen, and by 1865 there were thirty-seven, and the number of pupils was about 1000. At present, Nevada has a complete system of education, gradually developed, which begins with the primary school and ends with the State University. The educational affairs of the State are controlled and managed by a State Board of Education consisting of the State governor, the President of the University, and the State Superintendent of Public Instruction. The State is divided into five educational districts, each district being under the supervision and control of a deputy superintendent and there are no county superintendents. According to the law of the State all children between the ages of eight to fourteen years are compelled to attend school, but the law has never been rigidly enforced. At present (1908), there are in Nevada 17,583 children under twenty-one years of age, of whom thirty-eight are negroes and fifty Mongolians. Of all these, 6,733 attend the public schools and 595 attend private and denominational schools. The total number of schools in the State is 308 with 414 teachers. There are two Catholic schools with about 200 pupils and an orphan asylum under the care of religious.

The State University was opened in 1886. It is now located at Reno and has various departments of arts, literature, science. The teaching force consists of fifty-four professors, assistant professors, and instructors, and in 1909-10 the attendance was 220 students. The annual expenditures are at present about \$200,000, some of this money being appropriated for building purposes. The State has also a mining school, located at Virginia City, with about thirty students.

RELIGION.—The first Catholic church to be built in Nevada was the one erected by Father Gallagher, at Genoa, in 1861. In 1862 the church was blown down and another built in its place. In 1864 Father Monteverde erected the first Catholic church at Austin, and in 1871 Father Merrill built the first church at Reno. The efforts of these first zealous priests were the beginning of the history of Catholicism in Nevada. Nevada has at present no bishop and the State does not form a diocese. The eastern half of the State, east of the 117th meridian, including also Austin and the country bordering on the Reese River

to the West of the same meridian, belong ecclesiastically to the Diocese of Salt Lake, Province of San Francisco, while the territory west of the 117th meridian, with the exception of Austin and the country bordering on the Reese River, belong to the Diocese of Sacramento, of the same province. According to the Bureau of the United States Census (Bulletin No. 103, Religious Bodies, 1906) the Catholic population of Nevada was then 9,970, or 66% of the entire religious population of the State. The following are the principal denominations of the State and the church members in each: Catholics 9,970, or 66% of the total; Episcopalians 1,210, or 8%; Latter Day Saints 1,105, or 7%; Methodists 618, or 4%; Presbyterians 520, or 3½%; Baptists 316, or 2%.

Catholic Immigration.—Catholics have gone to Nevada at different times, along with the general influx of population into the Western States from the Middle States in 1845-75. Since the very beginning of the history of the State, the Catholic Church has been an important factor in the upbuilding of the commonwealth and the welfare and education of the people. The difficulties encountered were not easy to overcome in the midst of an unsettled, careless, and often lawless community in the years 1850-70. After the establishments of the first Catholic churches in the new country by Fathers Gallagher, Monteverde, and Merrill, came the great benefactor Father Monogue, who in 1863 established the pioneer benevolent organization of Nevada or the St. Vincent de Paul Benevolent Society. This was at a time when organizations of this kind were very much in need in the western countries, and the praiseworthy work of this society, the charities of which were extended to all, regardless of creed, cannot be too highly commended. Father Monogue also established in 1864, the Nevada orphan asylum, two Catholic schools, St. Mary's school for girls and St. Vincent's school for boys, and St. Mary's hospital, all under the care of Sisters.

Religious Polity.—The State constitution guarantees to all individuals absolute freedom of worship and toleration of religious sentiment. By statutory law, all amusements, business transactions, opening of saloons and gambling, are forbidden on Sundays, but the law has never been rigidly enforced. There is no law demanding a compulsory administration of a fixed form of oath, and a simple affirmation or negation suffices before the law. There are no statutory laws of any kind that forbid blasphemy or profanity. It is customary to open the Legislature, the school year at the State University and many of the public schools with prayer, but there are no laws either for or against such practices. By statutory law, however, religious instruction of any kind is absolutely forbidden in the public schools, and the public school funds cannot be used for sectarian purposes. Sunday, New Year's Day, Washington's Birthday, (Admission Day), Thanksgiving, and Christmas are designated by law as non-judicial days and are observed as legal holidays. There is no law recognizing religious holidays as such. No statutory law exists as regards the seal of confession, but it is presumed that the same is inviolable. Churches may be incorporated. All church property that is used only for church purposes is by law exempt from taxation, and malicious injury to churches or church property is by law punishable by fine or even imprisonment. The lawfully licensed clergy of all denominations is exempt from jury and military service. Marriage is recognized by law as a civil contract. It may be performed by any licensed minister or a civil judge. With the consent of the parents marriage may be contracted by a man and woman of the ages of eighteen and sixteen respectively, and without the parents' consent only at the ages of twenty-one and eighteen or over respectively. The parties contracting marriage must not be nearer kin than second cousins, or cousins in the second blood. The divorce

laws of the State are very liberal. By the State law, divorces may be granted for impotency, adultery, desertion, infamy, cruelty, drunkenness, or neglect to provide.

AURELIO M. ESPINOSA.

Neve, titular see of Arabia, suffragan of Bostra. Two of its bishops are known: Petronius, who attended the Council of Ephesus in 431, and Jobius, who was present at that of Chalcedon in 451. Isaac, a third bishop, mentioned by Le Quien about 540 ("Oriens christ.", II, 864) was not a bishop of Neve but of Nineve, and lived at the end of the seventh century ("Echos d'Orient", IV, 11). The Diocese of Neve is noticed in the "Notitia episcopatum" of Antioch in the sixth century ("Echos d'Orient", X, 145), and the city of Neve is referred to by George of Cyprus ("Descriptio orbis romani", ed. Gelzer, 54) in the next century. The "Revue biblique" published (III, 625) some Greek inscriptions from the locality. A large Mussulman village called Nawa, in the Hauran, now occupies the site of this former see and the tower of the ancient Christian church is still visible. Neve must not be confounded with Mount Nebo, situated about 94 miles south of the town.

S. VAILLÉ.

Nève, FELIX-JEAN-BAPTISTE-JOSEPH, orientalist and philologist, b. at Ath, Belgium, 13 June, 1816; d. at Louvain, 23 May, 1893. His parents were devout Catholics. Graduated with distinction from the Catholic college of Lille, Nève completed a course of academic studies at the University of Louvain, obtaining in 1838 the Degree of Doctor of Philosophy and Letters. His pronounced taste for classical and oriental languages led him to pursue higher studies under some of the most distinguished scholars of Europe, Professors Lassen of Bonn, Tiersch of Munich, and Burnouf of Paris. He became acquainted with many oriental scholars, some of them already famous, others destined like himself to win fame in after years. Among these were Muir, Wilson, A. Weber, Kuhn, Max Müller, and the distinguished orientalist and Catholic priest, Dr. Windischmann.

In 1841 Nève was appointed to the chair of Greek and Latin Literature in the University of Louvain, and while teaching the classics, gave a course of studies in the Sanskrit language and literature. This work he kept up with unsparing energy and marked success for thirty-six years, at the same time making known the results of his studies in books and in articles contributed to the "Journal Asiatique", "Annales de Philosophie Chrétienne", "Correspondant", and other periodicals. When in 1877 he was released from his arduous duties with the title of *professor emeritus*, his industry continued unabated, and for the next fifteen years a series of publications came from his pen. He was a member of the Asiatic Society of Paris, the Asiatic Society of London, the Royal Academy of Belgium, and was a Knight of the Order of Leopold.

To Nève belongs the honour of giving the first impetus to the cultivation of Sanskrit studies in Belgium. The most important of his numerous publications in this field are: (1) his translation of selected hymns from the Rig-Veda, "Études sur les hymnes du Rig-Veda, avec un choix d'hymnes traduits pour le premier fois en français" (Louvain, 1842); (2) his fine study of the ancient Brahmin cult of the Ribhanas, "Essai sur le mythe des Ribhanas . . . avec le texte sanskrit et la traduction française des hymnes

adressés à ces divinités" (Paris, 1847); (3) his translation of the Indian drama based on the story of the epic hero Rama, "Le dénouement de l'histoire de Rama. Outtara-Rama-Charita, drame de Bhavabhouti, traduit du sanskrit" (Brussels, 1880); (4) his collection of essays on the Vedanta philosophy and the epic and dramatic poetry of India, published under the title "Epoques littéraires de l'Inde" (Brussels, 1883).

Nève was also learned in the Armenian language and literature. A number of valuable translations and studies based on Armenian texts came from his pen. Among these may be mentioned: (1) the Armenian story of the Tatar invasion, "Exposé des guerres de Tamerlan et de Schah-Rokh dans l'Asie occidentale, d'après le chronique arménienne inédite de Thomas de Medzoph", published in "Mémoires de l'Académie Royale de Belgique" (1861); (2) the Armenian account of the exploits of Godfrey de Bouillon, "Les chefs belges de la première croisade d'après les historiens arméniens" (Brussels, 1859); (3) the valuable collection of studies on early Christian Armenian prayers and hymns entitled "L'Arménie chrétienne et sa littérature" (Louvain, 1886). Among the publications of Nève bearing on philology, a place of honour should be given to his account of the learned men who in the sixteenth and seventeenth centuries laboured for the upbuilding of the University of Louvain, "La renaissance des lettres et l'essor de l'érudition ancienne en Belgique".

LAMY, Nève in *Annuaire de l'Académie Royale de Belgique* (1893); LAFEBVRE, Nève in *Annuaire de l'Université de Louvain* (1894); WILLEMS, Nève in suppl. of *Journal de Bruxelles* (Aug., 1892).

CHARLES F. AIKEN.

Nevers, Diocese of (NIVERNUM), includes the Department of Nièvre, in France. Suppressed by the Concordat of 1801 and united to the See of Autun, it was re-established in 1823 as suffragan of Sens and took over a part of the former Diocese of Autun and a part of the former Diocese of Auxerre (see SENS). The "Gallia Christiana" mentions as first Bishop of Nevers St. Eladius, restored to health in the reign of Clovis by St. Severinus, Abbot of St. Maurice. According to Duchesne the first authentic bishop is Tauricanus, present at the Council of Epaon in 517. A number of former bishops of Nevers are venerated as saints: St. Arey (Aregius) 549-52; St. Agricola (580-94); St. Jerome (800-16) who rebuilt in honour of the martyrs Quiricus and Julitta, the cathedral until then dedicated to Sts. Gervasius and Protasius. It is possible that in the seventh century three other saints occupied the See of Nevers: St. Diè (Deodatus), the same perhaps who died a hermit in the Vosges; St. Nectarius and St. Itier (Itherius). The following bishops of Nevers were notable: the future cardinal Pierre I Bertrand (1320-22) who, in 1329-30, defended ecclesiastical immunities against the barons in the celebrated conferences of Paris and Vincennes presided over by Philip VI; Charles de Bourbon (1540-47) subsequently cardinal and whom the Leaguers wished to

make King of France under the name of Charles X; Spifame (1548-58) who became a Calvinist in 1559, and was afterwards accused of forgery and beheaded at Geneva in 1556; the polemist Sorbin de Ste-Foi (1578-1606) a voluminous writer. Among the saints of this diocese must be mentioned: Sts. Paul, priest; Péreux and Pélerin, martyrs between 272 and 303; St. Paroze (Patritius), Abbot of Nevers in the sixth century; the hermit St. Franchy (Francovacus); the priest St. Vincent of Magny in the ninth century; Blessed Nicholas Applaine, canon of the collegiate church of Prémery (fifteenth century) whose cassoock Louis XI claimed as a relic. Claude Fauchet, constitutional Bishop of Calvados during the Revolution, was a native of the diocese.

In 1168, William IV, Count of Nevers, willed to the Bishop of Bethlehem in Palestine the small town of Pantenor near Clamecy, also the hospital at Clamecy

founded by his father William III in 1147. In 1223, owing to the incursions of the Mussulmans in Palestine, the Bishop of Bethlehem settled at Clamecy, and exercised jurisdiction over the hospital and the faubourg of Pantenor; his successors were chosen by the counts, later by the dukes of Nevers, with the approval of the pope and the king. In 1413 Charles VI tried to obtain for the titular bishops of Bethlehem the privileges enjoyed by the other bishops of the realm, but

the French clergy were opposed to this and the titular of Bethlehem was always considered a bishop *in partibus infidelium*. The assembly of the clergy of France in 1635 granted the bishops of Bethlehem an annual pension. Christopher d'Authier of Sisgau, founder of the Missionary Priests of the Congregation of the Blessed Sacrament and celebrated for his sermons to the galley-slaves of Marseilles was Bishop of Bethlehem 1651-63. The Abbey of La Charité-sur-Loire, founded in 1056, and known as the "eldest daughter" of Cluny, was inaugurated in 1106 by Pascal II; the celebrated Suger, then a simple cleric, has left an account of the ceremony. The Benedictine Abbey of Corbigny, founded under Charlemagne was occupied by the Huguenots in 1563, as a basis of operations. Bernadette Soubirous (see LOURDES, NOTRE-DAME DE) died in the Visitandine Convent of Nevers, 12 December, 1878. The chief places of pilgrimage in the diocese are: Notre Dame de Pitié at St. Martin d'Heuille, dating from the fourteenth century; Notre Dame de Fauboulvin at Corancy, dating from 1590; Notre Dame du Morvan at Dun-sur-Grand Ry, dating from 1876. Prior to the enforcement of the law of 1901, the Diocese of Nevers counted Marists, Oblates of Mary Immaculate, Oratorians, and several orders of teaching brothers. Among the congregations for women which originated in the diocese must be mentioned: the Ursuline nuns, a teaching order founded in 1622 at Nevers by the Duke of Gonsaga and the Nevers aldermen; the Hospitaliers, founded in 1630 at La Charité-sur-Loire by Sister Médard-Varlet; the great congregation of Sisters of Charity and Christian Instruction, founded in 1680, with mother-house at Nevers. At the beginning of the

CATHEDRAL OF ST-CYR (XVI CENTURY), NEVERS

twentieth century the religious congregations of the diocese had charge of 22 day nurseries, 5 orphanages for girls, 2 sewing rooms, 18 hospitals or asylums, 1 house of retreat, 1 home for incurables, 1 insane asylum, 2 religious houses for the care of the sick in their own homes. In 1908 the Diocese of Nevers had 313,972 inhabitants, 95 parishes, and 272 succursal parishes.

Gallia Christiana, XII, novs (1770), 625-65; *Instrumenta*, 297-358; DUCHESNE, *Fastes Episcopaux*, II, 476; FISQUET, *France pontificale*, Nevers (Paris, 1886); FOUSSEREAU, *Histoire des comtes et des ducs de Nevers* (Paris, 1897); DU SOULTRAIT, *Armorial de Nevers* (Paris, 1852); CROSMIER, *Hagiologie Nivernaise* (Nevers, 1838); IDEM, *Monographie de la cathédrale de Nevers, suite de l'histoire des évêques de Nevers* (Paris, 1854).

GEORGES GUYAU.

Neville, EDMUND (*alias SALES*), a Jesuit, b. at Hopcut, Lancashire, 1606; d. in England, 18 July, 1847. Educated at St. Omer, he entered the English College, Rome, 29 June, 1621, where he distinguished himself in philosophy. He joined the Jesuits, 24 May, 1626; was stationed at Ghent, 1636, and sent on the London mission, 1637. He was professed, 3 August, 1640; served in the Oxford district, 1642, and in South Wales, 1645. Being a suspected priest he was seized under the Commonwealth but soon released. He wrote the "Palm of Christian Fortitude" (St. Omer, 1630), an account of the Japanese persecutions; a "Life of St. Augustine" and "Second Thoughts" both unpublished. (2) His uncle EDMUND NEVILLE (*alias ELIJAH NELSON*), probably the son of Sir John Neville of Leversedge, b. in Yorkshire about 1563; d. 1648, his death hastened by the treatment he received in prison. Ordained for the English mission, 12 April, 1608, he entered the Society, 1609. He is considered to have been the *de jure* seventh Earl of Northumberland. (3) Many members of the Scarisbrick family of Scarisbrick Hall, near Ormskirk, became Jesuits during the penal times and assumed the *alias* "Neville". Among them were EDWARD SCARISBRICK (Neville), b. 1639. Educated at St. Omer, he entered the Society at Watten, 7 September, 1660, and was stationed at Liège, 1671, and St. Omer, 1675. Sent to England, he was one of Oates's intended victims. James II appointed him royal chaplain. He was instructor of the Jesuit tertians at Ghent, 1693. He returned to Lancashire, where he died, 19 February, 1708-9. He wrote "Life of Lady Warner" (St. Omer, 1691); "Catholic Loyalty" (London, 1688); "Rules and Instructions for the Sodality of the Immaculate Conception", etc. (4) EDWARD NEVILLE (Scarisbrick), b. 1663; d. 15 November, 1735. He became a Jesuit, 1682; served on the Derbyshire mission, 1701, and after 1728 at Bushey Hall, Watford, Herts. (5) EDWARD NEVILLE (Scarisbrick), b. 1698; d. 7 July, 1778. He entered the Society, 7 September, 1728. Superior of the Derbyshire mission in 1764, he laboured also in Lancashire. (6) SIR EDWARD NEVILLE, son of Baron Bergavenny, a courtier of Henry VIII, took part in the war in France, and was made the king's standard bearer, 1531. He married Eleanor, daughter of Lord Windsor. Arrested 3 November, 1538, on the charge of conspiracy with the brother of Cardinal Pole, he was sent to the Tower, tried at Westminster, and beheaded for the faith, 8 December.

A. A. MACERLEAN.

New Abbey.—The Abbey of Sweetheart, named New Abbey Pow, or New Abbey, in order to distinguish it from Dundrennan in the same county, is situated near the River Pow, in the parish of Loch Kenderloch, Kirkcudbrightshire, Diocese of Galloway, about eight miles from the town of Dumfries, Scot-

land. The title of Abbey of Sweetheart was given by the foundress of the abbey, Lady Devorgilla, daughter of Alan, Lord of Galloway, who erected the monastery in order to keep in it a casket of ivory and silver, in which was embalmed the heart of her husband, King John de Baliol. Sweetheart is the last in order of the Cistercian abbeys in Scotland. It was begun in 1275, being a daughter of Dundrennan, of the lineage of Clairvaux. Henry, the first abbot, built a magnificent church in the early English style. It measured 203 feet in length, with a central tower 92 feet high; it had a nave with aisles, transepts with chapels on their eastern sides, and a choir without aisles. The monastic buildings were in proportion, and were surrounded with a massive granite enclosing wall, from eight to ten feet high, large portions of which still remain. Very little is known of the old history of Sweetheart, except that the Maxwells, lords of Kirkconnel, whose castle was near by, and who were descendants of the Maxwell kings, were great benefactors of the place. The most celebrated superior of the abbey was Abbot Gilbert Broun, the last of the line. He continued to uphold the Catholic faith long after the Reformation, and was a powerful opponent of Protestantism. He was denounced several times on the charge of enticing to "papistrie" from 1578 to 1605; he was seized by his enemies in 1605 in spite of the resistance of the whole countryside, taken prisoner, and conveyed to Edinburgh, whence he was banished. He then became rector of the Scots College, Paris, where he died in 1612 at the age of eighty-four. The possessions of Sweetheart Abbey passed into the hands of Sir John Spottiswoode in 1624, and with them the title of Lord of New Abbey. The monastery soon became a mere quarry for those who wanted ready-cut material for building. The chapter, with the remains of the library over it, and a part of the church, are all that remain to-day.

EDMOND M. OBRECHT.

Newark, DIOCESE OF (NOVARCENSIS), created in 1853, suffragan of New York and comprising Hudson, Passaic, Bergen, Essex, Union, Morris, and Sussex counties in the State of New Jersey, U. S. A., an area of 1699 square miles. The diocese originally included the whole State, but the fourteen other counties were taken (15 July, 1881) to form the Diocese of Trenton. As early as 1672 the records show that there were Catholics at Woodbridge and at Elizabethtown, the capital of East Jersey, and the Jesuit Fathers Harvey and Gage, Governor Dongan's chaplains in New York, visited them. Other priests came at a later period. Several of these pioneers were Alsations who had come over with Carteret to engage in the salt-making industry. William Douglass, elected from Bergen, was excluded from the first General Assembly held at Elizabethtown, 26 May, 1668, because he was a Catholic. Two years later he was arrested and banished to New England as a "troublesome person". The whole atmosphere of the colony was intensely anti-Catholic. The law of 1698 granted religious toleration in East Jersey, but "provided that this should not extend to any of the Romish religion the right to exercise their manner of worship contrary to the laws and statutes of England". In West Jersey, the pioneers were Quakers and more tolerant. It is claimed that John Tatham, appointed Governor of West Jersey in 1690, and the founder of its great pottery industry, was really an English Catholic whose name was John Gray. Father Robert Harding and Father Ferdinand Farmer (Steinmeyer) from the Jesuit community in Philadelphia, made long tours across the State in the eighteenth century ministering to the scattered groups of Cath-

olies at Mount Hope, Macopin, Basking Ridge, Trenton, Ringwood, and other places. The settlement at Macopin (now Echo Lake) was made by some German Catholics sometime before the Revolution and their descendants make up the parish to-day.

During the Revolution Washington's army brought many Catholics through the State. In the camp at Morristown the Spanish agent Don Juan de Miralles, died 28 April, 1780, and his funeral was conducted by Father Seraphin Bandol, chaplain of the French Minister, who came specially from Philadelphia to administer the last sacraments to the dying Spaniard. Washington and the other officers of the army attended the ceremony. When in the following May the remains were removed to Philadelphia, Congress attended the Requiem Mass in St. Mary's church. It was at Morristown in 1780, that the first official recognition of St. Patrick's Day is to be found in Washington's order book, still preserved there at his headquarters. Marbois, writing from Philadelphia, 25 March, 1785, gives the number of Catholics in New York and New Jersey as 1700; more than half of these were probably in New Jersey. There were many French refugees from the West Indies in Princeton, Elizabeth, and its vicinity, and Fathers Vianney, Tissorant, and Malou used to minister to them from St. Peter's, New York, in the early years of the last century. Mines, furnaces, glass works, and other industries started in various sections of the State, brought Catholic immigrants. The Augustinian Missionary, Father Philip Larisey, visited Paterson about 1821, and the first parish in the State, St. Francis, Trenton, was established in 1814. Newark's first church, St. John's, was opened in 1828, the pastor being the Rev. Gregory B. Pardow of New York, and the first trustees Patrick Murphy, John Sherlock, John Kelly, Christopher Rourke, Morris Fitzgerald, John Gillespie, and Patrick Mape. The first native of Newark to be ordained to the priesthood was Daniel G. Durning, son of Charles Durning, in whose house Mass used to be said before the first church was built. In 1820 Father Richard Bulger erected the first church in Paterson. In New Brunswick the first Mass was said by Rev. Dr. Power of New York in 1825, and the first church was opened by Rev. Joseph A. Schneller, 19 December, 1831. In Jersey City, originally called Paulus Hook, Mass was first said in 1830, and the first church opened by the Reverend Hugh Mohan in 1837. At Macopin the little band of German Catholics before mentioned had a church as early as 1829. Thus during the first half of the nineteenth century there was a slow but steady growth of the Faith all over the State, and as it was receiving a substantial share of the great inflow of Catholic immigrants, the Holy See deemed the time opportune to separate it from the Diocese of New York, and the See of Newark was erected. The Reverend James Roosevelt Bayley (q. v.), then secretary to Bishop Hughes of New York, was chosen the first Bishop of Newark, and consecrated 30 October, 1853. There were then between fifty and sixty thousand Catholics in his diocese, for the most part Irish and Germans.

In organizing the new diocese Bishop Bayley found he could count on only twenty-five priests. There were no diocesan institutions except small orphanages, and the people were poor and of little social influence. In the interest of Catholic education, one of his chief concerns, he founded the Madison Congregation of the Sisters of Charity (q. v.), and to supply the lack of funds for the work of new churches, he obtained assistance from the Association of the Propagation of the Faith of Lyons, France, and the Leopoldine Society of Vienna. Seton Hall College was opened by him in September, 1866, and everywhere the diocese responded to the energy of his zeal and practical effort. In ten years the churches increased to 67, the priests to 63, and a monastery of Benedictines and

another of Passionists was established. The Sisters of Charity became a community of 87 members, conducting 17 different establishments. Other notable additions were 2 convents of Benedictine nuns, 2 of German Sisters of Notre Dame; 2 of Sisters of the Poor of St. Francis; a flourishing college, an academy for young ladies, a boarding school for boys, and parish schools attached to most of the churches, while the old wooden chapels had been replaced by buildings of brick and stone. "All this has been done", the bishop wrote, "in the midst of a population of emigrants, comparatively poor, without incurring a great debt!" In twelve years the Association of the Propagation of the Faith gave the diocese \$26,600. This progress, too, was made in spite of much local narrowness and bigotry, the culmination of which on 5 November, 1854, resulted in a riot during which an anti-Catholic mob desecrated and sacked the little German church of St. Mary in Newark served by the Benedictine Father Nicholas Balleis. In this disturbance a Catholic was killed and several others wounded.

Bishop Bayley was promoted to the Archbishopric of Baltimore, 30 July, 1872, and his successor as second bishop of the see was the Right Reverend Michael Augustine Corrigan (q. v.) consecrated 4 May, 1873. He successfully overcame a number of complicated financial entanglements, and established a House of the Good Shepherd for girls 24 May, 1875, in Newark, a protectory for boys about the same time at Denville, and in June, 1880, in Newark a community of Dominican Nuns of the Perpetual Adoration, from Oullins, France. On 8 and 9 May, 1878, an important synod was held, and in July, 1881, the Diocese of Trenton, which cut off a considerable portion of the Newark territory in the southern section, was established. On 1 October, 1880, Bishop Corrigan was made titular Archbishop of Petra and coadjutor of New York, and to succeed him as third Bishop of Newark, the Rev. Dr. Winand M. Wigger, then pastor at Madison, was chosen and consecrated 18 October 1881. Bishop Wigger was born of German parents in New York City, 9 December, 1841, and made his classical studies at St. Francis Xavier's College, New York. His theological course was followed at Seton Hall and at the college of Brignole-Sale, Genoa, Italy, where he was ordained priest 10 June, 1865. Following the example of his predecessors Bishop Wigger made the diocesan seminary one of the objects of his chief solicitude. In 1883 he removed the Catholic Protectory to Arlington and established the Sacred Heart Union to aid in its maintenance. The Fifth Diocesan Synod was held by him 17 November, 1886, at which strict regulations were enacted in regard to funerals and the attendance at parochial and public schools. On 11 June, 1899, he laid the cornerstone of a new cathedral church at Newark, and soon after was forced to go abroad in search of rest and health. On his return he took up his duties with zeal, but died of pneumonia, 5 January, 1901. The record of his administration shows a character entirely disinterested and unselfish united to a poverty truly apostolic.

The Vicar-General John J. O'Connor was the choice of the Holy See as fourth bishop, and was consecrated 25 July, 1901. Born at Newark, 11 June, 1855, he made his college course at Seton Hall. In 1873 he was sent to the American College at Rome where he spent four years. After another year at Louvain he was ordained priest 22 December, 1877, and on his return to Newark, was appointed professor at Seton Hall College where he became Director of the Seminary in which he remained for the following eighteen years. He was then named vicar-general and on 30 October, 1895, rector of St. Joseph's. Early in his administration he adopted measures for the completion of the new cathedral of the Sacred Heart, begun by Bishop Wigger, making this the special object of the golden jubilee of the diocese. At this it was shown that in

the brief space of fifty years, there had been an increase of tenfold in the number of churches and ninefold in population, with nearly 50,000 children attending 167 Catholic schools and institutions, and 396 priests attending the 416 churches and chapels throughout the State. Religious communities now represented in the diocese are, men: the Jesuits, Passionists, Benedictines, Carmelites, Dominicans, Franciscans, Salesians, Pious Society of the Missions, the Christian Brothers, Alexian Brothers, and Xaverian Brothers; women: Sisters of Charity (Newark), Sisters of St. Benedict, Sisters of Christian Charity, Sisters of St. Francis, Sisters of Charity (Gray Nuns), Dominican Sisters of the Perpetual Rosary, Sisters of St. Dominic, Sisters of St. Francis, Sisters of the Poor of St. Francis, Sisters of the Good Shepherd, Sisters of St. Joseph, School Sisters of Notre Dame, Sisters of St. Joseph of Peace, Little Sisters of the Poor, Felician Sisters, Sisters of the Sorrowful Mother, Pallotine Sisters of Charity, Missionary Sisters of the Sacred Heart, Daughters of Our Lady of Help, Franciscan Sisters of the Immaculate Conception, Baptistine Sisters.

Statistics (1910): Priests, 368 (regulars, 88); churches with resident priests, 162; missions with churches, 36; stations, 10; chapels, 82; seminary, 1, students, 42; students in Europe, 7; seminaries of religious, 3, students, 31; colleges and academies for boys, 6; academies for girls, 12; parish schools, 116, pupils, 52,600; orphan asylums, 12, inmates, 2400; industrial and reform schools, 4, inmates 450; protectory for boys, 1, inmates, 180; total young people under Catholic care, 58,000; hospitals, 10; houses for aged poor, 2; other charitable institutions, 8; Catholic population, 365,000.

THOMAS F. MEEHAN.

Newbattle (NEUBOTLE, i. e. new dwelling), in the ancient Diocese of St. Andrews, about seven miles from Edinburgh, was founded about 1140, being the second of the six Cistercian Monasteries established by St. David, King of Scotland. Newbattle Abbey was a filiation of Melrose (itself a daughter of Clairvaux) and was situated, according to Cistercian usages, in a beautiful valley along the South Esk. Rudolph, its first abbot, a strict and severe observer of the rule, devoted himself energetically to the erection of proper buildings. The church, cruciform in shape, was two hundred and forty feet in length, and the other buildings in proportion; for the community numbered at one period as many as eighty monks and seventy lay-brothers. The abbey soon became prosperous, and famous for the regularity of its members, several of whom became well-known bishops. It was especially dear to the kings of Scotland, scarcely one of whom failed to visit it from time to time, and they were always its generous benefactors. One of the principal sources of income was the coal mines in its possession, for these monks were among the first, if not the first, coal miners in Scotland. The earliest mention of coal in Scotland is to be found in a charter of an Earl of Winchester, granting to them a coal mine. Newbattle suffered much from English incursions at various times, particularly in 1385, when the monastery and church were burned, and the religious either carried away, or forced to flee to other monasteries; it required forty years to repair these losses. A part of the monastery was again destroyed by the Earl of Hertford, but the destruction seems to have been chiefly confined to

the church. At the time of the Protestant Reformation but few of the monks remained, and these were pensioned by the commendator, Mark Kerr, ancestor of the Lothian family, its present owners. The stones of the church were used to convert the monastic buildings into a secular house.

New Brunswick. See CHATHAM, DIOCESE OF; SAINT JOHN, DIOCESE OF.

New Caledonia, VICARIATE APOSTOLIC OF.—New Caledonia, one of the largest islands of Oceania, lies about 900 miles east of Queensland, Australia, between 20° 10' and 22° 16' S. lat., and between 164° and 167° E. long. It is about 250 miles long by 30 broad, and has an area of 7650 square miles. It is a French colony, its principal dependencies being the Isle of Pines and Loyalty Islands (including Lifou, Mare, and Uvea). Its population, together with that of these dependencies, is estimated at 53,000 inhabitants (13,000 free; 11,000 of convict origin; 29,000 black). The coasts of New Caledonia are deeply indented, and the island is almost entirely surrounded by an immense madre-pore reef, which now retires to some distance from and now approaches close to the shore, but regularly leaves a broad channel of water between itself and the island. This species of canal, in which the sea is always calm, greatly facilitates communication between the various settlements on the coast. The island is very mountainous, and about one half of its area is thus uncultivable. The so-called central chain, which divides the island into an eastern and a western section, attains the height of over 5500 feet. The hills which fringe the coast, and at times rise sheer from the water, do not in general exceed the height of 600 feet. Between these lesser ranges stretch good-sized plains of great fertility, admirably watered by numerous streams which the natives skilfully utilize for purposes of irrigation. The streams of the same basin usually unite to form one river which is navigable for vessels of light draught for about a dozen miles from the coast. Unlike most intertropical regions, the island has no well-defined wet season, some years being very rainy and others characterized by prolonged droughts. The scenery is wonderfully beautiful and for salubrity of climate the island is almost unrivalled. The temperature rarely reaches the extremes of 96° by day during the hot season (December to March) and 56° by night during the cold (May to August). The administration has divided the island into three sections: the convict settlement, that reserved exclusively for the natives, and the remainder which is leased to colonists by the French Government. The chief agricultural products are coffee, maize, sugar, grapes, and pineapples, while efforts are being made at present to foster the cultivation of wheat, rubber, and cotton. The island also possesses valuable deposits of nickel, cobalt, chrome, and copper ores, all of which are being exploited chiefly by Australian miners. Discovered by Captain Cook in 1774, the island was occupied by the French in 1853, and on 2 Sept. 1863, a decree was passed authorizing the establishment of a convict settlement there. In May, 1864, the first criminals arrived, and between that date and 1896, an aggregate of about 22,000 were transported thither. As no convicts have been sent since 1896, the convict element of the population is rapidly diminishing. Nouméa is the chief town and the seat of government. It has an excellent harbour for the improvement of which various works are in course of execution. The colony is administered by a governor, assisted by a council consisting of various officials and two notables nominated by the governor. There is also an elective general council.

The ethnology of the natives, whose number is gradually decreasing, is somewhat uncertain, but they probably spring from a mixed Melanesian and Western Polynesian stock. Their height is above that of the average South Sea Islander; they are as a rule well built and quite erect; their colour varies from a very dark brown to a light complexion, and their hair is coarse and woolly. Cannibalism, which was generally practised on the island in former times, has disappeared in consequence of the strict measures taken by the administration. Although the men of the same tribe live together in the greatest harmony (such being in fact a leading dictate of their religious belief) intertribal wars have been always frequent, and have been in the past almost the sole occasion of cannibalism, as the flesh of a fellow tribesman is one of the most intelligible of their numerous and in very many cases peculiar taboos. The native religion is so closely intertwined with superstitions that distinction is rather difficult. The natives undoubtedly have a firm belief in a future life; the dead are supposed to live under the great mountain *Mu*, where the good are welcomed after death and where the general conditions bear some striking analogies to the Harmonic Hades. Ancestral worship is universally practised among the pagan natives, and there is a special class whose office it is to feed the deceased kinsmen, partly by consuming the food as their proxies and partly by exposing it for them in a taboo hut. The natives live together according to their tribes under chiefs, who exercise an extensive authority in purely native affairs. The food of the natives consists of yams, taros, sugar-cane, dried fish, and shell-fish. At various places on the island are held markets, at which the natives of the coast and of the mountains meet to exchange produce, dancing forming a regular feature of the transaction. Though excellent farmers, the natives are lazy.

New Caledonia was separated from Central Oceania and erected into a distinct vicariate Apostolic by decree of 2 July and Brief of 13 July, 1847. Besides the main island, the vicariate includes the Isle of Pines and the Belep and Loyalty Islands. The mission is entrusted to the Marist Fathers, who, besides ministering to the French settlers and convicts, have devoted themselves sedulously and with the greatest success to the conversion of the natives. According to the latest statistics the vicariate includes: 35,000 Catholics (11,500 natives); 48 missionary priests and 40 brothers of the Marist Congregation; 126 sisters; 61 catechists; 68 churches and several chapels; 45 schools with 1881 pupils; 1 orphanage with 50 inmates. The present vicar Apostolic, who is the fourth to fill the office, is Mgr. Chaurion, titular Bishop of Cariopolis.

THOMAS KENNEDY.

Newcastle. See HEXHAM AND NEWCASTLE, DIOCESE OF.

Newfoundland, a British colony of North America (area 42,734 square miles), bounded on the north by the Strait of Belle Isle, which separates it from its dependency Labrador (area 120,000 square miles), on the east and south by the Atlantic Ocean, and on the west by the Gulf of St. Lawrence, lies between 46° 35' and 51° 40' lat. N., and 52° 35' and 59° 25' long. W. It was the first portion of North America discovered by European voyagers. The Cabots sailed from Bristol in 1497, and on 24 June of that year, the festival of St. John the Baptist, they landed in the harbour to which they gave the name of St. John's, which it bears to the present day. The Cabots, like all the early navigators, had in view not only the discovery of new lands, and the increase of the power and wealth and territory of the mother country, but also the spread of the Gospel and the conversion of the heathens to the Chris-

tian Faith. Hence they brought with them priests and missionaries. Those who accompanied Cabot were Augustinians or "Black Friars". We may be sure that Mass was celebrated on these shores in 1497.

In the year 1500 the Portuguese under Gaspar de Cortereal took possession of the country and founded the settlement and Church of Placentia. In 1534 the French voyager, Jacques Cartier, visited the country, and explored the Gulf of St. Lawrence. He also had chaplains with him who celebrated Mass at Catalina in Newfoundland, and Brest, or Old Fort, on Labrador. In 1622 Lord Baltimore founded his colony of Ferryland. He brought out three Jesuit Fathers with him, and had Mass celebrated regularly, "and all other ceremonies of the Church of Rome were used in ample manner as 'tis used in Spain." Such was the complaint made against him to the Board of Trade by the Protestant clergyman, Mr. Stourton. In 1650 the French founded a church at Placentia on the site of the one abandoned by the Portuguese. But none of those attempts succeeded. The real foundation of the Catholic Church in Newfoundland is due to priests from Ireland, who came out towards the close of the eighteenth century.

The population of the country by the last census, taken in 1901, was 217,037. Of these the Catholics number 75,657, members of the Church of England 71,470, Methodists 60,700. The remainder belong to different denominations, viz. Presbyterians, Congregationalists, etc.

All denominations are equally recognized by the law, and there is no Established Church. In the early history of the country the Catholics were looked on as a proscribed class by the governors of the time, who were generally commanders of British war-ships. Priests were hunted and persecuted, people who harboured them, or permitted Mass to be celebrated in their houses were fined, imprisoned, and flogged, and their houses either burned or pulled down. In one unique case a house where Mass had been celebrated was towed into the sea and sunk. These acts were undoubtedly illegal, as there was no law in the statutes of the country penalizing the exercise of the Catholic Religion, but the penal laws of Ireland were supposed to be applicable to Newfoundland. However, the principle would not work both ways, and when Catholic Emancipation was granted to Ireland these same interpreters of the law held that the privileges of Emancipation did not apply to Newfoundland. During the whole course of his episcopate Bishop Fleming fought against these injustices and finally succeeded in obtaining full freedom for the Catholics.

In educational matters Catholics also enjoy every freedom. The denominational system is established by law. A sum is granted by Government amounting to about \$1.13 *per caput* of the population, or \$5.25 per pupil actually attending school. It is true this amount is small as compared with some of the Canadian Provinces, or States of the Union, but a large amount is paid by private individuals to Catholic colleges and convents which is not included in the above figures. The results compare most favorably with those of other countries. About thirty years ago a branch of the Irish Christian Brothers was introduced, an immediate impulse was given to education throughout the island, and it is now at a very high standard. The Brothers have charge of two very large schools in St. John's—St. Patrick's and Holy Cross schools. There are ten class-rooms, containing about a thousand boys. The Brothers also have charge of the college in which some three hundred boys are educated, sixty being boarders. Here are trained the pupil-teachers who will have charge of the public schools throughout the island. The college is affiliated to the Oxford Examining Board and the London University Board. A local council of higher education (non-denominational) looks after the local Examinations.

The Rhodes bequest gives three places for Newfoundland in perpetuity. They are all filled this year for the first time, and of the three occupants two are pupils of the College of St. Bonaventure. There are thirteen convents of Sisters of the Presentation Order in the country (9 in St. John's Diocese, 3 in Harbor Grace, and 1 in St. George's), and eight convents of the Sisters of Mercy (5 in St. John's, 2 in Harbor Grace, and 1 in St. George's). The Presentation Sisters have free schools, the nuns being paid out of the Government grant. The Sisters of Mercy have, besides free schools, a paying school and a boarding academy. The total number of children attending school is over 13,000. There are also two orphan asylums, or industrial schools, one under the Sisters of Mercy for girls, and one under the Christian Brothers for boys. These contain about 200 orphans, or one for every 375 of the Catholic population, which, considering that this is a maritime and fishing colony, and the losses at sea are abnormal, is not an excessive number.

The Catholic religion is not only holding its own, but advancing rapidly in Newfoundland. The most harmonious relations exist between the different denominations, which are only interrupted on occasions of public excitement, when persons aspiring to political position and honours do not scruple to stir up feelings of religious bigotry and theological hatred among the more simple-minded of the people. A great future is opening up for the country. Large industries are being started in the interior, the scene of the new developments being principally in the Dioceses of Harbor Grace and St. George's.

M. F. HOWLEY.

New Granada. See COLOMBIA, REPUBLIC OF.

New Guinea, the second largest island and one of the least known countries of the world, lies immediately north of Australia, extending from the equator to about 12° S. lat. and from 130° 50' to 154° 30' E. long. It is 1490 miles in length, its maximum breadth is about 430 miles, and its total area some 310,000 sq. miles. Its population is placed at the purely conjectural figure of 875,000. An examination of the report of D'Abreu, who was long credited with the discovery of New Guinea (1511), shows that he only reached the eastern coast of Further India (Cambodia); whether José de Menzes (1526), Saavedra (1536), and Grijalva (1537) reached New Guinea is still uncertain. But there can be no doubt in the case of Jingo Ortiz de Retas (1545), who landed at the mouth of the St. Augustine (now the Kabenau) River, and took possession of the country in the name of the King of Spain. It was he who gave the island the name of Nueva Guinea. On Mercator's map of 1569 New Guinea and numerous places and islands on its northern coast are indicated. Luis de Torres (1606), whose name is commemorated in the strait separating New Guinea from Australia, was the first to circumnavigate the greater portion of the island. The voyages of Tasman (1643-44), Vuik (1653), and Kayto (1674) added greatly to our knowledge of the southern and eastern coasts, and in the eighteenth century, thanks to the efforts of Dutch, English, and French explorers (Schouten, Lemaire, Captain Cook, De Bougainville, etc.), the picture of the island began in some measure to approach the actuality. However, Captain William Dampier's map of the north-western portion of the island, while exhibiting a great advance beyond the preceding, shows how erroneous still were the views concerning the exact contour of the island. The rapid growth of European interest in Australia in the nineteenth century invested New Guinea with enhanced importance: voyages of exploration multiplied, although, owing to the warlike and cannibal character of the natives, landings were still few. It was only during the last decades of the century that active exploration of the island began. Numerous successful expeditions (Mac-

Gregor, Monckton, Strong, Berton, Beccari, and d'Alberty) have furnished us with a comparatively accurate knowledge of the coasts and of the south-eastern portion of the island. For the scanty knowledge we possess of the German territory we are indebted mainly to Dr. Schlechter (1907): the lofty mountain ranges, which hem in and render almost inaccessible the greater part of the German and especially of the Dutch section, the difficulty of travelling and transporting supplies, the character of the native tribes who regard the setting foot on their special territory as a hostile act, and the insalubrious climate, constitute for the explorer obstacles greater perhaps than any he has to encounter elsewhere in the world.

The northern coast of New Guinea is in general steep and regular, and possesses but few places of safe anchorage. The only great indentation here is the vast Geelvink Bay. The most important of the other inlets are Humboldt, Cornelis, and Astrolabe bays, Huan Gulf (all in German New Guinea), and Acland Bay (British). The coasts are lined with groups of islands which are mostly volcanic (some still actively) or otherwise flat and sandy. The chief groups on the north and east are the Schouten Islands (at the entrance to Geelvink Bay), the Admiralty Islands, and Bismarck Archipelago (of which New Pomerania is the largest island) off the German territory, and the D'Entrecasteaux Islands, the Bennett group, and the Louisiade Archipelago off British New Guinea. On the southern side of the island the sea—which on the northern is frequently too deep for safe anchorage—becomes shallow, and the precipitous rocks give place to wide plains. This is, as already stated, almost the sole easily accessible portion of New Guinea. To the west of Cape Buru in Dutch New Guinea high cliffs again skirt the coasts, and the groups of islands once more become numerous (Arru, Wessel, and Ké Islands, etc.). From the north-western portion of the island two great peninsulas, Onin and Berau, are almost severed—the latter by McCluer's Inlet, which very deeply indents the coast in an easterly direction.

Our knowledge of the great mountain ranges of New Guinea is still to a great extent hypothetical, and the calculation of their heights only approximate and subject to revision. Beginning with British New Guinea in the south-east, we find the country traversed by a continuous chain of which the successive members are the Stirling and Stanley ranges (Mount Albert, 14,400 feet), the Yule (Mt. Yule, 14,730 feet) and Albert Victor (13,120 feet) mountains, and the Sir Arthur Gordon (13,120 feet) and Victor Emmanuel (12,810 feet) ranges. This chain is continued in Dutch New Guinea by the Charles Louis range, which attains the height of about 16,000 feet (probably the greatest altitude in New Guinea). How the central chain continues in the western portion of the island is still unknown. The principal range in German New Guinea is the Bismarck Mountains (variously estimated between 14,000 and 16,000 feet in height). Between the central chain and the sea run numerous parallel ranges, mostly of a lower altitude. With few exceptions, the rivers flow through narrow and steep ravines until within a few miles from the coast, and assume, during the wet season, the character of violent torrents. As they form practically the sole means of access to immense areas of the island, the difficulties confronting the explorer will be readily understood. The most important rivers of the northern coasts are: the Amberno (still unexplored), which enters the sea by a vast delta at Point d'Urville; the Kaiserin Augusta (navigable by ocean steamers for 180 miles), which rises in the Charles Louis range and enters the Pacific at Cape della Torre; the Ottlien, which, after a course of great length, empties into the ocean near the last-mentioned; the Maibara, which discharges near the Anglo-German boundary. On the southern coast the principal rivers are the Purari or Queen's

Jubilee River (navigable by whale boat 120 miles) and the Fly (navigable by whale boat 600 miles), both of which discharge into the Gulf of Papua. No important river is known to exist in the western section of the island, which is of course still a *terra incognita*.

The climate of New Guinea is characterized in general by its great heat and humidity, and in the low-lying districts fever abounds. Although, generally speaking, the temperature seldom rises above 104° in the southern portion, it rarely falls below 86°. The climate is, however, tempered by the regular winds from the south-east and north-east, and at an altitude of 3000 feet above sea level is pleasantly cool. The annual rainfall varies from 30 to 130 inches along the coasts, rain falling more abundantly in the north and north-east than along the southern seaboard. The difficulties of the climate are aggravated by the mosquitoes and the leeches, which insinuate themselves through the most closely woven clothing and whose bite often occasions burning ulcers.

To the great uniformity seen in the geographical build of the island corresponds a general ethnical uniformity among its inhabitants (see, however, "Journal of the Royal Anthropological Society of Great Britain and Ireland", XXIX, London, 1909, pp. 246 sqq., 314 sqq.). In the case of a country so vast and still so little explored, we must confine ourselves to indicating the general characteristics of the inhabitants, passing over the local differences which manifest themselves in the native customs and mode of life. The Papuans, as they are called (the name is unknown to themselves), belong to the Melanian family: they are larger than the Malay, are dark brown or black in colour, have a smooth skin, narrow forehead, dark eyes, dolichocephalous skull, and prominent nose. Their black, naturally frizzled hair is usually artistically arranged. They wear a lavish number of bracelets (mostly of turtle-shell) on both upper and lower arms: these not only serve as a protection against arrows, but, according to their shape and colour, are employed by certain tribes as an outward token of mourning. Necklaces are also generally worn: they are usually made of rings of vegetable fibre or, in the case of the wealthier natives, of wild boar's teeth. The lower limbs are less usually adorned, except on festive occasions. Agriculture is as yet little developed; the natives depend for their sustenance mainly on their hunting (wild boar, opossum, crocodile, wild fowl), fishing, and the wild sago, which grows in the greatest abundance in the valleys and marshy lands and which is, according to the missionaries, largely responsible for the unprogressive character of the natives.

A comparatively high sense of justice exists among the native tribes, each community possessing its strictly defined hunting and fishing grounds and sage fields. Many of the tribes are celebrated for their skill in boat-building. Commerce is carried on between the maritime and inland tribes. The trading is not confined to mere exchange: wild boar's tusks, and in certain districts bracelets and stone hatchets are accepted in payment. Of the greatest value and universally recognized as a medium of exchange are the small glass pins and jewelry. These are generally believed to be the product of the old Indian glassworkers, and the natives instantly detect modern productions, which are little valued. While cannibalism still exists on the island, the members of the same tribe or community live together in the greatest peace. In general the strictest endogamy is practised, and there are certain well-defined degrees of relationship within which marriage is forbidden. The wife, for whom payment is almost always made to her relatives, attends not only to the household work, but also to the rude agriculture practised: all observers testify to the kind manner in which wives are treated, and to the modesty and high moral character of the Papuan women in general. Though with no definite views concerning a deity, the

Papuan believes in another self or soul, which deserts the body temporarily during sleep and finally after death. Disease and death never result from natural causes: they are always the result of evil spirits, acting either directly or through a poisoner. Against these evil influences talismans (mostly pieces of carved wood, crocodile teeth, etc.) are carried. The native weapons are the bow and arrow, knives of bamboo, stone clubs, spears, and hardwood shields and clubs.

New Guinea is divided politically into the Dutch, German, and English protectorates, the last two being known officially as Kaiserwilhelmsland and the Territory of Papua. In 1884 Great Britain proclaimed its protectorate over the south-eastern portion of the island, and in 1885, after Germany had annexed the north-eastern section, the delimitation of the territories of the two countries was effected by the Anglo-German treaty of that year, Holland retaining the portion of the island west of 141° E. long. The boundary line between the German and British sections runs from 5° S. lat. at the 141st meridian E. to 8° on the coast. The Anglo-Dutch Treaty of May, 1895, confirmed the western boundary. The area of the British territory is 90,540 sq. miles; its population about 500,000 natives and 1250 whites. Cocoa-nuts, rubber, sisal hemp, Mirva fibre, coffee, tea, and tobacco are cultivated. The forests contain valuable timbers (sandal-wood, etc.); gold is found in the Louisiade Archipelago, on the mainland, and on Woodlark Island. The four ports of entry are Port Moresby, Samarai, Daru, and Bonagai. The German territory has an area of about 70,000 sq. miles, and a population of 110,000 (?) natives and 391 foreigners (184 white). Its development is entrusted to the German New Guinea Company, but its administration is undertaken by the Imperial Government. The principal ports are Berlinhafen and Konstantinshafen. Areca and sago palms, bamboos, ebony, and other woods abound: coco-palms and caoutchouc are grown on the small area yet under cultivation. Gold has been recently discovered on the Bismarck Mountains. Dutch New Guinea has an area of 150,000 sq. miles; its population is estimated purely conjecturally at 262,000. Although it is considered by some authorities the richest part of the island, very little attempt has been made to develop it. Extensive coal-fields exist near the north-western coast. The principal settlement is Mersuke. The fauna of New Guinea is very poor in mammals; only about seventy-five species are known, the most important being the wild boar, rat, mouse, bat, opossum, and crocodile. The avifauna is, on the other hand, both numerous and various, and includes among the five hundred known species many (such as the celebrated bird of paradise) which are peculiar to New Guinea and some other islands in this region.

Mission History.—On 1 July, 1885, the first Catholic priest, Father Verjus, set foot on Papuan soil. He devoted himself immediately to the care of the sick and the study of the native language, but was soon compelled to withdraw in consequence of the opposition of the Protestant missionaries and the pressure they brought to bear on the British authorities. A change of governors allowed the return of the Catholic missionaries, and on 1 May, 1889, British New Guinea was erected into a vicariate Apostolic and Father Navarre appointed vicar Apostolic. He introduced the Sisters of the Sacred Heart of Issoudun, who rendered valuable assistance by instructing the native girls, taking charge of the churches and chapels, and even founding stations in the interior. On 12 Sept., 1889, Father Verjus was named Bishop of Limyra and coadjutor to Mgr Navarre. The task of conversion is attended with great difficulty, as the adult native, though he shows no resentment to his religious customs being ridiculed, obstinately adheres

to them, even when they cause him excessive physical exertion. The latest statistics assign to the mission: 26 missionaries, 21 brothers, 38 sisters (all of the Sacred Heart of Issoudun), 15 catechists, 1500 Catholics, 7 stations with church and school, 2 orphanages, 28 schools with 1400 pupils. The Prefecture Apostolic of Dutch New Guinea was separated from the Vicariate Apostolic of Batavia on 22 December, 1902. Attended at first by the Jesuits, it was later entrusted to the Missionary Fathers of the Sacred Heart of Issoudun. The present prefect Apostolic is the Rev. Father Noyens (residence on the Island of Langur), appointed in January, 1903. The mission now contains 14 Fathers and 11 Brothers of the Sacred Heart; 7 Sisters of Our Lady of the Sacred Heart; 16 native catechists; 2911 Catholics; 210 catechumens; 4 churches with resident priest; 12 churches without residence; 12 sub-stations; 16 schools with 300 pupils. (For German New Guinea, see KAISERWILHELMSLAND.)

THOMAS KENNEDY.

New Hampshire, the most northerly of the thirteen original states of the United States, lying between 70° 37' and 72° 37' west long., and between 42° 40' and 45° 18' 23" north lat. It comprises an area of 9305 square miles, and according to the census of 1910, has a population of 430,572. New Hampshire is bounded on the south by Massachusetts, the dividing line beginning on the Atlantic shore at a point three miles north of the Merrimac; thence westerly, following the course of the river at the same distance to a point three miles north of Pawtucket Falls, thence westerly fifty-five miles to the western bank of the Connecticut; on the east by the Atlantic for about eighteen miles from said southern boundary to the middle of the mouth of Piscataqua harbour, thence by the State of Maine to the Canada line, the dividing line between Maine and New Hampshire beginning at the middle of the mouth of Piscataqua harbour, thence up the middle of the river to its most northerly head, thence north, two degrees west, to the Canada line; on the north by the Province of Quebec, the dividing line passing along the highlands that divide the rivers emptying into the St. Lawrence from those emptying into the sea; on the west by the Province of Quebec, southerly to the forty-fifth parallel of latitude, and by the State of Vermont, the line passing from the north-west head of the Connecticut river along the middle of that river to the forty-fifth parallel of north latitude (Treaty of 1783), and thence following the western bank of that river to the Massachusetts line. The south-west part of the Isles of Shoals, off the coast of New Hampshire, belongs to that state, the rest to Maine, the dividing line passing between Cedar and Smutty Nose Islands, Maine and Star Island, the most populous of the group in New Hampshire.

PHYSICAL CHARACTERISTICS.—New Hampshire is a state of hills and mountains, sloping gradually from north to south. A range of hills runs through the state from the southern boundary nearly to its northern extremity, buttressed at uneven intervals, south of the White Mountains, by Mounts Monadnock, Kearsarge, and Cardigan; a little further north it spreads into the plateau of the White Mountains, some thirty miles long by forty-five wide, and from sixteen to eighteen hundred feet high. From this pla-

teau arise some two hundred peaks in two groups: the White and Sandwich Mountains to the eastward, and the Franconia to the westward. This range divides the waters of the Androscoggin, the Saco, and the Merrimac rivers on the east from those of the Connecticut on the west. The White Mountain region is strikingly grand. Here Mount Washington (6290 feet) and Mounts Adams, Jefferson, Clay, Monroe, and others each rise nearly a mile in height. The fame of the beauty and sublimity of this region is world-wide and attracts countless visitors. In the south-eastern portion of the state, from the Merrimac valley to the sea, the land is lower and much of it fertile. Two-thirds of the largest cities and towns of the state are in this section. The climate is rugged and healthy, the air pure and bracing; the summers are short and changeable, but the autumn is generally delightful. The winters are very severe, though less so in the valleys of the Connecticut and Merrimac. Cold weather usually lasts eight months, with snow half that period.

RESOURCES.—*Agriculture:* The soil of the state outside the mountain regions is well watered and fairly productive, and good crops are raised of the ordinary farm staples: hay, corn, oats, potatoes, etc., but the chief food supply comes from the west. *Industries:* By the last census (1900) the gross value of the manufactures in the state is placed at \$123,610,904, the net value at \$85,008,010. These manufactures are largely confined to the cities and leading towns, which contain 65.8 per cent. of the establishments, manufacture 79.2 per cent. of the value, and pay 81.4 per cent. of the wages. Among the chief manufactures are boots and shoes, about \$23,500,000; leather goods, \$23,000,000; lumber, \$9,125,000; woollens, \$7,700,000; paper and pulp, \$7,125,000; machinery, cars, carriages, and furniture. *Minerals:* Chief among the mineral products is granite, of which there are valuable quarries at Concord, Hooksett, Mason, and other towns. Steatite or soapstone is also found in quantity at Franconia, Orford, and elsewhere; the quarry at Franconia being one of the most valuable in the Union. Graphite, mica, limestone, and slate are also found. *Commerce:* New Hampshire has but one seaport, Portsmouth, which has considerable coasting trade. The importation of foodstuffs and raw material, and the distribution of her vast volume of manufactures constitute an important interstate and domestic commerce, carried on chiefly by rail. Foreign importations come chiefly through Boston. The state is covered by a network of steam and electric railroads, connecting every city and town of any importance with the business centres.

EDUCATIONAL SYSTEM.—The state has always carefully provided for education. Under the Constitution (Part II, art., 82), it is the duty of the legislature and magistrate to cherish the interests of literature, the sciences, and all seminaries and public schools; to encourage private and public institutions, rewards, and immunities for the promotion of arts, sciences, etc.; but no money raised by taxation shall ever be applied for the use of the schools or institutions of any religious denomination. The law directs that every child from eight to fourteen shall attend school at least twelve weeks each year. Practically every town is a

SEAL OF NEW HAMPSHIRE

school district and may raise money by taxation for school purposes, and may, separately or uniting with other districts, establish a high school, or contract with academies in its vicinity for instruction of its scholars. The districts must meet at least once annually; oftener, if necessary. In the larger towns and cities the schools are graded and, liberally provided for, are in charge of local officials, elected by the people in every district, town, and ward, and known as School Committees. In the cities these form school-boards and appoint superintendents. All are under the general care of the State Superintendent of Public Instruction, appointed by the governor. In 1908 there were 2127 public schools, with a membership of 54,472 pupils, under 2999 teachers, of whom 255 were men. Manual training is provided in Manchester, Concord, Portsmouth, Rochester, and Berlin.

Evening schools are maintained in three cities, attended by 365 pupils, of which 308 are male. In places of 4000 people and over, 796 children attend kindergartens. The New Hampshire School for the Feeble Minded, at Laconia, has 89 inmates, under 4 instructors. There were 58 public high schools, with 243 teachers (84 men), and 5250 pupils. The State Normal School at Plymouth (founded 1870) has 14 teachers and 180 pupils, with 350 children in the model schools. Another normal school is in prospect. The total revenue from taxation for the public schools (1906-7) was \$1,293,013. Apart from Catholic schools, there are 24 secondary schools reported in 1908, with 167 teachers and 3235 pupils, over 900 of these being elementary. Among the private academies in the state, Phillips Exeter Academy deserves special mention. The New Hampshire College of Agriculture and the Mechanical Arts at Durham (founded 1867) is an excellent and liberally endowed state institution with 196 students (1908), 9 men and 13 women in general science; 48 men and 2 women in agriculture, and 124 men in engineering; professors and instructors, 31. Dartmouth College, at Hanover, (founded 1769) the chief university of the state, is an incorporated institution, not under state control. It has 69 professors in its collegiate department and 23 in its professional departments; 1102 collegiate students and 58 professional, including the Medical Department, the Thayer School of Civil Engineering, and the Amos Tuck School of Finance. St. Anselm's College, founded by the Benedictine Fathers in 1893 at the invitation of Bishop Bradley, is situated in Goffstown. The courses are collegiate, academic, and commercial, with 18 professors, 3 assistants, and 156 students. There is a fine state library at Concord and excellent libraries in all the cities. Every town of any importance either has its own library or is in easy reach of excellent library accommodations.

HISTORY.—Civil.—The first to settle in the limits of New Hampshire seems to have been David Thomson, a Scotchman, who in 1622 was granted 6000 acres and an island in New England (N. H. State Papers, XXV, 715). Forming a partnership with some Plymouth merchants, he came over in 1623 and settled south of the Piscataqua, calling the place Little Harbour. Nothing is known of this settlement, except that about three years afterwards Thomson moved to an island in Boston harbour which still bears his name. It is claimed with reason that at about the same time William and Edward Hilton settled a few miles further up the Piscataqua at what was called Hilton's Point or Northam, now Dover, though the formal grant of their patent was 1630 (Belknap, "Hist.", 8). Also, that all these men were sent by John Mason, Ferdinando Gorges, and a company of English merchants. In 1621, 1622, and 1629, Sir Ferdinando Gorges, an officer in the English navy, and Captain John Mason, a London merchant, afterward a naval officer and Governor of Newfoundland, both royal favourites, procured various grants of what is

now New Hampshire and a great deal more, from the Plymouth Company, organized by James I "for the planting, ruling, and governing of New England", and apparently under some arrangement with Thomson and others interested, sent over some eighty men and women duly supplied and furnished, by whom settlements were made on both sides of the Piscataqua near its mouth. Building a house, called Mason Hall, they began salt works, calling the settlement Strawberry Bank; while at Newitchwannock, now South Berwick, Maine, they built a saw mill. Things went along passably well till Mason died in 1635, after which the houses and cattle were taken to satisfy the wages and claims of his servants. Neither he nor Gorges seem to have reaped any profit from their investment. The claims of the Mason heirs were a bone of contention till 1788, when a settlement was effected. On two different occasions they delivered the colony from Massachusetts's sway on account of the influence the claimants had first with Charles II in 1679 and again with William III in 1692.

The settlements spread slowly, the people coming chiefly from Hampshire County, where Mason had held a lucrative office under the crown and from which he had named the plantation "New Hampshire". In 1638 John Wheelwright, a preacher, who had been disfranchised and banished from Boston for his religious opinions, settled, with some adherents, at Squamscott Falls, as being outside the Massachusetts patent, calling the place Exeter, and here they organized a local government, creating three magistrates, the laws to be made by the townsmen in public assembly, with the assent of the magistrates. The settlements at Dover and Strawberry Bank (Portsmouth) soon followed the example of Exeter and established local self-government. It is important to note that Mason, Gorges, Thomson, the Hiltons, and the wealthy merchants associated with them, were devoted supporters of the Church of England. The powerful Massachusetts Bay Colony, then the very essence of intense Puritanism, soon turned its attention to the struggling Anglican colonies on its northern borders, which it determined to seize. Proceeding with consummate craft and skill, they laid out the town of Hampton, clearly within the Mason patent, and settled it with people from Norfolk (Belknap, 1, 38), over the Mason protest. They procured powerful Puritan friends, Lords Say and Brook, and others, to buy up the Hilton patent at a cost of \$2150, and to send over large numbers of West of England Puritans and a minister who built and fortified a church on Dover Neck (Belknap, 1, 32). Jealousies, fears, and factions arose between the old settlers and the new comers. Then emissaries from the Bay appeared at the proper time on the Piscataqua (Fry, 37), "to understand the minds of the people and to prepare them", and their report was entirely satisfactory to their principals. They then (1641) got the purchasers of the Hilton patent to put it solemnly under the government of Massachusetts. And now, the time being ripe, and England too distracted with her own internal troubles to interfere, Massachusetts assumed jurisdiction over the New Hampshire settlements (October, 1641). Very soon after Puritans appeared among the settlers and obtained possession of the principal offices, dividing among themselves a goodly share of the common lands (Fry, 30). They silenced the Anglican minister at Portsmouth, seized the church, parsonage, and the fifty acres of glebe that had been granted that church by Governor Williams and the people, and in due time turned them over to a Puritan minister. Minister Wheelwright left Exeter and went to Maine.

For nearly one hundred years, or until the capture of Quebec by Wolfe and the subsequent surrender of Canada (1759-63), the development of New Hampshire was seriously impaired by the Indian wars, her territory being not only the borderland, but also in the

war-path of the Indians from Canada to the New England settlements. These wars seem to have been occasioned by the misdeeds, aggression, or treachery of the whites (Belknap, "Hist." I, 133, 242). There is no doubt that encroachments on their lands and fraud in trade gave sufficient grounds for a quarrel and kept up jealousy and fear (Belknap, I, 123). And the same writer gives the eastern settlers of New England but a poor character for religion and deems their conduct unattractive to the Indians (Hist., II, 47). Such would surely be the drowning by some rascals of the Saco chief Squando's babe; while the treachery of Major Waldron in 1676 in betraying them in time of peace in his own home, and consigning two hundred of them to slavery or death, was never forgotten nor forgiven (Belknap, I, 143), and brought untold horrors on the people till it was avenged in his blood on his own hearth-stone in the Indian attack on Dover in 1689. But through war or peace the population steadily increased. Estimated at between 3000 and 4000 in 1679, it was placed at 52,700 in 1767, and in 1775 at 83,300. The settlers, of course, were mainly English, but about 1719 a colony of one hundred families of Ulster Protestants came from Ireland to Massachusetts and after many trials a number of them settled on a tract in New Hampshire above Haverhill, known as Nutfield, where they established the towns of Londonderry and Derry; the rest settling in different parts of the country. This hardy and industrious element brought with it to New Hampshire the potato. After the capture of Quebec the settlements increased more rapidly, soon clashing in the west with New York's claims, till the boundary was settled by royal decree in 1764.

None of the thirteen colonies was better satisfied with British rule than New Hampshire. She had an extremely popular governor and had received fair treatment from the home government. It is true that patriots took alarm at the assumption of power to tax the people without their consent, and at the severity exercised towards the neighbouring sister colony; and took due precautions to consult for the common safety; also, that when the king and council prohibited the exportation of powder and military stores to America, the citizens, in December, 1774, quietly removed one hundred barrels of powder, the light cannon, small arms, and military stores from Fort William and Mary in Portsmouth harbour to more convenient places. The provincial convention, early in 1776, in forming a provisional government, publicly declared they had been happy under British rule and would rejoice if a reconciliation could be effected, but when they saw the home government persevere in its design of oppression, the Assembly at once (15 June, 1776) instructed its delegates at Philadelphia to join in declaring the thirteen colonies independent, and pledged their lives and fortunes thereto. This pledge was well redeemed through the war from Bunker Hill to Bennington and Yorktown, and New Hampshire's soldiers under Stark and Sullivan, Scammell and Cilley, and others, did their full part and more; while the hardy sailors of Portsmouth and its vicinity did gallant service in the navy under Paul Jones, whose ship, "The Ranger", was built and fitted out at that port. After careful consideration New Hampshire adopted the Constitution, 21 June, 1788, being the ninth state to do so; thus making the number required to give it effect. During the war of the Rebellion, notwithstanding considerable difference of party opinion, the state supported Lincoln and contributed its full share of men to the Union army and navy.

Ecclesiastical.—It was not eighty years from Henry VIII to Mason, and so it was that men imbued with the spirit of the English penal laws settled New Hampshire, whether of the Cavalier stripe, such as Mason, Gorges, and the Hiltons, or Puritan, such as Higgins,

the Waldrons, and the Moodeys. In the book of the Puritan the word "toleration" was not written, or only mentioned to be denied and scoffed at by the gravest and most venerable of their teachers and upon the most solemn occasions. President Oakes calls toleration "The first born of all abominations" (Election Sermon, 1673), "Having its origin," says Shepherd, "with the devil" (Election Sermon, 1672). As Dr. Belknap sums it up, "Liberty of conscience and toleration were offensive terms and they who used them were supposed to be the enemies of religion and government" (Hist., 84). The rigidity with which this idea was carried out towards their brethren who differed with them is shown in the case of Roger Williams, and the people of Salem, who were disfranchised and their property rights withheld for remonstrating in favour of liberty of conscience; Williams escaping only by flight to Narragansett Bay; and in multitudes of other instances, as well as in their merciless persecution of the Quakers, extending to imprisonment, scourging, mutilation, and death; as witness their laws from 1656 to 1661, and the barbarities perpetrated under them. It was during Massachusetts' usurpation in New Hampshire, and probably by one of the parties she colonized on the Hilton Patent, the notorious Richard Waldron, that the three Quakers, Anna Coleman, Mary Tomkins, and Alice Ambrose were ordered to be whipped, like infamous criminals, from Dover through eleven towns, and to the disgrace of the colony, the sentence was executed as far as the Massachusetts line; where the victims were rescued and set free by some ruse of the Cavalier Doctor Barefoot, and some friends, as the story goes, Waldron's warrant running in Massachusetts also.

Such being their attitude towards their Protestant brethren, it is easy to understand why so few Catholics appear among the early settlers; especially as they were banned by the charter of the Plymouth Council, which excluded from New England all who had not taken the Oath of Supremacy. Catholics were denied the right of freemen under the Royal Commission of 1679, which required the Oath of Supremacy and this was endorsed by the General Assembly held at Portsmouth the following year; and in 1696 an odious and insulting test-oath was imposed on the people under pain of fine or imprisonment. The proscription of Catholics continued to disfigure the state constitution even after the adoption of the federal constitution. The State Constitutional Convention of 1791 refused to amend the constitution of 1784, by abolishing the religious test that excluded Catholics from the office of governor, councillor, state senator, and representative, the vote standing thirty yeas to fifty-one nays. It is significant that the names of those voting nay are not entered on the record (Journal, p. 52). The convention of 1876 abolished all religious disqualifications, and this was adopted by the people except as to one clause empowering towns, parishes, etc. to provide at their own expense for public, "Protestant" teachers of religion and morality. The convention of 1889 voted to abolish this distinction; but this vote also failed of ratification, and the discrimination still remains a blot on the fairest and first of all written American state constitutions.

First Catholic Missions.—In 1816 Rev. Virgil Barber, an Episcopal minister and principal of an Academy at Fairfield, N. Y., son of Rev. Daniel Barber of Claremont, N. H., observing a prayer-book in the hands of a Catholic servant, made inquiries which resulted in his giving up his school and pastorate and becoming a Catholic. Afterwards, by agreement between himself and his wife, they separated. He and his son entered the Jesuits, and Mrs. Barber and her four daughters entered convents. Father Barber was ordained in 1822 and sent to Claremont, where he built a small brick church and academy, still standing; and according to Bishop Fenwick in 1825 there were

about one hundred and fifty persons, almost all converts, attending it. The following year Father Barber was sent by Bishop Fenwick to visit the eastern part of the diocese and found one hundred Catholics in Dover, eager for a church. In 1828 Father Charles French was assigned to that mission, which extended from Dover to Eastport and Bangor. Father French built the church of St. Aloysius at Dover (dedicated 1836), the second Catholic church in the state. In 1833 Father Lee was appointed resident pastor, and the following year he was succeeded by Father Patrick Canovan. In 1835 the Catholic population of the state is given as 385; in 1842 it was placed at 1370, ministered to by Fathers Daly and Canovan. Then came the emigration from Ireland (1845). In Manchester, N. H., in 1848 there were five hundred Catholics, and Bishop Fitzpatrick sent thither Rev. William McDonald, a wise, far-seeing, zealous, and devoted priest. A church was soon built, the present church of St. Anne, rebuilt in 1852. In 1857 he built a convent near the church for the Sisters of Mercy, organized schools, using the basement of the church till he could build or purchase buildings. The influx of Irish Catholics continuing, in 1867 he built St. Joseph's church, now the cathedral. He secured eligible sites for a church, a school, and charitable purposes; an orphan asylum, a Home for Aged Women, and a fine brick school for girls. Emigration from Canada set in, which he duly cared for, as he spoke French, till in 1871 a Canadian priest, Rev. J. H. Chevalier, was sent to Manchester, where he built a fine church and developed a flourishing parish. Father McDonald died in 1885, greatly beloved, honoured, and lamented by his fellow citizens, irrespective of creed. A beautiful mortuary chapel was erected by Bishop Bradley over his remains. Meanwhile such men as the late Fathers O'Donnell and Millette of Nashua, Barry of Concord, Murphy of Dover, O'Callaghan of Portsmouth and other zealous priests built up fine parishes in the chief manufacturing centres.

In 1853 Maine and New Hampshire were created a diocese. Father David W. Bacon, consecrated bishop in 1855, died in 1874, and was succeeded (1875) by the Right Rev. J. A. Healy. In 1884 the state was made the Diocese of Manchester with Father Denis M. Bradley, then pastor of St. Joseph's, as its first bishop. Under Bishop Bradley, a man of great mental power and breadth of view, of quick perception and sound judgment, singularly sweet in disposition, an able administrator and utterly devoted to his calling, the progress of the diocese was almost incredible. The tide of French Canadian immigration to the manufacturing centres of the state now increased tremendously and the new bishop spared no pains to procure the best pastors to care for the ever-increasing flock. Two other magnificent brick churches for this element, St. Mary's and St. George's, with schools for each sex, and convents for the sisters, were built, together with all the usual parish institutions. In 1884 there were 45,000 Catholics in the state, with 27 churches, 5 convents, 40 priests, and 3000 children in the parochial schools. After nineteen years, there were 100,000 Catholics, 91 churches, 24 chapels, 36 stations, 107 priests, 12,000 children in the parochial schools, 4 hospitals, 4 homes for aged women. Bishop Bradley died 13 December, 1903, and was succeeded in 1904 by Bishop John B. Delaney, whose untimely death in June, 1906, cut short his administration. His successor is the present bishop, Right Rev. George Albert Guertin. The new prelate has evidently brought with him the same prudence, zeal, and administrative ability that marked his career as a priest, and his work thus far has already borne rich fruit. There are now in the diocese over 126,000 Catholics, with 118 secular priests, and 19 regulars; 99 churches, 24 chapels, and 34 stations; over 13,000 children in the parochial schools, 7 orphan asylums, caring for 718 orphans, 5

homes for working girls, with many other charitable institutions. No Catholic has yet held the office of Judge of the Supreme Court; recently a Catholic, Hon. John M. Mitchell of Concord, was appointed judge of the Superior Court of the State.

RELIGIOUS POLITY.—Freedom of worship is now recognized as "a natural and unalienable right" under the Constitution; and no one shall be molested in person or property for exercising the same as his conscience dictates, or for his sentiments or persuasion; or be compelled to pay to the support of another persuasion; and no subordination of one denomination to another shall ever be established by law (Bill of Rights, Art. 5). All work, business, and labour of one's secular calling to the disturbance of others on Sunday, except works of necessity and mercy, are forbidden under penalty of fine and imprisonment, and no person shall engage in any play, game or sport on that day (Gen. laws; Ch. 271). The form of oath of office prescribed in the Constitution is, "I do solemnly swear, etc.—so help me God." Or, in case of persons scrupulous of swearing; "This I do under the pains and penalties of perjury". The same forms are followed in respect to witnesses in the courts, but any other form may be used which the affiant professes to believe may be more binding on the conscience. Open denial of the existence of God, or wilful blasphemy of the name of God, Jesus Christ, or the Holy Ghost, cursing or reproaching His word contained in the Bible, are punishable with severe fine and sureties for good behaviour for a year. Profane cursing or swearing is punishable by fine of one dollar for first offence, and two dollars for subsequent offences. Opening the legislature by prayer is a matter of custom since 1745, though as early as 1680 the Assembly was opened by prayer. Christmas Day is recognized as a legal holiday. Under the Puritan regime whoever kept Christmas Day had to pay five pounds, over twenty-four dollars (Commissioners Rep. to King). The seal of confession is not recognized by law. No instances of its being attacked have arisen, and probably public opinion would frown down any such attempt.

INCORPORATION OF CHARITIES.—Apart from special incorporation by the legislature, easily obtainable, any five persons may associate themselves together and become a corporation for religious or charitable purposes, by filing articles of agreement with their town clerk, and the Secretary of State. The laws could not well be more liberal toward such societies. A religious society, though not incorporated, is a corporation in this state, for the purpose of holding and using donations or grants worth not more than \$5000 a year. Any officers, such as trustees or deacons, of any church, if citizens, shall be deemed a corporation, to hold any grants or donations of the above value, either to them and their successors, to their church or to the poor. No religious society shall be dissolved, or its right to any property affected, by failure to hold its annual meeting, to choose its officers, or for any informality in electing or qualifying its officers, or for any defect in its records.

TAXATION.—All "Houses of Public Worship" are exempt from taxation; also twenty-five hundred dollars of the value of parsonages owned by religious societies and occupied by their pastors; also school houses and "Seminaries of learning". Ordained ministers are exempt from jury duty, but not from military duty. The sale of liquor is regulated by a stringent high licence law, sale for sacramental purposes being expressly recognized and coming under a low licence fee, ten dollars.

MARRIAGE AND DIVORCE.—The age of consent, for females is thirteen, for males fourteen. Marriages to the degree of first cousins are incestuous and void, and the issue illegitimate. Marriages may be solemnized by a justice of the peace in his county, or by an ordained minister in good standing, resident in the

state; also by ministers out of the state, commissioned by the governor to be legally authorized officers. Children born before marriage and duly acknowledged thereafter are deemed legitimate. The legitimacy of the children is not to be affected by decree of divorce unless so expressed in the decree. If one of the parties thereto believed they were lawfully married and the marriage was consummated, it is valid, although before a *supposed* but not actual justice or minister, or under an informal or defective certificate of intention. The causes for legal divorce are impotency, adultery, extreme cruelty, conviction of crime entailing over a year's imprisonment; treatment seriously injuring health or reason, habitual drunkenness, refusal to cohabit or support for three years, refusal for six months, when conjoined with religious belief (Gen. Stat., Ch. 174). Where legal cause for divorce exists, all the objects of separation—non-access, non-interference with person and property, alimony, custody of children—can be obtained without a legal divorce, should the injured party so desire (Stat., 1909).

PRISONS AND REFORMATORIES.—The rules of all prisons, houses of correction, or public charitable or reformatory institutions, shall provide for suitable religious instruction and ministration to the inmates. These are to have freedom of religious belief and worship, but may not interfere with proper discipline.

WILLS AND TESTAMENTS.—Every person of twenty-one years of age, and sound mind (married women included), may dispose of any right in property by will in writing, signed by the testator and subscribed in his presence by three credible witnesses. No seal is required. Husband or wife may waive the provisions of a will and take the share allowed them respectively by law.

CHARITABLE BEQUESTS.—These are governed by the principles of the common law. The courts will order them to be executed according to the true intent and will let no trust lapse for want of a trustee (2 N. H., 21-55; N. H., 463-470-36; N. H., 139).

The following is a rough estimate of the nationality of the Catholic population of the diocese:

French Canadians.....	66,200
Irish.....	52,250
Poles.....	5,000
Lithuanians.....	1,500
Ruthenians.....	750
As reported in 1906 the membership of the principal non-Catholic denominations is as follows:	
Congregationalists.....	19,070
Methodists.....	12,529
Baptists.....	9,741
Free Baptists.....	6,210
Unitarians.....	3,629
Universalists.....	1,993
Advent Christians.....	1,608
Christians.....	1,303
Presbyterians.....	842

CHAS. A. O'CONNOR.

New Hebrides, VICARIATE APOSTOLIC OF, in Oceania, comprises the New Hebrides, with Banks and Torres, islands situated between 13° and 21° S. lat. and between 166° and 170° E. long. The total area is about 580 sq. miles. The indigenous population, which has decreased considerably, amounts to about 75,000; they are for the most part of an olive or brown complexion, varying in darkness. Their languages, which are very numerous, belong to the Malay stock and their religious worship has for its object the souls of the dead, but they also recognize a higher Being who is good. The white population is about 1000, nearly 650 of whom are French, and 300 English. The islands belong jointly to France and Great Britain under what is known as the "Condominium of the New Hebrides". They were discovered in 1606 by

the Spaniards under Quiros, and were named Tierra Austral del S. Espiritu. In 1768 the French navigator, Bougainville, in sailing round the globe, came upon the same group and named them the Grandes Cyclades. Six years later, Cook discovered the islands and gave them their present name. According to the account of Quiros, the Franciscans, who acted as chaplains to his ships, celebrated Mass several times in a chapel built on the shore, and even held a procession of the Blessed Sacrament. Nevertheless, the islands had to wait long for the preaching of Catholic missionaries. Not until January, 1887, did four Marist priests, sent by Mgr Frayse, Vicar Apostolic of New Caledonia, definitely establish here the first missions, and they did it amid great difficulties. The missions, however, developed rapidly, and in 1900, at the petition of Mgr. Frayse, the New Hebrides were separated from his jurisdiction and made a prefecture Apostolic, under Père Douceré, of the Society of Mary. In 1904 this mission became a vicariate Apostolic, and Père Douceré, as vicar Apostolic, was consecrated titular Bishop of Terenuthis. His residence is at Port-Vila. The staff of the mission now comprises 26 priests and 3 lay brothers of the Lyons Society of Mary. Their labours are seconded by 16 religious women of the regular Third Order of Mary, and a certain number of native catechists. There are 20 missionary residences, besides numerous annexes. Each mission has its schools. Near the episcopal residence is established a training-school for native catechists. Religious instruction and education for white children are secured by two schools at Port-Vila: a school for boys, conducted by the Little Brothers of Mary; one for girls, under the sisters of the mission who also serve the hospital at Port-Vila and conduct at Mallicolo a *crèche* for little orphans. Conversions from paganism progress slowly, but continuously. The native Catholics, now numbering rather more than one thousand, are well instructed and faithful to their religious duties. There are about 600 white Catholics, and this number is increasing rapidly, both by births and by immigration.

P. DOUCERÉ.

Newhouse, ABBEY OF, near Brockelsby, Lincoln, the first Premonstratensian abbey in England, was founded in 1143 by Peter de Gousel, with the consent of his lord, Hugh de Bayeux, and the approbation of Alexander, Bishop of Lincoln, with a colony from Liegues Abbey near Calais, France, then under the rule of Abbot Henry. On their arrival in England the White Canons were hospitably received by William, Earl of Lincoln, who confirmed the donations made to Gelro, the first Abbot of Newhouse, by Peter de Gousel the founder, by Ralph de Halton, and Geoffrey de Tours. The abbey was built in honour of Our Lady and St. Martial, Bishop of Limoges. In time Newhouse became the parent house of eleven of the Premonstratensian houses in England. The seal of Newhouse represents an abbot at full length with his crozier and the inscription: *Sigill. conventus Sci Marcialis. Ep. Li. de Newhouse.* Of this abbey which was granted (30 Henry VIII) to Charles, Duke of Suffolk, parts only of the old foundations still remain. The names of twenty-six abbots are known, the last being Thomas Harpham, who was abbot from 1534 to the suppression of the abbey by Henry VIII. The following list gives in alphabetical order the names and the dates of foundations of the Premonstratensian, or Norbertine, abbeys, made from the Abbey of Newhouse and existing in England at the time of the Reformation: Alnwick, Northumberland, this was the first foundation made from Newhouse (1147); Barlings, near Lincoln (1154); Bileigh, near Maldon, Essex (1180); Coverham, Yorkshire (originally established at Swainby, 1190); Croxton, near Melton Mowbray, Leicestershire (1162); Dale, Derbyshire (1162); St.

Agatha's at Easby, near Richmond, Yorkshire (1152); Newbo, near Barrowby, Lincolnshire (1198); Sulby, Northamptonshire (originally established at Welford (1155)).

DUGDALE, *Monasticon Anglicanum*, VI; *Collectanea Anglo-Framonst.* in REDMEN, *Register*, ed. GASQUET (Royal Historical Society, 3rd series, VI, X, XII); GEUDENS, *A Sketch of the Premonstratensian Order and its houses in Great Britain and Ireland* (London, 1878); HUGO, *Annales Premonstratenses* (Nancy, 1734).

New Jersey, one of the original thirteen states of the American Union. It ratified the Federal Constitution on 18 December, 1787, being preceded only by Delaware and Pennsylvania. The capital of the state is Trenton. The extreme length of New Jersey from north to south is 160 miles, its extreme breadth 70 miles, and its gross area 7815 square miles. It is situated between 38° 55' 39" and 41° 21' 19" N. lat., and between 73° 53' 51" and 75° 33' 3" W. long. It is bounded on the north by New York State, on the east by the Hudson River and the Atlantic Ocean, on the south by Delaware Bay, and on the west by the Delaware River. In 1910 the population was 2,537,167 (1,883,669 in 1900), the state being thus, notwithstanding its large mountainous and forest areas, more densely populated than the most fertile of the prairie states or the great manufacturing States of New York or Pennsylvania. New Jersey has, in proportion to its area, more miles of railway than any other state, the majority of the eastern trunk lines traversing it. Its farms yield a larger income in proportion to the area cultivated than the richest states of the Mississippi valley. In manufactures it ranks sixth in the Union.

PHYSICAL CHARACTERISTICS.—Much of the northern half of New Jersey is mountainous, and much of its southern half is covered with forest. The state divides itself naturally into four belts, differing in age, in the nature of the underlying rocks, and in topography. The Appalachian belt, made up of the Kittatinny range and valley, forms the north-western part of the state. This ridge is due to tilted-up layers of hard rock, which have been able to resist the agents of waste, while the softer rocks were being slowly worn away to form the Kittatinny valley. The Kittatinny Mountains constitute the highest land in the state, and are clothed with forests; the valley, which is one of the most fertile parts of the state, is devoted to general farming and grazing. There are no large cities, and but little manufacturing, in this section. The Highland belt is the oldest part of the state, and is a portion of the very ancient mountain system of which the Blue Ridge Mountains are a worn-down remnant. The Highlands (generally less than 1500 feet high) are a region of lakes, forests, and picturesque valleys, but are not a productive farming section. Here, in ancient crystalline rocks, are found valuable beds of iron and of zinc ore, but there are no large cities and no extensive manufacturing. The Piedmont belt is a rolling plain from which rise abrupt ridges of hard trap-rock. The Palisades along the Hudson and the Orange or Watchung Mountains are the most prominent of these ridges. While the rocks of the Piedmont plain are mostly sandstone and shale, the trap-rocks are ancient lava sheets. This, the belt of dense population, many cities, great manufacturing activity, and generally productive soil, is by far the most wealthy part of the state. The northern part of New Jersey was covered by the ice sheet of the glacial period. As a result, there are many swamps, lakes, and waterfalls, a glacial soil with many boulders, and the terminal moraine formed by low rounded hills. These hills are composed of till, gravel, boulders, etc., brought together by the advancing ice sheet and piled up along its front. The coastal plain is the youngest, flattest, and largest of the four natural divisions of the state, of which it forms more than one half. It is composed of layer upon layer of sand, clay, gravel, and

marl sediments, that were, in past ages, slowly deposited in the ocean waters along the coast, and afterwards into a low, sandy plain. The marl belt and a few other portions are alone fertile. More than half of the coastal plain is covered with pine forests and is thinly peopled. Outside of the larger cities, the raising of fruit and vegetables for the city markets and the manufacture of glass are the chief industries. The sea-coast is fringed with summer resorts.

CIVIL HISTORY.—The precise date of the first settlement in New Jersey is not known, though it is believed that the Danes or Norwegians, who crossed the Atlantic with the Dutch colonists, began a settlement at Bergen about 1624. Ten years previously an attempt

had been made to form a settlement at Jersey City. In 1623 the Dutch West India Company sent out a ship under the command of Captain Cornelius Jacobse Mey. Entering Delaware Bay, he gave his name to its northern cape, and then, sailing up the river to Gloucester, built Fort Nassau, which may be

SEAL OF NEW JERSEY

considered the first permanent settlement of the state. In 1632 Charles I granted to Sir Edmund Plowden a vast tract of land embracing New Jersey, Pennsylvania, Delaware, and Maryland, although he had previously granted Maryland to Lord Baltimore. In 1634 Plowden made a grant of ten thousand acres to Sir Thomas Danby on condition that he would settle one hundred planters on it, and would not permit "any to live thereon not believing or professing the three Christian creeds commonly called the Apostolical, Athanasian, and Nicene". In 1642 Plowden sailed up the Delaware River, which he named "The Charles", and founded at Salem City a settlement of seventy persons. The efforts of Thomas and George Plowden to assert their claims to the lands granted to their grandfather proved futile, the possessions having fallen into other hands after the latter had retired to Virginia during the Commonwealth. In 1606, prior to the grant of Charles I to Plowden, King James had granted a new patent for Virginia (ignoring that of Sir Walter Raleigh, dated 1584), in which was included the territory now known as the New England States, New York, New Jersey, Pennsylvania, and Maryland. The possession of New Jersey, Pennsylvania, and adjacent lands was subsequently claimed by the Dutch and Swedes. The former built Fort Nassau on the Delaware near Gloucester. Disputes as to the rightful possession of this territory continued until 12 March, 1664, when Charles II with royal disregard for previous patents, grants, and charters, deeded to his brother James, Duke of York, a vast tract embracing much of New England, New York, and all of what is now New Jersey. This was accompanied by active preparations to drive the Dutch from America, as their possession of New Jersey, if acquiesced in, would practically separate the New England Colonies from Virginia, Maryland, and the Carolinas. In the summer of 1664 armed vessels appeared in New York harbour, and after negotiations the Dutch surrendered.

In the meantime the Duke of York transferred to two favourites, Lord John Berkeley and Sir George Carteret, practically what is now the State of New Jersey by the following description: "All that tract of land adjacent to New England and lying and being to the westward of Long Island, bounded on the east part by the main sea and part by the Hudson River, and hath

upon the west, Delaware bay or river, and extendeth southward to the main ocean as far as Cape May, at the mouth of Delaware bay, and to the northward as far as the northernmost branch of said bay or river of Delaware, which is forty-one degrees and forty minutes of latitude, and worketh over thence in a straight line to Hudson river, which said tract of land is hereafter to be called by the name or names of Nova Cæsarea or New Jersey". This name was given in honour of Carteret's gallant defence of the Island of Jersey (*Cæsarea*), of which he was governor, during the parliamentary wars. This grant regarded the Dutch as intruders, and Berkeley and Carteret not only became rulers, but acquired the right to transfer the privilege to others. Measures were speedily devised for peopling and governing the country. The proprietors published a constitution, dated 10 February, 1664, by which the government of the province was to be exercised by a governor, council, and general assembly. The governor was to receive his appointment from the proprietors. On the same day that the instrument of government was signed, Philip Carteret, a brother of one of the proprietors, received a commission as Governor of New Jersey, and landed at Elizabeth in August, 1665. By granting a liberal form of government and extolling the advantages of their colony, so well located for agriculture, commerce, fishing, and mining, Carteret and Berkeley attracted settlers not only from England, but from Scotland, New England, and particularly from Long Island and Connecticut. These planters were largely Calvinists from Presbyterian and Congregational communities, and occupied mainly land in Newark, Elizabeth, and upon the north shore of Monmouth county. The valley of the Delaware remained unsettled. The Calvinists brought with them into East Jersey their distinctive views upon religious and civil matters.

The first Legislative Assembly met at Elizabethtown on 26 May, 1668. The session lasted four days, and was characterized by harmony and strict attention to the business for which the burgesses and representatives were summoned by Governor Carteret. It may be noticed that this assembly passed laws by which twelve distinct offences were made punishable with death. The assembly adjourned *sine die*, and seven years elapsed before another convened. The capture of New York by the Dutch, on 30 July, 1673, was followed by the subjection of the surrounding country, including the province of New Jersey. The whole of the territory, however, was restored to the English Crown by the Anglo-Dutch Treaty of 9 February, 1674. The second General Assembly began its sessions on 5 November, 1675. Laws were enacted concerning the proper military defence of the province, the institution of regular courts, and the assessment of taxes. A code of capital laws was also adopted, similar in its provisions to that passed in 1668. On 18 March, 1673, Lord Berkeley disposed of his right and interest in the province to John Fenwick and Edward Byllinge, members of the Society of Quakers, or Friends, for the sum of one thousand pounds. John Fenwick received the conveyance in trust for Edward Byllinge, and a dispute as to the terms having arisen, William Penn was called in as arbitrator. He gave one-tenth of the province and a considerable sum of money to Fenwick, the remainder of the territory being adjudged to Byllinge. In 1676 a division of the Carteret and Berkeley interests occurred. By the "Indenture Quintipartite", dated 1 July, 1676, the line of division was made to extend across the province from Little Egg Harbor to a point in the Delaware River in forty-one degrees N. lat. These divisions were known respectively as East and West Jersey, until the charters of both were surrendered, and the two portions included together under a royal government. After Berkeley's transfer the dominant influence in West Jersey was that of the

Society of Friends. Salem was settled in 1675; Burlington, Gloucester, and Trenton about five years later, while within ten years the "shore" communities of Cape May and Tuckerton came into existence. The Society of Friends established in West Jersey a series of communities in which the life of the people was different from that of East Jersey. As East Jersey resembled New England in civil government, so West Jersey resembled Virginia. The political and social centres of the large plantations were the shire towns; slave-holding was common; a landed aristocracy was established; prominent families intermarried, and, under the advice of William Penn and his friends, good faith was kept with the Indians. Capital punishment was practically unknown, and disputes were frequently settled by arbitration.

Two elements of discord marked the genesis of East Jersey and West Jersey. One was external, and arose from the attitude of the Duke of York. As we have already noted, New Jersey was recaptured in 1673 by the Dutch, who held the colony until the early spring of 1674. A question arose as to the Duke of York's title after 1674; reconveyances were made, but in spite of past assurances the duke claimed the proprietary right of government. To that end Sir Edmund Andros was commissioned Governor of New Jersey, and a climax was reached in 1680 when the proprietary Governor of East Jersey was carried prisoner to New York. In 1681 the Crown recognized the justice of the proprietors' contention, and local government was re-established, but not before the seeds of disaffection were sown that bore fruit in the Revolutionary War. An internal disturbance was the contest between the Board of Proprietors and the small landowners. Both in East and West Jersey, Carteret and Berkeley and their assigns had transferred to wealthy combinations of capitalists (mostly non-resident) much of the broad acreage of the colonies. With the land went the right of selection of governors and of members of executive councils, which right Berkeley and Carteret derived from the Crown. This, with "quit-rent" agitation in East Jersey, led to much bitterness. Finally, disgusted with turmoil and recognizing the sentiments of revolt entertained by the people, the Boards of Proprietors surrendered to the Crown in 1702 their rights of government, retaining only their interest in the soil. East and West Jersey were now united and the two provinces became the royal colony of New Jersey. Queen Anne appointed Lord Cornbury, Governor of New York and New Jersey, but each continued to have a separate assembly. In 1738 New Jersey petitioned for a distinct administration, and Lewis Morris was appointed governor. The population was then about 40,000. The last royal governor was William Franklin, the natural son of Benjamin Franklin. The opening of the Revolution found New Jersey sentiment unevenly crystallized. Few, if any, favoured absolute independence. There were three elements. One, the Tory and conservative class and led by William Franklin, embraced nearly all the Episcopalians, a vast proportion of the non-combatant members of the Society of Friends, and some East Jersey Calvinists. Another element was composed of men of various shades of belief, some in favour of continual protest, others desirous of compromise. This included at the outbreak of the struggle most of the Calvinists, some few Quakers of the younger generation, and the Irish and Scotch. The third party drew its support from a few bold, aggressive spirits of influence, whose following included men who believed that war for independence would benefit their fortunes. The part played in the Revolution by New Jersey has been frequently told. Events succeeded rapidly after Trenton and Princeton; Monmouth and Red Bank are ever-memorable, while the raids at Salem, Springfield, Elizabeth, in the valley of the Hackensack, and the winter at Morris-

town are a part of national history. Lying between New York and Philadelphia, its soil was a theatre where the drama of war was always presented. At no time was the Tory element suppressed, finding its expression in open hostility, or in the barbaric cruelties of the "Pine Robbers" of Monmouth, Burlington, Gloucester, and Salem counties. Though under suspicion, the Society of Friends was neutral, for conscience' sake, remaining faithful to the teachings of its creed. The close of the struggle found the people of New Jersey jubilant and not disposed to relinquish their sovereignty. The Articles of Confederation were weak and had become a byword and a jest. There was much state pride and much aristocratic feeling among the old families who continued to dominate state politics.

ECCLESIASTICAL HISTORY.—Early Missionary Efforts.—The comparative liberality of the proprietary rule of Berkeley and Carteret, especially in religious matters, attracted some Catholic settlers to New Jersey. As early as 1672 we find Fathers Harvey and Gage visiting both Woodbridge and Elizabethtown (then the capital of New Jersey) for the purpose of ministering to the Catholics in those places. Robert Vanquellén, a native of Caen, France, and a Catholic, lived at Woodbridge, and was surveyor general of that section of New Jersey in 1669 and 1670. Catholics were, however, regarded with some suspicion and considerable bigotry at times manifested itself. A Catholic by the name of William Douglass, when elected a representative from Bergen County, was excluded, because of his religious convictions, from the General Assembly of 1668. In 1691 the New York Assembly passed the first anti-Catholic enactment, which was followed by laws strongly opposed to Catholics and their beliefs both in New York and New Jersey. Lord Cornbury, when appointed governor in 1701, was instructed by Queen Anne to permit liberty of conscience to all persons except "papists".

The first Catholics in New Jersey were probably those who availed themselves of the grant made by Charles I in 1632 to Sir Edmund Plowden, and of Plowden's conveyance in 1634 to Thomas Danby. In this way a Catholic settlement was founded near Salem. The fine clay found at Woodbridge attracted some Catholics to that place as early as 1672. The ship "Philip", which is said to have brought Carteret to America, also transported several French Catholics, who were skilled as salt makers, to New Jersey. The records show Hugh Dunn and John and James Kelly in Woodbridge in 1672. In 1741 some fanatics, unable to bear the toleration which the Catholics were enjoying in the province, endeavoured to arouse ill-feeling against them by accusing them of complicity in the "Negro Plot". In the persecution thus aroused Father John Ury, a Catholic priest (see Flynn, *op. cit.* in bibliography, pp. 21-2), who had exercised unostentatiously his sacred ministry in New Jersey, and had been engaged for about twelve months in teaching at Burlington, was put to death in New York City, the real cause being the violent hostility of the rabble towards the Catholic name and priesthood. Father Robert Harding arrived in Philadelphia from England in August, 1749, when the City of Brotherly Love contained only 2000 homes. He laboured in New Jersey from 1762 until his death in 1772, at the age of seventy years. Father Ferdinand Farmer, whose family name was Steenmeyer (q. v.), may be considered the true missionary of New Jersey.

In "First Catholics in New Jersey", in 1744, Father Theodore Schneider, a distinguished Jesuit, professor of philosophy and theology in Europe, visited New Jersey and celebrated Mass at the iron furnaces there. Having some skill in medicine, he was accustomed to cure the body as well as the soul; and travelling about under the name of Doctor Schneider he obtained access to places whither he could not

otherwise have gone without great personal danger. Sometimes, however, his real character was discovered, and several times he was shot at in New Jersey. He used to carry in his missionary excursions a manuscript copy of the Roman Missal, carefully written in his own hand. He died on 11 July, 1764. Patrick Colvin seems to have been the only Catholic resident in Trenton in 1776. He was interested in the cause of the patriots, and helped to furnish the boats used to transport General Washington's army across the Delaware on 25 December, 1776. Captain Michael Kearney, a Catholic, lived near Whippany in Morris County on his large estate, consisting of about one thousand acres, known as "The Irish Lott". The inscription on his tomb bears witness to his genial hospitality of disposition, and to his having served as a captain in the British Navy. He died at the age of seventy-eight years, six months, and twenty-eight days on 5 April, 1797. Molly Pitcher (*née* McCauley), who acquired fame at the Battle of Monmouth, was a Catholic girl. One Pierre Malou, who had been a general in the Belgian Army, was a resident of Princeton from 1795 to 1799; he purchased five hundred acres of land in Cherry Valley; subsequently he sailed for Europe in order to bring his wife and two sons to New Jersey. On the return voyage his wife died. He returned to Europe, became a lay brother of the Society of Jesus; afterwards he studied theology, and was later raised to the priesthood, came to America again and was stationed in Madison. Father Pierre Malou died at New York on 13 October, 1827, and is buried under St. Peter's Church in Barclay Street.

When Bishop John Carroll returned from England he received Father John Rossiter, an Augustinian, into his diocese in 1790. On 27 May, 1799, the Augustinians were given permission to establish convents of their order in the United States. They established missions in New Jersey at Cape May and at Trenton in 1803 and 1805, and at Paterson a little later. St. John's parish at Trenton, now the parish of the Sacred Heart, was the first parish established in New Jersey (1799). St. Joseph's Church in Philadelphia was the first parish church for the Catholics of Pennsylvania, New Jersey, and New York. The Father Harding above referred to was pastor of this parish, and is said to have been the first priest to have visited New Jersey prior to 1762. St. John's Church in Newark was built in 1828, and the first pastor was Rev. Gregory Bryan Pardow. Father Pardow was born in England in 1804, and in 1829 was named as first pastor of the first Catholic parish founded in Newark. During and after the terrible famine in Ireland about 1848 a great number of Irish Catholics came to New Jersey. About this time Father Bernard J. McQuaid (q. v.) began his missionary career in New Jersey. He became pastor at Madison in 1843, and had missions at Morristown, Dover, Mendham, Basking Ridge, and Springfield. His parish extended from Madison to the banks of the Delaware, including Morris, Somerset, Warren, and Sussex Counties, besides Short Hills in Essex and Springfield in Union. He opened the first Catholic school in New Jersey at Madison; built the Church of the Assumption at Morristown; St. Joseph's at Mendham; and St. Rose's at Springfield, now removed to Short Hills. He became rector of St. Patrick's pro-cathedral at Newark in 1853, upon the arrival of the Bulls from Rome appointing James Roosevelt Bayley, first Bishop of Newark; he built Seton Hall College and was its first president, and brought the Sisters of Charity into the Diocese of Newark.

DIOCESES AND CATHOLIC POPULATION.—The State of New Jersey is divided ecclesiastically into the Dioceses of Newark and Trenton, which are treated in separate articles. The total Catholic population of the state is about 500,000.

LEGISLATION ON MATTERS DIRECTLY AFFECTING RELIGION.—The First Constitution of the State of New Jersey, adopted at the Provincial Congress held at Burlington on 2 July, 1776, was a makeshift war measure, and provided that all state officers of prominence should be elected by a legislature chosen by voters possessing property qualifications. While this instrument provided "that no person shall ever, within this colony, be deprived of the inestimable privilege of worshipping Almighty God in a manner agreeable to the dictates of his own conscience; nor under any pretence whatever be compelled to attend any place of worship, contrary to his own faith and judgment"; and while it also provided "that there shall be no establishment of any one religious sect in this province in preference to another", yet it discriminated by implication against Catholics for public office in the following language: "that no Protestant inhabitant of this colony shall be denied the enjoyment of any civil right merely on account of his religious principles, but that all persons professing a belief in the faith of any Protestant sect, who shall demean themselves peaceably under the government, as hereby established, shall be capable of being elected into any office of profit or trust, or being a member of either branch of the Legislature, and shall fully and freely enjoy every privilege and immunity enjoyed by others their fellow-subjects". The Constitution agreed upon in convention at Trenton in 1844, and ratified by the people at an election held on 13 August, 1844, guarantees absolute freedom of worship, and further provides that "no religious test shall be required as a qualification for any office or public trust; and no person shall be denied the enjoyment of any civil right merely on account of his religious principles." In it there is no discrimination in favour of Protestants as in the earlier instrument.

The statutes of the state prohibit all worldly employment or business, except works of necessity or charity, on Sunday. Oaths are administered to all witnesses in courts of justice either by the ceremony of the uplifted hand or on the Bible, except where one declares himself, for conscientious reasons, to be scrupulous concerning the taking of an oath, in which case his solemn affirmation or declaration is accepted. Blasphemy and profanity are prohibited by statute and punishable by fine, while perjury is punished by fine and imprisonment, besides disqualification afterwards on the part of the person convicted to give evidence in any court of justice. The sessions of the Legislature are, through custom, opened by prayer. Catholic clergymen have frequently officiated in both houses on such occasions. The legal holidays in New Jersey are New Year's Day; Lincoln's Birthday, 12 February; Washington's Birthday, 22 February; Good Friday; Memorial Day, also known as Decoration Day, 30 May; Independence Day, 4 July; 12 October, known as Columbus Day; the first Tuesday after the first Monday in November, or Election Day; Thanksgiving Day, which is fixed by the governor's proclamation; and Christmas Day. There is no statutory provision recognizing the seal of the confessional, but no attempt to compel an answer to a question which would involve a breach of the sacramental seal has ever been known in the history of New Jersey jurisprudence.

LEGISLATION ON MATTERS AFFECTING RELIGIOUS WORK.—In 1875 a liberal statute was enacted, which has since then been supplemented and amended, whereby parochial corporations can be created through the filing with the county clerk of a certificate of incorporation signed by the Roman Catholic bishop of the diocese concerned, the vicar-general (or, in case of the vacancy of either of those offices, the administrator of the diocese for the time being), and two lay members of the church or congregation. Religious societies organized under this act may acquire, pur-

chase, and hold lands, legacies, donations, and other personal property to an amount not exceeding \$3000 a year (exclusive of the church edifices, school-houses, and parsonages, and the lands whereon the same are erected), and burying-places. The religious corporation may grant and dispose of its real and personal property; but all proceedings, orders, and acts must be those of a majority of the corporation, and not of a less number, and to be valid must receive the sanction of the bishop. Under an Act of the Legislature approved on 11 April, 1908, any Roman Catholic diocese may become a corporation, and be able unlimitedly to acquire and hold real and personal property. The legal corporate title of the Newark diocese is "The Roman Catholic Diocese of Newark"; that of the Trenton Diocese is "The Diocese of Trenton". Church property is exempt from taxation; parsonages owned by religious corporations, and the land whereon they stand, are exempt to an amount not exceeding \$5000.

MARRIAGE AND DIVORCE.—A revision of the statutes relating to marriage, enacted in 1910, empowers the following officers to perform marriages between such persons as may lawfully enter into the matrimonial relation: the chief justice and each justice of the supreme court, the chancellor and each vice-chancellor, and each judge of the court of common pleas and justice of the peace, recorder and police justice, and mayor of a city, and every "stated and ordained minister of the gospel"; and "every religious society, institution or organisation in this State may join together in marriage such persons as are members of the said society, or when one of such persons is a member of such society, according to the rules and customs of the society, institution or organization to which they or either of them belong". The same act renders absolutely void any marriage within the following prohibited degrees of relationship: "A man shall not marry any of his ancestors or descendants, or his sister, or the daughter of his brother or sister, or the sister of his father or mother, whether such collateral kindred be of the whole or half blood. A woman shall not marry any of her ancestors or descendants, or her brother, or the son of her brother or sister, or the brother of her father or mother, whether such collateral kindred be of the whole or half blood". Since 1 July, 1910, it is necessary for persons intending to be married to obtain first a marriage licence and deliver the same to the clergyman, magistrate, or person who is to officiate, before the proposed marriage can be lawfully performed; but, if the marriage is to be performed by or before any religious society, institution, or organization, the licence shall be delivered to the said religious society, institution, or organization, or any officer thereof. In Chapter 274 of the Laws of 1910, which makes such licences necessary, it is provided that "nothing in this act contained shall be deemed or taken to render any common law or other marriage, otherwise lawful, invalid by reason of the failure to take out a licence as is herein provided".

With certain limitations, decrees of nullity of marriage may be rendered in all cases, when (1) either of the parties has another wife or husband living at the time of a second or other marriage, (2) the parties are within the degrees prohibited by law, (3) the parties, or either of them, are at the time of marriage physically and incurably impotent, (4) the parties, or either of them, were, at the time of the marriage incapable of consenting thereto, and the marriage has not been subsequently ratified, (5) at the suit of the wife, when she was under the age of sixteen years at the time of the marriage, unless such marriage be confirmed by her after arriving at such age; (6) at the suit of the husband, when he was under the age of eighteen at the time of the marriage, unless such marriage be confirmed by him after arriving at such age. The decree of nullity of marriage does not render illegitimate the

issue of any marriage so dissolved, except where the marriage is dissolved because either of the parties had another wife or husband living at the time of a second or other marriage. Such marriage shall be deemed void from the beginning, and the issue thereof shall be illegitimate. The grounds for absolute divorce are: (1) adultery; (2) wilful, continued, and obstinate desertion for the term of two years. Divorces *a mensa et thoro* may be decreed for (1) adultery; (2) wilful, continued, and obstinate desertion for the term of two years; (3) extreme cruelty in either of the parties. In all cases of divorce *a mensa et thoro*, the court may decree a separation for ever thereafter, or for a limited time, with a provision that, in case of a reconciliation at any time thereafter, the parties may apply for a revocation or suspension of the decree, and upon such application the Court shall make such order.

WILLS.—All persons of sound mind and of the age of twenty-one years are legally competent to dispose of property by will. No specific form of words is necessary in a will, but the testator must state in the document that it is his will; and it must be signed, and declared or published, by the testator as his will in the presence of at least two subscribing witnesses. The witnesses must sign in the presence of the testator, and in the presence of each other. A codicil to a will must be made and executed with the same requirements as a will, regarding declaration of its character, signature, and witnesses. Unwritten or nuncupative wills are legal under some rare circumstances, as in cases of sudden dangerous sickness or accident, in the presence of at least three competent witnesses, and at the request of the person about to die. Devises and bequests may be validly made for charitable and religious purposes and to religious societies.

CEMETERIES.—The parochial corporation statute enables church corporations to hold title to "burying places", and the Diocesan Corporation Act of 1908 makes the diocesan corporation "capable unlimitedly" of acquiring and holding "leases, legacies, devises, moneys, donations, goods and chattels of all kinds, church edifices, school houses, college buildings, seminaries, parsonages, Sisters' houses, hospitals, orphan asylums, reformatories and all other kinds of religious, ecclesiastical, educational and charitable institutions, and the lands whereon the same are, or may be erected, and cemeteries or burying places and any lands, tenements and hereditaments suitable for any or all of said purposes, in any place or places in any such diocese; and the same, or any part thereof, to lease, sell, grant, demise, alien and dispose of; . . . to exercise any corporate powers necessary and proper to the carrying out of the above enumerated powers, and to the carrying out of the purposes of such corporation and its institutions."

EDUCATION.—A single little Dutch school in Bergen (now Jersey City) in 1662 marked the beginning of the free public school system in New Jersey. That was almost two hundred and fifty years ago and since that time the schools have increased gradually in number and size until, according to the New Jersey School Report of 1909, there are now 2052 public schools in New Jersey, with a total seating capacity of 426,719. The total value of the school property is estimated at \$33,900,466.00. There are 11,235 teachers employed, of which 1250 are men and 9985 are women. These receive an average yearly salary of \$718.40. For the school year 1908-9 the current expenses of the schools amounted to \$11,583,201; the cost of permanent improvements was \$4,996,887, and the special appropriations equalled \$647,253. These amounted to a total appropriation of \$17,227,331. The total enrollment of pupils for the same year was 424,534. The state superintendent, at the head of the state department of public instruction, exercises a general supervision over the public school system of the state. He is appointed by the governor, as also is the state board of

education, which consists of two members from each congressional district. The county superintendents of schools are appointed by the state board of education. This board also exercises supervision over the different state educational institutions, such for example as the normal schools. Each of the many school districts, into which the state is divided, has its own school or schools, controlled by the officers, whom the voters of the district elect. In the cities and large towns there are superintendents or supervising principals and school-boards, appointed by the mayor.

New Jersey has two state normal schools—one at Trenton and one at Montclair. The school at Trenton was established in 1855 by an Act of the Legislature, and has in connexion with it the State Model School. The Montclair State Normal School was formally opened on 28 September, 1908. The increasing demand for professionally trained teachers, and the inability of the State Normal School at Trenton to meet it, had made another normal school necessary. At Beverly is the Farnum School, a preparatory school associated with the State Normal School; at Trenton is the State School for Deaf Mutes; at Bordentown the Manual Training and Industrial School for Colored Youths; and connected with Rutgers College is the State Agricultural College. The principal institutions for higher education in New Jersey are Princeton University at Princeton (founded 1746); Stevens Institute of Technology at Hoboken; Rutgers College at New Brunswick (chartered as Queens College, 1766); Bordentown Female College at Bordentown; Saint Peter's College, Jersey City; Saint Benedict's College, Newark; Seton Hall College, South Orange (founded 1856). The three last-mentioned are Catholic institutions. (For full statistics concerning the Catholic schools, see the articles on the Dioceses of Newark and Trenton.)

WILLIAM J. KEARNS.

Newman, JOHN HENRY (1801-1890), Cardinal-Deacon of St. George in Velabro, divine, philosopher, man of letters, leader of the Tractarian Movement, and the most illustrious of English converts to the Church, b. in the City of London, 21 Feb., 1801, the eldest of six children, three boys and three girls; d. at Edgbaston, Birmingham, 11 Aug., 1890. Over his descent there has been some discussion as regards the paternal side. His father was John Newman, a banker, his mother Jemima Fourdrinier, of a Huguenot family settled in London as engravers and paper-makers. It is stated that the name was at one time spelt Newmann; it is certain that many Jews, English or foreign, have borne it; and the suggestion has been thrown out that to his Hebrew affinities the cardinal owed, not only his cast of features, but some of his decided characteristics—e. g., his remarkable skill in music and mathematics, his dislike of metaphysical speculations, his grasp of the concrete, and his nervous temperament. But no documentary evidence has been found to confirm the suggestion. His French pedigree is undoubted. It accounts for the religious training, a modified Calvinism, which he received at his mother's knees; and perhaps it helped towards the

"lucid concision" of his phrase when dealing with abstruse subjects. His brother Francis William, also a writer, but wanting in literary charm, turned from the English Church to Deism; Charles Robert, the second son, was very erratic, and professed Atheism. One sister, Mary, died young; Jemima has a place in the cardinal's biography during the crisis of his Anglican career; and to a daughter of Harriet, Anne Mozley, we are indebted for his "Letters and Correspondence" down to 1845, which contains a sequel from his own hand to the "Apologia".

A classic from the day it was completed, the "Apologia" will ever be the chief authority for Newman's early thoughts, and for his judgment on the great religious revival known as the Oxford Movement, of which he was the guide, the philosopher, and the martyr. His immense correspondence, the larger portion of which still awaits publication, cannot essentially change our estimate of one who, though subtle to a degree bordering on refinement, was also impulsive and open with his friends, as well as bold in his confidences to the public. From all that is thus known of him we may infer that Newman's greatness consisted in the union of originality, amounting to genius of the first rank, with a deep spiritual temper, the whole manifesting itself in language of perfect poise and rhythm, in energy such as often has created sects or Churches, and in a personality no less winning than sensitive. Among the literary stars of his time Newman is distinguished by the pure Christian radiance that shines in his life and writings. He is the one Englishman of that era who upheld the ancient creed with a knowledge that only theologians possess, a Shakespearean force of style, and a fervour worthy of the saints. It is this unique combination that raises him above lay preachers of *vanitate mundi* like Thackeray, and which gives him a place apart from Tennyson and Browning. In comparison with him Keble is a light of the sixth magnitude, Pusey but a devout professor, Liddon a less eloquent Lacordaire. Newman occupies in the nineteenth century a position recalling that of Bishop Butler in the eighteenth. As Butler was the Christian champion against Deism, so Newman is the Catholic apologist in an epoch of Agnosticism, and amid theories of evolution. He is, moreover, a poet, and his "Dream of Gerontius" far excels the meditative verse of modern singers by its happy shadowing forth in symbol and dramatic scenes of the world behind the veil.

He was brought up from a child to take great delight in reading the Bible; but he had no formed religious convictions until he was fifteen. He used to wish the Arabian tales were true; his mind ran on unknown influences; he thought life possibly a dream, himself an angel, and that his fellow-angels might be deceiving him with the semblance of a material world. He was "very superstitious", and would cross himself on going into the dark. At fifteen he underwent "conversion", though not quite as Evangelicals practise it; from works of the school of Calvin he gained definite dogmatic ideas; and he rested "in the thought of two and two only absolute and luminously self-evident beings, myself and my Creator". In other words, personality became the primal truth in his philosophy; not matter, law, reason, or the experience of the senses. Henceforth, Newman was a Christian mystic, and such he remained. From the writings of Thomas Scott of Aston Sandford, "to whom, humanly speaking", he says, "I almost owe my soul", he learned the doctrine of the Trinity, supporting each verse of the Athanasian Creed with texts from Scripture. Scott's aphorisms were constantly on his lips for years, "Holiness rather than peace", and "Growth the only evidence of life". Law's "Serious Call" had on the youth a Catholic or ascetic influence; he was born to be a missionary; thought it God's will that he should lead a single life; was enamoured of

quotations from the Fathers given in Milner's "Church History", and, reading Newton on the Prophecies, felt convinced that the pope was Antichrist. He had been at school at Ealing near London from the age of seven. Always thoughtful, shy, and affectionate, he took no part in boys' games, began to exercise his pen early, read the Waverley Novels, imitated Gibbon and Johnson, matriculated at Trinity College, Oxford, Dec., 1816, and in 1818 won a scholarship of £60 tenable for nine years. In 1819 his father's bank suspended payment, but soon discharged its liabilities in full. Working too hard for his degree, Newman broke down, and gained in 1821 only third-class honours. But his powers could not be hidden. Oriel was then first in reputation and intellect among the Oxford Colleges, and of Oriel he was elected a fellow, 12 April, 1822. He ever felt this to be "the turning point in his life, and of all days most memorable".

In 1821 he had given up the intention of studying for the Bar, and resolved to take orders. As tutor of Oriel, he considered that he had a cure of souls; he was ordained on 13 June, 1824; and at Pusey's suggestion became curate of St. Clement's, Oxford, where he spent two years in parochial activity. And here the views in which he had been brought up disappointed him; "Calvinism was not a key to the phenomena of human nature as they occur in the world." It would not work. He wrote articles on Cicero, etc., and his first "Essay on Miracles", which takes a strictly Protestant attitude, to the prejudice of those alleged outside Scripture. But he also fell under the influence of Wheateley, afterwards Anglican Archbishop of Dublin, who, in 1825, made him his vice-principal at St. Mary's Hall. Wheateley stimulated him by discussion, taught him the notion of Christianity as a social and sovereign organism distinct from the State, but led him in the direction of "liberal" ideas and nominalistic logic. To Wheateley's once famous book on that subject Newman contributed. From Hawkins, whom his casting vote made Provost of Oriel, he gained the Catholic doctrines of tradition and baptismal regeneration, as well as a certain precision of terms which, long afterwards, gave rise to Kingsley's misunderstanding of Newman's methods in writing. By another Oxford clergyman he was taught to believe in the Apostolic succession. And Butler's "Analogy", read in 1823, made an era in his religious opinions. It is probably not too much to say that this deep and searching book became Newman's guide in life, and gave rise not only to the "Essay on Development" but to the "Grammar of Assent". In particular it offered a reflective account of ethics and conscience which confirmed his earliest beliefs in a lawgiver and judge intimately present to the soul. On another line it suggested the sacramental system, or the "Economy", of which the Alexandrians Clement and St. Athanasius are exponents. To sum up, at this formative period the sources whence Newman derived his principles as well as his doctrines were Anglican and Greek, not Roman or German. His Calvinism dropped away; in time he withdrew from the Bible Society. He was growing fiercely anti-Erastian; and Wheateley saw the elements of a fresh party in the Church gathering round one whom Oriel had chosen for his intellectual promise, but whom Oxford was to know as a critic and antagonist of the "March of Mind".

His college in 1828 made him Vicar of St. Mary's (which was also the university church), and in its pulpit he delivered the "Parochial Sermons", without eloquence or gesture, for he had no popular gifts, but with a thrilling earnestness and a knowledge of human nature seldom equalled. When published, it was said of them that they "beat all other sermons out of the market as Scott's tales beat all other stories". They were not controversial; and there is little in them to which Catholic theology would object. Their char-

tened style, fertility of illustration, and short sharp energy, have lost nothing by age. In tone they are severe and often melancholy, as if the utterance of an isolated spirit. Though gracious and even tender-hearted, Newman's peculiar temper included deep reserve. He had not in his composition, as he says, a grain of conviviality. He was always the Oxford scholar, no democrat, suspicious of popular movements; but keenly interested in political studies as bearing on the fortunes of the Church. This disposition was intensified by his friendship with Keble, whose "Christian Year" came out in 1827, and with R. Hurrell Froude, a man of impetuous thought and self-denying practice. In 1832 he quarrelled with Dr. Hawkins, who would not endure the pastoral idea which Newman cherished of his college work. He resigned his tutorship, went on a long voyage round the Mediterranean with Froude, and came back to Oxford, where on 14 July, 1833, Keble preached the Assize sermon on "National Apostasy". That day, the anniversary of the French Revolution, gave birth to the Oxford Movement.

Newman's voyage to the coasts of North Africa, Italy, Western Greece, and Sicily (Dec., 1832-July, 1833) was a romantic episode, of which his diaries have preserved the incidents and the colour. In Rome he saw Wiseman at the English College; the city, as mother of religion to his native land, laid a spell on him never more to be undone. He felt called to some high mission; and when fever took him at Leonforte in Sicily (where he was wandering alone) he cried out, "I shall not die, I have not sinned against the light." Off Cape Ortogonal, 11 Dec., 1832, he had composed the first of a series of poems, condensed, passionate, and original, which prophesied that the Church would yet reign as in her youth. Becalmed in the Straits of Bonifacio, he sought guidance through the tender verses, "Lead, Kindly Light", deservedly treasured by all the English-speaking races. They have been called the marching song of the Tractarian host. But during the earlier stages of that journey it was not clear, even to the leader himself, in what direction they were moving—away from the Revolution, certainly. Reform was in the air: ten Irish bishoprics had been suppressed; disestablishment might not be far off. There was need of resistance to the enemies without, and of a second, but a Catholic, reformation within. The primitive Church must somehow be restored in England.

Others met in committee and sent up an address to Canterbury; Newman began the "Tracts for the Times", as he tells us with a smile, "out of his own head". To him Achilles always seemed more than the host of the Achæans. He took his motto from the Iliad: "They shall know the difference now." Achilles went down into battle, fought for eight years, won victory upon victory, but was defeated by his own weapons when "Tract 90" appeared, and retired to his tent at Littlemore, a broken champion. Nevertheless, he had done a lasting work, greater than Laud's and likely to overthrow Cranmer's in the end. He had resuscitated the Fathers, brought into relief the sacramental system, paved the way for an astonishing revival of long-forgotten ritual, and given the clergy a hold upon thousands at the moment when Erastian principles were on the eve of triumph. "It was soon after 1830", says Pattison grimly, "that the Tracts desolated Oxford life." Newman's position was designated the *Via Media*. The English Church, he maintained, lay at an equal distance from Rome and Geneva. It was Catholic in origin and doctrine; it anathematized as heresies the peculiar tenets whether of Calvin or Luther; it could not but protest against "Roman corruptions", which were excrescences on primitive truth. Hence England stood by the Fathers, whose teaching the Prayer Book handed down; it appealed to antiquity, and its norm was the undi-

vided Church. "Charles", said Newman, "is the king, Laud the prelate, Oxford the sacred city, of this principle." Patristic study became the order of the day. Newman's first volume, "The Arians of the Fourth Century", is an undigested, but valuable and characteristic, treatise, wholly Alexandrian in tone, dealing with creeds and sects on the lines of the "Economy". As a history it fails; the manner is confused, the style a contrast to his later intensity and directness of expression. But as a thinker Newman never travelled much beyond the "Arians" (published 1833). It implies a mystic philosophy controlled by Christian dogma, as the Church expounds it.

In the "Apologia" we find this key to his mental development dropped by Newman, not undesignedly. "I understood", he says, "... that the exterior world, physical and historical, was but the manifestation to our senses of realities greater than itself. Nature was a parable, Scripture was an allegory; pagan literature, philosophy, and mythology, properly understood, were but a preparation for the Gospel. The Greek poets and sages were in a sense prophets." There had been a "dispensation" of the Gentiles as well as of the Jews. Both had outwardly come to nought; from and through each had the evangelical doctrine been made manifest. Thus room was granted for the anticipation of deeper disclosures, of truths still under the veil of the letter. Holy Church "will remain after all but a symbol of those heavenly facts which fill eternity. Her mysteries are but the expression in human language of truths to which the human mind is unequal" ("Apol.", ed. 1895, p. 27). Such was the teaching that "came like music" to his inward ear, from Athens and Alexandria. Newman's life was devoted, first, to applying this magnificent scheme to the Church of England; and then, when it would not suit those insular dimensions, to the Church of the centre, to Rome. But its wide implications even this far-glancing-vision did not take in. However, it substituted a dynamic and progressive principle in Christianity for one merely static. But the Anglican position was supposed to rely on Vincent of Lerins's *Quod ubique*, admitting of no real developments; its divines urged against Bossuet the "variations" of Catholicism. From 1833 to 1839 the Tractarian leader held this line of defence without a misgiving. Suddenly it gave way, and the *Via Media* disappeared.

Meanwhile, Oxford was shaken like Medicean Florence by a new Savonarola, who made disciples on every hand; who stirred up sleepy Conservatives when Hampden, a commonplace don, subjected Christian verities to the dissolving influence of Nominalism; and who multiplied books and lectures dealing with all religious parties at once. "The Prophetic Office" was a formal apology of the Laudian type; the obscure, but often beautiful, "Treatise on Justification" made an effort "to show that there is little difference but what is verbal in the various views, found whether among Catholic or Protestant divines" on this subject. Dollinger called it "the greatest masterpiece in theology that England had produced in a hundred years", and it contains the true answer to Puritanism. The "University Sermons", profound as their theme, aimed at determining the powers and limits of reason, the methods of revelation, the possibilities of a real theology. Newman wrote so much that his hand almost failed him. Among a crowd of admirers only one perhaps, Hurrell Froude, could meet him in thought on fairly equal terms, and Froude passed away at Dartington in 1836. The pioneer went his road alone. He made a bad party-leader, being liable to sudden gusts and personal resolutions which ended in catastrophe. But from 1839, when he reigned at Oxford without a rival, he was already faltering. In his own language, he had seen a ghost—the shadow of Rome overclouding his Anglican compromise.

JOHN HENRY CARDINAL NEWMAN
PAINTING BY W. W. OULESS—ETCHING BY P.-A. RAJON

Two names are associated with a change so momentous—Wiseman and Ward. The "Apologia" does full justice to Wiseman; it scarcely mentions Ward (see OXFORD MOVEMENT). Those who were looking on might have predicted a collision between the Tractarians and Protestant England, which had forgotten the Caroline divines. This came about on occasion of "Tract 90"—in itself the least interesting of all Newman's publications. The tract was intended to keep stragglers from Rome by distinguishing the corruptions against which the Thirty-Nine Articles were directed, from the doctrines of Trent which they did not assail. A furious and universal agitation broke out in consequence (Feb., 1841). Newman was denounced as a traitor, a Guy Fawkes at Oxford; the University intervened with academic maladroitness and called the tract "an evasion". Dr. Bagot, Bishop of Oxford, mildly censured it, but required that the tracts should cease. For three years condemnations from the bench of bishops were scattered broadcast. To a mind constituted like Newman's, imbued with Ignatian ideas of episcopacy, and unwilling to perceive that they did not avail in the English Establishment, this was an *ex cathedra* judgment against him. He stopped the tracts, resigned his editorship of "The British Critic", by and by gave up St. Mary's, and retired at Littlemore into lay communion. Nothing is clearer than that, if he had held on quietly, he would have won the day. "Tract 90" does not go so far as many Anglican attempts at reconciliation have gone since. The bishops did not dream of coercing him into submission. But he had lost faith in himself. Reading church history, he saw that the Via Media was no new thing. It had been the refuge of the Semiarrians, without whom Arianism could never have flourished. It made the fortune of the Monophysites, thanks to whom the Church of Alexandria had sunk into heresy and fallen a prey to Mohammed's legions. The analogy which Newman had observed with dismay was enforced from another side by Wiseman, writing on the Donatists in "The Dublin Review". Wiseman quoted St. Augustine, "Securus judicat orbis terrarum", which may be interpreted "Catholic consent is the judge of controversy". Not antiquity studied in books, not the bare succession of bishops, but the living Church now broke upon him as alone peremptory and infallible. It ever had been so; it must be so still. Nicea, Ephesus, and Chalcedon thus bore witness to Rome. Add to this the grotesque affair of the Jerusalem bishopric, the fruit of an alliance with Lutheran Prussia, and the Anglican theory was disproved by facts.

From 1841 Newman was on his death-bed as regarded the Anglican Church. He and some friends lived together at Littlemore in monastic seclusion, under a hard rule which did not improve his delicate health. In February, 1843, he retracted in a local newspaper his severe language towards Rome; in September he resigned his living. With immense labour he composed the "Essay on the Development of Christian Doctrine", in which the apparent variations of dogma, formerly objected by him against the Catholic Church, were explained on a theory of evolution, curiously anticipating on certain points the great work of Darwin. It has many most original passages, but remains a fragment. On 9 Oct., 1845, during a period of excited action at Oxford, Newman was received into the Church by Father Dominic, an Italian Passionist, three days after Renan had broken with Saint-Sulpice and Catholicism. The event, although long in prospect, irritated and distressed his countrymen, who did not forgive it until many years had gone by. Its importance was felt; its causes were not known. Hence an estrangement which only the exquisite candour of Newman's self-delineation in the "Apologia" could entirely heal.

His conversion divides a life of almost ninety years

into equal parts—the first more dramatic and its perspective ascertained; the second as yet imperfectly told, but spent for a quarter of a century *sub luce magna*, under suspicion from one side or another, his plans thwarted, his motives misconstrued. Called by Wiseman to Oscott, near Birmingham, in 1846, he proceeded in October to Rome, and was there ordained by Cardinal Fransoni. The pope approved of his scheme for establishing in England the Oratory of St. Philip Neri; in 1847 he came back, and, besides setting up the London house, took mission work in Birmingham. Thence he moved out to Edgbaston, where the community still resides. A large school was added in 1859. The spacious Renaissance church, consecrated in 1909, is a memorial of the forty years during which Newman made his home in that place. After his "Sermons to Mixed Congregations", which exceed in vigour and irony all others published by him, the Oratorian recluse did not strive to gain a footing in the capital of the Midlands. He always felt "paucorum hominum sum"; his charm was not for the multitude. As a Catholic he began enthusiastically. His "Lectures on Anglican Difficulties" were heard in London by large audiences; "Loss and Gain", though not much of a story, abounds in happy strokes and personal touches; "Callista" recalls his voyage in the Mediterranean by many delightful pages; the sermon at the Synod of Oscott entitled "The second Spring" has a rare and delicate beauty. It is said that Macaulay knew it by heart. "When Newman made up his mind to join the Church of Rome", observes R. H. Hutton, "his genius bloomed out with a force and freedom such as it never displayed in the Anglican communion." And again, "In irony, in humour, in eloquence, in imaginative force, the writings of the later and, as we may call it, emancipated portion of his career far surpass the writings of his theological apprenticeship." But English Catholic literature also gained a persuasive voice and a classic dignity of which hitherto there had been no example.

His own secession, preceded by that of Ward (amid conflicts of the angriest kind at Oxford), and followed by many others, had alarmed Englishmen. In 1850 came the "Papal Aggression", by which the country was divided into Catholic sees, and a Roman cardinal announced from the Flaminian Gate his commission to "govern" Westminster. The nation went mad with excitement. Newman delivered in the Corn Exchange, Birmingham, his "Lectures on the Position of Catholics", (he was seldom felicitous in titles of books), and, to George Eliot's amazement, they revealed him as a master of humorous, almost too lively sketches, witty and scornful of the great Protestant tradition. An apostate Italian priest, Achilli, was haranguing against the Church. Prompted by Wiseman, the Oratorian gave particulars of this man's infamous career, and Achilli brought a charge of libel. Newman, at enormous expense, collected evidence which fully justified the accusations he had made. But a no-papery jury convicted him. He was fined £100; on appeal, the verdict was quashed; and "The Times" admitted that a miscarriage of justice had taken place when Newman was declared guilty. Catholics all the world over came to his relief. His thanks are on record in the dedication of his Dublin "Lectures". But he always remembered that to Wiseman's haste and carelessness he owed this trial.

There was much more trouble awaiting him. The years from 1851 to 1870 brought disaster to a series of noble projects in which he aimed at serving religion and culture. In Ireland the bishops had been compelled, after rejecting the "Godless" colleges in 1847, to undertake a university of their own. Neither men nor ideas were forthcoming; the State would not sanction degrees conferred by a private body; nevertheless, an attempt could be made; and Newman was appointed rector, November, 1851. Three years passed

as in a dream; in 1854 he took the oaths. But he had, in 1852, addressed Ireland on the "Idea of a University" with such a largeness and liberality of view as Oxford, if we may believe Pattison, had never taught him. The "Lectures" end abruptly; they gave him less satisfaction than any other of his works; yet, in conjunction with his brilliant short papers in the "University Magazine", and academic dissertations to the various "Schools", they exhibit a range of thought, an urbanity of style, and a pregnant wit, such as no living professor could have rivalled. They are the best defence of Catholic educational theories in any language; a critic perhaps would describe them as the *Via Media* between an obscurantism which tramples on the rights of knowledge and a Free-Thought which will not hear of the rights of revelation. Incidentally, they defended the teaching of the classics against a French Puritan clique led by the Abbé Gaume. This was pretty much all that Newman achieved during the seven years of his "Campaign in Ireland". Only a few native or English students attended the house in St. Stephen's Green. The bishops were divided, and Archbishop MacHale opposed a severe *non possumus* to the rector's plans. In administration difficulties sprang up; and though Newman won the friendship of Archbishop Cullen and Bishop Moriarty, he was not always treated with due regard. The status of titular bishop had been promised him; for reasons which he never learnt, the promise fell through. His feeling towards Ireland was warm and generous; but in Nov., 1853, he retired from the rectorship. Its labours and anxieties had told upon him. Another large enterprise, to which Cardinal Wiseman invited him only to balk his efforts, was likewise a failure—the revision of the English Catholic Bible. Newman had selected a company of revisors and had begun to accumulate materials, but some small publishers' interests were pleaded on the other side, and Wiseman, whose intentions were good, but evanescent, allowed them to wreck this unique opportunity.

During the interval between 1854 and 1860 Newman had passed from the convert's golden fervours into a state which resembled criticism of prevailing methods in church government and education. His friends included some of a type known to history as "Liberal Catholics". Of Montalembert and Lacordaire he wrote in 1864: "In their general line of thought and conduct I enthusiastically concur and consider them to be before their age." He speaks of "the unselfish aims, the thwarted projects, the unrequited toils, the grand and tender resignation of Lacordaire". That moving description might be applied to Newman himself. He was intent on the problems of the time and not alarmed at Darwin's "Origin of Species". He had been made aware by German scholars, like Acton, of the views entertained at Munich; and he was keenly sensitive to the difference between North and South in debatable questions of policy or discipline. He looked beyond the immediate future; in a lecture at Dublin on "A Form of Infidelity of the Day" he seems to have anticipated what is now termed "Modernism", condemning it as the ruin of dogma. It is distressing to imagine what Newman's horror would have been, had his intuition availed to tell him that, in little more than half a century, a "form of infidelity" so much like what he predicted would claim him as its originator; on the other hand, he would surely have taken comfort, could he also have foreseen that the soundness of his faith was to be so vindicated as it has been by Bishop O'Dwyer, of Limerick, and above all, the vindication so approved and confirmed as it is in Pius X's letter of 10 March, 1908, to that bishop. In another lecture, on "Christianity and Scientific Investigation", he provides for a concordat which would spare the world a second case of Galileo. He held that Christian theology was a deductive science, but physics and the like

were inductive; therefore collision between them need not, and in fact did not really occur. He resisted in principle the notion that historical evidence could do away with the necessity of faith as regarded creeds and definitions. He deprecated the intrusion of amateurs into divinity; but he was anxious that laymen should take their part in the movement of intellect. This led him to encourage J. M. Capes in founding the "Rambler", and H. Wilberforce in editing the "Weekly Register". But likewise it brought him face to face with a strong reaction from the earlier liberal policy of Pius IX. This new movement, powerful especially in France, was eagerly taken up by Ward and Manning, who now influenced Wiseman as he sank under a fatal disease. Their quarrel with J. H. N. (as he was familiarly called) did not break out in open war; but much embittered correspondence is left which proves that, while no point of faith divided the parties, their dissensions threw back English Catholic education for thirty years.

These misunderstandings turned on three topics:—the "scientific" history which was cultivated by the "Rambler", with Newman's partial concurrence; the proposed oratory at Oxford; and the temporal power, then at the crisis of its fate. Newman's editorship of the "Rambler", accepted, on request of Wiseman, by way of compromise, lasted only two months (May–July, 1859). His article, "On Consulting the Laity in Matters of Doctrine", was denounced at Rome by Bishop Brown of Newport and Menevia. Leave was given for an Oratorian house at Oxford, provided Newman did not go thither himself, which defeated the whole plan. A sharp review of Manning's "Lectures on the Temporal Power" was attributed to Newman, who neither wrote nor inspired it; and these two illustrious Catholics were never friends again. Newman foresaw the total loss of the temporal power; his fears were justified; but provision and the politics of the day could not well be united. Of all Christians then living this great genius had the deepest insight into the future; but to his own generation he became as Jeremiah announcing the fall of Jerusalem. Despondency was his prevailing mood when, in January, 1864, from an unexpected quarter, the chance of his life was given him.

Charles Kingsley, a bold, picturesque, but fiercely anti-Catholic writer, dealing, in "Macmillan's Magazine", with J. A. Froude's "History of England," let fall the remark that "Truth, for its own sake, had never been a virtue with the Roman clergy. Father Newman informs us that it need not, and on the whole ought not to be; that cunning is the weapon which heaven has given to the Saints wherewith to withstand the brute male force of the wicked world which marries and is given in marriage. Whether his notion be doctrinally correct or not, it is at least historically so." These assertions had no foundation whatever in fact. Newman demanded proof; a correspondence ensued in which Kingsley referred to one of the Oxford Anglican sermons generally; he withdrew his charge in terms that left its injustice unproved; and thus he brought on himself, in the pamphlet which his adversary published, one of the most cutting replies, ironical and pitiless, known to literature. He returned to the assault. "What then does Dr. Newman mean?" was his question. The answer came in the shape of an "Apologia pro Vita sua", which, while pulverizing enemies of the Kingsley stamp, lifted Newman to a height above all his detractors, and added a unique specimen of religious autobiography to our language. Issued in seven parts, between 21 April and 2 June, 1864, the original work was a marvel of swift and cogent writing. Materials in expectation of some such opportunity had been collecting since 1862. But the duel which led up to an account of Newman's most intimate feelings exhibited sword-play the like of which can be scarcely found outside Pascal's "Provincial

Letters" and Lessing's "Anti-Goese". It annihilated the opponent and his charge. Not that Newman cherished a personal animosity against Kingsley, whom he had never met. His tone was determined by a sense of what he owed to his own honour and the Catholic priesthood. "Away with you, Mr. Kingsley, and fly into space", were his parting words to a man whose real gifts did not serve him in this wild encounter. Then the old Tractarian hero told the story of his life. He looked upon it with the eye of an artist, with self-knowledge like that of Hamlet, with candour, and pathos, and awe; for he felt a guiding power throughout which had brought him home. The handling was unaffected, the portraits of Oxford celebrities true and yet kind; the drama which ended in his renunciation of place and power at St. Mary's moved on with a tragic interest. His brief prologues are among the jewels of English prose. A word from St. Augustine converted him, and its poignant effects could not be surpassed in the "Confessions" of the saint himself. The soliloquy, as we may term it, which describes Newman's attitude since 1845, presents in a lofty view his apology, which is not a surrender, to those Catholics who mistrusted him. Though he never would discuss the primary problems of Theism *ex professo*, he has dwelt on the apparent chaos of history, goodness defeated and mortal efforts futile, with a piercing eloquence which reminds us of some lament in *Æschylus*. He met Kingsley's accusations of double-dealing proudly and in detail. But by the time he reached them, Englishmen—who had read the successive chapters with breathless attention—were completely brought round. No finer triumph of talent in the service of conscience has been put on record. From that day the Catholic religion may date its re-entrance into the national literature. Instead of arid polemics and technical arguments, a living soul had revealed in its journey towards the old faith wherein lay the charm that drew it on. Reality became more fascinating than romance; the problem which staggered Protestants and modern minds—how to reconcile individual genius with tradition, private judgment with authority—was resolved in Newman's great example.

Amid acclamations from Catholics, echoing the "aves vehement" of the world outside, he turned to the philosophy which would justify his action. He began the "Grammar of Assent". Still, Manning, now archbishop, Talbot, chamberlain of Pius IX, Ward, editor of the "Dublin Review", were not to be pacified. Manning thought he was transplanting the "Oxford tone into the Church"; Talbot described him as "the most dangerous man in England"; Ward used even harder terms. In 1867 an attack by a Roman correspondent on Newman led to a counter-move, when two hundred distinguished laymen told him, "Every blow that touches you inflicts a wound upon the Catholic Church in this country." His discriminating answer on the cultus of Our Lady to Pusey's "Eirenicon" had been taken ill in some quarters. One of his Oratorians, H. I. D. Ryder, was bold enough to cross swords with the editor of the "Dublin", who inflicted on friend and foe views concerning the extent of papal infallibility which the Roman authorities did not sanction; and Newman rejoiced in the assault. In 1870 the "Grammar" was published. But its appearance, coinciding with the Vatican Council, roused less attention than the author's suspected dislike for the aims and conduct of the majority at Rome. Years before he had proclaimed his belief in the infallible pope. His "Cathedra Sempiterna" rivals in fervour and excels in genuine rhetoric the passage with which de Maistre concluded his "Du Pape", which became a text for "ultramontane" apologetics. Yet he shrank from the perils which hung over men less stable than himself, should the definition be carried. He would have healed the breach between Rome and Munich.

Under these impressions he sent to his bishop, W. B. Ullathorne, a confidential letter in which he branded, not the Fathers of the Council, but the journalists and other partisans outside who were abounding in violent language, as "an insolent and aggressive faction". The letter was surreptitiously made public; a heated controversy ensued; but Newman took no further part in the conciliar proceedings. Of course he accepted the dogmatic definitions; and in 1874 he defended the Church against Gladstone's charge that "Vaticanism" was equivalent to the latest fashions in religion (see his "Letter to the Duke of Norfolk").

Newman's demeanour towards authority was ever one of submission; but, as he wrote to Phillips de Lisle in 1848, "it is no new thing with me to feel little sympathy with parties, or extreme opinions of any kind." In recommending the Creed he would employ "a wise and gentle minimism", not extenuating what was true but setting down nought in malice. The "Grammar of Assent" illustrates and defends this method, in which human nature is not left out of account. It is curiously Baconian, for it eschews abstractions and metaphysics, being directed to the problem of concrete affirmation, its motives in fact, and its relation to the personality of the individual. This hitherto unexplored province of apologetics lay dark, while the objective reasons for assent had engrossed attention; we might term it the casuistry of belief. Newman brought to the solution a profound acquaintance with the human heart, which was his own; a resolve to stand by experience; and a subtilty of expression corresponding to his fine analysis. He believed in "implicit" logic, varied and converging proofs, indirect demonstration (*ex impossibili* or *ex absurdo*); assent, in short, in not a mechanical echo of the syllogism but a vital act, distinct and determined. The will, sacrificed in many schools to formal intellect, recovers its power; genius and common sense are justified. Not that pure logic loses its rights, or truth is merely "that which each man troweth"; but the moral being furnishes an indispensable premise to arguments bearing on life, and all that is meant by a "pious disposition" towards faith is marvellously drawn out. As a sequel and crown to the "Development" this often touching volume (which reminds us of Pascal) completes the author's philosophy. Some portions of it he is said to have written ten times, the last chapter many times more. Yet that chapter is already in part antiquated. The general description, however, of concrete assent appears likely to survive all objections. How far it bears on Kant's "Practical Reason" or the philosophy of the will as developed by Schopenhauer, has yet to be considered. But we must not torture it into the "pragmatism" of a later day. As Newman held by dogma in revelation, so he would never have denied that the mind enjoys a vision of truth founded on reality. He was a mystic, not a sceptic. To him the reason by which men guided themselves was "implicit" rather than "explicit", but reason nevertheless. Abstractions do not exist; but the world is a fact; our own personality cannot be called in question; the will is a true cause; and God reveals Himself in conscience. Apologetics, to be persuasive, should address the individual; for real assents, however multiplied, are each single and *sui generis*. Even a universal creed becomes in this way a private acquisition. As the "Development" affords a counterpart to Bossuet's "Variations", so the "Grammar" may be said to have reduced the "personal equation" in controversy to a working hypothesis, whereas in Protestant hands it had served the purposes of anarchy.

For twenty years Newman lay under imputations at Rome, which misconstrued his teaching and his character. This, which has been called the ostracism of a saintly genius, undoubtedly was due to his former friends, Ward and Manning. In February, 1878,

Pius IX died; and, by a strange conjuncture, in that same month Newman returned to Oxford as Honorary Fellow of Trinity College, "dear to him from undergraduate days". The event provoked Catholics to emulation. Moreover, the new pope, Leo XIII, had also lived in exile from the Curia since 1846, and the Virgilian sentiment, "Haud ignara mali", would come home to him. The Duke of Norfolk and other English peers approached Cardinal Manning, who submitted their strong representation to the Holy See. Pope Leo, it is alleged, was already considering how he might distinguish the aged Oratorian. He intimated, accordingly, in February, 1879, his intention of bestowing on Newman the cardinal's hat. The message affected him to tears, and he exclaimed that the cloud was lifted from him forever. By singular ill-fortune, Manning understood certain delicate phrases in Newman's reply as declining the purple; he allowed that statement to appear in "The Times", much to everyone's confusion. However, the end was come. After a hazardous journey, and in broken health, Newman arrived in Rome. He was created Cardinal-Deacon of the Title of St. George, on 12 May, 1879. His *biglietto* speech, equal to the occasion in grace and wisdom, declared that he had been the life-long enemy of Liberalism, or "the doctrine that there is no truth in religion, but that one creed is as good as another", and that Christianity is "but a sentiment and a taste, not an objective fact, not miraculous".

Hitherto, in modern times, no simple priest, without duties in the Roman Curia, had been raised to the Sacred College. Newman's elevation, hailed by the English nation and by Catholics everywhere with unexampled enthusiasm, was rightly compared to that of Bessarion after the Council of Florence. It broke down the wall of partition between Rome and England. To the many addresses which poured in upon him the cardinal replied with such point and felicity as often made his words gems of literature. He had revised all his writings, the last of which dealt somewhat tentatively with Scripture problems. Now his hand would serve him no more, but his mind kept its clearness always. In "The Dream of Gerontius" (1865), which had been nearly a lost masterpiece, he anticipated his dying hours, threw into concentrated, almost Dantean, verse and imagery his own beliefs as suggested by the Offices of Requiem, and looked forward to his final pilgrimage, "alone to the Alone". Death came with little suffering, on 11 Aug., 1890. His funeral was a great public event. He lies in the same grave with Ambrose St. John, whom he called his "life under God for thirty-two years". His device as cardinal, taken from St. Francis de Sales, was *Cor ad cor loquitur* (Heart speaketh to heart); it reveals the secret of his eloquence, unaffected, graceful, tender, and penetrating. On his epitaph we read: *Ex umbris et imaginibus in veritatem* (From shadows and symbols into the truth); it is the doctrine of the Economy, which goes back to Plato's "Republic" (bk. VII), and which passed thence by way of Christian Alexandria into the philosophy of St. Thomas Aquinas, the poetry of the Florentine, and the schools of

Oxford. John Henry Newman thus continues in modern literature the Catholic tradition of East and West, sealing it with a martyr's faith and suffering, steadfast in loyalty to the truth, while discerning with a prophet's vision the task of the future.

As a writer of English prose Newman stands for the perfect embodiment of Oxford, deriving from Cicero the lucid and leisurely art of exposition, from the Greek tragedians a thoughtful refinement, from the Fathers a preference for personal above scientific teaching, from Shakespeare, Hooker, and that older school the use of idiom at its best. He refused to acquire German; he was unacquainted with Goethe as with Hegel; he took some principles from Coleridge, perhaps indirectly; and, on the whole, he never went beyond Aristotle in his general views of education. From the Puritan narrowness of his first twenty years he was delivered when he came to know the Church as essential to Christianity. Then he enlarged that conception till it became Catholic and Roman, an historical idea realized. He made no attempt, however, to widen the Oxford basis of learning, dated 1830, which remained his position, despite continual reading and study. The Scholastic theology, except on its Alexandrian side, he left untouched; there is none of it in his "Lectures", none in the "Grammar of Assent". He wrote forcibly against the shallow enlightenment of Brougham; he printed no word concerning Darwin, or Huxley, or even Colenso. He lamented the fall of Döllinger; but he could not acquiesce in the German idea by which, as it was in fact applied, the private judgment of historians overruled the Church's dogmas. Conscience to him was the inward revelation of God, Catholicism the outward and objective. This twofold force he opposed to the agnostic, the rationalist, the mere worldling. But he seems to have thought men premature who undertook a positive reconciliation between faith and science, or who attempted by a vaster synthesis to heal the modern conflicts with Rome. He left that duty to a later generation; and, though by the principle of development and the philosophy of concrete assent providing room for it, he did not contribute towards its fulfilment in detail. He will perhaps be known hereafter as the Catholic Bishop Butler, who extended the "Analogy" drawn from experience to the historical Church, proving it thus to be in agreement with the nature of things, however greatly transcending the visible scheme by its message, institutions, and purpose, which are alike supernatural.

The best authorities on Newman are his own writings: *Collected Works* (36 vols., popular ed., London, 1895); *My Campaign in Ireland* (London, 1896); *Meditations and Devotions* (London, 1895); *Addresses and Replies* (London, 1905) (the last three posthumous, ed. by NEVILLE); *Letters and Correspondence* (to 1845), ed. ANNE MOZLEY (London, 1891). See also monographs by HUTTON (London, 1891); BARRY (London, 1904); BRÉMOND (Paris, 1907); LILLY in *Dict. of Nat. Biography*, s. v.; and consult: WILFRID WARD, *W. G. Ward and the Oxford Movement* (London, 1889); IDEM, *Life and Times of Cardinal Wiseman* (London, 1897); PURCELL, *Life of Cardinal Manning* (London, 1895); DE LISLE AND PURCELL, *Life and Times of Ambrose Phillips de Lisle* (London, 1900); GASQUET, *Lord Acton and his Circle* (London, 1906); with caution T. MOZLEY, *Reminiscences of Oriel* (London, 1882). See also bibliography under OXFORD MOVEMENT.
